Speed-recorder for vehicles or locomotives. F. W. G. Bruhn. No. 1,385,842; July 19; v. 288; p. 560.
Speed-responsive device. W. M. Fulton. No. 1,384,314; July 12; v. 288; p. 268.
Speedometer. C. G. Smith. No. 1,384,800; July 19; v. 288; p. 452.
Spindle-supporting member. W. F. Zimmermann. (Reissue.) No. 15,161; July 19; v. 288; p. 564.
Spinning and twisting machines, Doffing apparatus for. F. Graf. No. 1,384,449; July 12; v. 288; p. 296.
Spinning tops, &c., Device for. A. E. Sandstrom. No. 1,384,972; July 19; v. 288; p. 485.
Spool. O. H. Heinig. No. 1,384,562; July 12; v. 288; p. 320.
Spotlight. E. H. Howard. No. 1,384,896; July 19; v. 288; p. 469.
Spray. F. C. Cook. No. 1,384,304; July 12; v. 288; p. 266.
Spray-head. J. F. Kirgan. No. 1,383,404; July 5; v. 288; p. 31.
Spray-plate, Composite. J. Scheminger, Jr. No. 1,383,862; July 5; v. 288; p. 125.
Spraying device. H. C. Baumgardner. No. 1,384,296; July 12; v. 288; p. 264.
Spring: *See*—
Automobile-spring.
Spring. W. Irwin. No. 1,385,919; July 26; v. 288; p. 754.
Spring-board. J. Tors. No. 1,384,580; July 12; v. 288; p. 324.
Spring-mattress and support therefor. B. H. Jones. No. 1,385,174; July 19; v. 288; p. 528.
Spring-motor. K. R. Akerlund. No. 1,385,351; July 26; v. 288; p. 689.
Spring-tension gage. W. H. D. Ford. No. 1,383,713; July 5; v. 288; p. 95.
Spring-wheel. H. Myers. No. 1,384,847; July 19; v. 288; p. 460.
Springs, Clamp for broken. S. H. Brady. No. 1,384,591; July 12; v. 288; p. 326.
Springs, Tool for compressing valve-. H. S. Jillson. No. 1,384,958; July 19; v. 288; p. 482.
Sprinkler-head. W. C. Penty. No. 1,385,302; July 26; v. 288; p. 647.
Stare, Shifting. C. W. Clodfelter. No. 1,384,180; July 12; v. 288; p. 240.
Stair structure. A. J. Hall. No. 1,385,209; July 19; v. 288; p. 535.
Stake-holding device. T. F. Cullinan. No. 1,383,986; July 5; v. 288; p. 151.
Stall. J. K. Putt. No. 1,385,273; July 19; v. 288; p. 547.
Stamp or seal. R. Perez. No. 1,385,490; July 26; v. 288; p. 668.
Stamp-inking pad. N. Mock. No. 1,385,022; July 19; v. 288; p. 496.
Stamping-presses, Safety device for. F. Alley. No. 1,384,654; July 12; v. 288; p. 340.
Stand: *See*—
Adjustable stand. Switch-stand.
Display-stand. Watch-stand.
Stand and target, Switch. D. C. Mulvihill. No. 1,384,148; July 12; v. 288; p. 234.
Starter, Impulse-. P. Ostenberg. No. 1,383,480; July 5; v. 288; p. 46.
Starting means. C. Haunz. No. 1,385,210; July 19; v. 288; p. 535.
Stay-iron. E. J. Wells. No. 1,385,765; July 26; v. 288; p. 724.
Staybolt structure. E. I. Dodds. No. 1,385,770; July 26; v. 288; p. 727.
Staybolt structure. E. I. Dodds. No. 1,385,780; July 26; v. 288; p. 727.

Steam cooking vessel. J. T. Slocomb. No. 1,384,102; July 12; v. 288; p. 224.
Steam-generating system. L. L. Scott. No. 1,385,845; July 26; v. 288; p. 740.
Steam-generator. B. H. Leister. No. 1,383,408; July 5; v. 288; p. 31.
Steam hydraulic intensifier. T. W. Hand. No. 1,383,399; July 5; v. 288; p. 29.
Steam-trap. H. Willematyn. No. 1,384,715; July 12; v. 288; p. 352.
Steel clamp. J. C. Jacoby. No. 1,384,664; July 12; v. 288; p. 342.
Steel fishing-rod. H. E. Rawson. No. 1,385,149; July 19; v. 288; p. 528.
Steel tie and rail-fastener therefor. W. F. Price. No. 1,383,428; July 5; v. 288; p. 35.
Steering mechanism. A. H. Hofer and L. T. Wickey. No. 1,385,765; July 26; v. 288; p. 728.
Steering mechanism for trailers. G. E. Conrad. No. 1,385,667; July 26; v. 288; p. 704.
Steering-post-locking means. A. E. Miller. No. 1,384,707; July 12; v. 288; p. 351.
Steering-post-positioning means. C. P. Stanbon. No. 1,383,348; July 5; v. 288; p. 18.
Steering-wheel-spider puller. C. P. Brockway. No. 1,383,382; July 5; v. 288; p. 26.
Stenographer's note-holder. L. Schingel. No. 1,384,861; July 19; v. 288; p. 463.
Stereoscopic projection apparatus. H. Dickinson and G. A. W. Hepburn. No. 1,383,538; July 5; v. 288; p. 57.
Sterilizer. C. R. Pelton and J. A. Hand. No. 1,384,403; July 12; v. 288; p. 286.
Sterilizing outfit. W. T. Power. No. 1,384,849; July 19; v. 288; p. 460.
Stimulant and fertilizer, Plant. J. R. Campbell. No. 1,384,990; July 19; v. 288; p. 490.
Stirrup. W. E. Olmstead. No. 1,384,627; July 12; v. 288; p. 334.
Stock-tank. W. H. Cotton. No. 1,383,530; July 5; v. 288; p. 56.
Stoker. M. Alpern. No. 1,384,656; July 12; v. 288; p. 340.
Stoker, Underfeed. W. E. De Voe. No. 1,385,433; July 26; v. 288; p. 656.
Stokers, Safety connecting-rod for automatic. M. Murphy. No. 1,384,270; July 12; v. 288; p. 250.
Stone or ores, Roller-mill for crushing material such as. C. M. Conder and G. T. Vivian. No. 1,383,529; July 5; v. 288; p. 56.
Stool. F. P. Riley. No. 1,384,675; July 12; v. 288; p. 344.
Stool, Bench-. M. L. Cochran. No. 1,385,903; July 26; v. 288; p. 751.
Stool, Gardener's. A. J. Hurd. No. 1,383,542; July 5; v. 288; p. 58.
Stop, Automatic. F. Malocsay. No. 1,383,651; July 5; v. 288; p. 81.
Stopper for vacuum-bottles. R. S. Porter. No. 1,385,394; July 26; v. 288; p. 648.
Storage-battery cells, Protective covering for. C. P. Hatfield. No. 1,384,063; July 12; v. 288; p. 216.
Storage-battery connector. W. H. Palmer, Jr. No. 1,383,845; July 5; v. 288; p. 122.
Storage-battery container. J. M. Ahlgren. No. 1,384,816; July 19; v. 288; p. 453.
Storing and displaying device, Information. W. C. Cutler. No. 1,385,116; July 19; v. 288; p. 518.
Stove. G. Hammer. No. 1,385,641; July 26; v. 288; p. 678.

Tilling-tool. G. Sykes. No. 1,384,220; July 12; v. 288; p. 248.
Time and cost computing and recording mechanism. P. Wilson. No. 1,385,414; July 26; v. 288; p. 651.
Time combination-lock. C. Miller. No. 1,384,397; July 12; v. 288; p. 285.
Time control. J. L. Winkler. No. 1,383,893; July 5; v. 288; p. 132.
Time-indicating and signaling device, Automatic. C. M. Crook. No. 1,383,533; July 5; v. 288; p. 56.
Time-indicating and signaling instrument, Automatic. C. M. Crook and J. R. Gammeter. No. 1,383,534; July 5; v. 288; p. 57.
Time-release mechanism. R. C. Leake. No. 1,384,533; July 12; v. 288; p. 313.
Timer, Engine-. P. J. Dell, Jr. No. 1,385,907; July 26; v. 288; p. 752.
Tire. W. L. Kemper. No. 1,385,252; July 19; v. 288; p. 543.
Tire. S. D. Master. No. 1,385,882; July 26; v. 288; p. 747.
Tire. V. Kubelka. No. 1,383,822; July 5; v. 288; p. 117.
Tire, Antiskid-. C. P. Salgee. No. 1,385,926; July 26; v. 288; p. 750.
Tire-armor. J. M. Baker. No. 1,384,817; July 19; v. 288; p. 455.
Tire armor and antiskid device. A. Remar. No. 1,385,753; July 26; v. 288; p. 722.
Tire-beads, Reinforcement for. M. A. Marquette. No. 1,385,383; July 26; v. 288; p. 645.
Tire-carrier-locking device. H. Walker. No. 1,384,962; July 19; v. 288; p. 486.
Tire-chain retainer. G. E. Sellers. No. 1,384,639; July 12; v. 288; p. 336.
Tire construction. O. Zancan. No. 1,385,653; July 26; v. 288; p. 702.
Tire-core. W. A. Black. No. 1,384,508; July 12; v. 288; p. 308.
Tire, Cushion. D. W. Kirby. No. 1,383,818; July 5; v. 288; p. 116.
Tire, Emergency automobile-. C. G. Gerlach. No. 1,385,612; July 26; v. 288; p. 693.
Tire-finishing mechanism. M. A. Replogle. No. 1,385,975; July 26; v. 288; p. 765.
Tire for vehicle-wheels, Spring-. A. K. Lovell. No. 1,385,620; July 26; v. 288; p. 696.
Tire-insert, Puncture-proof. R. B. Disbrow. No. 1,384,243; July 12; v. 288; p. 253.
Tire-loosening machine. A. O. Abbott, Jr. No. 1,384,419; July 12; v. 288; p. 290.
Tire-molds, Tire-supporting device for. A. H. Harris. No. 1,384,463; July 12; v. 288; p. 299.
Tire, Pneumatic. T. D. Frazier. No. 1,383,458; July 5; v. 288; p. 42.
Tire, Pneumatic. N. Jackson. No. 1,384,184; July 12; v. 288; p. 131.
Tire protector, Pneumatic-. P. Evancho. No. 1,383,612; July 5; v. 288; p. 73.
Tire-removing tool. O. A. Norlund. No. 1,385,948; July 26; v. 288; p. 760.
Tire, Resilient. W. B. Shaw. No. 1,384,678; July 12; v. 288; p. 345.
Tire-rim carrier. C. F. Wasserfallen. No. 1,384,222; July 12; v. 288; p. 249.
Tire, Spring-. W. E. Stout. No. 1,385,804; July 26; v. 288; p. 732.
Tire-stripping machines, Control for. M. Davis. No. 1,384,431; July 12; v. 288. p. 293.
Tire structure. H. E. Penwell. No. 1,384,484; July 12; v. 288; p. 303.
Tire-tread. C. L. Landon. No. 1,384,262; July 12; v. 288; p. 257.
Tire, Vehicle-. A. B. and H. A. Broluska. No. 1,384,551; July 12; v. 288; p. 317.
Tire, Vehicle-. E. G. Hulse. No. 1,384,759; July 19; v. 288; p. 442.
Tires, Air-compressor for motor-vehicle. M. J. B. Barbarou. No. 1,385,832; July 19; v. 288; p. 558.
Tires, Antiskid device for auto-. W. F. Staggers. No. 1,384,358; July 12; v. 288; p. 277.
Tires, Armor for vehicle-. W. G. Stockham. No. 1,385,159; July 19; v. 288; p. 525.
Tires, Armor-reliner for. S. A. Rouse and H. C. Stockel. No. 1,385,890; July 26; v. 288; p. 749.
Tires, Dust-cap for pneumatic. W. O. Vivarttas. No. 1,385,055; July 19; v. 288; p. 503.
Tires from rims, Removing. R. R. Jones. No. 1,385,079; July 19; v. 288; p. 508.
Tires, Material for producing patches for pneumatic. J. J. Voorhees. No. 1,385,805; July 26; v. 288; p. 732.
Tires, Repairing device for bicycle-. R. Stafiez. No. 1,385,591; July 26; v. 288; p. 688.
Tires, Temporary or permanent support for vehicle solid band-. B. and S. H. Lee. No. 1,385,920; July 26; v. 288; p. 754.
Tobacco-box. H. E. Brunelle. No. 1,384,937; July 19; v. 288; p. 478.
Tobacco-receptacle. A. J. Guill. No. 1,383,935; July 5; v. 288; p. 140.
Toilet-article package. A. Siris. No. 1,383,867; July 5; v. 288; p. 126.
Tomatoes, Peeling. W. D. Bost and H. M. Miller. No. 1,384,379; July 12; v. 288; p. 281.
Tone-arm. J. W. Booth. No. 1,385,358; July 26; v. 288; p. 640.
Tong, Back-up or go-around. H. Corrigan. No. 1,384,688; July 12; v. 288; p. 347.
Tool, Adjustable. J. F. Semones. No. 1,385,477; July 26; v. 288; p. 665.
Tool, Dental. W. A. Kelsey. No. 1,385,747; July 26; v. 288; p. 720.
Tool, Garden-. A. Miller. No. 1,385,089; July 19; v. 288; p. 510.
Tool, Hand-. W. A. Bernard. No. 1,385,516; July 26; v. 288; p. 673.
Tool-handle. J. E. Burndahl. No. 1,384,887; July 19; v. 288; p. 468.
Tool-handle. H. Rosenberg. No. 1,384,154; July 12; v. 288; p. 235.
Tool-holder. L. D. Luttmer. No. 1,384,669; July 12; v. 288; p. 343.

Tool-holder and cutter, Combined. F. O. Hoagland. No. 1,383,630; July 5; v. 288; p. 77.
Tools, Hammering-handle with interchangeable. J. W. Mosher. No. 1,384,330; July 12; v. 288; p. 271.
Tooth, Artificial. A. N. Davis. No. 1,383,696; July 5; v. 288; p. 91.
Tooth, Artificial. C. E. Tuttle. No. 1,384,282; July 12; v. 288; p. 261.
Tooth, Bridge-. L. H. Sprinkle. No. 1,384,869; July 19; v. 288; p. 464.
Toothbrush. J. H. Bowman. No. 1,384,936; July 19; v. 288; p. 478.
Toothbrush and paste-container, Combined. A. Wildmaier. No. 1,385,767; July 26; v. 288; p. 724.
Toothpick-holder. G. W. Walker. No. 1,385,288; July 19; v. 288; p. 550.
Torch, Hand-. M. Volkes. No. 1,384,171; July 12; v. 288; p. 238.
Torpedo, Aerial. L. Giles and S. H. Woodruff. No. 1,384,559; July 12; v. 288; p. 319.
Torpedo for transporting and firing explosives. W. B. Bowker. No. 1,385,109; July 19; v. 288; p. 515.
Torpedo-placing device. E. R. Davenport. No. 1,383,535; July 5; v. 288; p. 57.
Torpedo, Railway-. C. E. Franklin. No. 1,383,614; July 5; v. 288; p. 74.
Torpedo, Railway signal-. F. Dutcher. No. 1,385,312; July 19; v. 288; p. 555.
Torpedo, Railway signal-. F. Dutcher. No. 1,385,313; July 19; v. 288; p. 555.
Torpedo, Railway signal-. F. Dutcher. No. 1,385,314; July 19; v. 288; p. 555.
Torpedo, Railway signal-. F. Dutcher. No. 1,385,315; July 19; v. 288; p. 555.
Torpedo, Railway signal-. F. Dutcher. No. 1,385,316; July 19; v. 288; p. 555.
Towel-rack. E. T. Breghan. (Reissue.) No. 15,147; July 12; v. 288; p. 356.
Towel-vending machine. C. E. Shanklin and C. B. Burge. No. 1,385,063; July 19; v. 288; p. 502.
Towing device. E. G. Hines and C. S. Myers. No. 1,384,835; July 19; v. 288; p. 457.
Toy. C. W. Blackburn. No. 1,385,517; July 26; v. 288; p. 673.
Toy. N. Chapelaine. (Reissue.) No. 15,148; July 12; v. 288; p. 356.
Toy. F. Fowler. No. 1,383,795; July 5; v. 288; p. 112.
Toy. J. G. Liebert. No. 1,383,316; July 5; v. 288; p. 12.
Toy. D. F. Morgan. No. 1,385,883; July 26; v. 288; p. 748.
Toy. J. E. Rogers. No. 1,385,275; July 19; v. 288; p. 548.
Toy. D. Zalden. No. 1,383,780; July 5; v. 288; p. 109.
Toy, Balancing. C. Mathieu. No. 1,384,476; July 12; v. 288; p. 301.
Toy bed. S. F. Kohn. No. 1,383,727; July 5; v. 288; p. 98.
Toy building-block. W. S. Shields. No. 1,385,154; July 19; v. 288; p. 524.
Toy building-block. W. S. Shields. No. 1,385,155; July 19; v. 288; p. 524.
Toy, Dancing. H. C. Cramer. No. 1,383,532; July 5; v. 288; p. 55.
Toy, Flying. O. H. Eller. No. 1,385,073; July 19; v. 288; p. 507.
Toy horse. D. R. Frick. No. 1,385,320; July 19; v. 288; p. 556.
Toy, Mechanical. P. A. Marshall. No. 1,385,634; July 26; v. 288; p. 698.
Toy, Paper and like. T. Mathews. No. 1,383,836; July 5; v. 288; p. 120.
Toy push-vehicle. F. R. Baier. No. 1,385,107; July 19; v. 288; p. 514.
Toy, Revolving. G. C. Lasares. No. 1,385,559; July 26; v. 288; p. 682.
Toy scenery-box. J. Zieba. No. 1,384,293; July 12; v. 288; p. 264.
Toy vehicle. J. W. Bellairs. No. 1,384,738; July 19; v. 288; p. 437.
Toy vehicle. C. J. Gordon. No. 1,383,897; July 5; v. 288; p. 29.
Toy wagon. C. Faust. No. 1,383,457; July 5; v. 288; p. 42.
Toy wheel, Sounding-. G. Pitoni. No. 1,384,334; July 12; v. 288; p. 272.
Toy, Whirling-bell. W. F. Blake. No. 1,383,283; July 5; v. 288; p. 5.
Toy whistle. J. C. Taylor. No. 1,383,878; July 5; v. 288; p. 128.
Track-circuit system. W. W. Macfarlane. No. 1,383,319; July 5; v. 288; p. 12.
Track-circuit system. W. W. Macfarlane. No. 1,383,320; July 5; v. 288; p. 13.
Tracking device, Automatic. W. Dupré. No. 1,383,390; July 5; v. 288; p. 28.
Traction device. H. E. Houston. No. 1,383,948; July 5; v. 288; p. 143.
Traction-wheel. H. W. Kardell. No. 1,385,455; July 26; v. 288; p. 660.
Traction-wheel. J. G. Vincent. No. 1,384,170; July 12; v. 288; p. 238.
Tractor. J. Barletta. No. 1,385,108; July 19; v. 288; p. 514.
Tractor. S. R. Du Brie. No. 1,385,240; July 19; v. 288; p. 542.
Tractor. H. A. Harrah. No. 1,384,951; July 19; v. 288; p. 481.
Tractor. H. A. Harrah. No. 1,384,952; July 19; v. 288; p. 481.
Tractor. L. F. Nielsen. No. 1,384,968; July 19; v. 288; p. 484.
Tractor. H. Partridge. No. 1,383,563; July 5; v. 288; p. 63.
Tractor. A. D. Ray. No. 1,383,425; July 5; v. 288; p. 35.
Tractor. J. C. Wooley. No. 1,385,417; July 26; v. 288; p. 652.
Tractor and trailer assemblage. F. J. Faulhaber. No. 1,383,709; July 5; v. 288; p. 94.
Tractor-drawn tillage implement. F. C. Warne. No. 1,384,790; July 19; v. 288; p. 448.
Tractor, Motor-. J. and C. J. Bamford. No. 1,384,986; July 19; v. 288; p. 489.
Tractor, Plowing-. C. Cunningham. No. 1,385,668; July 26; v. 288; p. 407.
Tractors, Safety device for. R. D. Jeffries. No. 1,384,957; July 19; v. 288; p. 482.
Tractor-seat. S. J. Coughran. No. 1,385,521; July 26; v. 288; p. 674.
Tractor-wheels, Resistance appendage for. W. J. Jones. No. 1,384,068; July 12; v. 288; p. 217.
Tractors, Bull-gear dust-shield for. J. L. Goodwin. No. 1,384,189; July 12; v. 288; p. 242.
Tractors, Top and fender for. N. Anderson. No. 1,384,735; July 19; v. 288; p. 437.
Traffic signal system. R. E. Wetter. No. 1,385,807; July 26; v. 288; p. 733.
Train-control apparatus, Automatic. A. L. Brookins. No. 1,384,552; July 12; v. 288; p. 317.
Train-controlling device. F. C. Williams. No. 1,385,059; July 19; v. 288; p. 504.
Train-controlling device, Automatic. A. L. Bower. No. 1,384,231; July 12; v. 288; p. 251.
Train signaling and stopping mechanism. F. C. Williams. No. 1,383,362; July 5; v. 288; p. 21.
Train-speed-controlling mechanism, Automatic. F. C. Williams. No. 1,385,060; July 19; v. 288; p. 504.
Train stop-signal. M. Culbertson. No. 1,383,908; July 5; v. 288; p. 124.
Tramway and other rails, Heat treatment of. W. M. Mordey. No. 1,383,963; July 5; v. 288; p. 146.
Translating device, Energy-. W. M. White. No. 1,383,361; July 5; v. 288; p. 21.
Transmission-brake-operating mechanism. G. C. Brown. No. 1,383,385; July 5; v. 288; p. 27.
Transmission-controlling means, Automatic. J. F. Toomey and C. S. Demarest. No. 1,384,579; July 12; v. 288; p. 323.
Transmission cover lock. G. C. Jensen. No. 1,385,553; July 26; v. 288; p. 681.
Transmission, Mechanical. D. P. Demarne. No. 1,385,247; July 19; v. 288; p. 542.
Transmission mechanism for motors. W. C. Farnum. No. 1,383,705; July 5; v. 288; p. 93.
Transmission-shaft construction and means for lubricating the same, System of vertical-. W. A. Doble. No. 1,383,989; July 5; v. 288; p. 152.

Valve. H. E. Popp. No. 1,383,482; July 5; v. 288; p. 47.
Valve. E. H. Spencer. No. 1,383,871; July 5; v. 288; p. 127.
Valve. F. A. Warter. No. 1,385,058; July 19; v. 288; p. 504.
Valve, Alarm check-. L. M. Lewis. No. 1,385,460; July 26; v. 288; p. 662.
Valve and heater, Auxiliary-air. D. J. Pledger. No. 1,384,211; July 12; v. 288; p. 246.
Valve and locking device therefor. W. T. Smith. No. 1,383,969; July 5; v. 288; p. 127.
Valve, Automatic. E. W. Harper. No. 1,384,950; July 19; v. 288; p. 481.
Valve, Automatic gas-. A. G. Maranville. No. 1,384,268; July 12; v. 288; p. 259.
Valve, Automatic cut-off. S. C. Carr. No. 1,385,112; July 19; v. 288; p. 515.
Valve, Brake-pipe vent-. T. H. Thomas. No. 1,384,980; July 19; v. 288; p. 476.
Valve, Feed-water-regulator. V. V. Veenschoten. No. 1,384,414; July 12; v. 288; p. 289.
Valve, Flush-. E. L. Kellan. No. 1,385,456; July 26; v. 288; p. 660.
Valve for angle-cocks, Double-pressure vent-. E. L. Evans. No. 1,385,122; July 19; v. 288; p. 518.
Valve-gear for motors. A. Afanador. No. 1,385,104; July 19; v. 288; p. 514.
Valve-governor. A. Arnold. No. 1,384,113; July 12; v. 288; p. 226.
Valve-grinder. J. Miller. No. 1,384,624; July 12; v. 288; p. 333.
Valve, House-service. T. J. Sullivan. No. 1,384,645; July 12; v. 288; p. 338.
Valve-housing or handle-lock for pneumatic tools. A. Levedahl. No. 1,385,178; July 19; v. 288; p. 529.
Valve, Hydraulic. E. Mathieu. No. 1,385,019; July 19; v. 288; p. 496.
Valve, Hydraulic. D. F. Stayman. No. 1,385,932; July 26; v. 288; p. 757.
Valve-lifter. R. L. Criswell. No. 1,384,518; July 12; v. 288; p. 310.
Valve-lifter. T. Otsuka. No. 1,384,969; July 19; v. 288; p. 485.
Valve-lifting device. H. Egloff. No. 1,385,436; July 26; v. 288; p. 656.
Valve-lifting device. W. W. McNaughton. No. 1,384,585; July 12; v. 288; p. 314.
Valve mechanism, Automatic. J. C. Hansen-Ellehammer. No. 1,384,462; July 12; v. 288; p. 299.
Valve mechanism, Electro. C. P. Frey. No. 1,384,443; July 12; v. 288; p. 295.
Valve, Mixing-. S. N. Holm. No. 1,384,132; July 12; v. 288; p. 231.
Valve, Muffler-cut-out. J. W. Horine. No. 1,384,893; July 19; v. 288; p. 469.
Valve of the annular type. O. Ohlsson. No. 1,383,842; July 5; v. 288; p. 121.
Valve operating and locking device. W. G. Wiesener. No. 1,384,369; July 12; v. 288; p. 280.
Valve-packing grease. E. C. Weisgerber. No. 1,384,714; July 12; v. 288; p. 352.
Valve, Plate-. W. Prellwitz. No. 1,385,147; July 19; v. 288; p. 523.
Valve-seat retainer. F. W. Parsons. No. 1,385,467; July 26; v. 288; p. 663.
Valve-seating machine, Portable locomotive-. J. J. Mooney and R. E. Bennett. No. 1,385,344; July 19; v. 288; p. 561.
Valve, Sleeve-. J. H. Stockholder. No. 1,385,401; July 26; v. 288; p. 649.
Valve-spring holder. W. A. Leahy. No. 1,384,472; July 12; v. 288; p. 301.
Valve-spring lifter. E. E. Tibbets. No. 1,384,648; July 12; v. 288; p. 339.
Valve structure, Check-. W. J. Schlacks. No. 1,384,096; July 12; v. 288; p. 223.
Valve, Thermostatically-controlled. R. D. Smith. No. 1,383,573; July 5; v. 288; p. 65.
Valve, Throttle-. C. J. Pilliod. No. 1,384,567; July 12; v. 288; p. 321.
Valves, Device for removing puppet-. C. J. Bousfield. (Reissue.) No. 15,162; July 26; v. 288; p. 765.
Valves, Making flexible sleeve-. W. Noble. No. 1,383,747. July 5; v. 288; p. 102.
Vaporizer. J. F. Hamer. No. 1,385,680; July 26; v. 288; p. 707.
Vaporizer, Oil-. J. J. Weithaus. No. 1,384,004; July 5; v. 288; p. 155.
Varnished surfaces, Polish for. C. Rosenthal. No. 1,383,427; July 5; v. 288; p. 35.
Vault closure, Burial-. H. C. Sponhauer. No. 1,384,279; July 12; v. 288; p. 261.
Vehicle. J. H. Collins. No. 1,385,815; July 26; v. 288; p. 734.

Vehicle attachment. G. B. Perkins. No. 1,383,847; July 5; v. 288; p. 122.
Vehicle attachment. W. C. Smith. No. 1,383,668; July 5; v. 288; p. 85.
Vehicle attachment. C. Suhr. No. 1,384,576; July 12; v. 288; p. 322.
Vehicle-body. E. H. Belden. No. 1,383,374; July 5; v. 288; p. 24.
Vehicle-body. C. W. McKinley. No. 1,383,412; July 5; v. 288; p. 32.
Vehicle-body, Convertible. G. Z. Dyer. No. 1,385,317; July 19; v. 288; p. 555.
Vehicle-body, Convertible. F. Fallace. No. 1,385,909; July 26; v. 288; p. 752.
Vehicle-body hanger. A. Montel. No. 1,383,415; July 5; v. 288; p. 33.
Vehicle, Child's. A. T. Tirado. No. 1,385,761; July 26; v. 288; p. 723.
Vehicle-dump. J. R. Grider. No. 1,383,934; July 5; v. 288; p. 140.
Vehicle extension drive-shaft, Motor- G. S. Davison. (Reissue.) No. 15,149; July 12; v. 288; p. 356.
Vehicle for children. L. Johns. No. 1,383,307; July 5; v. 288; p. 10.
Vehicle, Motor-. F. J. Druar. No. 1,384,309; July 12; v. 288; p. 287.
Vehicle, Motor-. A. R. Lang. No. 1,383,644; July 5; v. 288; p. 80.
Vehicle, Motor-. A. J. Purdy. No. 1,384,087; July 12; v. 288; p. 221.
Vehicle, Motor-. J. G. Vincent. No. 1,384,283; July 12; v. 288; p. 262.
Vehicle of the motor-truck type, Road-. N. Milner. No. 1,384,269; July 12; v. 288; p. 259.
Vehicle propulsion mechanism. F. Raspotnik. No. 1,383,661; July 5; v. 288; p. 83.
Vehicle, Tip-. W. Barnett and J. Florendine. No. 1,383,513; July 5; v. 288; p. 52.
Vehicle-top frame. E. Lover. No. 1,385,138; July 19; v. 288; p. 521.
Vehicle-wheel. J. Hoffman. No. 1,385,171; July 19; v. 288; p. 527.
Vehicle-wheel. E. Kemp. No. 1,383,991; July 5; v. 288; p. 152.
Vehicle-wheel. K. G. Knappen. No. 1,383,405; July 5; v. 288; p. 31.
Vehicle-wheel. H. D. Rey. No. 1,385,710; July 26; v. 288; p. 713.
Vehicle-wheel, &c. B. F. Seymour. No. 1,384,783; July 19; v. 288; p. 447.
Vehicle-wheels, Auxiliary tread element for. E. S. Howard. No. 1,385,918; July 26; v. 288; p. 754.
Vehicles, Auxiliary shield for motor-. D. E. Bharucha. No. 1,383,282; July 5; v. 288; p. 4.
Vehicles, Brace for shipping. A. H. Levene. No. 1,385,013; July 19; v. 288; p. 495.
Vehicles, Bumper for motor-. T. E. Lind. No. 1,383,470; July 5; v. 288; p. 44.
Vehicles, Device for checking the rocking and rebounding of. E. E. Lyon. No. 1,385,565; July 26; v. 288; p. 683.
Vehicles, Disk wheel for. W. H. Klocke. No. 1,383,728; July 5; v. 288; p. 98.
Vehicles, Emergency-brake for. C. L. McDonald. No. 1,385,877; July 26; v. 288; p. 747.
Vehicles, Heavy-traction attachment suitable for motor road-. R. Reynolds and H. Gibbs. No. 1,383,566; July 5; v. 288; p. 63.
Vehicles, Lockable steering-wheel for motor-. J. Lawson. No. 1,383,550; July 5; v. 288; p. 60.
Vehicles, Radiator for motor-. J. G. Vincent. No. 1,384,285; July 12; v. 288; p. 262.
Vehicles, Signal-light for. J. Davis. No. 1,383,606; July 5; v. 288; p. 72.
Vehicles, Speed control for motor-. E. J. Crawford. No. 1,384,730; July 12; v. 288; p. 355.
Vehicles, Spring for motor-. D. H. Montgomery. No. 1,384,146; July 12; v. 288; p. 233.
Vehicles, Sprinkler attachment for. I. G. Howell. No. 1,385,684; July 26; v. 288; p. 708.
Vehicles, Steering and coupling connection for trailer-. C. G. Clement. No. 1,385,361; July 26; v. 288; p. 641.
Vehicles, Tractor attachment for motor-. L. A. Sprague. No. 1,384,164; July 12; v. 288; p. 237.
Vending-machine. M. B. Baird. No. 1,385,419; July 26; v. 288; p. 653.
Vending-machine. F. C. Bates. No. 1,384,586; July 12; v. 288; p. 325.
Vending-machine. A. D. Grover. No. 1,385,822; July 26; v. 288; p. 735.
Vending-machine. G. H. Matchett. No. 1,385,087; July 19; v. 288; p. 510.
Vending-machine. L. M. Parkhurst. No. 1,383,996; July 5; v. 288; p. 153.
Vending-machine. W. G. Templeton. No. 1,385,933; July 26; v. 288; p. 757.

Purifying the air in rooms, Metal dishes for disseminating vapors for. L. Gudeman. No. 144,789; July 19; v. 288; p. 618.
Puttees, Spiral. Lockhart Spiral Service Leggings, Inc. No. 144,834; July 19; v. 288; p. 619.
Quilts, sheets, pillow-cases. T. B. Draper. No. 144,748; July 19; v. 288; p. 617.
Razor-strops. Simmons Hardware Company. No. 144,936; July 19; v. 288; p. 623.
Razors. E. Morris. No. 145,161; July 26; v. 288; p. 815.
Razors and hair-trimmers, Safety-. Howard Specialties Company. No. 145,116; July 26; v. 288; p. 814.
Record-book. Motor-Log. No. 144,868; July 19; v. 288; p. 620.
Remedy, Stomach. M. Barzak. No. 144,546; July 12; v. 288; p. 423.
Resistance wires and ribbons. Electrical Alloy Company. No. 144,564; July 12; v. 288; p. 423.
Ribbon and textile fabric in the piece, towels, tapestry, &c. Bernhard Ulmann Co. No. 144,956; July 19; v. 288; p. 623.
Ribbons and certain named piece goods. Johnson Cowdin & Company. No. 145,122; July 26; v. 288; p. 814.
Ribbons and goods in the piece. Johnson, Cowdin & Company. No. 144,818; July 19; v. 288; p. 619.
Ribbons and piece goods of silks and satins and mixtures. Johnson Cowdin & Company. No. 145,123; July 26; v. 288; p. 814.
Ribbons in the piece, Silk and cotton. Rodstein and Hyman. No. 145,189; July 26; v. 288; p. 816.
Ribbons, silk and satin piece goods. Johnson, Cowdin & Company. No. 144,815; July 19; v. 288; p. 619.
Rice. Pacific Rice Growers Association. No. 144,888; July 19; v. 288; p. 621.
Rings, Finger-. Vandervoort Brothers. No. 144,962; July 19; v. 288; p. 623.
Rings, Wedding-. J. A. Meyers & Co. No. 144,860; July 19; v. 288; p. 620.
Roasting-pots. Griswold Mfg. Co. No. 145,267; July 26; v. 288; p. 822.
Roofing, Prepared. Heppes-Nelson Roofing Company. Nos. 144,579–80; July 12; v. 288; p. 424.
Root-beer and ginger-ale. J. B. Council. No. 144,735; July 19; v. 288; p. 616.
Rope, cord, and twine manufactured from vegetable fiber. American Manufacturing Company. No. 144,507; July 5; v. 288; p. 197.
Rope made from fiber. Tubbs Cordage Company. No. 144,955; July 19; v. 288; p. 623.
Rope, twine, and cordage of vegetable fiber. Columbian Rope Co. No. 144,518; July 5; v. 288; p. 198.
Rubber bands, Stationers'. B. F. Goodrich Company. No. 146,102; July 26; v. 288; p. 818.
Rubber boots and shoes. Bourn Rubber Co. No. 144,989; July 19; v. 288; p. 626.
Rubber boots and shoes. Hood Rubber Company. No. 144,527; July 5; v. 288; p. 199.
Rubber gloves. Wilson Rubber Company. Nos. 145,021–3; July 19; v. 288; p. 630.
Rubber hose. B. F. Goodrich Company. Nos. 144,781–2; July 19; v. 288; p. 618.
Rubber hose, rubber and asbestos packing, and brake-lining. Union Rubber & Asbestos Co. No. 144,540; July 5; v. 288; p. 200.
Rubber nipples. Revere Rubber Company. No. 144,456; July 5; v. 288; p. 194.
Rubber patches, Sheet-. Jones & Jones Company. No. 145,124; July 26; v. 288; p. 814.
Rubber stamps. Horder's Incorporated. No. 144,797; July 19; v. 288; p. 618.
Rubber tires and tubes. Cupples Company, Manufacturers. No. 144,521; July 5; v. 288; p. 198.
Rugs and carpets of textile material. M. J. Whittall Associates. Nos. 144,541–2; July 5; v. 288; p. 200.
Rugs, Wool. Sears, Roebuck and Co. No. 145,217; July 26; v. 288; p. 817.
Rust-solvent and lubricant. Halstead Specialties Company. No. 144,793; July 19; v. 288; p. 618.
Sales-registers, Pocket. J. L. Morris. No. 144,867; July 19; v. 288; p. 620.
Salve for aid in congestion and inflammation, &c. J. H. Cole. No. 144,559; July 12; v. 288; p. 423.
Salve for cuts, sore throat, &c. C. E. Zipperer. No. 144,653; July 12; v. 288; p. 426.
Salve for hemorrhoids. S. Basso. No. 144,341; July 5; v. 288; p. 191.
Salve for piles, Medicinal. W. M. Bowman. No. 144,552; July 12; v. 288; p. 423.
Sateen in the piece. Sears, Roebuck and Co. No. 144,467; July 5; v. 288; p. 195.
Satins in the piece. T. J. Mitchell & Co. No. 145,154; July 26; v. 288; p. 815.
Scales, Weighing-. Detroit Automatic Scale Company. No. 145,257; July 26; v. 288; p. 821.
Screen, Marcus horizontal picking-table. Roberts and Schaefer Company. No. 145,287; July 26; v. 288; p. 825.
Seed, Timothy-. H. E. Conklin. No. 145,064; July 26; v. 288; p. 812.
Serge in the piece, Cotton. Sears, Roebuck and Co. No. 144,925; July 19; v. 288; p. 622.
Shade-cloth, Holland. Interstate Shade Cloth Co.. Nos. 145,269–70; July 26; v. 288; p. 822.
Shampoo. E. E. Whiteley. No. 144,496; July 5; v. 288; p. 196.
Shampooing preparation. L. E. A. Stroud. No. 145,016; July 19; v. 288; p. 629.
Sheets and slates for building purposes. N. V. Eerste Nederlandsche Fabriek van Asbest-Cementplaten. No. 144,754; July 19; v. 288; p. 617.
Sheets, pillow-cases, and cotton piece goods. Naumkeag Steam Cotton Co. No. 145,002; July 19; v. 288; p. 627.
Sheets, pillow-cases, and sheeting. Marshall Field & Company. No. 144,847; July 19; v. 288; p. 620.
Shells, toggle-bolts, &c., Expansion-. Paine Company. No. 145,282; July 26; v. 288; p. 824.
Shirts, Men's and boys'. H. Berger. No. 144,698; July 19; v. 288; p. 615.
Shirts, Men's silk. M. Auerbach & Sons. No. 144,693; July 19; v. 288; p. 615.
Shock-absorbers, Pneumatic. Seibel Air-Spring Company. No. 144,468; July 5; v. 288; p. 195.
Shoe-dressing. A. L. Bauer. No. 144,342; July 5; v. 288; p. 191.
Shoe-dressing, cream, and polishing-paste. Falcon Manufacturing Company. No. 144,757; July 19; v. 288; p. 617.
Shoe-polish. G. J. Pellettiere. No. 145,174; July 26; v. 288; p. 815.
Shoe-polishes. Columbus Polish Mfg. Co. No. 144,728; July 19; v. 288; p. 616.
Shoes, Leather, cloth, or canvas. Brauer Bros. Shoe Company. No. 144,707; July 19; v. 288; p. 616.
Shoe-tips from wear, Metal plates to protect. Tiptoes Corporation. Nos. 145,235–6; July 26; v. 288; p. 817.
Shoes, Leather-. H. E. Davis Co. No. 145,069; July 26; v. 288; p. 812.
Shoes, Men's. Brown Shoe Company. No. 145,050; July 26; v. 288; p. 812.
Silk and cotton piece goods. S. M. Levor & Co. No. 144,830; July 19; v. 288; p. 619.
Silk and silk-mixture fabrics in the piece. Wechsler Barber Silk Co. No. 144,696; July 19; v. 288; p. 615.

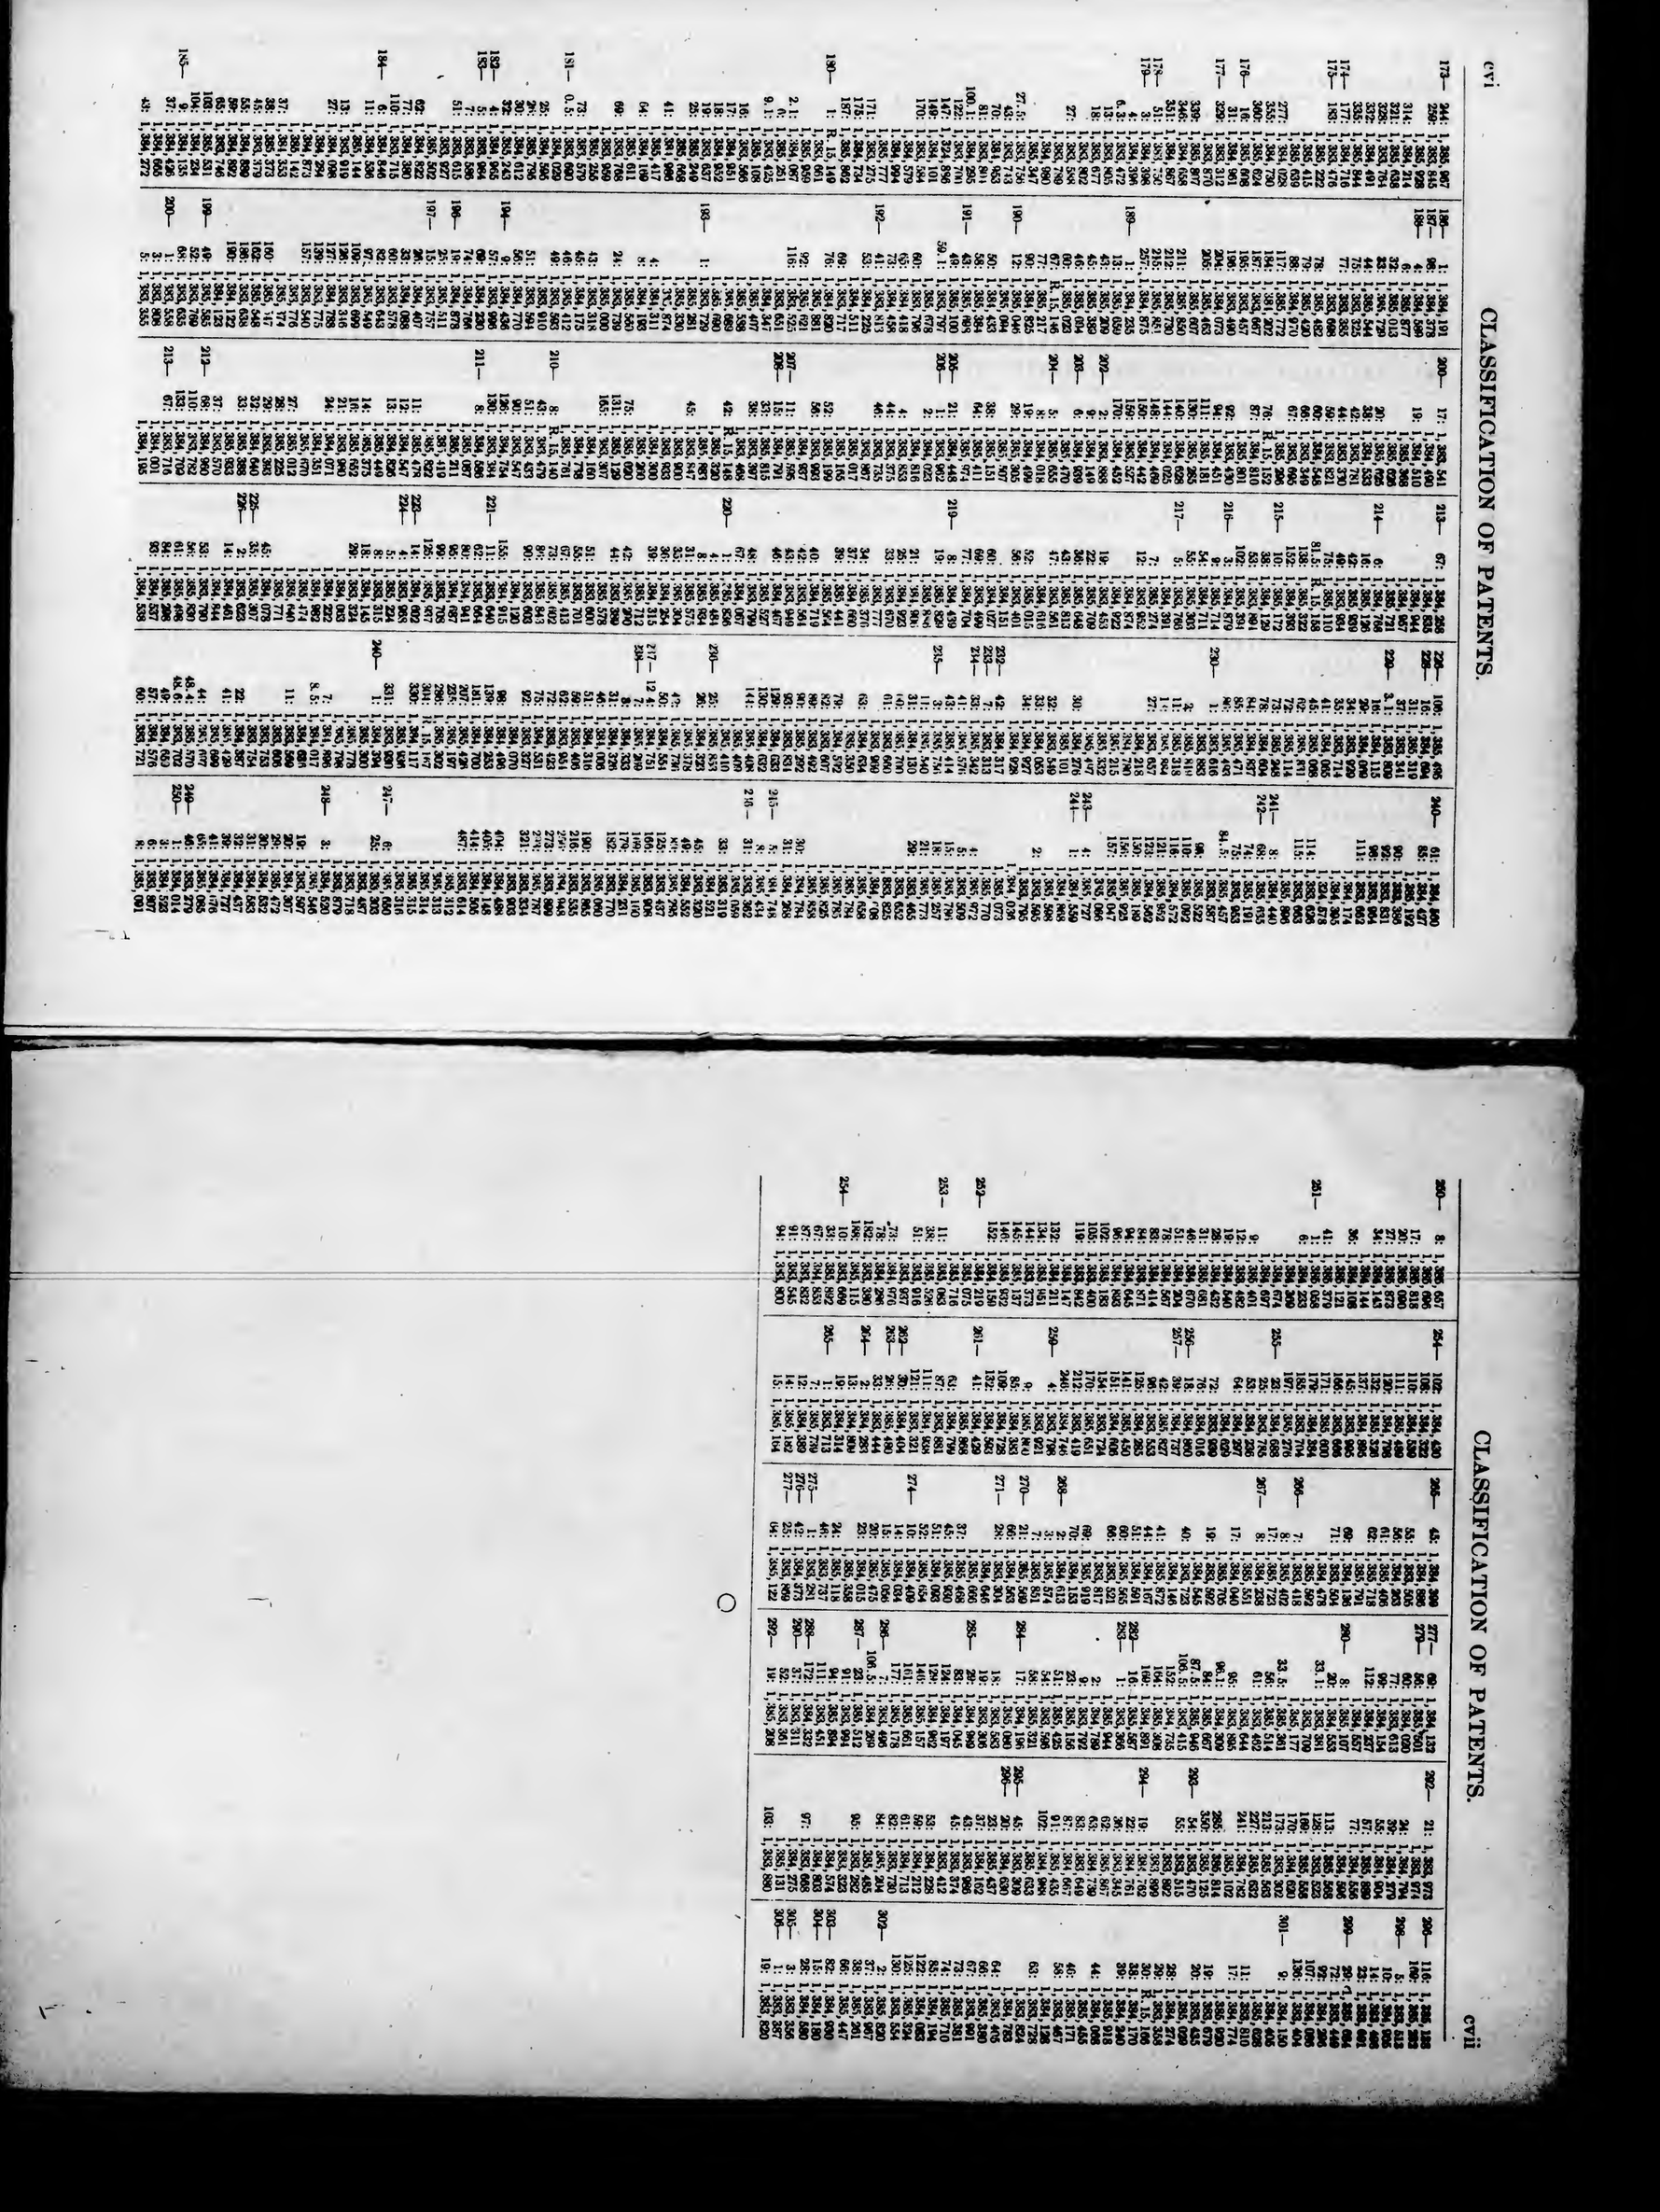
"Nobrush." (For Shoe-Polish.) The Climax Specialties Co. No. 5,660; July 5; v. 288; p. 203.
"No Underwear is B. V. D. Without This Red Woven Label." (For Advertising Purposes for Athletic Underwear.) The B. V. D. Company. No. 5,659; July 5; v. 288; p. 203.
"Old Rubbers Made New." (For Advertising Purposes for Repair-Patches for Rubber Footwear.) Robertson & Sons Shoe Repairers, Inc. No. 5,672; July 5; v. 288; p. 203.
"Price's Grown-Ups." (For Advertising Purposes for Jell-O, a Dessert Preparation.) Genesee Pure Food Company. No. 5,682; July 26; v. 288; p. 828.
"The Cosmetic Oils of Cleopatra Combined in a Cake of Soap." (For Advertising Purposes for Palmolive Soap.) The Palmolive Company. No. 5,670; July 5; v. 288; p. 203.
"The Girl You Stop to Look At." (For Palmolive Soap.) The Palmolive Company. No. 5,678; July 12; v. 288; p. 430.
"The Largest Selling Quality Pencil in the World." (For Advertising Purposes for Lead-Pencils.) American Lead Pencil Company. Nos. 5,655–6; July 5; v. 288; p. 203.
"The 1921 Orange Jell-O." (For Advertising Purposes for Orange Jell-O, a Dessert Preparation.) The Genesee Pure Food Company. No. 5,662; July 5; v. 288; p. 203.
"Virginies Will Delight You. (For Advertising Purposes for Canned Meat-Patties.) Acme Packing Co. No. 5,654; July 5; v. 288; p. 203.
"We Shall Keep Faith." (For Advertising Purposes for Motors.) Hares Motors, Inc. No. 5,676; July 12; v. 288; p. 430.
"We Shall Keep Faith." (For Advertising Purposes for Motor-Cars.) Hares Motors, Inc. No. 5,677; July 12; v. 288; p. 430.
"Westinghouse Batteries." (For Advertising Purposes for Secondary Batteries.) Westinghouse Union Battery Company. No. 5,688; July 12; v. 288; p. 430.
"You Can't Mistake the Flavor." (For Peanut-Butter.) Beech-Nut Packing Co. No. 5,657; July 5; v. 288; p. 203.



CLASSIFICATION OF PATENTS

JULY, 1921.

NOTE.—First number—class, second number—subclass, third number—patent number.

173— 244: 1,385,967 250: 1,385,845
174— 314: 1,385,214 321: 1,385,639 328: 1,385,764 322: 1,384,491 335: 1,384,944
175— 177: 1,384,716 183: 1,385,222
176— 277: 1,385,639 355: 1,384,780 360: 1,385,724 31: 1,384,540 18: 1,385,802 27: 1,385,788
177— 43: 1,384,540 70: 1,384,432 320: 1,385,650 100: 1,384,670 339: 1,385,670 346: 1,384,224 351: 1,385,256
178— 511: 1,387,256
179— 3: 1,384,396 4: 1,384,472 6.3: 1,384,605 13: 1,385,677 18: 1,385,802 27: 1,385,788
180— 1: 1,384,780 9: 1,386,401 12: 1,386,482 19: 1,384,432 28: 1,384,642 31: 1,384,150 40: 1,384,219 75: 1,385,075 82: 1,385,716 94: 1,385,526 96: 1,385,083 102: 1,385,916 105: 1,385,400 119: 1,385,642 132: 1,384,147 134: 1,384,211 144: 1,383,573 145: 1,385,157 146: 1,384,932 152: 1,384,150 161: 1,384,219 167: 1,385,075 170: 1,385,716
181— 0.5: 1,385,526 73: 1,385,579 46: 1,385,266 49: 1,385,902
182— 25: 1,385,796 29: 1,385,531 32: 1,385,243 51: 1,385,965 5: 1,385,586 51: 1,385,615
183— 9: 1,385,984 37: 1,384,135 104: 1,384,224 108: 1,385,531 65: 1,385,746 99: 1,385,892 55: 1,384,899 38: 1,384,436 43: 1,384,272
184— 1: 1,384,667 11: 1,384,196 6: 1,384,846 110: 1,384,380 177: 1,384,715 26: 1,384,407 54: 1,384,077 36: 1,384,853 41: 1,384,573 1: 1,384,846 13: 1,384,944 27: 1,384,294
185— 1,385,415 1,385,639 1,385,873 1,385,142 1,384,553 1,384,373 1,384,902 1,384,914 1,384,531 1,384,272
186— 1: 1,384,536 64: 1,384,044 64: 1,384,122 1,384,778 1,384,673 1,384,284 1,384,873 1,384,135 1,384,436 1,384,666
187— 1,384,222 1,384,639 1,384,780 1,384,724 1,384,667 1,384,674 1,384,697 1,384,482 1,384,432 1,384,150 1,384,211 1,384,147 1,384,451 1,384,083 1,384,526 1,384,916 1,384,400 1,384,642 1,384,211 1,384,573 1,384,157 1,384,932 1,384,219 1,384,075 1,384,716 1,384,526 1,384,579 1,384,994 1,384,418 1,384,224 1,384,531 1,384,746 1,384,892 1,384,135 1,384,436 1,384,666 1,384,272
188— 1: 1,384,430 4: 1,384,322 6: 1,384,630 6: 1,384,489 1,384,766 1,384,320 1,384,144 1,384,143 1,384,108 1,384,121 1,384,370 1,384,056 1,384,253 1,384,240 1,384,674 1,384,697 1,384,401 1,384,540 1,384,432 1,384,150 1,384,219 1,384,075 1,384,716 1,384,526 1,384,579 1,384,994 1,384,418 1,384,224 1,384,531 1,384,746 1,384,892 1,384,135 1,384,436 1,384,666 1,384,272

Notice—Nolan Act—Requirements as to Statements Filed by an Associate Attorney in the United States Under Order No. 2,675, Relating to British Applications.

Department of the Interior,
United States Patent Office,
Washington, D. C., August 1, 1921.

Notice is hereby given that statements intended to comply with Commissioner's Order No. 2,675, (287 O. G., 597,) relative to British applications, when made by associate attorneys in the United States, should set forth that it is based upon information furnished by the applicant or his agent in the foreign country or set forth facts within his personal knowledge.

THOMAS E. ROBERTSON,
Commissioner.

Notice—Pan-American Industrial Property Convention of 1910.

July 30, 1921.

The following communication from the International Trade-Mark Registration Bureau at Habana is herewith published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

INTER AMERICAN HIGH COMMISSION,
UNITED STATES SECTION,
ROOM 153 TREASURY DEPARTMENT,
Washington, D. C., July 27, 1921.

SIR: At the request of the Director of the International Trade-Mark Registration Bureau at Habana, the Honorable Mario Díaz Yrisar, I have the honor officially to inform you that the convention concluded at Buenos Aires August 20, 1910, for the protection of trade-marks has now been ratified by fifteen countries, according to the records of the foreign office of the Argentine Republic, which, by virtue of articles 18 and 19, is the depositary of all records concerning the convention. A list of the fifteen countries that have ratified the convention is attached; it contains also the six republics which signed the convention but have not, up to this time, ratified it, so far as the Argentine Government or the Director of the Habana Bureau is aware.

Respectfully,

C. E. McGUIRE,
Assistant Secretary General.

The honorable the Commissioner of Patents, Washington, D. C.

List of countries which have ratified the Pan-American Trade-Mark Convention: Bolivia, (adhered,) Brazil, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Honduras, Nicaragua, Panama, Paraguay, Peru, Uruguay, United States.

The following countries have not ratified: Mexico, northern group; Salvador, northern group; Argentina, southern group; Colombia, southern group; Chile, southern group; Venezuela, southern group.

TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

4782

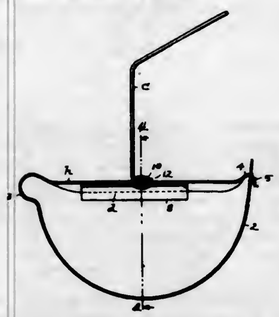
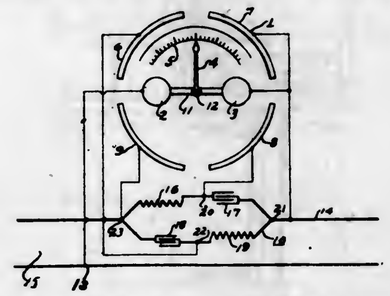
PATENTS



GRANTED AUGUST 2, 1921.

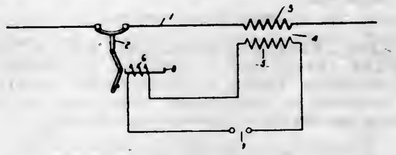
1,385,977. HIGH-VOLTAGE DISCONNECTING-SWITCH. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1919. Serial No. 295,318. 9 Claims. (Cl. 200—48.)

3. A high-potential disconnecting switch comprising an insulating structure of substantially inverted T-shape and conducting members extending diagonally between the outer ends of the legs thereof, one of said members constituting a movable switch arm.



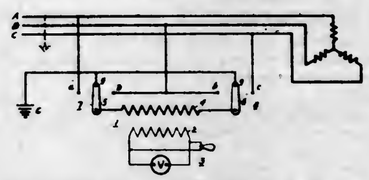
1,385,978. EAVES-TROUGH HANGER. JONATHAN P. ABBOTT, Painesville, Ohio. Filed June 29, 1920. Serial No. 392,617. 3 Claims. (Cl. 108—29.)

1. An eaves trough hanger, having a straight tapered body portion with inwardly extending flanges flared outwardly, a reinforcing piece fitted snugly inside between said flanges against the back thereof and flanged at its side to a greater depth than the flanges on said body and riveted thereto at its middle portion.



1,385,979. ELECTRICAL MEASURING INSTRUMENT. CHESTER T. ALLCUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 2, 1917. Serial No. 151,989. 7 Claims. (Cl. 172—245.)

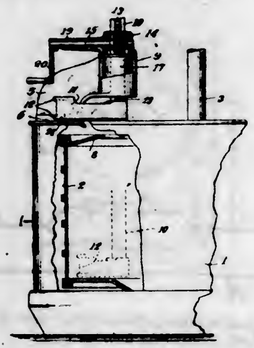
1. In a single-phase electric circuit, the combination with four conducting members, of a phase-splitting bridge connected in series with the circuit, and means for so connecting the said conducting members to the bridge that



a symmetrical rotating electrostatic field is produced between the said conducting members.

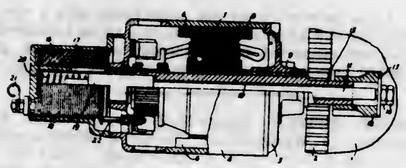
1,385,980. CIRCUIT-INTERRUPTING DEVICE. CHESTER T. ALLCUTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1917. Serial No. 189,344. 3 Claims. (Cl. 175—294.)

1. In an electric circuit, the combination with a circuit interrupter and a trip coil therefor, of a series transformer operatively connected to the circuit, and a spark gap connected between the transformer and the trip coil.



1,385,981. SWITCH. JAMES M. BROWN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1917. Serial No. 195,248. 3 Claims. (Cl. 175—183.)

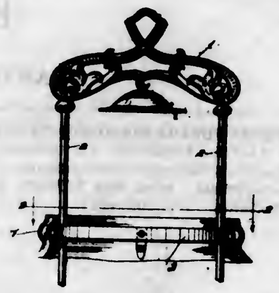
1. The combination with an indicating device and a plurality of circuits, of a ground conductor, two switches each of which comprises one movable contact member and a plurality of stationary contact terminals, one of the said stationary contact terminals of each switch being operatively connected to the ground conductor and the other terminals being connected to the circuits, a transformer having its primary winding connected in series with the stationary contact terminals and its secondary winding connected to the indicating device, and means



whereby the movable contact members may selectively engage the stationary contact terminals to determine, by means of the indicating device, a ground on, and the voltage of, any of the circuits.

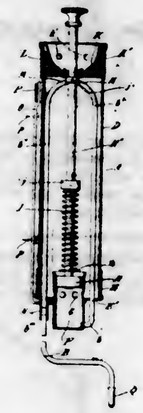
1,385,982. CENTRIFUGAL MACHINE. TANDY A. BAYSON, Troy, N. Y., assignor to Tolhurst Machine Works, a Corporation of New York. Filed Mar. 22, 1917. Serial No. 156,563. 7 Claims. (Cl. 210—70.)

1. A centrifugal machine including in combination, a basket, a casing, a bracket on the casing, a scraper carrying bar journaled in said bracket, rotatable means engaging said bar and swingable about the axis thereof to raise and lower the same and to move the scraper to and from the basket wall.



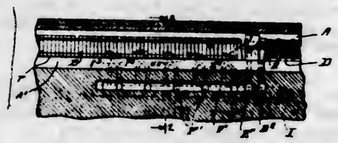
1,385,983. STARTING MECHANISM FOR AUTOMOBILES. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 19, 1917. Serial No. 168,179. 6 Claims. (Cl. 172—239.)

1. In a starting mechanism, the combination with a pair of coacting gear wheels, and means comprising an electromagnet for shifting one of said gear wheels into and out of mesh with the other, of an electric motor operatively connected to one of said gear wheels, means for substantially simultaneously controlling a circuit comprising said motor and said electromagnet, said motor having a field-magnet winding, and a non-inductive path of relatively high resistance in permanent parallel relation to said field-magnet winding, whereby the energization of said field-magnet winding is delayed relatively to the operation of said electromagnet.



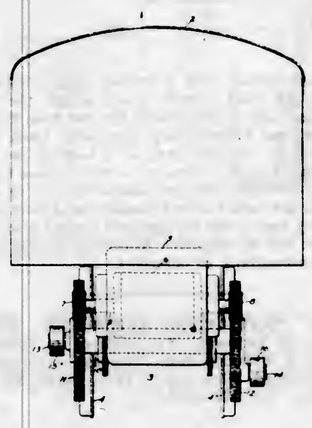
1,385,984. SUPPORT FOR SHADES. CORTLAND W. DAVIS, Oak Park, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,268. 7 Claims. (Cl. 240—115.)

1. A shade-supporting device including a ring carrying a plurality of shade supporting clips and a plurality of shade-retaining screws arranged in different planes and



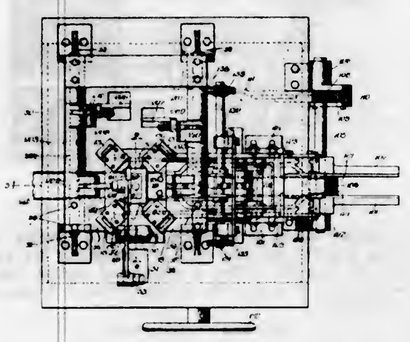
adapted to receive between them a portion of a lamp shade.

1,385,985. SANITARY DEVICE. FRANK A. DECKER, New York, N. Y. Filed Nov. 3, 1917. Serial No. 200,001. 3 Claims. (Cl. 4—30.)



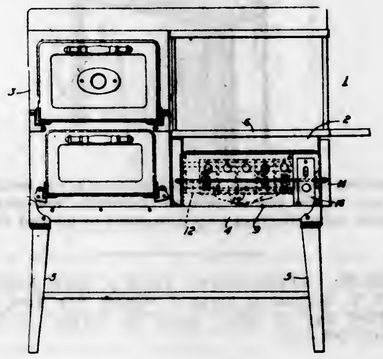
1. A disinfectant apparatus comprising a disinfectant reservoir, openings to charge the same, means for circulating disinfectant therein and aerating means actuated by the circulation of said liquid and means to diffuse the disinfectant vapor through the top of the reservoir and connections for delivering a measured quantity of said liquid exterior to said reservoir.

1,385,986. BURNER FOR TUNNEL-KILNS. PHILIP D'H. DRESSLER, Zanesville, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 1, 1920. Serial No. 378,331. 8 Claims. (Cl. 25—142.)



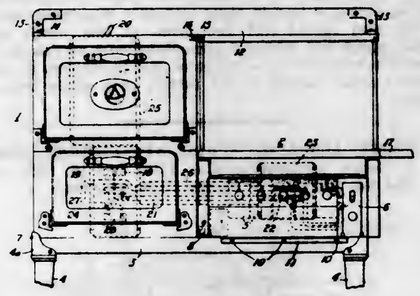
1. In a continuous tunnel kiln, the combination with an elongated kiln chamber, of an elongated combustion chamber therein formed with an aperture in its bottom wall, a masonry bench supporting said combustion chamber and formed with air and gas supply channels which open through the top surface of the bench into said aperture.

1,385,987. POWER-TRANSMISSION SYSTEM. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 10, 1917. Serial No. 141,620. 8 Claims. (Cl. 74—29.)



6. In a power transmission system, the combination with a motor having a rotatable armature, of pinions mounted near the ends of the armature shaft, said pinions being respectively provided with helical and herring-bone teeth, and gear wheels meshing with said pinions.

1,385,988. BOX-MAKING MACHINE. ARTHUR J. EVERS, Chicago, Ill. Filed Sept. 20, 1920. Serial No. 411,689. 10 Claims. (Cl. 93—59.)



1. In a machine for making necked pasteboard boxes, the combination of a shouldered form having a larger portion corresponding to the body of the box and a smaller portion corresponding to the neck of the box, means to bend the pasteboard blanks about the form, and means to press the blank to the reduced portion of the form to provide the neck in the box by offsetting the pasteboard at the shoulder of the form, substantially as described.

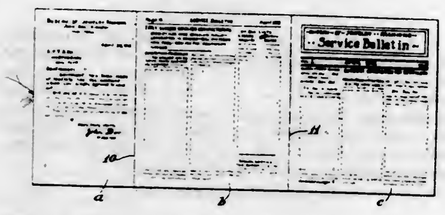
1,385,989. TERMINAL STRUCTURE FOR ELECTRIC RANGES. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Mar. 1, 1920. Serial No. 362,424. 5 Claims. (Cl. 219—35.)

1. In an electric stove, the combination with a plurality of electric heating elements, a member of box-shape for supporting said elements, and switches for controlling said heating elements, of a plurality of bus bars located in said member of box-shape, insulating supporting means for supporting said bus bars adjacent their ends only and means supported at each end only for electrically connecting said bus bars to said switches.

1,385,990. ELECTRIC RANGE. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Mar. 1, 1920. Serial No. 362,426. 5 Claims. (Cl. 219—35.)

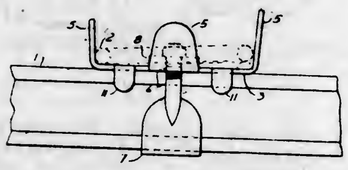
1. An electric range comprising a supporting member, an electrically heated oven, current conductors located in said oven, terminals for said conductors, an electrically heated stove, said stove and said oven being mounted in interchangeable side-by-side relation on said supporting member, and current conductors on said stove adapted to operatively engage said stove conductor terminals in either of the two relative positions of said stove and said oven.

1,385,991. BOOKMARK. HARRY C. FRENCH, Cleveland, Ohio. Filed Apr. 13, 1918. Serial No. 228,325. 1 Claim. (Cl. 116—119.)



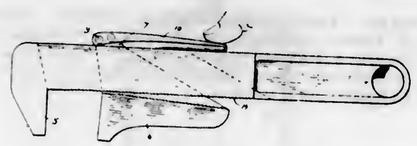
A book mark formed from spring wire and provided with a lateral portion and two branches extending there-

from, one of said branches being substantially shorter than the other of said branches, said short branch ter-



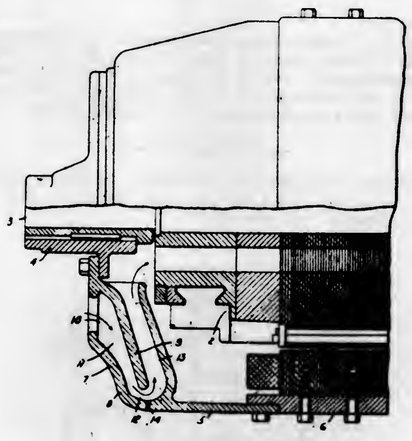
minating in a handle portion, said branches being converged to the end of said short branch, and said long branch being diverged from this point to the end thereof.

1,385,992. STATIONERY. EDGAR A. GOVE, New York, N. Y., assignor to Frank C. Osmers, New York, N. Y. Filed May 13, 1918. Serial No. 234,089. 2 Claims. (Cl. 283—1.)



1. A combined letter head and form, comprising a first leaf having letter head indicia thereon and having a blank space for the insertion of a message, and a second leaf having permanent indicia thereon connected to one side edge of the first leaf throughout its length, said first leaf being arranged to fold along said edge into juxtaposition with said second leaf and being of less width than said second leaf, whereby when so folded a portion of the permanent indicia on said second leaf is exposed, the two leaves being formed by the folding of a single integral sheet.

1,385,993. AUXILIARY-SPRING ATTACHMENT. ANGUS R. GROFF, Birmingham, Ala. Filed July 15, 1920. Serial No. 396,411. 7 Claims. (Cl. 267—60.)

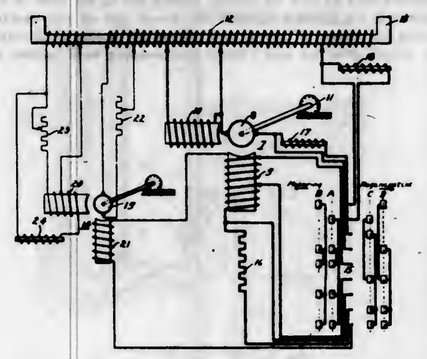


7. A base plate formed of bendable sheet metal in the form of a cross with upturned spring engaging lugs on its ends and spaced pairs of axle engaging lugs, a clip connected to the plate ends overhung at each side from the axle and disposed midway between and at right angles to the plane of the axle engaging lugs, and a heavy metal clip yoke overlying the overhung plate ends, said spring engaging lugs being adapted to receive the base coil of a spring snugly between them and to be bent upwardly over said coil to secure it to the plate and said clip forming a diagonal centering block for said base coil, substantially as described.

1,385,994. WRENCH. ALTON B. HEIMBACH, Duluth, Minn. Filed Aug. 29, 1919. Serial No. 320,631. 1 Claim. (Cl. 81—147.)

The combination with a wrench comprising a shank having a jaw fixed thereto, a slot within the shank, a movable jaw adjustable through the slot from the back of the shank, and coöperatively engageable teeth upon the shank and the movable jaw, of a bearing for said adjustable jaw spaced in advance of the working face thereof and a one-piece resilient member rigidly fixed to the adjustable jaw, said resilient member being bent under and backwardly upon itself the free end thereof being engaged within the slot in the shank to prevent lateral movement thereof substantially as described.

1,385,995. VENTILATING APPARATUS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1917. Serial No. 184,798. 5 Claims. (Cl. 171—252.)

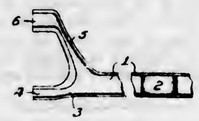


1. An air intake device for a ventilated machine comprising a casing provided with a passageway for ventilating air currents having a constricted portion that is adapted to be closed by the accumulation of frozen particles therein.

1,385,996. REGENERATIVE CONTROL SYSTEM. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Continuation of application No. 75,958, filed Feb. 3, 1916. This application filed Sept. 28, 1917. Serial No. 193,696. 7 Claims. (Cl. 172—276.)

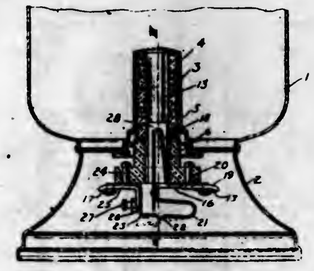
3. The combination with a dynamo-electric machine of the commutator type having a working winding and an exciting winding, of means for connecting portions of

said exciting winding in series with said working winding in either direction, at will, and means for supplying an



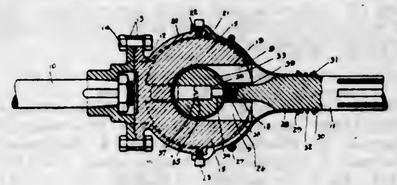
auxiliary excitation comprising an auxiliary source of alternating current.

1,385,997. SYSTEM OF CONTROL OF SINGLE-PHASE COMMUTATOR-GENERATORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1917. Serial No. 206,139. 13 Claims. (Cl. 172—276.)



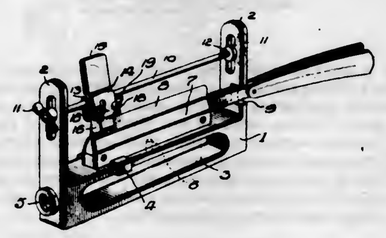
1. In a system of control, the combination with an alternating-current dynamo-electric machine having an armature and an exciting field winding, of means including a source of energy for supplying to said field winding the difference between the armature and the field winding currents, and means for automatically adjusting such differential current.

1,385,998. METHOD OF MANUFACTURING AXLES. REINHOLD G. HOUSDORFER, Detroit, Mich. Filed Aug. 18, 1919. Serial No. 318,320. 10 Claims. (Cl. 29—153.)



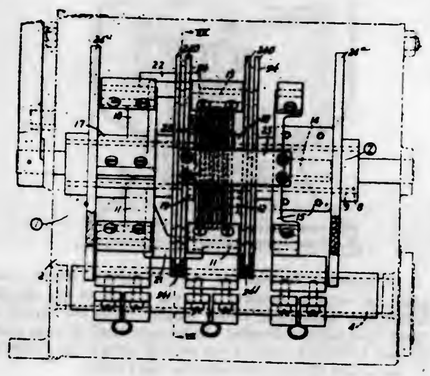
1. A method of manufacturing an axle from a blank, consisting in bending the end of the blank at an angle, pressing the angular blank end to reduce its cross sectional area, and then re-shaping the blank end while the blank is held between dies.

1,385,999. THERMAL CUT-OUT. DAVID G. HOWARD, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,736. 6 Claims. (Cl. 200—122.)



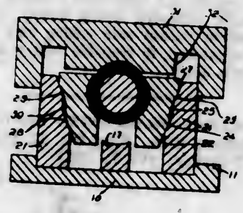
1. A thermal cut-out for electric-circuit control comprising a resilient member forming a part of the electric circuit and maintained under tension when the circuit is closed, and heat-responsive means connected to said member and forming a part of the electric circuit for releasing the same and thereby interrupting the circuit.

1,386,000. YIELDING UNIVERSAL JOINT. FRANK R. HUME, Indianapolis, Ind. Filed June 21, 1920. Serial No. 390,608. 3 Claims. (Cl. 64—96.)



1. A universal coupling including a pair of shafts, a radial driving lug on one shaft and a radial driven lug on the other shaft, inclosing casing means, and a sectored spherical cushion within said casing and interposed between said radial lugs to transfer rotary movement from one shaft to the other.

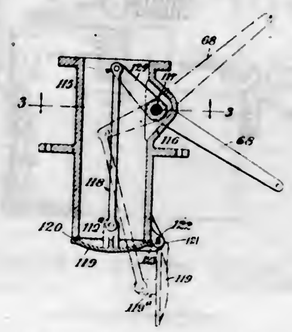
1,386,001. RAZOR-SHARPENING DEVICE. EMANUEL JACOBS, Detroit, Mich. Filed Oct. 17, 1918. Serial No. 258,550. 7 Claims. (Cl. 51—59.)



4. Means for sharpening a razor, comprising spaced members one of which is adapted to have a razor extend therethrough to a position between said members, a rod adjustably mounted in said members, a reciprocatory and oscillatory blade sharpener on said rod adapted to be shifted under said rod from one side of the razor to the other side when at either end of the razor blade and move longitudinally of either side when reciprocated, and means between said members for holding the razor during the operation of said blade sharpener.

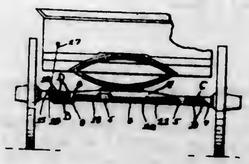
1,386,002. CONTROLLER. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 15, 1916. Serial No. 120,277. 12 Claims. (Cl. 200—10.)

1. In a controller, the combination with a plurality of series-connected pairs of coating stationary contact members and movable contact members, of a blowout coil connecting a plurality of said movable contact members and means for connecting said coil in series circuit relation with each pair of stationary and movable contact members that are in engagement.



1,386,003. MOLD FOR MICARTA TUBES, RODS, AND THE LIKE. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1918. Serial No. 257,388. 6 Claims. (Cl. 18—16.)

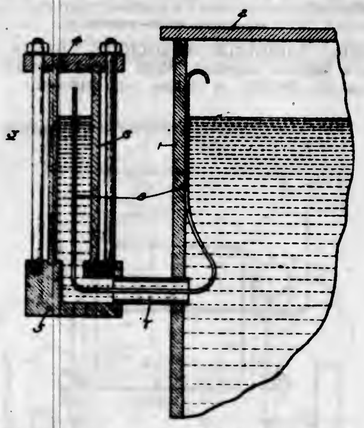
2. A mold for rods, tubes and the like including a stationary forming-member, a plurality of additional-forming members, and means whereby pressure applied to one of the latter forming members will first bring all of the latter forming members into their final positions relative to each other and certain of them into engagement with the stationary forming member and will then bring all of the additional forming members into their final positions relative to the stationary forming-member.



1,386,004. INLET-VALVE FOR BLOWING-TANKS. HARRY ARTHUR KIMBER, New Rochelle, N. Y., assignor to Quigley Furnace Specialties Co., Inc., a Corporation of New York. Original application filed Jan. 31, 1918, Serial No. 214,755. Divided and this application filed Dec. 6, 1919. Serial No. 343,105. 1 Claim. (Cl. 251—10.)

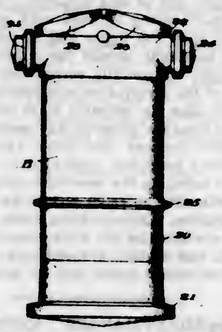
An inlet valve for blowing tanks designed to handle finely pulverized coal and the like which comprises, in combination, a vertically arranged hollow casting adapted to be set in the upper head of the tank, a valve having a loose-hinged connection offset from the lower end of the casting and having an elastic gasket set in its face in position to be pressed against the lower end of the casting when the valve is closed, and means for holding the valve in closed position and evenly compressing said gasket by

reason of the freedom of adjustment of the valve afforded by the loose hinge, which means comprises an upwardly projecting lug on the upper face of the valve, a lever extending through the wall of the hollow casting and pivoted therein, a connection from the end of the above mentioned lug to the inner end of said lever, an exterior crank and an elastic connection from the said crank to the exterior end of the above mentioned lever.



1,386,005. HORSE-DETACHER. JESSE KIRKLAND, Povo, Tenn. Filed Sept. 27, 1920. Serial No. 413,003. 4 Claims. (Cl. 278—30.)

1. A device of the character described comprising a vehicle axle having shaft couplings, bearings on said axle, a shaft mounted in said bearings and having its end portions extending in the same direction and into the couplings, springs carried by the end portions of the shaft, each spring having one of its ends secured to the shaft, the other end of the spring being disposed in engagement with the adjacent bearing of the shaft for moving said shaft toward one end of the axle at certain times, and means carried by said axle to normally prevent said movement.

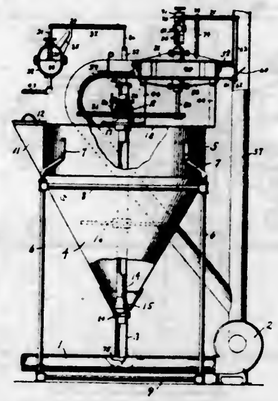


1,386,006. GAGE. CHARLES S. LAWSON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 340,976. 7 Claims. (Cl. 73—54.)

1. The combination with a vessel containing liquid and air, a device for indicating the level of the liquid therein, and a single connecting means between said device and said vessel having a passage therethrough, whereby said

level may be indicated, irrespective of the pressure of the liquid and the air.

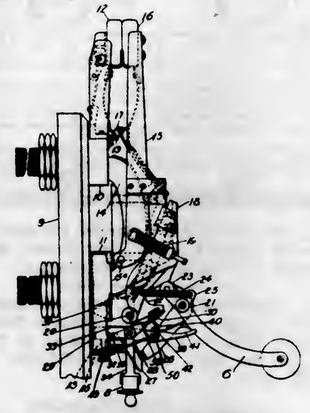
1,386,007. METHOD OF MAKING HYDROCARBON-MOTORS. GEORGE F. LYNN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1917, Serial No. 181,527. Renewed Apr. 22, 1920. Serial No. 375,897. 9 Claims. (Cl. 29—156.4.)



1. A method of making a cylinder block consisting in forming two cylinders each with radial flanges having bent over outer portions forming skirts, welding parts of the skirts of the cylinders together, placing a water jacket around the two cylinders in contact with the parts of the skirts that are not so welded together, and welding said jacket to said skirts.

1,386,008. INSULATING MATERIAL. LEON MCCULLOCH, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1917. Serial No. 140,822. 16 Claims. (Cl. 154—2.)

1. A composite material comprising flake material and a lead free binder containing an oxygen compound of boron.

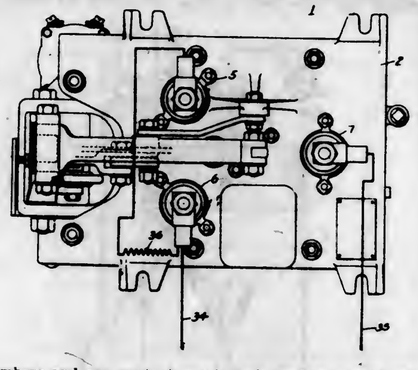


1,386,009. FEEDER FOR POWDERED FUEL. JOHN URBAN MCDONALD, Decatur, Ill. Filed Oct. 11, 1919. Serial No. 330,090. 8 Claims. (Cl. 302—42.)

8. In a feeder for powdered fuel, the combination of a hopper, a rotatable valve tube in said hopper, a discharge pipe at the lower end of the hopper to receive the powdered fuel, a blower connected to said discharge pipe which constitutes the suction pipe of said blower, the current of air actuated by said blower being adapted to carry the fuel from the hopper, a motor operated by the air flowing through said valve tube, gearing connecting the motor to

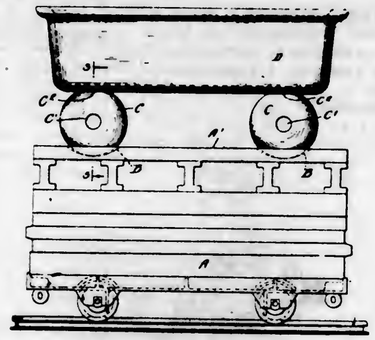
the valve tube whereby the tube may be turned by the motor, a governor connected to said motor, and means operated by the governor for controlling the flow of air to said motor.

1,386,010. CIRCUIT-INTERRUPTER. JOSEPH N. MAHONEY, Wilkinsburg, and Walter M. Austin, Swissvale, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1917. Serial No. 167,085. 9 Claims. (Cl. 200—50.)



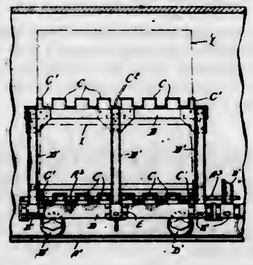
5. In a multi-polar circuit interrupter, the combination with a plurality of actuating handles and a single trip bar therefor, of means associated with one pole for holding the tripping bar in its tripping positon under predetermined conditions.

1,386,011. CIRCUIT-INTERRUPTER. JOSEPH N. MAHONEY and JOHN B. MACNEILL, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1917. Serial No. 168,676. 9 Claims. (Cl. 200—144.)



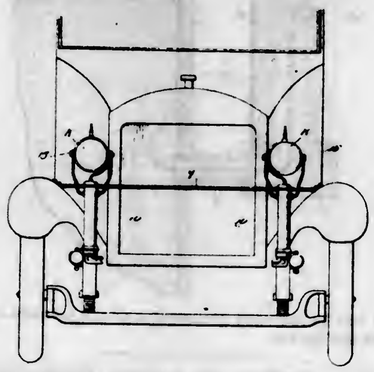
8. In combination, a circuit interrupter comprising a plurality of movable bridging contact structures, a single operating member therefor, a pair of stationary contact members for coöperation with each bridging structure,

and a current-retarding device connected between one contact member of one of said pairs of stationary contact



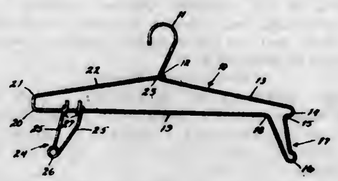
members and one contact member of another of said pairs thereof.

1,386,012. WARE-SUPPORT FOR KILNS. PAUL A. MEEHAN, New Castle, Pa., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed May 20, 1919. Serial No. 298,374. 6 Claims. (Cl. 25—153.)



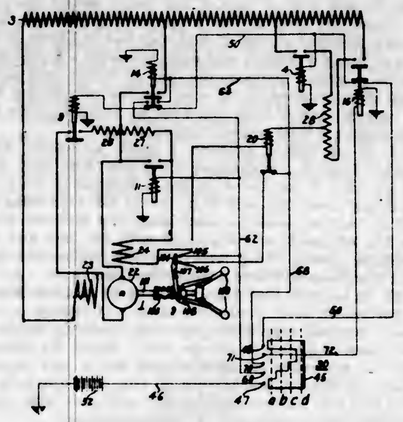
1. As a new article of manufacture, a member for supporting ware subjected to heat, said member having one side flattened and its opposite side spherical.

1,386,013. DRYING-KILN CAR. PAUL A. MEEHAN, New Castle, Pa., assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 26, 1920. Serial No. 376,459. 4 Claims. (Cl. 105—373.)



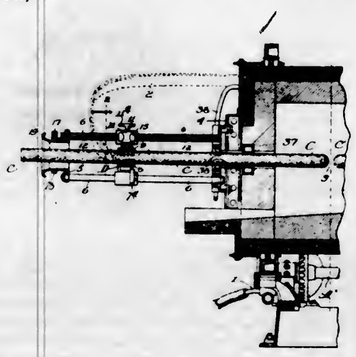
1. A car for the purpose specified having a work supporting platform formed by hollow pressed metal bolsters each bolster having its upper surface inclined downwardly at a slight angle from its outer end toward its center.

1,386,014. DIRIGIBLE HEADLIGHT. GEORGE FREDERICK MESSER, Aberdeen, Wash. Filed June 10, 1920. Serial No. 387,960. 4 Claims. (Cl. 240—61.)



1. In a device of the character described, the combination with a vehicle having a steering gear and steering wheels and a headlight associated with the vehicle, of a support for said headlights including a hollow cylindrical housing, caps at each end of said housing, a sleeve rotatably mounted on said housing between said caps and bracket arms mounted upon the upper end of said housing and carrying said headlight, means for automatically swinging the headlight horizontally corresponding to the horizontal swing of the steering wheels including a pulsator, means for actuating the pulsator from the steering gear, a motor driven from the pulsator, and motion transmission means operative between the motor and the headlight including a crank positively connected to the said sleeve, and means for swinging the headlight vertically including a pulsator, manually operable means for actuating said last-named pulsator, a motor driven from said last-named pulsator and arranged in the cylindrical housing of said light support, and motion transmission means operable between the last-named motor and the headlight.

1,386,015. GARMENT-HANGER. KEITH MONTGOMERY, Jacksonville, Ill. Filed July 31, 1920. Serial No. 400,400. 4 Claims. (Cl. 211—13.)

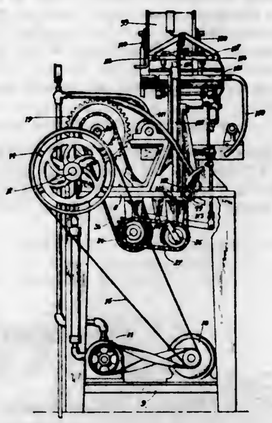


1. A hanger comprising a body including a horizontal rod portion and a rigid depending arm at one end of the rod portion inclining outwardly beyond the end, and a movable arm slidable along said rod portion and including resilient diverging arms connected by a coil and having their end portions coiled about said rod portion and in inclined relation thereto and in frictional clamping engagement therewith, said movable arm being freely slidable in one direction and releasably slidable in the other direction.

1,386,016. SYSTEM OF CONTROL. HUBB T. MORRIS, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed June 4, 1915, Serial No. 32,188. Divided and this application filed July 12, 1917. Serial No. 180,041. 2 Claims. (Cl. 172—276.)

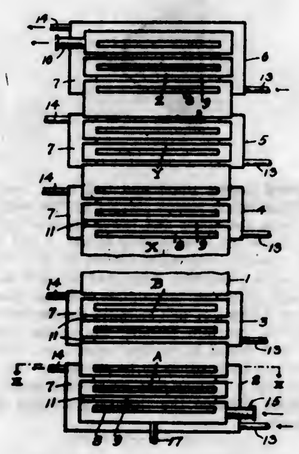
1. A system of control comprising an alternating-current motor of the commutator type, a plurality of manually-controlled switches severally having actuating coils, means for starting the motor as a repulsion motor, centrifugally-governed means for automatically establishing a partial auxiliary circuit for said coils when the motor attains a predetermined speed, and a limit switch actuated in accordance with the current in a part of the motor circuit for automatically completing said auxiliary circuit to effect transition to the doubly-fed connection of the motor.

1,386,017. ELECTRODE-ADJUSTING MECHANISM. WILLIAM L. MORRIS, Chicago, Ill., assignor to The Booth Electric Furnace Co., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,966. 9 Claims. (Cl. 204—64.)



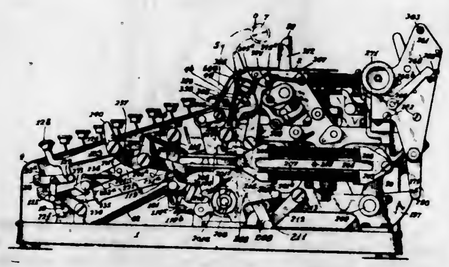
1. In means of the character set forth, the combination of an electrode supporting-frame, a carriage adjustably mounted for movement longitudinally of said frame, and electrode clamping means mounted on said carriage and provided with means of adjustment to vary the axial direction of the electrode.

1,386,018. COMBINED LICENSE-PLATE AND TAIL-LIGHT. WILLIAM F. OTHER, St. Louis, Mo. Filed May 31, 1916. Serial No. 100,767. 1 Claim. (Cl. 40—132.)



A combined license plate and tail light, comprising a support, illuminating means carried by the support, walls diverging from the upper and lower sides of said support above and below the illuminating means, a tail light plate supported between said walls served by the illuminating means, a frame removably supported by said walls below the tail light plate, an infrangible resilient license plate composed of a sheet of non-metallic opaque material having translucent portions forming the license number supported in said frame in vertical alinement with the tail light plate and in position to be served by the illuminating means, and a transparent protecting plate supported in said frame between the license plate and the illuminating means.

1,386,019. PAPER FEEDING AND CUTTING MECHANISM. LYNDON C. PALMER, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Original application filed May 14, 1918, Serial No. 234,416. Patent No. 1,312,570, dated Aug. 12, 1919. Divided and this application filed July 9, 1919. Serial No. 309,709. 30 Claims. (Cl. 164—48.)



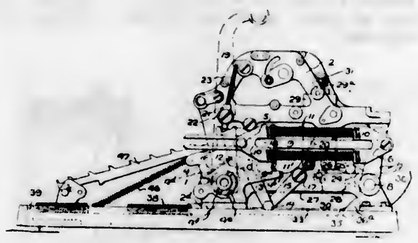
1. In an apparatus of the character described, in combination, a table on which a web is adapted to slide, a drag plate adapted to press the web on the table movable relative to the table to feed the web and movable toward and from the table, means adapted to operate the drag plate comprising a carriage adapted to effect the feed movement of the drag plate, means adapted to reciprocate said carriage, and devices whereby the operation of said reciprocating means effects the movements of the drag plate toward and from the table comprising a rock arm on the carriage operatively connected to the drag plate.

1,386,020. FRACTIONATING APPARATUS. HARRY F. PERKINS, Pittsburgh, Pa., assignor to Rosanoff Process Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 23, 1918. Serial No. 267,885. 3 Claims. (Cl. 257—218.)

1. A structure of the character and for the purposes described, containing in combination, a fractionating chamber having an inlet opening at one end for the substances to be treated and an outlet opening at its opposite end, a chamber for temperature-controlling fluid surrounding said fractionating chamber between its ends and provided with inlet and outlet openings, and a plurality of flat hollow plates extending transversely thereof, each of said plates having closed side-walls spaced from the inner wall of said fractionating chamber, and opposite open ends connected to said fluid chamber, said plates being arranged in transverse lines in angular relation one to the other, whereby the substances under treatment are caused to flow in a tortuous path.

1,386,021. ADDING-MACHINE. HEBER C. PETERS, New York, N. Y., assignor to Peters-Morse Manufacturing Corporation, a Corporation of New York. Filed Nov. 28, 1916. Serial No. 133,846. 41 Claims. (Cl. 235—60.)

1. In an adding machine, a series of depressible number keys, one end of each key acting when depressed as a stop, a stop bar carrying a series of stops, one for each number key, the stops for some of said number keys being located upon said stop bar at a distance to the rear of the depressed position of the number key with which it is adapted to coöperate greater than the distance between key stops, and means for moving the stop bar to avoid contact between stop bar stops and inappropriate key stops and for producing contact between a given stop bar stop and the key stop with which it is adapted to coöperate said number key stops being all in the same vertical plane.



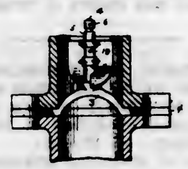
12. A key-board having rows of depressible keys adapted to be detained in depressed position, rods positioned parallel to said rows of keys, a stop bar, a detent operating to retain the stop bar in a rearward position, a strip loosely mounted on one of said rods and co-acting with a row of keys for holding said keys depressed, a second strip having a portion acting as the stop bar detent, said second strip being mounted on the same rod and coöperating with an adjacent row of keys, and a spring acting to press said strips against their respective rows of keys.

13. In an adding machine, a shaft, an adding wheel carrier adapted for swinging movement with said shaft as its axis, a key-board carrying depressible keys and retaining means for said keys, means for supporting one end of said key-board on said shaft and latching means for the key-board, said key-board with the keys and key-retaining means being removable and replaceable as a unit with respect to said adding wheel carrier.

21. In an adding machine, a pair of vertical side frames, a horizontal shaft connecting said side frames, a key-board carrying depressible keys and retaining means for said keys, a second transverse shaft, means for supporting the key-board on both of said shafts and latching means for the key-board, whereby said keyboard with the keys and key retaining means are held upon said shafts and are readily removable as a unit therefrom.

25. In an adding machine, depressible number keys, means for individually retaining said keys in a depressed position, means for releasing said keys, a total lever which may be set in a plurality of operative positions and means for releasing the same, in combination with a master plate and operating means therefor, said plate carrying means for operating the key releasing means and the total lever releasing means.

1,386,022. ADDING-MACHINE. HEBER C. PETERS, New York, N. Y., assignor to Peters-Morse Manufacturing Corporation, a Corporation of New York. Original application filed Nov. 29, 1915, Serial No. 133,846. Divided and this application filed Dec. 28, 1917. Serial No. 209,251. 19 Claims. (Cl. 235—60.)



1. In an adding machine, a main operating shaft, type carriers, a member loosely mounted upon said shaft for controlling the movement of said type carriers, and means connecting said main shaft and said member to enable said member to be operated at a varying rate of movement with respect to the forward movement of said main shaft.

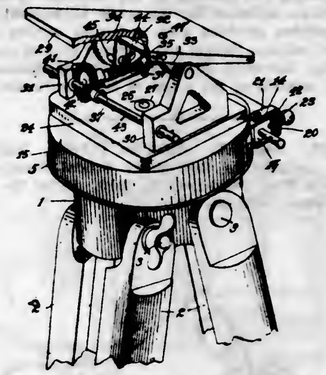
5. In an adding machine, a main operating shaft, a main spring connected thereto and operating to impart motion to said shaft on its backward movement, a cam mounted on said main shaft and capable of movement varying from the movement of said main shaft during the forward movement of said main shaft and said cam and means for imparting movement to the cam on the backward movement of said main shaft.

18. In an adding machine, a main shaft and second shaft, means operated by the main shaft for imparting movement to the second shaft, type bars adapted to be set by the movement of the main shaft, a cam loosely mounted upon the main shaft for controlling said type bars and means for governing the rate of movement of said cam independently of the rate of movement of said main shaft but dependent on the movement of said second shaft.

18. In an adding machine, a main operating shaft, a main spring connected thereto and operating to impart motion to said shaft on its backward movement, a speed governing device, a cam mounted on said main shaft and connected to said governing device, said cam being capable of movement at a rate controlled by said governing device and independent of the rate of movement of said main shaft during the forward movement thereof, means for imparting movement to said cam during the backward movement of said main shaft whereby the rate of backward movement of said cam and said main shaft is controlled by said governing device.

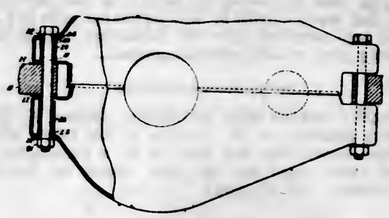
1,386,023. GAS-MIXER. CARL A. PETERSON, Superior, Wis. Filed May 13, 1920. Serial No. 381,024. 2 Claims. (Cl. 48—180.)

1. A gas mixer of the class described, comprising a support having a spindle securely fixed thereto, a combination propeller and fan-like blade rotatably carried upon the spindle, a portion of said blade on either side of the spindle being straight and parallel therewith, while the other portion is bifurcated and each half thereof curved outwardly in radially opposite directions from the spindle.



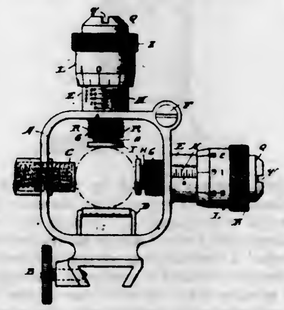
1,386,024. ANTIRATTLER FOR WINDOW-SASHES. PAUL WILLIAM PICK, Portland, Oreg. Filed June 7, 1920. Serial No. 387,057. 2 Claims. (Cl. 292—343.)

1. An anti-rattler for window sashes, comprising a sheath formed from a doubled piece of sheet metal having relatively expansible sides, and a movable wedging device carried by the sheath and mounted so that it is adapted to be inserted between the sides of the sheath.



1,386,025. TRIPOD FOR CAMERAS. REINHART W. PITTMAN, New York, N. Y. Filed Sept. 1, 1920. Serial No. 407,438. 6 Claims. (Cl. 248—45.)

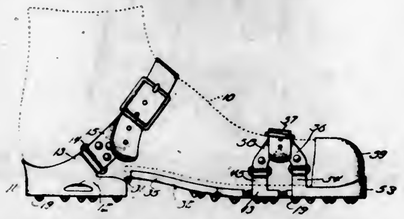
3. In a tripod, a head, a base rotatable on the head, a worm-wheel fast on the head, an arm pivoted on the head, a worm-wheel shaft rotatably mounted on said arm to be thereby shifted to engage and release the worm-wheel,



and a hinged clamping member to coöperate with the said arm to hold the worm in engagement with the worm-wheel.

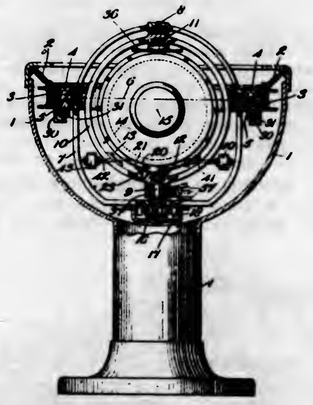
1,386,026. SHEET-METAL GEAR-CASE. ALEXIS R. PRIBIL, Cleveland, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 3, 1917. Serial No. 184,234. 11 Claims. (Cl. 74—56.)

1. A gear-case member comprising a one-piece trough portion of varying depth and having relatively shallow end portions, corresponding portions of the side walls of said trough extending inwardly toward each other, and other portions of the trough projecting over to close the said end portions and to engage the said inwardly extending portions.



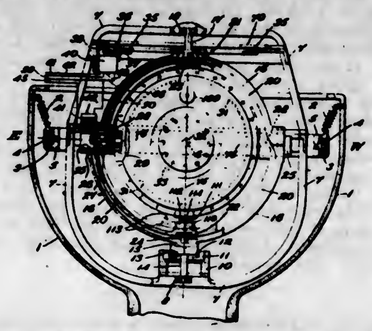
1,386,027. MOUNTING FOR TELESCOPE GUN-SIGHTS. ROBERT V. R. REYNOLDS, Washington, D. C. Filed Aug. 2, 1920. Serial No. 400,822. 7 Claims. (Cl. 33—50.)

1. A mounting for telescopes of gun sights, comprising a member for attachment to the gun and having an opening



adapted to receive the telescope, a radially-disposed manually-operable adjusting screw and coöperating abutment for adjusting the position of the telescope in said member, and an indicator for the screw adjustment comprising a member provided with a circular surface having a series of recesses therein and a spring-pressed member cooperating therewith for varying the resistance to the manual rotation of the screw in either direction.

1,386,028. SANDAL. CHARLES O. ROE, Indianapolis, Ind., assignor to Roe Metal Sandal Company, Milwaukee, Wis. Filed Dec. 22, 1919. Serial No. 346,623. 13 Claims. (Cl. 36—63.)

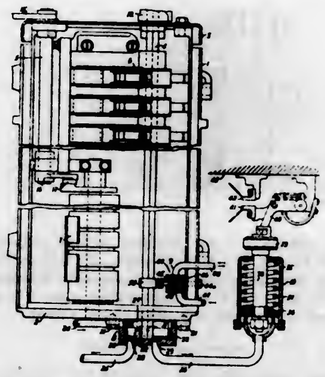


1. In a sandal of the character described, a ball section comprising a perforated plate, headed calks or spikes slidably and removably mounted in the perforations of said ball section, a retaining plate within said perforated plate engaging the heads of said calks or spikes, means on said retaining plate for spacing the same from said perforated plate, and means carried by said perforated plate and engaging said retaining plate for detachably holding said retaining plate in calk retaining position.

1,386,029. GYROSCOPIC COMPASS. GEORGE A. ROSSITER, Brooklyn, N. Y., assignor to The Carrie Gyroscopic Corporation, New York, N. Y., a Corporation of New York. Filed May 20, 1918. Serial No. 235,589. 13 Claims. (Cl. 33—204.)

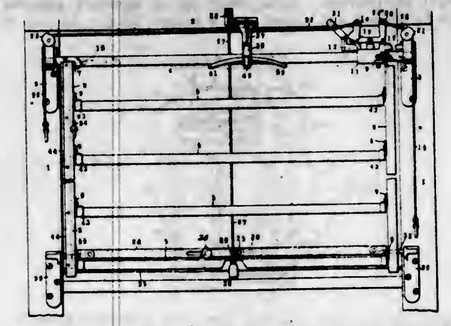
1. In a gyro compass adapted for use aboard a moving vessel the combination of a gyroscopic directive element; a casing in which said element is pivoted for rotation; a pendulous supporting frame; means for horizontally pivoting said frame; a shadow ring vertically pivoted in said supporting frame; means for vertically pivoting said casing in said shadow ring, whereby one of the degrees of freedom of said element is suppressed; and means carried by said casing adapted to dampen out oscillations of said element about the north point, substantially as described.

1,386,030. GYROSCOPIC COMPASS. GEORGE A. ROSSITER, Brooklyn, N. Y., assignor to The Carrie Gyroscopic Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1919. Serial No. 327,898. 6 Claims. (Cl. 33—204.)



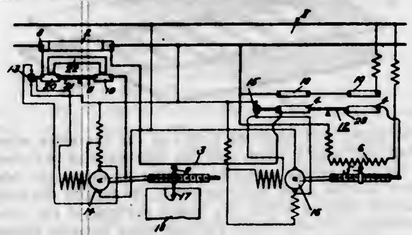
1. In a gyro compass the combination of a gyro wheel; means to support said wheel with three degrees of freedom; and magnetic means on said supporting means for suppressing one of said degrees of freedom, substantially as described.

1,386,031. METHOD OF PRODUCING POTASSIUM SULFATE AND ALUMINUM OXID FROM ALUNITE OR SIMILAR MATERIAL. JOSEPH L. SILSBEE, Salt Lake City, Utah. Filed Dec. 2, 1919. Serial No. 341,904. 5 Claims. (Cl. 23—13.)



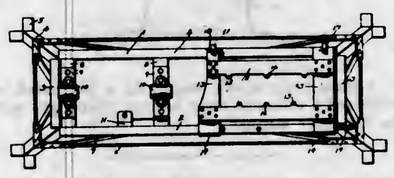
1. The method of recovering potassium sulfate from alunitic ore, comprising crushing and roasting the ore, adding solvent liquor to the ore while hot, thereby transferring heat from the ore to the liquor and raising the temperature of said liquor to increase its capacity for dissolving potassium sulfate from the ore, mechanically separating the solvent liquor and the suspended fines of aluminum oxid from the undissolved solids of the roasted ore, separating the clear solvent liquor from the fines of aluminum oxid, cooling said liquor and depositing potassium sulfate by crystallization.

1,386,032. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 3, 1917. Serial No. 146,545. 6 Claims. (Cl. 200—1.)



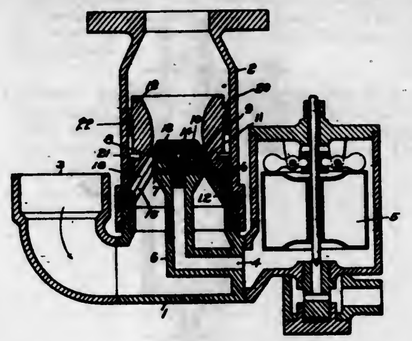
4. In electrical apparatus, the combination with a mechanically-operated contact member and a fluid-pressure-operated contact member, of common means for actuating both of said members.

1,386,033. WINDOW-SCREEN. LEOPOLD SIMON, New York, N. Y. Filed July 8, 1915. Serial No. 38,637. 33 Claims. (Cl. 156—17.)



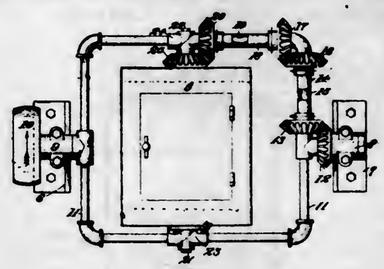
3. In a device of the character described, in combination, a transverse support, a plurality of screen-carrying frames, including one translatable on said support, a foldable brace between said frames to rigidly space the same when separated, and means to lock said foldable brace in a predetermined position.

1,386,034. ELECTRICAL MEASURING INSTRUMENT. HAROLD B. TAYLOR, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,382. 9 Claims. (Cl. 175—183.)



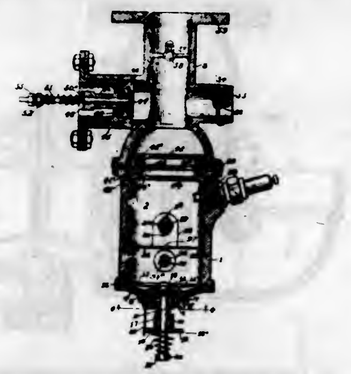
1. In an electric circuit, the combination with a current shunt, of a potentiometer conductor connected across the circuit, means for balancing the potential across the shunt with the potential across the potentiometer conductor, and means for causing the current traversing the potentiometer conductor to vary inversely as the voltage across the circuit.

1,386,035. MOTOR-BEARING-BURNING-IN STAND. HENRY VATTER, Jr., Shreveport, La. Filed Oct. 17, 1919. Serial No. 331,407. 2 Claims. (Cl. 29—1.)



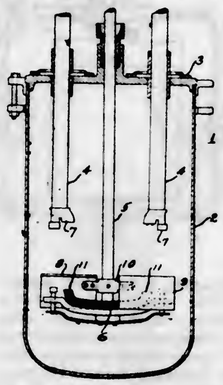
1. In a device of the class described, a table for supporting a cylinder block, said table including side members, dowel pins mounted on the side members for engaging openings in the cylinder block for aiming the same upon the table, and ears formed on said side members and provided with openings through which fastening means may be engaged with the cylinder block.

1,386,036. CARBURETER. WILLIAM W. WEEKS, Brooklyn, N. Y., assignor of one-half to Harold W. Shonnard, Upper Montclair, N. J. Filed July 3, 1919. Serial No. 308,422. 4 Claims. (Cl. 261—62.)



1. In a carbureter for an internal-combustion engine, the combination of an air passageway, a grid with a sector-shaped opening set athwart said passageway, a fuel nozzle centrally arranged within said passageway and provided with an aperture extending in an arc of a circle transversely of the passageway, and a rotary valve controlling at once the opening in said grid and the aperture in said nozzle, the arrangement being such that the stream of air as it flows through the valve orifice sweeps the aperture of the fuel nozzle, substantially as described.

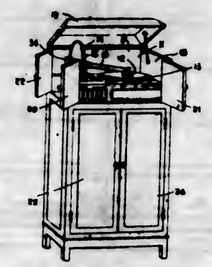
1,386,037. MACHINE ELEMENT. GEORGE C. WEISS, Oakland, Calif. Filed July 16, 1920. Serial No. 396,682. 2 Claims. (Cl. 74—7.)



1. In combination, a rotatable element, a rotatable mounting therefor, comprising a skeleton frame having a rotatable bearing on two opposite sides, a support for the mounting arranged to support said rotatable bearings, direct driving means for rotating the mounting in a fixed orbit with the container carried thereby, a driving gear co-axially mounted upon and fixed to a transverse part of said mounting, a driven gear carried upon one side member of said skeleton frame and adapted to mesh with said driving gear, a second driven gear mounted upon said side member of the frame adapted to be driven by said first named driven gear and adapted to mesh with a gear carried upon another side member of the frame, said last named gear adapted to drive a gear mounted co-axially thereof and in driving relation to a gear carried upon and in driving relation with the element; whereby the rotation of the mounting is adapted to also rotate the element in a fixed orbit independent of the mounting and with its axis of rotation intersecting the axis of rotation of the mounting.

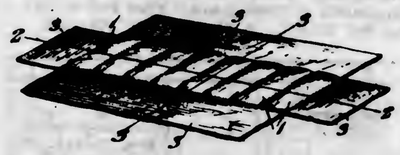
1,386,038. OIL-GAS PRODUCER. EDWARD A. WEST, West Park, and EDWARD E. PARSONS, Cleveland, Ohio, assignors to The Oil Gas Producer Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1918. Serial No. 238,251. 38 Claims. (Cl. 48—62.)

25. In a device of the character described, the combination of a generating chamber having an outlet and an air inlet opening, a liquid fuel conduit extending into said chamber between said inlet opening and said outlet, a valve controlling said inlet opening and operable by the suction or vacuum in said chamber, said valve having means irrespective of its movement for admitting air to said chamber, and means for igniting the mixture of air and fuel supplied to and within said chamber.



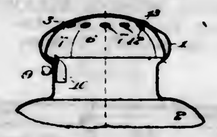
1,386,039. CIRCUIT-INTERRUPTER. CHARLES C. WHITTAKER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 12, 1917. Serial No. 180,050. 10 Claims. (Cl. 200—150.)

5. A circuit interrupter comprising relatively-movable contact members, and relatively-stationary means operatively connected to one of said members for directing a stream of fluid transversely between the coöperating surfaces of said members.



1,386,040. CABINET FOR TYMPANUM-PHONOGRAPHS. EUGENE A. WIDMANN, Brooklyn, N. Y. Filed Jan. 21, 1919. Serial No. 272,388. 3 Claims. (Cl. 214—2.)

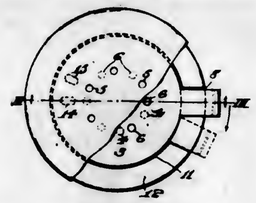
1. A cabinet for a tympanum phonograph, having a compartment at its upper end for the reception of the tympanum sound reproducing apparatus, said compartment being of substantially the height of said tympanum apparatus, and at least two of the vertical walls of said compartment being made up of members adapted to be opened and closed, and a hinged lid for the top of



the compartment, whereby the tympanum sound reproducing apparatus may be entirely inclosed within the compartment, or the compartment may be opened up so that the tympanum is substantially freely exposed in substantially all directions to unconfined air during sound reproduction.

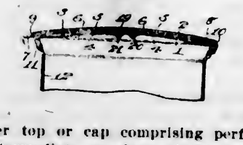
1,386,041. SOAP-BAG AND WASHRAG. CORA IRENE SHAW WILSON, Albuquerque, N. Mex. Filed Dec. 28, 1920. Serial No. 432,712. 1 Claim. (Cl. 15—20.)

In a two part wash-rag device of the character stated, a bag, and soap therein, said bag consisting of two sheets of porous washrag material of different areas, the edges of the smaller sheet being united to the face of the larger sheet by stitches within the border portions of the latter, the corners of said border portions being removed forming separate wings of said border portions which are adapted to be folded independently of each other along the line of said stitches flat on either face of the soap-containing bag as above formed.



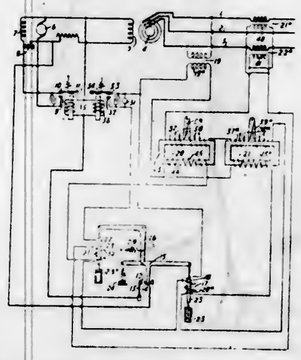
1,386,042. SHAKER TOP OR CAP. RALPH W. WILSON, New York, N. Y. Filed Mar. 22, 1920. Serial No. 367,980. 7 Claims. (Cl. 221—64.)

1. A shaker top or cap comprising a perforated outer member and a rotatable inner member frictionally mounted in the outer member.



1,386,043. SHAKER TOP OR CAP. RALPH W. WILSON, New York, N. Y. Filed May 8, 1920. Serial No. 379,857. 5 Claims. (Cl. 221—64.)

1. A shaker top or cap comprising inner and outer perforated members and an intermediate rotatable perforated shutter member, all composed of thin sheet material, the inner member having a raised peripheral portion engaging the outer member and a depressed central portion forming a seat for the rotatable shutter member, the inner member pressing the shutter member against the outer member, the said shutter member being provided with a finger piece projecting through the side wall of the outer member, the said raised peripheral portion of the inner member having a break therein of a

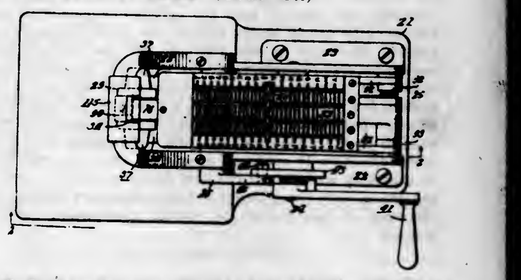


length sufficient to permit the movement of the shutter member and the finger piece, the depressed portion and the said break in the raised peripheral portion of the inner member being of a depth substantially equal to the thickness of the shutter member, to form a powder tight joint therefor.

1,386,044. SHAKER TOP OR CAP. RALPH W. WILSON, New York, N. Y. Filed May 8, 1920. Serial No. 379,858. 8 Claims. (Cl. 221—62.)

1. A shaker top or cap comprising perforated inner, outer and intermediate members of thin sheet material, said intermediate member being provided with oppositely disposed finger pieces projecting through the side walls of the outer member for use in reciprocating the intermediate member, and means for yieldingly holding the intermediate member opened or closed, said means being arranged to spring one of the members out of its normal position as the intermediate member is reciprocated.

1,386,045. ELECTRICAL REGULATOR. WALTER R. WOODWARD, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1916. Serial No. 114,158. 7 Claims. (Cl. 171—241.)



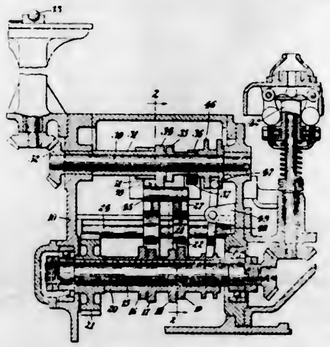
5. The combination with an electrical regulator of the vibrating-contact type comprising a plurality of electromagnets severally having a plurality of energizing windings, of series transformers associated therewith and having primary windings which are connected in series-circuit relationship with some of the windings of said electromagnets and secondary windings which are severally connected in circuit with other windings of said electromagnets.

1,386,046. ADHESIVE FOR LENSES. FRED M. BISHOP, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 2, 1917. Serial No. 140,107. 2 Claims. (Cl. 87—17.)

2. A cement comprising Canada balsam, shellac, powdered glass, and a small percentage of phenolic toughening ingredient.

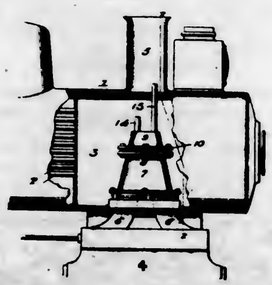
1,386,047. COMBINED TAG AFFIXING AND MARKING MACHINE. WILLIAM BORCHERT and FRED L. BORCHERT, Rockford, Ill. Filed Nov. 23, 1918. Serial No. 263,848. 30 Claims. (Cl. 93—87.)

5. In a marking machine, a plurality of fonts of type bars positioned side by side and relatively movable in parallel planes to position any one type bar of each font at a feeding station, the type bars of each adjacent font having interlocking notches and extensions so that the type bars at the feeding station are movable as a unit to a marking position.



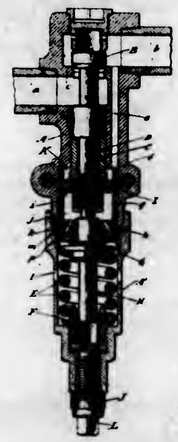
1,386,048. STRAW-RACK. CLYDE E. BRADDY, Pinebluff, Wyo., assignor to Wyoming Thresher Company, Pinebluff, Wyo. Filed Apr. 8, 1920. Serial No. 372,256. 6 Claims. (Cl. 130—23.)

1. In a straw rack, a frame pivoted at its front end, a series of pickers journaled in the frame, a series of grates



connected at their front ends to the frame and projecting rearwardly over the axes of the pickers to which they pertain, each picker comprising a row of picker blades and each grate comprising a row of grate bars, and means for adjusting the rear end portion of the frame vertically.

1,386,049. FUEL-INJECTION MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HAROLD DAVID BUSH, Greenhithe, Kent, England, assignor to Herbert Merton, Reading, England. Filed Jan. 30, 1920. Serial No. 355,045. 6 Claims. (Cl. 123—140.)

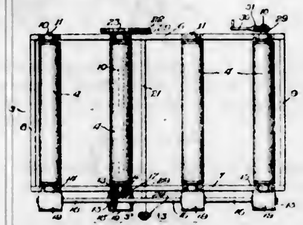


1. In an internal-combustion engine of the kind wherein reversal is effected by producing a counter-explosion in the cylinder, the combination of a fuel-injection pump for injecting fuel directly into the cylinder, a cam-shaft arranged to be driven by the engine, two cams displaced angularly relatively to one another, one for forward and one for reverse running, rotatable with said cam-shaft, and means for bringing either of said cams into and out of operative relation with said pump, the rear face of each cam being so positioned angularly that when the engine is running in one direction and the cam for running in the reverse direction is rendered operative, the said rear face of that cam operates on the said pump to inject a reversing charge into the cylinder to bring about reversal of the direction of rotation of the engine, substantially as described.

1,386,050. DRAFT-EQUALIZER FOR STEAM-BOILERS. JOSEPH V. CARR and FRED W. MATZ, Evansville, Ind. Filed Dec. 23, 1919. Serial No. 347,032. 2 Claims. (Cl. 162—4.)

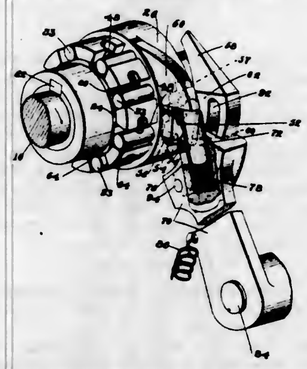
1. A draft equalizer for steam boilers comprising the combination with a steam discharge nozzle in the smoke box, of a hollow self-contained attachable and detachable discharge nozzle connected to and mounted on the nozzle aforesaid and provided with an internal partition for splitting up the steam into independent streams and a plurality of pipes extending upwardly from the top of said hollow nozzle and respectively in communication with the different chambers of the subdivided body and respectively having discharge mouths located at different heights in the smoke box.

1,386,051. PRESSURE-REDUCING VALVE. WILLIAM DIETER, Brooklyn, N. Y. Filed Feb. 20, 1919. Serial No. 278,204. 8 Claims. (Cl. 50—23.)



1. A pressure-reducing valve comprising a casing, and a spring-pressed valve or tappet having a balancing plunger, the casing having an annular chamber receiving leakage past said plunger, with a vent therefrom to the outlet, a flexible annular gasket closing said chamber, and means in the casing and on the plunger respectively for engaging said gasket, said means having substantially continuous surfaces affording a support for the entire area of the gasket against the pressure in said chamber, while permitting it to yield to the movement of the valve.

1,386,052. TOW-LINE. JOSEPH DUGGAN, Detroit, Mich. Filed Apr. 15, 1920. Serial No. 374,111. 2 Claims. (Cl. 213—67.)

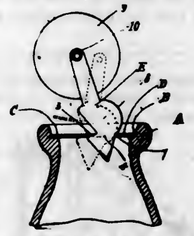


1. A tow line comprising, a main section, and branch sections connected to one end of the main section, and having their free ends formed with eyes, relatively short sections connected to the branch sections and having knotted ends adapted to extend through the eyes of the branch sections, and locking blocks slidably fitted on the eyes of the branch sections for locking the knotted ends of the short sections within the eyes.

1,386,053. LOADING AND UNLOADING DEVICE. JOHN DYER, Chicago, Ill., assignor of one-half to Norman C. Mather, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,116. 3 Claims. (Cl. 214—65.)

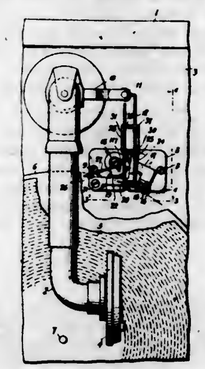
1. A device of the type described comprising a rectangular frame, a plurality of driven shafts mounted in the sides of said frame, a roller rigidly mounted on each of said shafts, said rollers having smooth surfaces, a bevel gear carried by the end of each driven shaft, a transverse shaft extending transversely with respect to said driven shafts and having bevel gears keyed thereto, each one of said gears being adapted to mesh with one of said first named bevel gears, a casing being adapted to cover each group of gears, a gear mounted on the opposite end of one of the central driven shafts, a driving shaft disposed parallel to said driven shafts and having a gear adapted to engage the gear mounted on said driven shaft, a cogged wheel carried by said driving shaft, a handle loosely mounted on said driving shaft and having a pawl adapted to engage said cogged wheel and rotate it in either direction, whereby said rollers can be rotated intermittently in either direction or continuously in either direction, and a second actuating means carried by one of the driven shafts said means being adapted to coöperate with said driving shaft.

1,386,054. CLUTCH MECHANISM. ALFRED B. FOWLER, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 14, 1917. Serial No. 174,650. 14 Claims. (Cl. 192—27.)



1. A clutch mechanism, having, in combination, a shaft, a series of friction rollers, a driving member loose upon the shaft, a driven member fixed to the shaft, one of said members having a series of recesses for the rollers, a cage for the rollers movable to a limited extent relatively to the recessed member to cause the rollers to engage or disengage the driving and driven members, and means for effecting such relative movement, said means being constructed and arranged to permit free rotation of the driven member until its momentum is substantially absorbed, after disengagement takes place.

1,386,055. PURIFICATION OF INDIA-RUBBER, GUTTA-PERCHA, AND THE LIKE. CHRISTIAN HAMILTON GRAY, London, England. Filed Mar. 29, 1921. Serial No. 456,741. 1 Claim. (Cl. 18—50.)



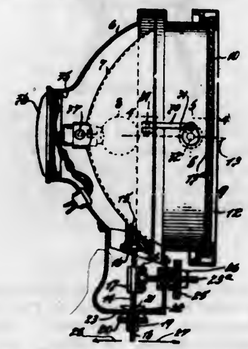
A process for the purification of india rubber, gutta percha and the like from sand or other impurities of the kind described in which the material either in thin sheets or crumb or while undergoing a mechanical operation to expose fresh surfaces is subjected in the presence of water to the action of hydrofluoric acid.

1,386,056. DEVICE FOR REMOVING PAPER CLOSURES FROM MILK-BOTTLES. ROBERT C. GROH, St. Paul, Minn., assignor to Louis F. Dow Company, St. Paul, Minn., a Corporation. Filed Oct. 16, 1920. Serial No. 417,285. 2 Claims. (Cl. 65—47.)

1. A device for the purpose set forth, comprising a thin blade formed with a tip shaped like an inverted V, constituting a piercing point adapted to be forced through the closure disk, a neck in the blade below the V shaped tip narrower than the width between the legs of the V, and a gradually widening portion extending from said neck in a direction away from said tip, as and for the purpose set forth.

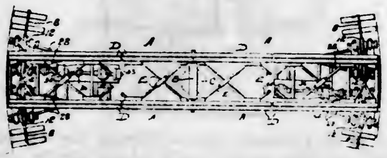
1,386,057. AUTOMATIC STOP MECHANISM. ROBERT HEAD, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Aug. 16, 1917. Serial No. 186,548. 18 Claims. (Cl. 192—116.)

1. In an automatic stop mechanism, the combination, with a rotatable member, and a member adapted to travel thereacross in either direction; of a brake tending to engage the rotating member; an operating part connected to move relatively to, but in unison with, the traveling



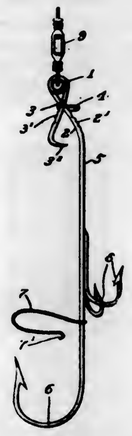
member; means tending to hold said brake in disengaged position during the movement of the traveling member in one direction; and means carried by said operating part for engaging and automatically releasing said holding means when said traveling member reaches a predetermined point in such movement, said releasing means being movable relatively to said operating part to determine the position of such point, said operating part coöperating with the brake to disengage it from the rotating member incident to movement of the traveling member in a reverse direction.

1,386,058. BAG-TIE. CHARLES C. HENDERSON, Spring Valley, Minn. Filed June 10, 1920. Serial No. 387,918. 1 Claim. (Cl. 24—30.5.)



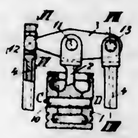
A bag tie including a length of flexible wire and having loops formed at the ends thereof, the loops extending from opposite sides of the length of wire, and the extreme ends of the length of wire extending toward the loop forming a part thereof.

1,386,059. HEADLIGHT. ERNEST E. HILLYER, Port Richmond, N. Y. Filed Jan. 2, 1920. Serial No. 348,955. 4 Claims. (Cl. 240—41.)



1. In a head light, a casing, a vertically disposed vertically adjustable movable support carried by the casing, a reflector rotatably mounted upon said support, adjustable means carried by the casing to rotate said reflector and adjustable means to actuate the vertically adjustable support longitudinally of the casing to tilt the reflector.

1,386,060. TRUCK CONSTRUCTION FOR TURNTABLES. MEIER GEO. HILPERT, Harrisburg, Pa., assignor to Bethlehem Steel Bridge Corporation, Bethlehem, Pa., a Corporation of Delaware. Filed May 1, 1918. Serial No. 231,858. Renewed Dec. 19, 1919. Serial No. 346,173. 59 Claims. (Cl. 104—43.)

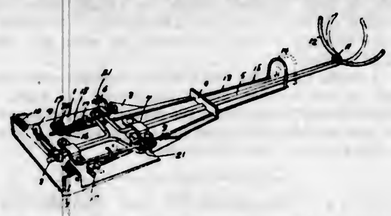


1. An equalizing two-wheel truck for turntables underhung from the wheel axles and having a movable bearing engagement with a girder of the turntable span.

1,386,061. FISHING-TACKLE. HERBERT LAWRENCE JOHNSON, Yarmouth, Me., assignor to George F. Lowell, Freeport, Me. Filed Dec. 29, 1920. Serial No. 433,864. 5 Claims. (Cl. 43—40.)

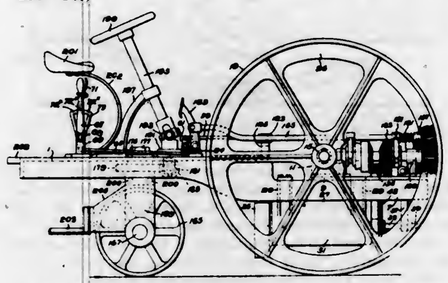
5. In a bait holder, a resilient head clamp comprising a longitudinally disposed bait supporting member and an oppositely disposed pin end adapted to be passed through the head of the bait and to abut the longitudinally disposed member, a band encircling said members for releasably retaining them in bait clamping relation, and a body clamp permanently engaged at one end with said longitudinally disposed member and having its opposite end releasably engageable with said member.

1,386,062. DOUBLE-PISTON ENGINE. HUGO JUNKERS, Aix-la-Chapelle, Germany, assignor, by mesne assignments, to Opposed Piston Oil Engine Co., Inc., a Corporation of New York. Filed May 19, 1914. Serial No. 839,652. 3 Claims. (Cl. 121—100.)



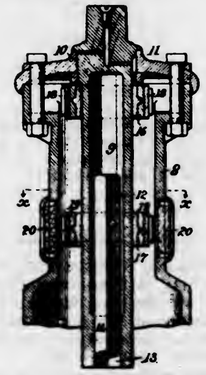
1. In an engine of the type described, the combination of a cylinder, a crank shaft, a piston in the cylinder directly connected to the crank shaft, a second piston in the cylinder, a transverse beam, a power transmitting connection from the transverse beam to the second piston at a point intermediate the ends of said beam, connecting rods pivotally connected at one end to the crank shaft, and a power transmitting connection from the other ends of the said connecting rods to the ends of the transverse beam, one of said power transmitting connections being in a form permitting universal movement.

1,386,063. GOPHER-TRAP. HENRY KUHNHENN, Avoca, Nebr. Filed Sept. 14, 1920. Serial No. 410,134. 5 Claims. (Cl. 43—91.)



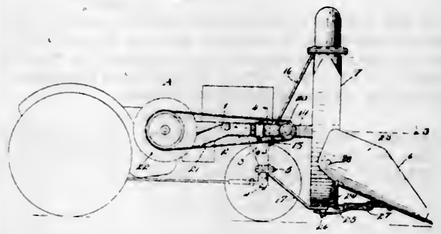
1. A trap of the class described comprising a body constituting a substantially flat structure, upstanding ears formed upon one end of said body, jaws journaled upon said body and provided with laterally extending spring engaging arms, oppositely extending springs secured to said arms for normally swinging said jaws to a closed position, each jaw provided with a laterally extending loop formed intermediate the ends thereof, and substantially

centrally located upon said body, triggers mounted upon said body and adapted to overhang said loops for normally holding said jaws in an operative position, a releasing yoke



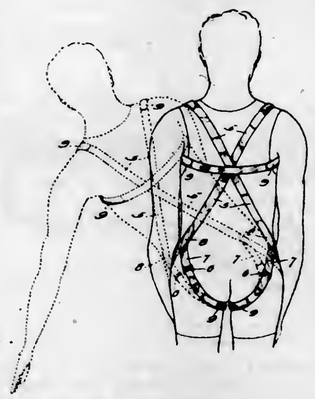
slidably mounted upon said body and engaging said triggers for normally holding said triggers in an operative position, and animal gripping means carried by the outer ends of said jaws.

1,386,064. TRACTOR. JOHN E. LEAVITT, Boston, Mass. Filed Oct. 4, 1915. Serial No. 53,887. 7 Claims. (Cl. 180—17.)



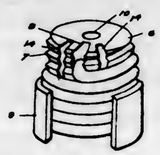
1. A tractor comprising in combination, a pair of driving wheels closely arranged collectively to furnish a narrow tread, a pilot wheel, a frame connecting said driving wheels with said pilot wheel, a motor and transmission means supported by said frame within the circumstances of and principally beneath the axis of said driving wheels to lower the center of gravity of the tractor, a seat mounted on said frame, and a step adjacent the ground beneath said frame to receive the weight of the driver to contribute to the lowering of the center of gravity of the tractor.

1,386,065. INDICATOR-POST. HERBERT M. LOFTON, Chattanooga, Tenn. Filed Aug. 29, 1919. Serial No. 320,578. 3 Claims. (Cl. 251—151.)



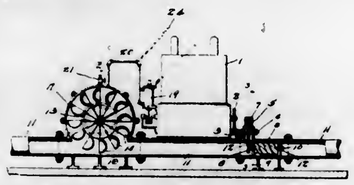
1. In a device for operating valves of the character stated, an indicator post having a window and a rotatable screw-threaded sleeve, combined with two independent target castings to respectively indicate the open and shut positions of the valve, said castings screwed upon the sleeve and guided in the post so as to be adapted to be alternately brought into alinement with the window and adjustable to or from each other to suit valves requiring different numbers of turns in opening and closing them.

1,386,066. SNOWPLOW. FRANK A. LUND, Hartland, Wis. Filed Oct. 20, 1919. Serial No. 331,888. 2 Claims. (Cl. 37—63.)



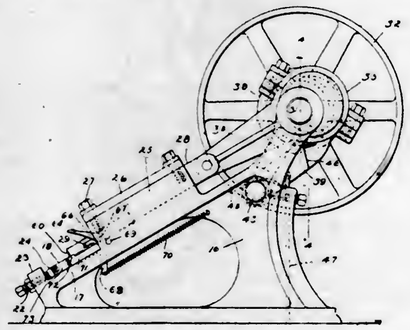
1. The combination with a vehicle, of a conveyer casing carried by the vehicle and having a portion of one side open, a scoop pivoted to the casing and extending downwardly and forwardly on the open side thereof, a spring urging the forward end of the scoop toward the ground, and a stop for positively limiting the upward movement of the scoop, the attached end of the scoop being spaced above the bottom of the casing, an apron depending from the attached end of the scoop to cover the open portion of the casing, and a conveyer in said casing.

1,386,067. SHOULDER AND BODY BRACE. ROBERT EDWIN MASON, (now by judicial change of name, Mayor Mason,) Detroit, Mich. Filed June 9, 1920. Serial No. 387,776. 1 Claim. (Cl. 2—93.)



A combined shoulder and body brace including a band, the intermediate part of which being adapted to embrace the back and shoulders of the human body, the end portions being extended in crossed relation across the back and downwardly and forwardly across the thigh and passed rearwardly under the crotch, and tubs carried by the end portions at points rearwardly of the thigh engaging parts for detachable connection to the extremities of the band.

1,386,068. SPECTACLE CONSTRUCTION. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 10, 1920. Serial No. 380,302. 4 Claims. (Cl. 18—3.)

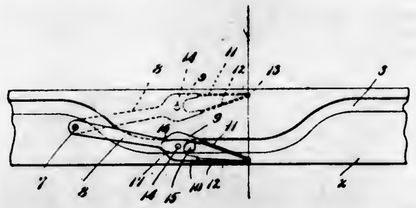


1. The process of forming non-metallic parts for ophthalmic mountings, consisting in grooving the stock, winding the stock on a suitable arbor, treating the stock to cause it to set to the form of the arbor, and subsequently cutting the stock into individual sections.

1,386,069. WATER-POWER SYSTEM. HANS MORTENSEN, Sr., Penrose, Colo. Filed Oct. 6, 1920. Serial No. 415,129. 3 Claims. (Cl. 60—54.)

1. The combination with a prime mover, a closed conduit, and an impeller to cause water currents in the conduit, of a motor wheel having submerged buckets in the conduit and a housing over said wheel, and means for introducing fluid in said housing to maintain the proper water level therein.

1,386,070. MACHINE AND METHOD FOR ROLLING CONICAL TIPS ON LACINGS. GEORGE G. PERKINS, Lynn, Mass. Filed Apr. 22, 1919. Serial No. 291,808. 15 Claims. (Cl. 153—1.5.)



1. The method of forming conical tips on lacings which consists in laying a binder blank flat upon a work support having an uncovered exposed supporting surface with one edge beside a forming shoulder, laying a lacing end upon said blank, lowering a confining cover over the blank and lacing and upon said shoulder, and then advancing the complemental forming die over the work support and toward said shoulder, said die having a shoulder opposed to the first-named shoulder and shaped with a concave conical surface.

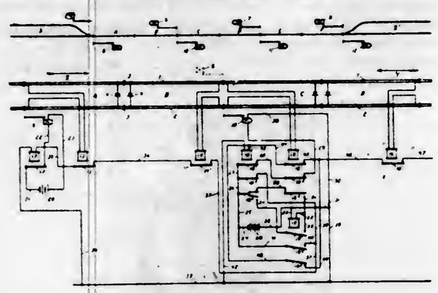
7. A lace tipping machine comprising a die having a forming shoulder and a supporting portion beside said shoulder, a complemental die with an opposed forming shoulder movable over said work support and parallel thereto, a cover piece carried by said movable die in advance of said shoulder, means for raising said cover piece when the die is retracted, and means for lowering it upon the shoulder of the first named die when the other die is advanced.

14. A lacing tip binder blank having opposite side edges inclined to one another, and substantially the whole of such blank being in one plane, the corner included between one of said inclined edges and the longer end edge of the blank being bent up out of such plane.

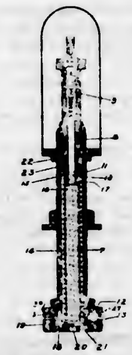
1,386,071. STRAND-GUIDE FOR BRAIDING-MACHINES. ANKER PETERSEN, Winthrop, Mass., assignor to American Wire-Mold Company, Hartford, Conn., a Corporation of Connecticut. Filed July 30, 1920. Serial No. 400,171. 11 Claims. (Cl. 28—4.)

1. A braiding machine comprising a composite therad lever having rigid and flexible portions, the flexible portion being substantial length as compared with the rigid portion and extending beyond the free extremity of the latter, said flexible portion having a thread guide adjacent its extremity, pivotal means engaging the rigid portion of the lever, and a cam follower adjacent one end of said rigid portion.

1,386,072. BEAD-CABLE FOR AUTOMOBILE-TIRES. ALPHONSO COMSTOCK PRATT, Deep River, Conn. Filed Jan. 20, 1921. Serial No. 438,577. 3 Claims. (Cl. 152—13.)



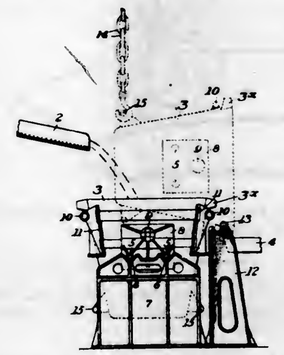
1. A bead cable comprising the combination of a core and a casing on the core consisting of a plurality of convolutions of spirals with the spirals of the several convolutions lying side by side, the core and the casing being wholly disconnected one from the other so that the casing as a whole may move angularly upon the core.



1,386,073. SIGNALING SYSTEM FOR SINGLE-TRACK RAILWAYS. NEIL D. PRESTON, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed July 8, 1916, Serial No. 108,182. Renewed Dec. 11, 1919. Serial No. 344,270. 7 Claims. (Cl. 246—33.)

1. In a signaling system for railroads, in combination: two track circuit sections; a circuit controller governed by one track circuit section and closed when that track

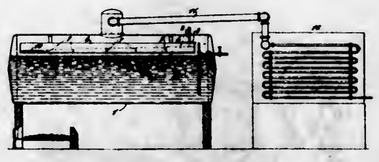
circuit section is occupied; a second circuit controller governed by both of said track circuit sections and opened when either of said track circuit sections is occupied; a device adapted to be governed electrically; a circuit for energizing said device including in series said circuit controllers; means governed by said device for preventing the opening of said second circuit controller by a train on said first mentioned track circuit section until said electrically operable device has operated; and means for signaling controlled by said device.



1,386,074. TIRE VALVE AND GAGE. ISIDORE PULVERMAN, Warren, Pa. Filed Apr. 21, 1919. Serial No. 291,567. 4 Claims. (Cl. 152—11.5.)

1. In a tire valve and gage, the combination of a sleeve having a tube engaging shoulder at its inner end with a screw threaded socket therein; a valve stem containing a valve telescopically mounted in the sleeve; and expansible tubular element comprising a rubber tube secured to the end of the stem and a coil spring outside of the tube secured to the stem; means arranged in the socket for securing the opposite end of the coil spring; a flange on the rubber tube extending over the floor of the socket to form a seal against the entrance of air to the sleeve outside the tube; and devices for clamping the flange in the socket.

1,386,075. LIQUID-METAL-TRANSFER APPARATUS. EDGAR J. REILLY, Youngstown, Ohio, assignor to The William B. Pollock Company, Youngstown, Ohio, a Corporation of Ohio. Filed Jan. 30, 1917. Serial No. 145,439. 1 Claim. (Cl. 22—79.)

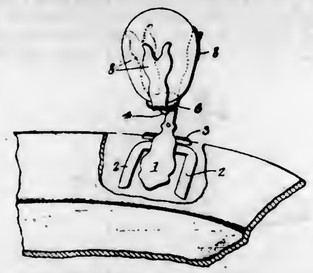


The herein described apparatus for transferring molten metal from a melting furnace to molds, comprising a trough extending from a metal furnace, another trough for carrying the metal to the molds, and having its receiving end separated from and at a lower level than the discharge end of the first-named trough, a stand placed intermediate the adjacent ends of the two troughs, said stand having one set of open bearings at a lower fixed level for supporting a ladle in upright position and another set of open bearings at another fixed level to be engaged by the ladle when tipped, and a large capacity open top, top-pour, metal-receiving and mixing vessel tiltably mounted on said stand in a position to receive metal from the first named trough and to discharge it into the second named trough, said troughs being generally fixed with respect to said vessel and the latter being tiltable between said troughs, substantially as described.

1,386,076. OXIDATION AND COLORATION OF FERROUS SURFACES. TITO RONDELLI, Turin, and QUIRINO SESTINI, Bergamo, Italy, assignors of one-third to Sestron (Foreign Patents) Limited, London, England. Filed Aug. 24, 1920. Serial No. 405,599. 7 Claims. (Cl. 204—1.)

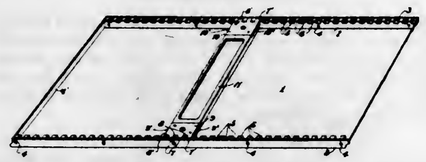
1. The process for oxidizing ferrous surfaces which consists in submitting the surface exclusively to anodic oxidation in a hot concentrated alkaline electrolyte containing an oxidizing agent.

1,386,077. METHOD OF DISTILLATION OF OIL. EDWARD A. RUDIGIER, Bayonne, N. J., assignor to Standard Oil Company, a Corporation of New Jersey. Filed May 27, 1918. Serial No. 236,717. 2 Claims. (Cl. 196—25.)



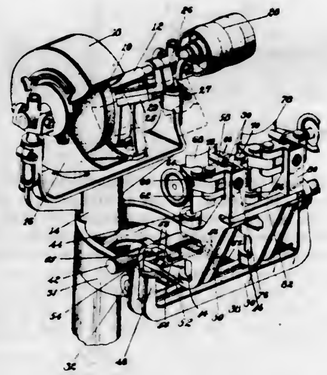
1. The method of treating oil to remove water therefrom, which consists in passing the oil at atmospheric temperature onto an extended surface located in the vapor space of a heated still containing a body of oil undergoing distillation, permitting the oil to flow over said surface and into the main body of oil being distilled, subjecting the oil while on said surface to a temperature evolved from said distillation sufficient to vaporize the water contained in the oil on said surface, and conducting off and condensing the vapor product.

1,386,078. EGG-HOLDER. RICHARD F. SCHULZE, Shelbyville, Ind. Filed Feb. 18, 1921. Serial No. 446,008. 1 Claim. (Cl. 65—12.)



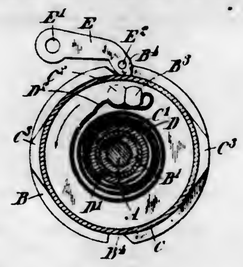
In an egg holder, the combination of means for holding an egg, a plate engaging clamp having a reversely bent arm

member to which the egg holding means is attached, and a laterally extending plate within the plate engaging clamp



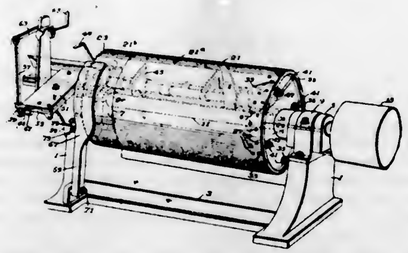
to contact with the edge of the plate to prevent damage to the device if pressed on too hard.

1,386,079. PRINTER'S GALLEY. JOHN W. SHIELDS, Springfield, Mass. Filed Feb. 21, 1921. Serial No. 446,586. 3 Claims. (Cl. 276—43.)



1. In a printer's galley, the combination with a base portion having upturned side members, of graduated bars secured to the side members, a gage bar having notched plates secured to the ends of the same and adapted to engage the graduated bars, the notches in said plates being so arranged that when said bar is reversed its original position will be changed a distance equal to one graduation, as described.

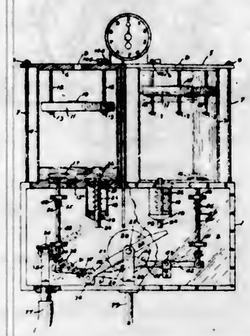
1,386,080. GRINDING-MACHINE. RALPH C. SIMMONS, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 2, 1916. Serial No. 134,686. 11 Claims. (Cl. 51—100.)



1. In a machine of the type described, a support, a rotary grinding element, a former adjustably mounted on said support and movable radially of the grinding element, a gage for determining the relative positions of said former and grinding member having two contact points associated with said former and grinding member respectively, said gage being movably mounted to assume a plurality of positions parallel to the axis of said grinding element.

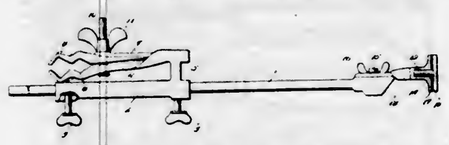
1,386,081. MAGNETO-STARTER. JOSEPH REGINALD MONTAGUE STANFIELD, Cardiff, Wales. Filed Nov. 23, 1920. Serial No. 426,077. 3 Claims. (Cl. 123—149.)

1. In yielding locking means for the driving and driven members of a magneto-starter the combination with one of the aforesaid movable members of a portion of spring which moves with said member, and a pin which moves with the other member, the said spring portion being so shaped that it provides a butting face for the pin sufficient to effect the required locking of the one member relatively to the other but not sufficient to prevent such locking from being forced for starting purposes and said spring portion further being so positioned that for starting purposes it is displaced by the said pin in an approximately radial direction relatively to the axis of rotation of the members, the resiliency of the spring tending always to keep the said butting portion in the engaging position relatively to the pin, substantially as set forth.



1,386,082. DRUM-SAW MACHINE. WILLIAM M. WHITNEY, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1920. Serial No. 419,819. 10 Claims. (Cl. 143—85.)

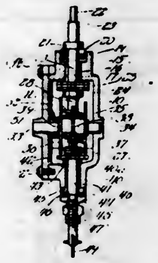
1. In a drum saw machine, the combination of a shaft, a head thereon, a drum saw having an internal collar larger than and adapted to receive said head, and adjusting screws threaded into said collar bearing against said head for adjusting the drum saw to center the same in respect to the axis of said shaft.



1,386,083. MEANS FOR MEASURING LIQUIDS. CLARENCE B. YOUNT, Montgomery county, near Union, Ohio. Filed Mar. 19, 1920. Serial No. 367,120. 9 Claims. (Cl. 221—112.)

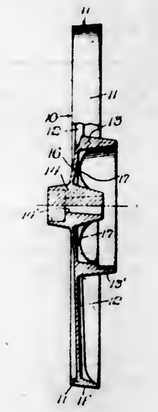
1. In a device of the type described, the combination with a liquid measuring vessel having an outlet opening, of a liquid receiving tank below said vessel with which said outlet opening communicates, a valve adapted to open and close said opening, a rocker arm, means operatively connected between said rocker arm and valve to open the latter when one end of the rocker arm is depressed, means actuated by the liquid in the vessel, when full, to depress

one end of said rocker arm slightly beyond a horizontal position, and resilient means connected to the other end of said rocker arm, for throwing the latter to an extreme position to open the outlet valve after the first named end of said rocker arm has been depressed by the liquid actuating means slightly beyond a horizontal position.



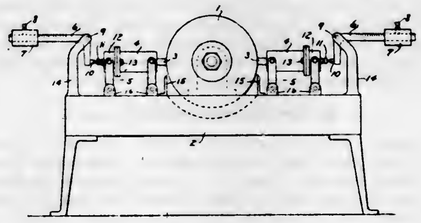
1,386,084. ATTACHMENT FOR T-STANDS. JOHN SELDEN ADAMSON, San Antonio, Tex. Filed July 27, 1920. Serial No. 399,225. 2 Claims. (Cl. 248—30.)

1. An attachment for display stands comprising a rod having means whereby the same may be secured to a display stand, said rod having one end enlarged and formed with a conical socket having its axis extending at right angles to the axis of the rod, an arm having a conical head fitted within said conical socket and having a central opening provided with smooth side walls, a threaded stem extending upwardly from the bottom wall of said socket and through the opening in said head, a head retaining nut secured on said stem, and article engaging means carried by the end of said arm.



1,386,085. VALVE-GRINDER. FRANS O. ALBERTSON, Sioux City, Iowa, assignor to Albertson & Company, Sioux City, Iowa, a Corporation of Iowa. Filed Oct. 13, 1920. Serial No. 416,625. 3 Claims. (Cl. 51—29.)

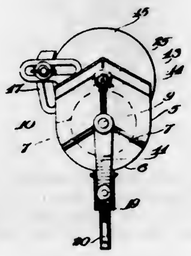
1. A valve grinder comprising a driving shaft adapted to be engaged and rotated by a chuck, a casing, a removable cover plate for said casing, a spur gear rigidly secured to said driving shaft, a worm shaft disposed parallel to said driving shaft, a second spur gear rigidly secured to said worm shaft and meshing with said first-mentioned spur gear, a worm formed integral with said worm shaft, a third shaft disposed at right angles to said worm shaft, said third shaft being journaled in said cover plate and a socket in said casing, spring means for holding said third shaft in said socket, a pair of mutilated gears rigidly secured to said third shaft, the leading tooth of each mutilated gear being bent outwardly in a direction away from the other mutilated gear, a gear rigidly secured intermediate the said mutilated gears to said third shaft and meshing with said worm, a driven shaft disposed coaxially with said driving shaft and journaled in said casing, an end thrust bearing collar adjustably secured to said driven shaft, bearing balls between said collar and casing on the



inner side of said collar and the outer side of said casing, spring means for maintaining engagement between said collar and bearing balls, and a spur gear rigidly secured to said driven shaft and meshing with said mutilated gears.

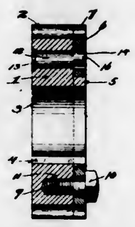
1,386,086. VEHICLE-WHEEL. RUSSELL A. ALGER, Detroit, Mich. Filed Jan. 14, 1921. Serial No. 437,143. 17 Claims. (Cl. 301—66.)

1. An automobile wheel of steel comprising in an integral forged structure, a hub, a felly, connecting spokes and a brake-drum.



1,386,087. ABRASION-TESTING MACHINE. GEORGE S. BLANKENHORN, Milwaukee, Wis. Filed Feb. 9, 1917. Serial No. 147,931. 8 Claims. (Cl. 73—51.)

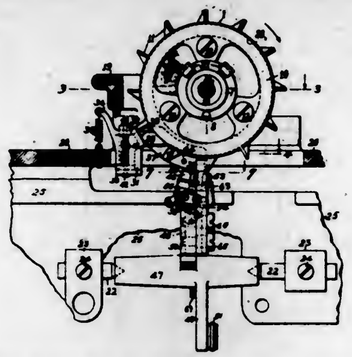
1. In combination, means for reducing materials by abrasion, means for holding a sample of material, means



for guiding one of said means to effect motion of translation thereof, and means for urging said reducing and said holding means horizontally relatively toward each other with substantially constant force.

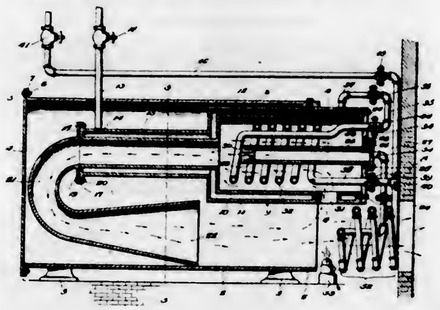
1,386,088. TOOL-GRINDER. WILLIAM J. F. BOETTCHER, Chicago, Ill. Filed Mar. 18, 1919. Serial No. 283,338. 1 Claim. (Cl. 74—56.)

A gear case for hand-operated tool grinders comprising a trough made in one piece and having its top open at a point above the gears, and a gable shaped cover plate for said top, said plate having a depending lug adapted to receive a cross pin passed through the side walls of the trough.



1,386,089. TOOTHED GEAR. THOMAS FRANK BUTZEN, Madison, Wis., assignor of one-half to Dudley Montgomery, Madison, Wis. Filed July 20, 1920. Serial No. 397,578. 1 Claim. (Cl. 74—28.)

In a toothed element, a toothed body section, a toothed take up section movable with respect to the body section and having an opening therethrough, a pin journaled in the body section, an eccentric head on one end of the pin and disposed in the opening of the take up section, said head having a kerf for a screw driver and accessible from the outer side of the toothed section, the other end of the pin being upset and countersunk in the body section whereby to frictionally hold it against accidental rotation, said take up section being oscillated with respect to the body section when the pin is rotated, whereby to aline or disaline the teeth of the section.

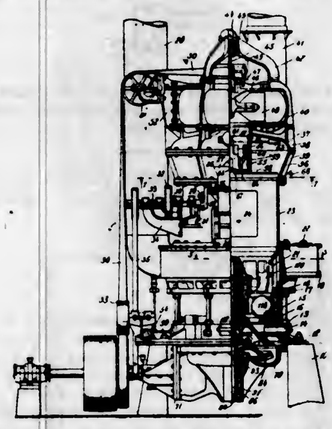


1,386,090. TYPEWRITING-MACHINE. DANIEL A. CARPENTER, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 5, 1920. Serial No. 386,725. 32 Claims. (Cl. 197—88.)

30. In an escapement mechanism, a toothed escape wheel, a dog carrier, a dog thereon movable transversely of the axis of said wheel and also longitudinally of said axis, and key actuated means for moving said dog independently of its carrier in the last mentioned direction,

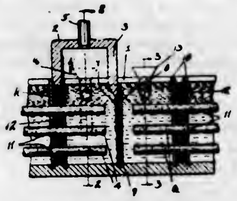
said dog carrier and said key actuated means being mounted independently of each other.

1,386,091. METHOD AND APPARATUS FOR BURNING FUEL-OILS. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor of one-half to Joseph Goodfellow, Fort Edward, N. Y. Filed Mar. 15, 1920. Serial No. 365,770. 16 Claims. (Cl. 158—5.)



1. The herein described method of burning fuel oils consisting in commingling oil with steam under pressure, nebulizing the product in a steam jacketed retort, circulating a portion of the heated products of combustion through such retort during nebulization, and practically excluding air.

1,386,092. WASHER. GEORGE H. COLE, Wenona, Ill. Filed Apr. 1, 1920. Serial No. 370,612. 1 Claim. (Cl. 151—52.)



A washer comprising a sheet metal plate having a central opening to receive a bolt, and having a plurality of depending tapered prongs stamped out of the body of the washer and extending at right angles thereto, and located contiguous to the periphery thereof, and also provided with a plurality of resilient tangs stamped out of the body of the washer contiguous to its periphery and inclined upwardly relatively to the surface thereof and adapted after depression to spring back to locking position, said last mentioned tangs being located alternately with respect to said first mentioned tangs.

1,386,093. PULVERIZER-MILL. HARRY RAYMOND COLLINS, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Sept. 9, 1920. Serial No. 409,069. 23 Claims. (Cl. 83—45.)

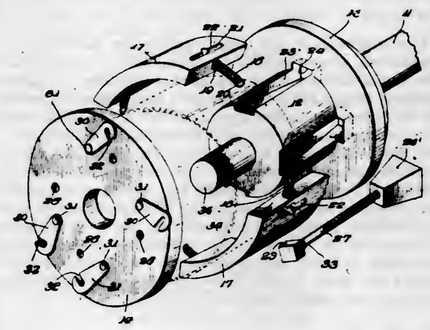
1. A pulverizer mill comprising a base, a grinding ring mounted on the base, a casing mounted on the grinding ring and means connected between the base and the casing whereby the latter may be lifted to permit the grinding ring to be laterally removed.

1,386,094. ELECTROLYTIC APPARATUS. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Sept. 3, 1918. Serial No. 252,324. 12 Claims. (Cl. 204—58.)

1. In apparatus of the class described, the combination of a cell having a partition depending below the normal level of the solution therein, an anode and a cathode on the respective sides of such partition, a closure for the anode side of the cell, the other side being open, and a diaphragm depending substantially vertically from such partition between said anode and cathode in spaced relation thereto.

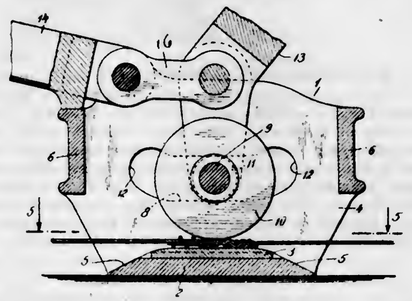
1,386,095. ELECTRODE ELEMENT FOR GALVANIC BATTERIES AND METHOD OF PRODUCING SAME. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Nov. 6, 1919. Serial No. 336,208. 32 Claims. (Cl. 204—38.)

1. An electrode element for galvanic batteries comprising an agglomerated mass of finely divided oxid of copper held together by a binder comprising cupric oxid formed *in situ* in said mass, substantially as described.



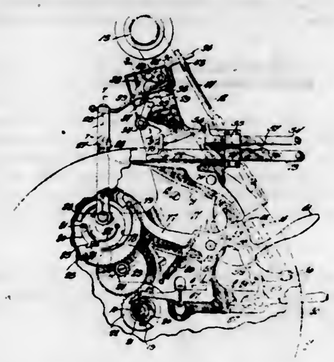
1,386,096. BADGE-FASTENER. FRANK J. FEHN, East Orange, N. J., assignor to The Whitehead & Hoag Company, Newark, N. J., a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 288,911. 1 Claim. (Cl. 24—103.)

In a badge fastener, the combination of a sheet metal plate having integral ears and an integral keeper hook pressed up to one side of the main body, said ears projecting edgewise from the main body in spaced parallel planes, the keeper hook projecting edgewise from said body in a plane at right angles to that of the ears, a pintle between and upon the ears, a pin looped around the pintle



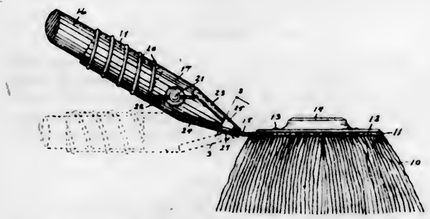
and having its ends extending in the same general direction therefrom, one end being movable into and out of engagement with the hook, and the other end being movable into and out of engagement with the main body of the plate at a point between the pintle and hook and placed under tension when the pin is engaged with the hook.

1,386,097. EXPANSIBLE PACKING. JAMES J. FISHER, Junior, W. Va., assignor of one-half to William L. Fisher, Tunnelton, W. Va. Filed Nov. 7, 1919. Serial No. 336,275. 8 Claims. (Cl. 74—109.)



1. In an expansible packing, a plurality of arcuate sections having their adjacent ends yieldably connected, a packing surrounding the arcuate sections, and means to adjust the arcuate sections.

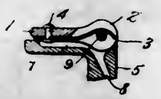
1,386,098. SEALING-TOOL. ELLSWORTH E. FLORA, Chicago, Ill., assignor to The National Binding Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1917. Serial No. 195,502. Renewed Dec. 24, 1920. Serial No. 433,053. 5 Claims. (Cl. 81—9.1.)



1. In a sealing tool the combination of a stationary support or anvil for the tie to be sealed, a compressing member, means for advancing said member first into engagement with a portion of the tie to compress the same, and then over the tie in a direction parallel with the support to progressively compress the successive portions of the tie.

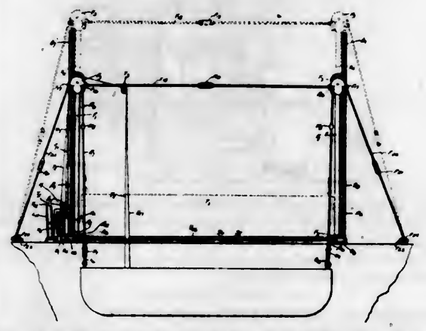
1,386,099. PHONOGRAPH-OPERATING MECHANISM. ARTHUR H. FRANKE, Manitowoc, Wis. Filed Aug. 30, 1918. Serial No. 252,102. 9 Claims. (Cl. 274—15.)

1. A phonograph operating mechanism including the combination with a turn table and spindle, a pivoted tone-arm and a sound box carried by the tone-arm, of mechanism for lifting the sound box and mechanism for swinging the tone-arm outwardly to initial position, a clutch drive connection between said mechanism and spindle, a lever resiliently urged to rotation in one direction, a tone-arm actuated release means for said lever, a connection between said lever and the clutch for operating the clutch upon swinging movement of the lever, means movable with the resetting mechanism for resetting the lever, a brake block carried by said lever and engageable with the turn table upon swinging movement of the lever, and means for holding the lever against movement to engage said block with the turn table.



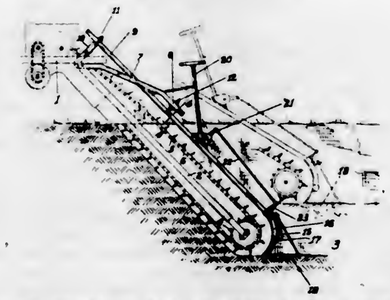
1,386,100. MOP OR BRUSH. FRANK H. FRENCH, Preston, Iowa. Filed Dec. 23, 1919. Serial No. 346,943. 4 Claims. (Cl. 306—1.)

1. In a brush or mop, a brush member, a tongue mounted on and extending laterally from said member, a handle, a pair of clamp members adapted laterally to engage opposite sides of the handle, said clamp members having opposed inwardly opening grooves arranged angularly with respect to the axis of the handle, said grooves adapted to engage side margins of said tongue, said clamp members being formed with holes, lugs on side margins of said tongue adapted to extend through said holes, and means for forcing the clamp members toward said tongue.



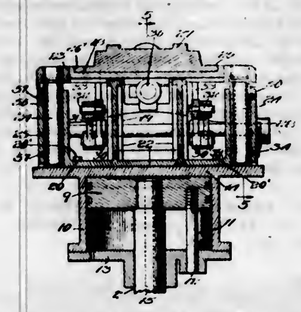
1,386,101. CLOSURE. GOTTLOB FUEGEL and HERMAN SCHMID, Brooklyn, N. Y., assignors, by mesne assignments to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 30, 1919. Serial No. 320,914. 1 Claim. (Cl. 184—91.)

A closure for an oil opening, comprising a body having a pair of arms spaced apart and extending parallel to each other from one end of the body, said arms having perforations to receive a pivot pin, the closure being recessed on its lower or inner face; and a spring secured to the said



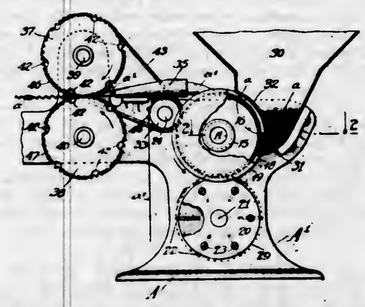
recessed face and projecting between said arms, said spring being curved between said arms and extending across the edges of the openings therethrough.

1,386,102. LIFEBOAT-DERRICK. CHARLES H. FULLER, Portland, Oreg. Filed May 19, 1919. Serial No. 298,105. 4 Claims. (Cl. 9—22.)



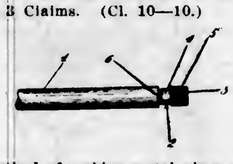
1. A life boat derrick consisting of a pair of derricks adapted to receive a life boat between them, each derrick consisting of a vertical mast mounted on a deck and having a boom hinged near its foot, a hauling line arranged to pass from a point on the deck inboard from said mast, over the top of said mast, thence over the head of said boom to a boat block, thence back through said boom head to a point on the deck outboard from said mast.

1,386,103. GRADE-MAINTAINING DEVICE FOR DITCHING-MACHINES. JOHN E. FUNK, Stockton, Calif. Filed Feb. 25, 1920. Serial No. 361,200. 5 Claims. (Cl. 37—24.)



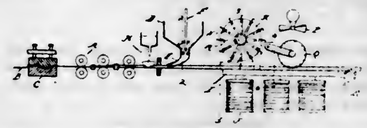
1. In combination with the digger boom of a ditch digging machine having a sprocket wheel on its lower end adjustable lengthwise of the boom and an endless digging device passing thereover, a curved shoe mounted to the boom concentric with the sprocket wheel behind the same and having a rearward extension adapted to bear on the bottom of the ditch at all times, means for altering the vertical level of the shoe while maintaining the concentric alinement thereof with the sprocket wheel, and independent means for maintaining such concentric alinement irrespective of the adjusted position of the sprocket wheel relative to the boom.

1,386,104. MOLDING-MACHINE. WILLIAM B. GEORGE, Chicago, Ill. Filed May 20, 1920. Serial No. 385,191. 9 Claims. (Cl. 22—48.)



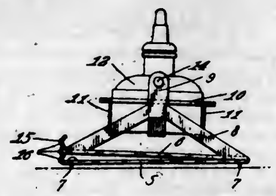
1. In a machine of the kind described, a pattern and a flask supporting mechanism comprising a relatively fixed pattern plate support, arranged within a relatively movable flask supporting frame, the pattern supporting plate having a shallow recess for receiving the pattern plate, a ledge surrounding the recess within which the pattern plate is adapted to fit with its upper face in the plane of the top edge of said ledge.

1,386,105. MACHINE FOR FORMING PACKAGES. EDWARD E. GRAY, Plano, Ill., assignor, by mesne assignments, to Ivers-Lee Company, Newark, N. J., a Corporation of Delaware. Filed June 5, 1916, Serial No. 101,804. Renewed Jan. 19, 1921. Serial No. 438,531. 15 Claims. (Cl. 93—5.)



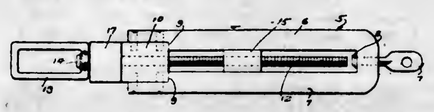
1. In a machine for forming packages, the combination of means for supporting a supply of package forming material, means for depositing articles thereon, means for folding said material, and means for crimping said folded material to secure the same in folded position.

1,386,106. METHOD OF MAKING METAL PLUGS. JOHN HALBRITTER, Boston, Mass., assignor to Walworth Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1920. Serial No. 370,028. 3 Claims. (Cl. 10—10.)



1. The method of making metal plugs which comprises the incising of a metal rod at a point removed from the end of the rod a distance substantially equal to the length of the body of the plug desired to be obtained whereby forward of said cut there is left a portion of the rod forming the unfinished body of the plug and back of said body a portion of the rod forming the unfinished head of the plug, externally threading the unfinished body of the plug and thereby finishing the same, cutting the then finished body and unfinished head of the plug from the rod, and shaping and thereby finishing the head by application of pressure laterally thereto.

1,386,107. MACHINE FOR FORMING FINISHING-MOLDING. LEWIS LEONARD HAMILTON, Detroit, Mich. Filed Jan. 12, 1920. Serial No. 350,992. 8 Claims. (Cl. 207—11.)

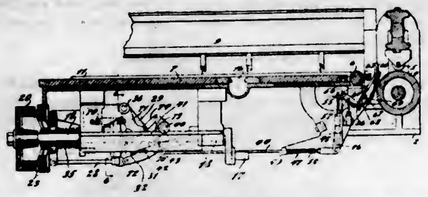


2. The combination with means for advancing a molten metal filled strip, of magnetic means for drawing securing devices into the molten metal and retaining the same until the metal is solidified.

1,386,108. INKWELL. ROLAND HARDING, Groton, N. Y. Filed Oct. 9, 1920. Serial No. 415,742. 4 Claims. (Cl. 120—73.)

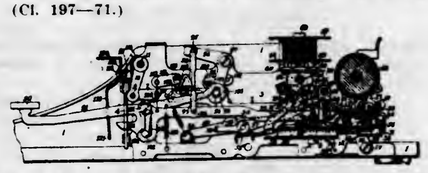
4. A bottle support comprising a base, an upper section formed integral with the base and adapted to move with respect thereto, an upwardly extending arm formed integral with the base and having notches, said notches adapted to accommodate a portion of one edge of the upper section to support the upper section in its positions of adjustment, and pivotal bottle supporting means carried by the upper section.

1,386,109. WIRE SPLICE AND STRETCHER. CHRISTIAN E. HATFIELD, Florence, Okla. Filed Dec. 22, 1920. Serial No. 432,554. 3 Claims. (Cl. 24—19.)



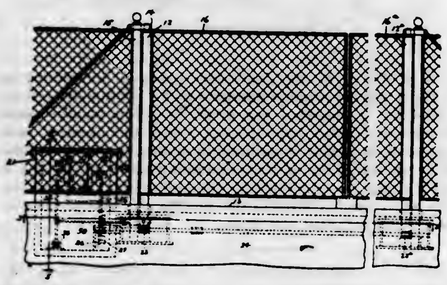
3. A device of the character described comprising a yoke, a bearing member carried by and closing one end of the yoke, a threaded rod freely movable through said bearing member, a block having a threaded opening, said rod being rotatable in said opening, said block being slidable longitudinally of the yoke, between the arms, and a many sided collar carried by the end of the rod, whereby the rod is rotated through the medium of a suitable implement engaged with the collar.

1,386,110. DOUBLE-SCORING MACHINE. OTTO M. HOCH, Rochester, N. Y., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 2, 1920. Serial No. 421,242. 11 Claims. (Cl. 164—62.)



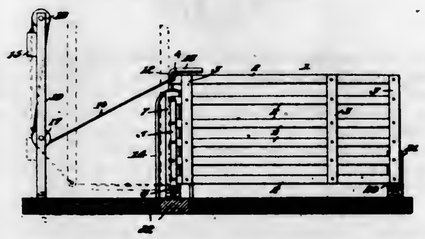
1. In a machine of the class described, the combination with a clutch and clutch-controlling mechanism, of a latch

normally maintaining said mechanism with the clutch released, a trip member adapted to be actuated by a moving sheet, means for returning said member to its normal



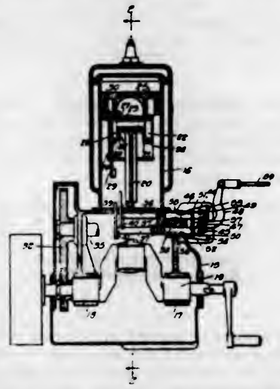
position upon the passage of the sheet thereover, and means operative upon the return movement of the trip member to release the said latch and thereby permit engagement of the clutch.

1,386,111. TYPEWRITING-MACHINE. JOSEPH B. HOLDEN, Utica, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 13, 1920. Serial No. 351,197. 17 Claims. (Cl. 197—71.)



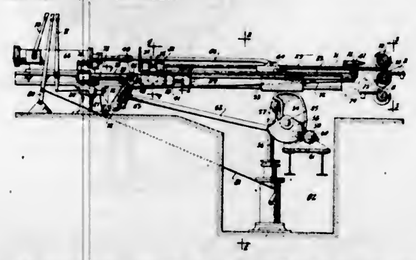
1. In a top strike typewriting machine, the combination of a carriage, a platen carried thereby, and means for affording a bodily case shift movement of the carriage fore and aft of the machine, said means including a shift frame, and a pair of parallel upright arms which support the rear end of said shift frame, said upright arms being pivoted at their lower ends to the rigid framework and being pivoted at their upper ends to the shift frame, the latter pivots being substantially in the same vertical plane with the axis of the platen when the latter is in both lower case position and upper case position while the first mentioned or lower fixed pivots are out of said vertical plane when the platen is in normal or lower case position but by reason of the shifting of the platen and the upper or shiftable pivots the said lower fixed pivots lie substantially in said vertical plane when the platen is moved to the upper case position whereby at this time said upright arms are substantially dead-centered relatively to the axis of the platen and the printing line.

1,386,112. APPARATUS FOR OPERATING GATES, &c. LOUIS V. HOMAN, South Dartmouth, Mass. Filed June 1, 1920. Serial No. 385,409. 3 Claims. (Cl. 39—7.)



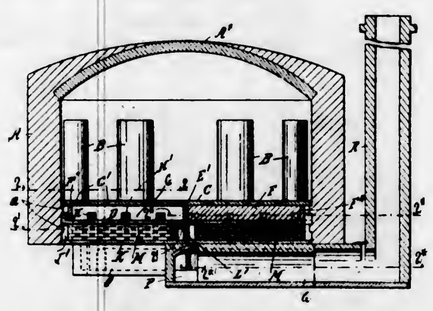
1. Gate-operating mechanism comprising, in combination, a reversible motor, a motor-driven gate, torque-transmitting connections between the motor and the gate, and motor-controlling mechanism operable by a vehicle approaching the gate to open the gate, and by a vehicle leaving the gate to close the gate, said mechanism including normally raised platforms located at opposite sides of the gate and depressible by vehicle wheels approaching and leaving the gate, a controlling member associated with the motor and adapted to occupy either of two operative positions and an intermediate neutral position, an oscillatory arm engaged with said controlling member, and adapted to move the latter to either of said positions, flexible connections between said platforms and said arm, and means operable by the gate when the latter reaches an open and a closed position, to move the oscillatory arm and controlling member to the neutral position of the latter, and thus stop the motor.

1,386,113. FARM-GATE. EZRA B. HOUCK, Peoria, Ill. Filed June 18, 1920. Serial No. 389,836. 2 Claims. (Cl. 39—60)



1. The combination of a horizontal rock shaft, a gate consisting of rails and braces secured to and connecting the rails between the ends thereof, a vertical bar secured to and connecting some of the rails at the ends thereof, the lower end of said bar being rigidly secured to said shaft whereby rocking of the shaft will tilt the gate in its own vertical plane, a post disposed in the plane of the gate in spaced relation to the rocking end thereof, a counterbalance supported on said post, a flexible connection between said counterbalance and the adjacent end of the upper rail, outwardly facing pinions secured to the ends of the rock shaft, vertical shafts adjacent the ends of the rock shaft, pinions on the lower ends of said shaft meshing with the pinions on the rock shaft, and handles at the upper ends of the vertical shafts, extending therefrom over the roadway and normally directed away from the gate at a right angle to each other, said handles moving simultaneously in opposite directions when the gate is tilted.

1,386,114. INTERNAL-COMBUSTION ENGINE. EDMUND JEDRZYKOWSKI, Chicago, Ill. Filed Oct. 24, 1919. Serial No. 332,909. 20 Claims. (Cl. 123—78.)



1. In combination with an internal combustion engine comprising a cylinder, piston and crank shaft, devices connecting said piston and crank shaft in driving relation, comprising means operated by the momentum of the piston at the end of a stroke thereof, to change the effective length of said driving connection, and instrumentalities associated with the connecting devices effective, after a change in the length of the driving connection, to maintain the then existing length of the driving connection throughout the several strokes of succeeding engine cycles.

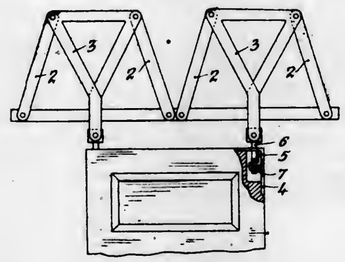
1,386,115. ROLLING-MILL APPARATUS FOR MAKING HOLLOW BARS. WESTON JENKINS, Rome, N. Y., assignor to Rome Iron Mills, Inc., a Corporation of New York. Filed Jan. 3, 1920. Serial No. 349,297. 11 Claims. (Cl. 80—11.)

1. A three-high rolling mill for making hollow bars comprising in combination a table, means for raising and lowering the table, a mandrel, and means for retracting and advancing the mandrel upon movement of the table up or down, said means being under the control of the table actuating means.

1,386,116. KILN. HARFORD P. JENKS, Vigo, Ohio. Filed July 8, 1916. Serial No. 108,132. 11 Claims. (Cl. 25—145.)

1. A kiln provided with a perforated floor, a checker-work heat-reservoir located below said floor and adapted to receive the hot gases passing through the perforations of the floor, a down-take located at the edge portion of the reservoir and forming an outlet therefor, and a flue connected with the lower portion of the down-take and having an imperforate upper wall extending along the lower portion of the heat-reservoir, and in contact, throughout its length, with the bottom wall of said reservoir.

1,386,117. METHOD OF ABSORBING HALOGENS. COULTER W. JONES, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 23, 1918. Serial No. 246,312. 2 Claims. (Cl. 23—10.)



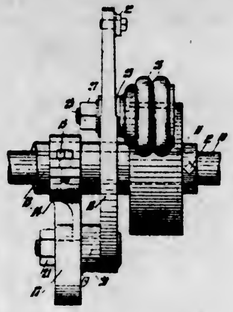
1. The method of recovering bromin from an admixture of chlorin, which consists in treating the same with sufficient alkali to absorb such chlorin and one molecule of bromin to five of chlorin, thereby converting such chlorin into chlorid and forming a proportionate amount of bromate, separating such bromate from such chlorid, and subsequently absorbing the residual bromin purified as aforesaid by elimination of the chlorin.

1,386,118. MANUFACTURE OF CHLORHYDRIN. WILLIAM E. KIRST, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Dec. 9, 1918. Serial No. 265,859. 3 Claims. (Cl. 23—24.)

1. The method of removing water from a solution of the same and glycol chlorhydrin, which consists in adding benzol; and then raising the resulting solution-mixture to a temperature at which the combined vapor tensions of the benzol and water are equal to or greater than atmospheric or other superimposed pressure, thereby simultaneously evaporating the water and benzol and leaving the chlorhydrin behind.

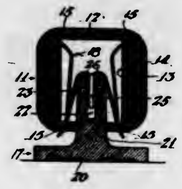
3. The method of removing water from a solution of the same and glycol halogen-hydrin, which consists in adding benzol and then raising the resulting solution-mixture to a temperature at which the combined vapor tensions of the benzol and water are equal to or greater than atmospheric or other superimposed pressure, thereby simultaneously evaporating the water and benzol and leaving the halogen-hydrin behind.

1,386,119. MECHANISM FOR SLIDING DOORS, DRAWERS, AND THE LIKE. HANS EDVARD KJÖLSETH, Porsgrund, Norway. Filed May 28, 1920. Serial No. 384,926. 3 Claims. (Cl. 16—156.)



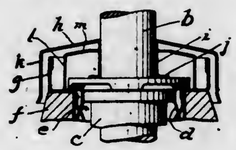
2. In a suspension link mechanism for the substantially rectilinear displacement of sliding doors, drawers and other objects having to perform to and fro movements, the combination of two links, hinged at their lower ends to stationary points and a third intermediate link lever having three hinge points arranged in a triangle, the two upper of such hinge points being hinged to the free upper ends of said links, and the third of said hinge points serving as a suspension joint for the object to be suspended and guided along a substantially rectilinear path with a slight lowering of said path at its end positions.

1,386,120. BRAKING DEVICE. GEORGE W. KUENNETH, Paterson, N. J., assignor to Jeanneta Kuenneth, Paterson, N. J. Filed Oct. 6, 1916. Serial No. 124,081. 4 Claims. (Cl. 188—74.)



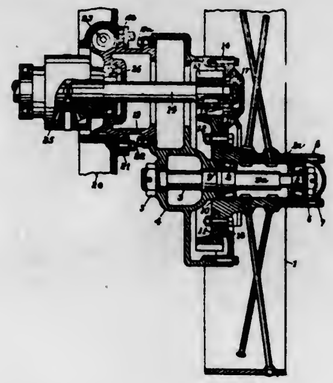
1. A device of the class described, comprising a stationary tubular shaft housing, a shaft extending through said housing axially but out of contact therewith, a member held to rotate with the shaft and carried thereby exte-

riorly of said housing, a hanger carried by said housing, a lever fulcrumed on said hanger, and a friction member



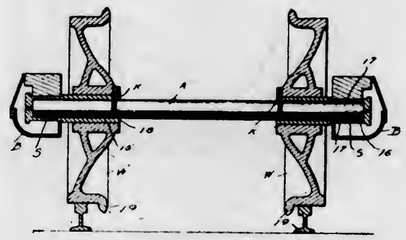
carried by said lever and adapted for engagement with said rotary member.

1,386,121. CROCHET-BALL HOLDER. WERNER LEHMANN, Los Angeles, Calif. Filed July 12, 1920. Serial No. 395,516. 7 Claims. (Cl. 242—134.)



5. A crochet ball holder comprising a stationary standard having a central bore, and a frame rotatably mounted on said standard, said frame consisting of a post extending into the bore in the standard and wires extending outwardly from said post rotatably engaging the top of the standard and downwardly forming elastic legs engaging the lower edge of the inside of said ball, the upper ends of said wires extending outwardly to engage the upper portion of the inside of said ball.

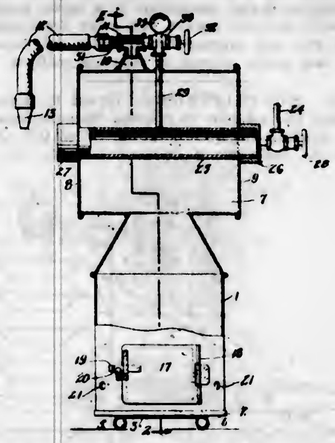
1,386,122. MEANS FOR EXCLUDING DIRT AND LIQUID FROM BEARINGS AND DRIVING MECHANISM OF CENTRIFUGAL MACHINES. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 7, 1920. Serial No. 356,988. 7 Claims. (Cl. 64—22.)



7. A removable protector for the floating spindle bearing of a centrifugal machine comprising a thin shell arranged to be seated in the bearing support and having outwardly and upwardly extending flange portions, a cap having spindle engaging portions and a downwardly extending petticoat arranged to surround the upwardly extending flange of shell, and an oil spray catcher adapted to be mounted within the shell and cap and having an inwardly extending flange at its upper end.

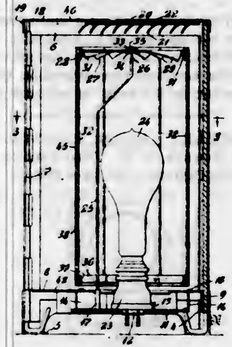
1,386,123. SUPPORT AND DRIVING MECHANISM FOR ADJUSTABLE DRIVE-WHEELS OF TRACTORS. OTTO LEROY LEWIS, Houston, Tex. Filed July 28, 1920. Serial No. 399,600. 4 Claims. (Cl. 180—41.)

1. An apparatus of the character described, including a drive shaft, a stationary support having a bearing opening around the drive shaft, a connecting cylinder through which the drive shaft extends, having its inner end disposed in the bearing opening of the support and rotatably confined in connection with the support, a wheel shaft supporting frame secured to the outer end of the cylinder and having a bearing for the outer end of the drive shaft, a wheel shaft mounted in said supporting frame in offset parallel relation to the drive shaft, a wheel mounted on said wheel shaft, a gearing within the said supporting frame for driving the wheel from said drive shaft.



1,386,124. RAILWAY-CAR WHEELS AND AXLE. THOMAS LITTLEFIELD, Exira, Iowa. Filed Mar. 2, 1921. Serial No. 449,017. 2 Claims. (Cl. 295—35.)

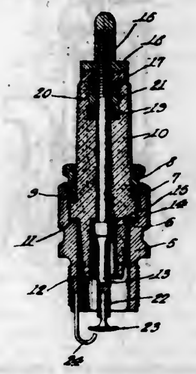
1. In combination, an axle, bearing sleeves rotatably mounted on the opposite ends of the axle, each of the sleeves including a thickened portion and a relatively thin portion having ducts formed therein, wheels mounted on the thickened portions, and means extending through the hubs of said wheels and said thickened portions and engaging said axle for detachably securing the sleeves and wheels to the axle and for fixing the wheels to the sleeves.



1,386,125. FUMIGATOR. HENRY LOEB, New York, N. Y. Filed Sept. 16, 1918. Serial No. 254,193. 3 Claims. (Cl. 43—128.)

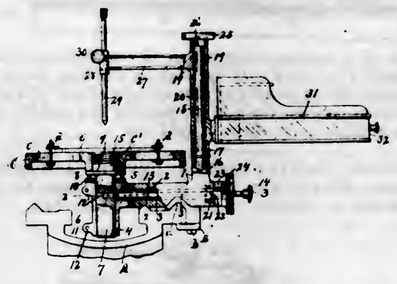
1. The combination of means providing a fume producing chamber, a reservoir arranged outside of said chamber and connected to receive fumes therefrom, a second reservoir arranged within said first reservoir and adapted to contain fluid under pressure, and means for discharging

fumes from said first reservoir under the force of fluid from said second reservoir, said reservoirs insuring a substantially steady flow of the fluid and fumes.



1,386,126. ADVERTISING DISPLAY DEVICE. GORHAM M. LYNES, Brooklyn, N. Y. Filed June 3, 1920. Serial No. 386,180. 3 Claims. (Cl. 40—132.)

1. A display device, comprising, a casing, a light source and a rotating element located in the casing when erected and revolved by hot air currents heated by the source, for producing changing waves of light on the display fields, the top of the casing consisting of a removable cover provided with overlapping ventilator blind openings and an overlapping false bottom below the main bottom, the overlapping members of the top and bottom being adapted to permit sufficient passage of air between them to give the rotating element the proper speed, without egress of light rays from the source to normal vision.

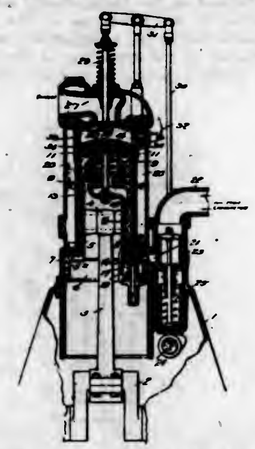


1,386,127. SPARK-PLUG. WILLIAM W. MCELRATH, JR., East Radford, Va. Filed Aug. 25, 1919. Serial No. 319,547. Renewed June 8, 1921. Serial No. 476,109. 1 Claim. (Cl. 123—169.)

A spark plug including a tubular body, a core received therein and provided with a longitudinal bore which is enlarged at its upper and lower ends, a stationary electrode extending laterally from the tubular member, a longitudinally movable electrode received in the bore and adapted to be moved into engagement with the stationary electrode and rotated thereagainst to clean deposits from the contacting faces of both electrodes, an annular shoulder formed on the longitudinally movable electrodes and received in the lower end of the bore, a packing washer positioned on the longitudinally movable electrode and positioned on the upper face of the shoulder, a compressible packing element arranged in the upper end of

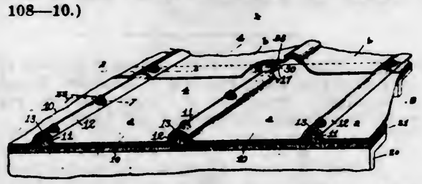
the bore and positioned around the longitudinally movable electrode, a packing gland received upon the upper end of the latter, and a jam nut threaded upon the upper end of said electrode to rotate thereon to engage the packing gland to force the compressible element against said electrode and to move the same upwardly to space the electrodes and to move the washer into engagement with the adjacent wall of the bore.

1,386,128. WORK CENTERING AND BALANCING DEVICE FOR THE FACE-PLATES OF LATHES. HERMAN R. MACCORDY, Fulton, N. Y. Filed May 19, 1920. Serial No. 382,536. 10 Claims. (Cl. 73—51.)



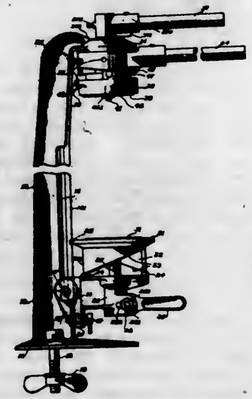
1. In a work centering and balancing device for lathes and analogous machines, the combination of a mandrel rotatable about a vertical axis and provided with means for supporting the face plate of a lathe coaxial therewith, a support for said mandrel, means for determining the position of the part of the work to be turned relatively to the axis of the mandrel and enabling said work to be adjusted to properly center the same relatively to said axis, and means for clamping the centered work to the face plate so that the face plate with the work centered thereon may be removad from the mandrel and placed upon the mandrel of the lathe.

1,386,129. INTERNAL-COMBUSTION ENGINE. EDWARD LEIGH MALSBARY, Reno, Nev. Filed June 14, 1917. Serial No. 174,705. 17 Claims. (Cl. 123—71.)



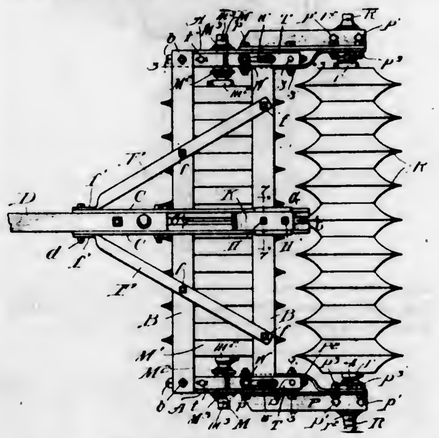
15. An internal combustion engine, comprising in combination a cylinder terminating in a combustion chamber, the combustion chamber end of said cylinder being counter-

bored; a power piston arranged to reciprocate in said cylinder, a sub-piston located between said power piston



and said combustion chamber, and mechanical means for controlling said sub-piston.

1,386,130. BUILDING CONSTRUCTION. HERBERT E. MARKS, Sewickley, and WILLIAM R. FRAZIER, Pittsburgh, Pa., assignors to Asbestos Protected Metal Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1918. Serial No. 210,437. 10 Claims. (Cl. 108—10.)

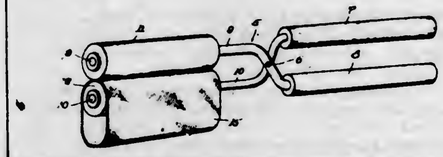


4. In a building construction, in combination, adjacent members provided with overlapping side lips, and a preformed sealing member of substantially plastic bituminous material between the said overlapping lips capable of being molded to the shape of said lips.

1,386,131. BOTTLE-CAPPING DEVICE. ARNOLD CRAWFORD MASSIE, New York, N. Y. Filed June 10, 1920. Serial No. 388,027. 7 Claims. (Cl. 226—84.)

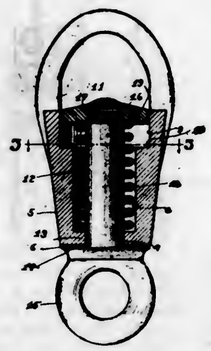
3. In a bottle capping apparatus, the combination, with a compression foot, a capping-throat device, and means angularly movable to impart positive predetermined thrust movement to said compression foot and capping-throat device separately, of a bottle support independently movable toward and away from said compression foot and capping-throat device, and means for holding said bottle support in adjusted position.

1,386,132. SOIL-PULVERIZER. HENRY F. RODEMEYER, Sterling, Ill., assignor to Sterling Manufacturing Company, Sterling, Ill., a Corporation. Filed Dec. 18, 1919. Serial No. 345,756. 2 Claims. (Cl. 55—21.)



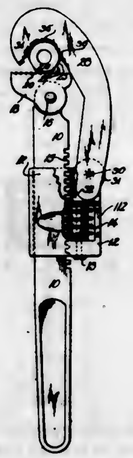
1. A soil pulverizer comprising a main frame, front and rear pulverizer rollers, pivoted, vertically movable bars carrying at their rear ends the journals of the rear roller, springs for exerting pressure upon the rear roller, and means adjacent to the seat for adjusting said springs.

1,386,133. JEWELRY. JOSEPH P. ROWLEY and JOHN W. SCHOELLNER, Newark, N. J. Filed July 24, 1919. Serial No. 313,016. 2 Claims. (Cl. 24—102.)



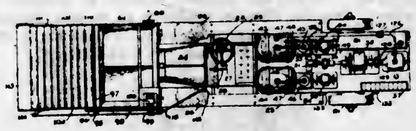
2. An article of the kind described, generally S-shaped in plan, having an unbroken endless outer wall, and an inner wall portion defined by uniting inturned edge portions of the outer wall, the visible surfaces of both the outer and inner wall portions being of plated precious metal and the invisible surfaces being of base metal, upon which the precious metal is plated.

1,386,134. METHOD OF AND MEANS FOR TREATING THE HAIR. HUBERT HERMAN SEYL, Chicago, Ill. Filed May 28, 1921. Serial No. 473,281. 3 Claims. (Cl. 132—31.)



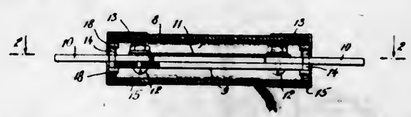
3. A device for treating hair comprising a pair of tongs having rollers on the respective prongs of the tongs and a liquid-absorbing girdle overlying one of the rollers.

1,386,135. SWIVEL-CONNECTOR. PATRICK H. SHAFFER, Richwood, W. Va. Original application filed Apr. 14, 1920. Serial No. 373,872. Divided and this application filed Nov. 13, 1920. Serial No. 423,971. 1 Claim. (Cl. 59—95.)



A swivel connector of the character described comprising a casing open at one end, an opening formed in the opposite end of the casing, an annular shoulder formed within said casing adjacent the open end, a loop carried by said open end, a shank slidably and rotatably mounted in said casing and extending through the opening in the end thereof, one end of said shank having a collar, a connecting loop, said collar being adapted to engage the lower surface of said end of the casing, the opposite end of the shank being reduced, a plate carried by said reduced end, said plate being movable within the open end of the casing, and a spring surrounding the shank within the casing, one end of said spring engaging the end of the casing, the opposite end of the spring engaging said plate, said plate limiting longitudinal movement of the casing and shank away from each other, the collar of the shank limiting movement of the casing and shank toward each other.

1,386,136. CANT-SLIP WRENCH. GEORGE SIBBALD, Denver, Colo. Filed Oct. 4, 1920. Serial No. 414,527. 3 Claims. (Cl. 81—107.)

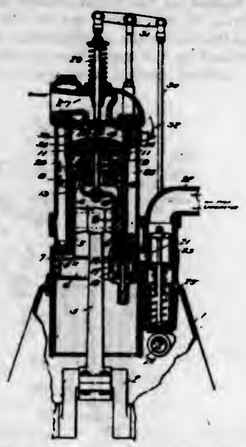


1. A wrench comprising a handle, a gripping jaw (18) pivotally connected to one end thereof, said jaw having a projecting portion (25) extending beyond the gripping face (20) at one side thereof, a member (12) adjustably movable along said handle, a cant hoook shaped gripping jaw (28) pivotally connected to said movable member, and having its gripping portion extending beyond said first named gripping jaw, and on the side of the latter which carries the projecting portion, whereby said projecting portion engages said second named jaw and prevents crushing action.

1,386,137. SNOW-REMOVAL APPARATUS. CHARLES SQUIRE, Deans, N. J. Filed June 4, 1920. Serial No. 386,559. 4 Claims. (Cl. 37—60.)

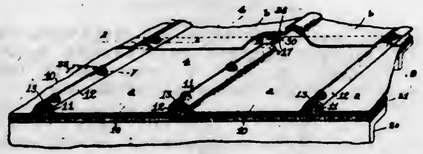
1. The combination with a wheeled truck and its motor; of an elevator at the front of the truck arranged to continuously elevate snow and the like as the truck moves forward, a melting tank on the truck having a bottom down which snow may pass, said bottom sloping downwardly in opposite directions from an intermediate point and in a direction transverse to said first named directions; said tank also having outlets at the foot of the slopes of the bottom, and means to heat said bottom whereby to melt the snow as it passes over said bottom.

1,386,138. ELECTRIC FUSE. ARCHIE W. STEELE, Bloomfield, N. J., assignor to Wilford J. Hawkins, Montclair, N. J. Filed July 5, 1919. Serial No. 308,842. 2 Claims. (Cl. 200—132.)



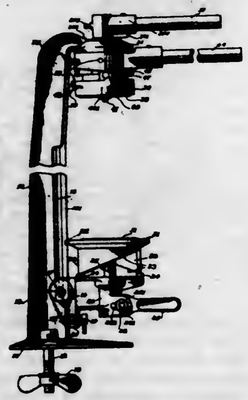
1. An electric fuse comprising a tube of insulating material having slots in its ends, a unit consisting of a fusible link and a strip of insulating material extending parallel to each other, and two fuse-terminals secured to the ends of the link and strip, said unit being mounted within the tube with the terminals projecting beyond the ends thereof, plates lying in said slots and arranged to receive the terminals, said plates having inclined walls coöperating with the walls of said slots, end caps on the ends of the tube and screws passing through the ends of the end caps and engaging threaded openings in the plates.

1,386,139. SELF-STARTER. FAIRBANK BARNES STOCKDALE, Brooklyn, N. Y., and HOBART ARTHUR SIMPSON, Ocean Grove, N. J. Filed Aug. 20, 1918. Serial No. 250,721. 34 Claims. (Cl. 185—41.)



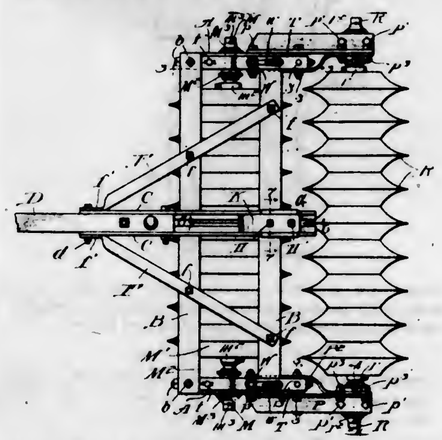
32. In a spring starting device for an internal combustion motor, the combination with a power spring for de-

bored; a power piston arranged to reciprocate in said cylinder, a sub-piston located between said power piston



and said combustion chamber, and mechanical means for controlling said sub-piston.

1,386,130. BUILDING CONSTRUCTION. HERBERT E. MARKS, Sewickley, and WILLIAM R. FRAZIER, Pittsburgh, Pa., assignors to Asbestos Protected Metal Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 5, 1918. Serial No. 210,437. 10 Claims. (Cl. 108—10.)

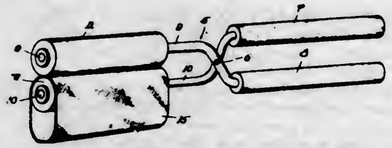


4. In a building construction, in combination, adjacent members provided with overlapping side lips, and a preformed sealing member of substantially plastic bituminous material between the said overlapping lips capable of being molded to the shape of said lips.

1,386,131. BOTTLE-CAPPING DEVICE. ARNOLD CRAWFORD MASSIE, New York, N. Y. Filed June 10, 1920. Serial No. 388,027. 7 Claims. (Cl. 226—84.)

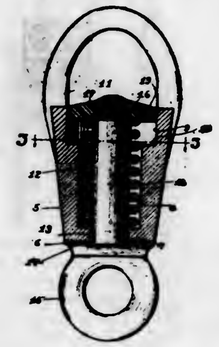
3. In a bottle capping apparatus, the combination, with a compression foot, a capping-throat device, and means angularly movable to impart positive predetermined thrust movement to said compression foot and capping-throat device separately, of a bottle support independently movable toward and away from said compression foot and capping-throat device, and means for holding said bottle support in adjusted position.

1,386,132. SOIL-PULVERIZER. HENRY F. RODEMEYER, Sterling, Ill., assignor to Sterling Manufacturing Company, Sterling, Ill., a Corporation. Filed Dec. 18, 1919. Serial No. 345,756. 2 Claims. (Cl. 55—21.)



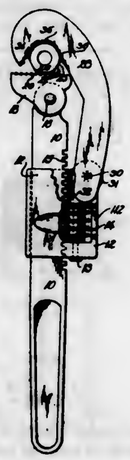
1. A soil pulverizer comprising a main frame, front and rear pulverizer rollers, pivoted, vertically movable bars carrying at their rear ends the journals of the rear roller, springs for exerting pressure upon the rear roller, and means adjacent to the seat for adjusting said springs.

1,386,133. JEWELRY. JOSEPH P. ROWLEY and JOHN W. SCHOELLNER, Newark, N. J. Filed July 24, 1919. Serial No. 313,016. 2 Claims. (Cl. 24—102.)



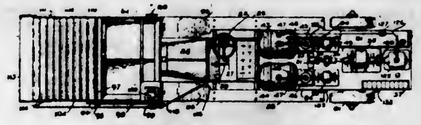
2. An article of the kind described, generally S-shaped in plan, having an unbroken endless outer wall, and an inner wall portion defined by uniting inturned edge portions of the outer wall, the visible surfaces of both the outer and inner wall portions being of plated precious metal and the invisible surfaces being of base metal, upon which the precious metal is plated.

1,386,134. METHOD OF AND MEANS FOR TREATING THE HAIR. HUBERT HERMAN SEYL, Chicago, Ill. Filed May 28, 1921. Serial No. 473,281. 3 Claims. (Cl. 132—31.)



3. A device for treating hair comprising a pair of tongs having rollers on the respective prongs of the tongs and a liquid-absorbing girdle overlying one of the rollers.

1,386,135. SWIVEL-CONNECTOR. PATRICK H. SHAFFER, Richwood, W. Va. Original application filed Apr. 14, 1920, Serial No. 373,872. Divided and this application filed Nov. 13, 1920. Serial No. 423,971. 1 Claim. (Cl. 59—95.)

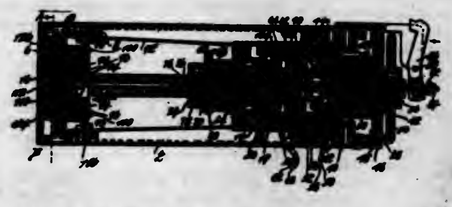


A swivel connector of the character described comprising a casing open at one end, an opening formed in the opposite end of the casing, an annular shoulder formed within said casing adjacent the open end, a loop carried by said open end, a shank slidably and rotatably mounted in said casing and extending through the opening in the end thereof, one end of said shank having a collar, a connecting loop, said collar being adapted to engage the lower surface of said end of the casing, the opposite end of the shank being reduced, a plate carried by said reduced end, said plate being movable within the open end of the casing, and a spring surrounding the shank within the casing, one end of said spring engaging the end of the casing, the opposite end of the spring engaging said plate, said plate limiting longitudinal movement of the casing and shank away from each other, the collar of the shank limiting movement of the casing and shank toward each other.

1,386,136. CANT-SLIP WRENCH. GEORGE SIBBALD, Denver, Colo. Filed Oct. 4, 1920. Serial No. 414,527. 3 Claims. (Cl. 81—107.)

1. A wrench comprising a handle, a gripping jaw (18) pivotally connected to one end thereof, said jaw having a projecting portion (25) extending beyond the gripping face (20) at one side thereof, a member (12) adjustably movable along said handle, a cant hoook shaped gripping jaw (28) pivotally connected to said movable member, and having its gripping portion extending beyond said first named gripping jaw, and on the side of the latter which carries the projecting portion, whereby said projecting portion engages said second named jaw and prevents crushing action.

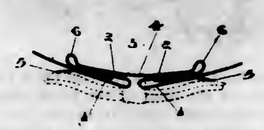
1,386,137. SNOW-REMOVAL APPARATUS. CHARLES SQUIRE, Deans, N. J. Filed June 4, 1920. Serial No. 386,559. 4 Claims. (Cl. 37—60.)



1. The combination with a wheeled truck and its motor; of an elevator at the front of the truck arranged to continuously elevate snow and the like as the truck moves forward, a melting tank on the truck having a bottom down which snow may pass, said bottom sloping downwardly in opposite directions from an intermediate point and in a direction transverse to said first named directions; said tank also having outlets at the foot of the slopes of the bottom, and means to heat said bottom whereby to melt the snow as it passes over said bottom.

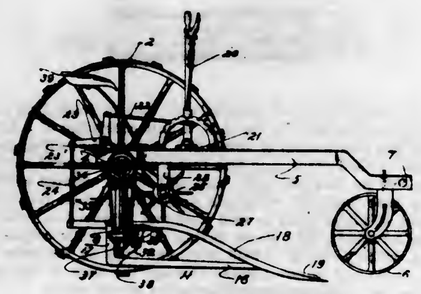
1,386,138. ELECTRIC FUSE. ARCHIE W. STEELE, Bloomfield, N. J., assignor to Wilford J. Hawkins, Montclair, N. J. Filed July 5, 1919. Serial No. 308,842. 2 Claims. (Cl. 200—132.)

1. An electric fuse comprising a tube of insulating material having slots in its ends, a unit consisting of a fusible link and a strip of insulating material extending parallel to each other, and two fuse-terminals secured to the ends of the link and strip, said unit being mounted within the tube with the terminals projecting beyond the ends thereof, plates lying in said slots and arranged to receive the terminals, said plates having inclined walls coöperating with the walls of said slots, end caps on the ends of the tube and screws passing through the ends of the end caps and engaging threaded openings in the plates.



1,386,139. SELF-STARTER. FAIRBANK BARNES STOCKDALE, Brooklyn, N. Y., and HOBART ARTHUR SIMPSON, Ocean Grove, N. J. Filed Aug. 20, 1918. Serial No. 250,721. 34 Claims. (Cl. 185—41.)

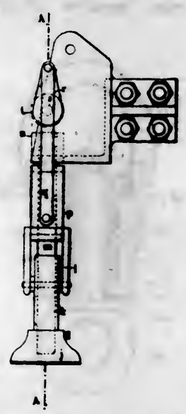
32. In a spring starting device for an internal combustion motor, the combination with a power spring for de-



livering power to the motor, clutching means for connecting one end of said spring to the motor to start the same, manual means for moving said clutching means to operative position, a second clutching means to connect said motor to the other end of said spring to rewind the same, spring actuated means controlled from said power spring as the same is unwound for acting on said rewinding clutching means, and means operated by said manual means for positively acting on said rewinding clutching means to hold the same in unclutched position against the action of said spring actuated means.

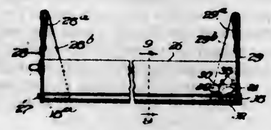
1,386,140. NECKTIE-FORM. HARVEY E. STONGE, Toronto, Ontario, Canada, assignor to Gerald Decourcy O'Grady, Toronto, Ontario, Canada. Filed June 2, 1921. Serial No. 474,557. 4 Claims. (Cl. 24—81.)

1. A tie form formed of an integral piece of spring metal bent back upon itself at each end to a point adjacent the center, and then back upon itself in the opposite direction to form jaws adapted to grip the ends of a collar; said form having a slight bend at its center, the bent back portions lying upon its convex side.



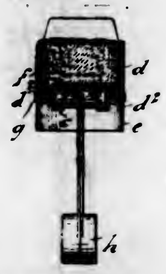
1,386,141. WEEDING IMPLEMENT. STEVEN TAUSCH, Spokane, Wash. Filed Nov. 15, 1920. Serial No. 424,086. 5 Claims. (Cl. 55—85.)

1. The combination in an implement as described including the traction wheels, and main frame, of drop frames and a supporting bar therein, a rock sleeve on said bar, a plurality of weeding teeth attached to said sleeve, said teeth each comprising a lower approximately horizontal cutting blade and a curved tine, and said blade and tine converging and terminating in a digging point, and means for rocking said sleeve for the purpose described.



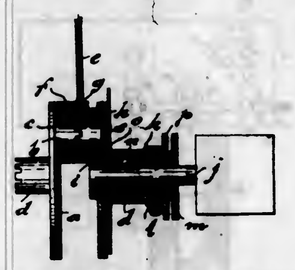
1,386,142. STAMPING APPARATUS. PHILIPPE HENRI LOUIS TRANTY and JAMES THEODORE FELIX CONTI, Paris, France. Filed June 21, 1919. Serial No. 305,230. 3 Claims. (Cl. 101—320.)

1. A stamping and registering machine comprising a movable stamping device, a control spring connected with the stamping device, means for operating the stamping device and spring so that the stamping device is moved quickly backward and forward so that it cannot stop either during the said movements or in the stamping position, means for counting and registering the number of



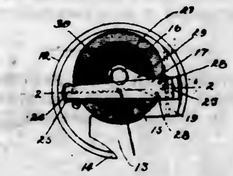
operations of the spring and stamp, and means for stopping the machine after the completion of a predetermined number of operations.

1,386,143. TRANSFER-FILE. CHARLES B. ULRICH, Jamestown, N. Y. Filed Nov. 20, 1916. Serial No. 132,258. 8 Claims. (Cl. 45—7.)



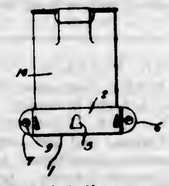
1. A drawer for a transfer cabinet comprising sheet metal sides, bottom and ends, the bottom having channels formed therein longitudinally thereof along its edges, and rollers mounted in said channels at the rear end thereof and projecting below the bottom of said channels, each roller having a supporting housing in one of said channels supporting said drawer by engagement with the side wall of the drawer and the inner wall of said channel.

1,386,144. ENGINE-PISTON AND CONNECTING-ROD. ARTHUR WILLIAM WALL, Sheldon, near Birmingham, England. Filed Dec. 27, 1918. Serial No. 268,544. 2 Claims. (Cl. 74—108.)



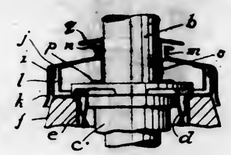
1. A piston, comprising a pair of cup members obtained by stamping, pressing or the like and secured base to base, the bases of said cup members being provided with bearing formations to arrange the axis of pivotal connection between the piston and the connecting rod in the plane in which the cup bases meet.

1,386,145. MAGNETO-DRIVING ARRANGEMENT FOR INTERNAL-COMBUSTION ENGINES. ARTHUR WILLIAM WALL, Sheldon, near Birmingham, England. Filed Dec. 27, 1918. Serial No. 268,547. 1 Claim. (Cl. 74—34.)



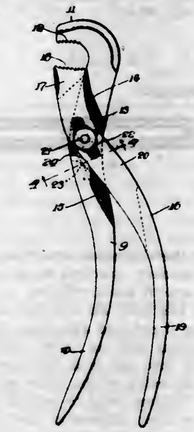
A magneto driving mechanism for internal combustion engines, including in combination with the rotating part of the magneto a crank shaft, a connecting rod secured to said crank shaft, a pinion secured to said connecting rod, and a second pinion on said rotating part coaxial with said crank shaft and meshing with said first named pinion.

1,386,146. SEWING-MACHINE SHUTTLE. LUCIUS E. WEAVER, East Hampton, Conn., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed July 8, 1919. Serial No. 309,412. 1 Claim. (Cl. 112—233.)



A shuttle having a bobbin chamber, a stud in said chamber on which a universally wound bobbin is rotatable, the chamber being provided with an internal face surrounding the stud and supporting an end of the bobbin, a bobbin-confining arm hinged to the shuttle and extending across the chamber when in operative position; and a resilient finger attached at one end to said arm, and formed at its opposite end to bear yieldingly on the central portion of the outer end of the bobbin when the arm is in its operative position, and prevent displacement of the inner convolutions of thread when the bobbin is partially spent, said finger being provided with an opening which receives the outer end of the stud when the finger is in its operative position, whereby the finger is enabled to spring inwardly toward said internal face as the length of the bobbin decreases.

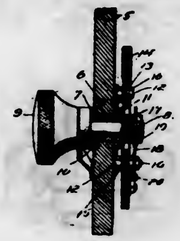
1,386,147. WASHBOILER-PROTECTOR. MAX WENSAUER, Sheboygan, Wis., assignor of one-half to August L. Maas, Sheboygan, Wis. Filed Apr. 2, 1920. Serial No. 370,795. 2 Claims. (Cl. 68—30.)



1. A support for wash boilers comprising a loop-shaped member in the form of a strip, of sufficient stiffness to support a boiler, the strip being provided with inwardly projecting brackets and having relatively movable ends, and a tightening device connecting said ends, the brackets being located intermediate the upper and lower edges of the strip, thereby to support a boiler out of contact with the heater.

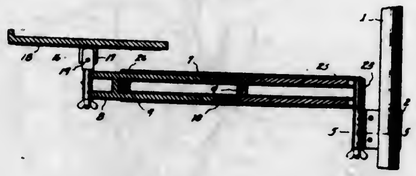
1,386,148. MEANS FOR EXCLUDING DIRT AND LIQUID FROM BEARINGS AND DRIVING MECHANISM OF CENTRIFUGAL MACHINES. BERT R. WRIGHT, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 7, 1920. Serial No. 357,104. 15 Claims. (Cl. 64—22.)

15. In a centrifugal machine, the combination with a spindle, a surrounding bearing support, an intermediate bearing a part overlying the bearing support, and a spring element between the bearing and the surrounding bearing support, of a sleeve surrounding the spindle having at its lower end a flange overlying the bearing and at its upper end a flange operating to catch dust and deflect water, and a second dust guard and water deflector extending under and substantially beyond the last named flange and spaced from said sleeve.



1,386,149. WRENCH. ALLEN C. ALLAN, Chicago, Ill. Filed Apr. 26, 1920. Serial No. 376,568. 3 Claims. (Cl. 81—83.)

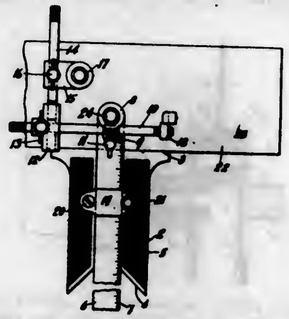
1. In a wrench of the character described, the combination of a first handle-member having a transverse groove between its ends and bent laterally at one end to provide a first jaw, a second handle-member crossing said first handle-member, occupying said groove, and having a second jaw at one end adapted to coöperate with said first jaw, and a pin and slot connection between the overlapped parts of said members, the second jaw bearing on an edge of said first handle-member and an edge of the second handle-member simultaneously bearing on the end wall of the



groove remote from the jaws and adjacent to that edge of the first handle-member on which the second jaw bears for all positions of the jaws within the capacity of the tool and with the active jaw faces substantially parallel.

1,386,150. RHEOSTAT. DEREK S. BREITENBACH, Washington, D. C. Filed Jan. 21, 1920. Serial No. 353,081. 3 Claims. (Cl. 219—48.)

1. In a rheostat, an externally threaded supporting sleeve, a stem journaled in said sleeve, a nut threaded thereon, a supporting plate clamped between said nut and a support, opposed extensions formed on said supporting plate, laterally projecting threaded stems on said extensions, an insulated disk supported by said stems, spacing elements between said supporting plate and disk, a contact arm and a retaining nut positioned over the terminal of said stem, said disk having a circular, staggered series of apertures receiving the convolutions of a conductor, binding posts carried by said disk and a knob for turning said stem and contact arm on said disk and over the conductor.

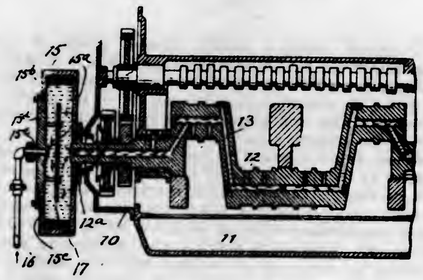


1,386,151. INVALID-BED TABLE. EDWARD C. BREWER, Seattle, Wash. Filed June 22, 1920. Serial No. 390,695. 1 Claim. (Cl. 45—82.)

In a device of the character described, in combination with a bedstead member, brackets fixed to the said member in vertically spaced apart relation, and a rod extending between said brackets, an arm pivotally mounted at its inner end on said rod and adjustable thereon, comprising an inner section and an outer section adapted to move telescopically into and from the inner section, means for limiting the extension of the outer section, said outer section having a vertical joint to permit lateral swinging of its outer end, a table adjustably mounted on the outer end of said arm, means for retaining the table at an adjusted position and a flange along one edge of the table, for the purpose set forth.

1,386,152. PRICK-PUNCHING TOOL. WILLIAM M. BAIGHAM, Newark, N. J. Filed Jan. 12, 1921. Serial No. 436,684. 2 Claims. (Cl. 33—189.)

1. An implement of the class described comprising a base, a graduated slide connected with the base for adjustment, means for holding the slide in an adjusted position, an indexing rod slidable transversely of the slide, the slide having an opening and the indexing rod having an index member which coöperates with the opening, and a second

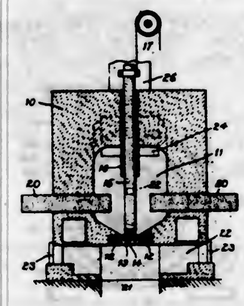


rod slidably connected with the first rod for movement transversely thereof and provided with a part having an opening to receive a prick-punching tool.

1,386,153. PROCESS FOR THE VULCANIZATION OF RUBBER. GIUSEPPE BAUNI, Milan, Italy, assignor to Pirelli & Co., Milan, Italy, a Company of Italy. Filed Mar. 9, 1920. Serial No. 364,478. 5 Claims. (Cl. 18—53.)

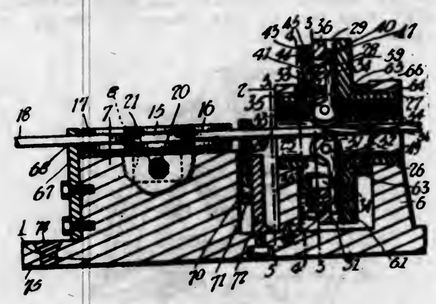
1. The process of vulcanizing rubber, consisting in treating it with sulfur and a metallic salt of a dithiocarbamic acid, and heating it to a temperature lower than 100° C.

1,386,154. ENGINE-LUBRICATING SYSTEM. ALANSON P. BRUSH, Detroit, Mich. Filed Aug. 17, 1918. Serial No. 250,375. 10 Claims. (Cl. 184—6.)



1. In an engine, the combination of the crank shaft thereof, a lubricating system for supplying lubricant to the bearing surfaces of the shaft, a centrifugal separator adapted to separate foreign particles from the lubricant and including means for causing the lubricant to flow outward toward the periphery of the separator in its passage through the separator, and means whereby the centrifugal separator receives rotary motion from the crank shaft.

1,386,155. ELECTRIC FURNACE. WALTER S. BUSCH and WILLIAM A. SCHELL, Rochester, N. Y., assignors to Rochester Railway & Light Company, Rochester, N. Y., a Corporation of New York. Filed July 31, 1919. Serial No. 314,409. 10 Claims. (Cl. 204—64.)

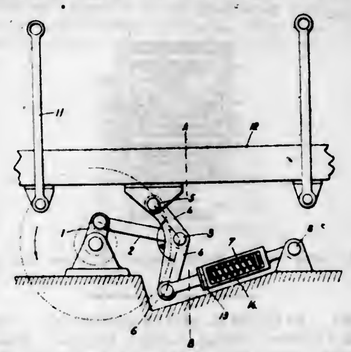


4. An electric furnace comprising: a refractory body provided with a reaction-chamber; primary electrodes in said chamber; a source of current for the primary electrodes; refining electrodes located below the primary

electrodes and acting upon the material after its descent from the sphere of action of the primary electrodes, one of

the refining electrodes being adjustable toward and from the other; and an independent source of current for the refining electrodes.

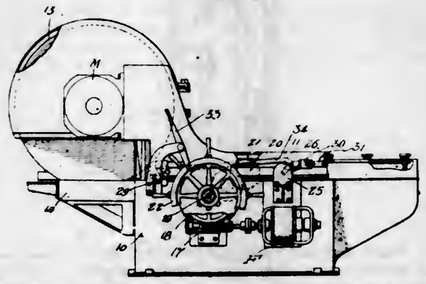
1,386,156. WIRE-GROOVING MACHINE. PERCY FREDERICK BUTTERFIELD, Toronto, Ontario, Canada. Filed Jan. 19, 1920. Serial No. 352,398. 13 Claims. (Cl. 80—10.)



4. A wire grooving machine, comprising a carrier sleeve mounted to freely revolve in suitable bearings and through which a wire is adapted to pass, cutting disks located on opposite sides of the wire and set at such an angle to the longitudinal center of the wire so that the longitudinal draw of the wire upon the cutting disks rotates the sleeve whereby the cutting disks follow a spiral path around the wire.

1,386,157. EMBALMING FLUID. GIUSEPPE CALLODI, Chicago, Ill. Filed Jan. 25, 1919. Serial No. 273,195. 1 Claim. (Cl. 27—22.)

An embalming fluid of the class described, comprising a mixture of turpentine, sodium chlorid and sulfate of calcium in approximately the proportions of forty grams of sodium chlorid and forty grams of sulfate of calcium per gallon of turpentine.

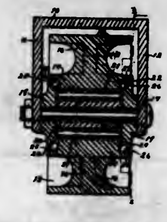


1,386,158. CONVEYER. CHARLES CANDLOT, Paris, France. Filed June 1, 1920. Serial No. 385,734. 3 Claims. (Cl. 74—14.)

1. An operating mechanism for shaking screens and the like, the combination with a connecting rod having at one end a crank connection with a continuously rotating driving means, of a floating bell-crank lever pivotally secured at its intermediate portion to the other end of said connecting rod, a pivotal connection between one end of said

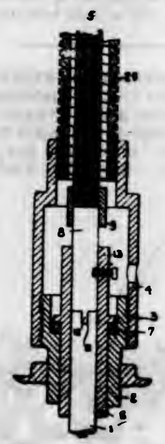
bell crank lever and screen and a resilient coupling for supporting the other end of said bell crank lever.

1,386,159. CONTROLLING SYSTEM FOR FEED-MOTORS. G HARRY CASE, Philadelphia, Pa., assignor to Joseph T. Ryerson & Son, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 7, 1914, Serial No. 865,566. Divided and this application filed November 6, 1916. Serial No. 129,768. 5 Claims. (Cl. 172—239.)



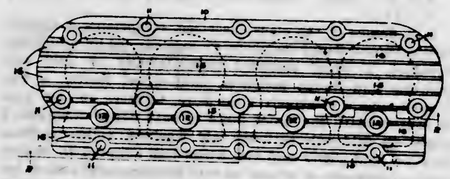
1. In a system for controlling electrical motors for friction cutting machines, a carriage, a friction cutting disk supported thereon, an electric motor for operating said disk, a second electrical motor for feeding the carriage and disk having a drooping speed torque characteristic whereby the resistance to the disk is maintained at a substantially constant value when the disk is driven through loads of varying values.

1,386,160. COMBINATION ROLLER AND BALL-BEARING WHEEL. JOHN LOUCIEN CHESNUTT, Kansas City, Mo., assignor to The Service Caster & Truck Company, Kansas City, Mo., a Corporation of Missouri. Filed May 22, 1919. Serial No. 298,912. 2 Claims. (Cl. 64—17.)



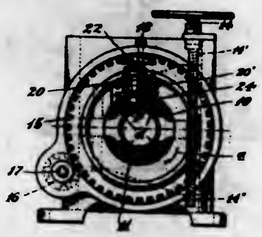
1. A device of the class described, comprising a support having spaced flange members, an axle carried by said flange members, a wheel mounted concentrically on said axle between said flange members, said wheel having a hub formed with a relatively large bore, washers on said axle in contact with the inner faces of said flange members, a sleeve on said axle between said washers, roller bearings between said sleeve and the wheel hub adapted to receive vertical pressure of a load on said support, said rollers being of slightly less length than said sleeve, and securing means on end portions of said axle outside of said flange

members whereby said flange members, washers and sleeve may be drawn together and form a rigid structure, said



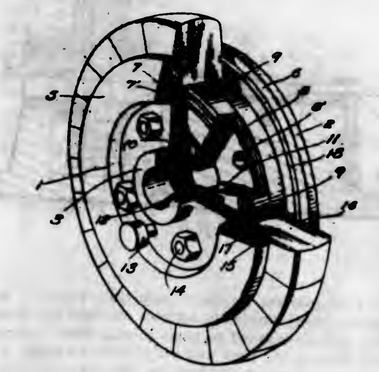
washers being out of direct contact with the hub of said wheel.

1,386,161. FLEXIBLE SHAFT-COUPLING. WILLIAM HUGH CLIFFORD, Ealing, London, England. Filed Nov. 28, 1919. Serial No. 341,184. 2 Claims. (Cl. 64—30.)



1. Shaft and tool couplings for motor driving machines and flexible shafts comprising a driving machine, a driving shaft, a flexible shaft, a sleeve at the end of said driving shaft adapted to receive the tail piece of a tool or the tail piece of the flexible shaft, an outer sleeve secured to said driving shaft and surrounding said tool sleeve, ball bearings between said outer and inner driving shaft sleeves, a sleeve attached to the end of said flexible shaft corresponding in form and size with the tool or flexible shaft sleeve at the end of the driving shaft, an outer sleeve secured to said flexible shaft and surrounding said tool sleeve and ball bearings between said flexible shaft sleeves.

1,386,162. CYLINDER-HEAD AND METHOD OF MANUFACTURING SAME. RALPH E. COLLINS, Indianapolis, Ind. Filed Apr. 24, 1920. Serial No. 376,230. 2 Claims. (Cl. 123—171.)

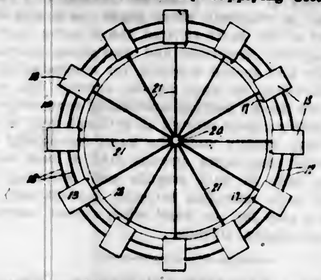


1. As an article of manufacture a cylinder head for internal combustion engines comprising a single unit member having a plurality of thin integrally formed ribs arranged longitudinally of the cylinder head to form air passageways, said ribs being tapered from one end to the other.

1,386,163. CUTTING-OFF MACHINE. LEWIS B. CURTIS, Bridgeport, Conn. Filed Oct. 22, 1919. Serial No. 332,425. 2 Claims. (Cl. 81—190.)

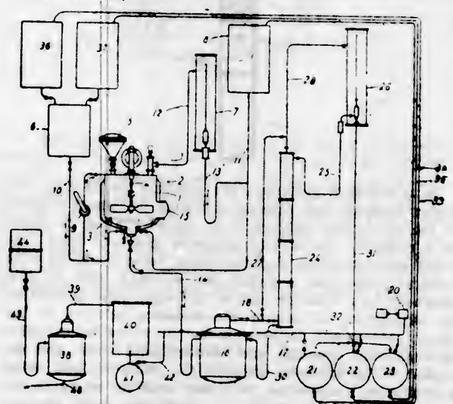
1. A machine of the character described, comprising a vise, a tool-carrier, means for supporting said carrier for rotation and longitudinal movement relative to said vise, a cut-off tool mounted on said carrier, means for feeding-in said tool, and a device for locking said tool-carrier against longitudinal movement and for intermittently operating said feeding-in means during the successive rotations of said carrier.

1,386,164. WHEEL. THOMAS G. DADE, South Fort Smith, Ark. Filed Dec. 12, 1918. Serial No. 266,452. 3 Claims. (Cl. 301—63.)



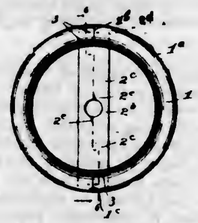
1. A wheel comprising two complementary disks consisting of hub, web and rim portions, the disks being provided with annular ribs on their inner faces, a packing ring between the disks and engaged by the ribs, fastening means for securing the disks in clamping relation with respect to the packing ring, and a tire carried by the rim.

1,386,165. PROCESS AND APPARATUS FOR DEGREASING GARBAGE. FRANK DANKS, Detroit, Mich. Filed Mar. 23, 1918. Serial No. 224,363. Renewed Dec. 8, 1920. Serial No. 429,262. 15 Claims. (Cl. 87—13.)



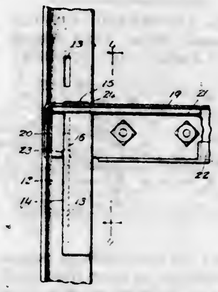
1. In the degreasing of garbage a plurality of containers movable with respect to each other, means for closing said containers, an open overflow outlet for each of said containers, and means for simultaneously supplying steam to said containers at a predetermined temperature comprising a central steam pipe and pipes leading therefrom to said containers.

2. In the degreasing of garbage a circular track, containers adapted for movement thereon and with respect to each other, open overflow outlets for said containers, and means for simultaneously supplying steam to said



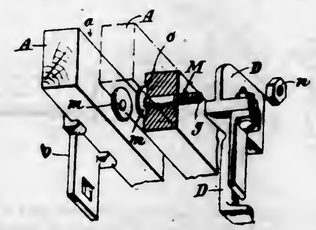
containers comprising a central steam pipe and pipes leading therefrom to said containers near the bottom thereof.

1,386,166. TREATMENT OF COCOA WASTE. EDOUARD DE GROUSSEAU and AUGUSTE VICONGNE, Clichy, France. Filed June 8, 1918. Serial No. 238,881. 6 Claims. (Cl. 23—24.)



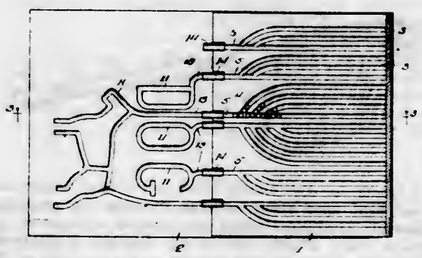
1. The process of recovering theobromin from cocoa waste, which comprises agitating the powdered waste in a solvent of tetrachlorid of ethane and phenol in the presence of an ammoniacal solution, separating the solvent from the solute by fractional distillation in vacuum, subjecting the remaining solute to the action of steam and further vacuum distillation, dissolving the fatty matter of the residue of distillation, dissolving theobromin and tannin from the residue in dilute alkali solution, and precipitating theobromin therefrom by the action of carbonic acid.

1,386,167. METALLIC WHEEL. RAY E. DUNHAM, Berea, Ohio, assignor to Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed Aug. 28, 1920. Serial No. 406,698. 10 Claims. (Cl. 55—77.)



1. A metallic wheel, comprising a metallic wheel rim of sheet metal having its ends abutting forming a joint and butt-welded to each other, and a wheel body welded within said rim and across said joint.

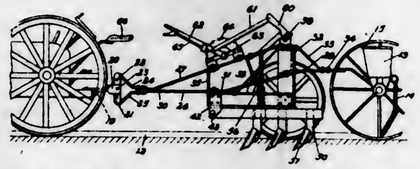
1,386,168. METAL SHELVING. AXEL F. ERICKSON, Aurora, Ill., assignor to All-Steel-Equip Company, Aurora, Ill., a Corporation of Illinois. Filed June 19, 1919. Serial No. 305,364. 10 Claims. (Cl. 211—27.)



5. A structure of the kind described comprising standards, side-walls secured to said standards, brackets adjustably and removably mounted on said standards, shelves removably supported on said brackets and having vertically disposed front and rear portions and removable front and rear walls coacting with certain of said shelves; said walls provided with lateral flanges along their lower edges coacting with the vertical portions of the shelves, and substantially flat elongated plates pivotally mounted on said walls for removably securing said front and rear walls to said standards.

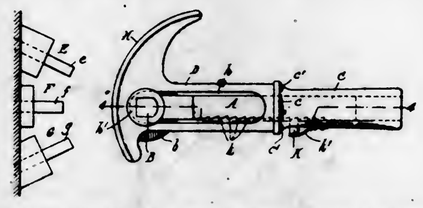
1,386,169. MEANS FOR ATTACHING PICKER-STICK CHECKS TO LOOM-LAYS. JOHN B. FENNELL and EDWARD B. FLOWERS, Columbia, S. C. Filed Oct. 13, 1920. Serial No. 416,629. 2 Claims. (Cl. 139—22.)

1. The combination with a loom lay having a picker stick slot, of a bracket for suspending a picker check device, a bolt extending entirely through the side of the lay on one side of the picker stick slot and which is threaded at opposite ends, a nut arranged in said slot and engaging the bolt, and a nut engaging the outer end of the bolt outside the bracket.



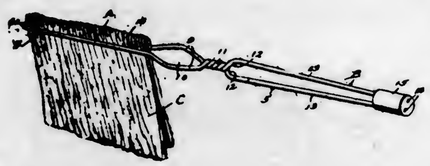
1,386,170. EDUCATIONAL TOY. ALBERT L. FIERLEIN, Batavia, Ill. Filed Oct. 28, 1920. Serial No. 420,272. 7 Claims. (Cl. 35—9.)

1. An educational toy comprising a reservoir, a multiplicity of balls normally contained therein, a record plate



having a groove in its face outlining a pattern or figure, and means for connecting the reservoir and record plate whereby said balls will flow by gravity to said plate to complete said pattern or figure.

1,386,171. SOIL-LOOSENING DEVICE. ROBERT M. FREEMAN, Fremont, Nebr. Filed July 29, 1920. Serial No. 399,786. 3 Claims. (Cl. 97—30.)

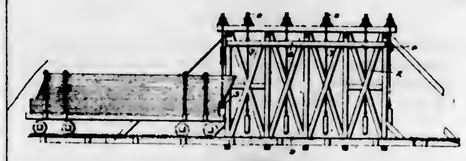


1. A framework for soil looseners comprising a pair of beams secured together at their front and rear ends and being bent apart at their intermediate portions, the rear ends of the beams being higher than their front ends, a bridge-piece extending transversely between the bent-apart beams near their rear ends, a truss brace secured to said beams and bridge piece, said bridge-piece having supporting standards, side rails connected to said standards at their lower ends and extending forwardly therefrom, a cross sill connecting the front ends of the rails, a second truss brace between the beams and connected to said beams and the sill, and an implement holder carried by the framework.

1,386,172. ACCIDENT-PREVENTING ATTACHMENT FOR VEHICLES. EDWARD J. FUTTERER, Buffalo, N. Y. Filed Mar. 30, 1918. Serial No. 225,713. 9 Claims. (Cl. 74—39.)

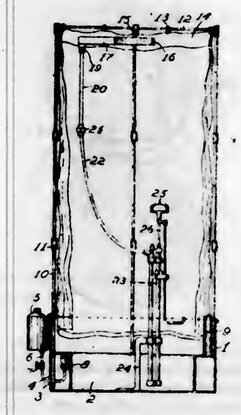
8. The combination of safety appliances and a controlling device, of an attachment including a movable part which is arranged in operative relation to said controlling device, an actuating device for said safety appliances adapted to be engaged by said movable part for causing the actuation of said appliances, and means for releasably holding said movable part in a position in which said part engages said actuating device.

1,386,173. HOLDER FOR DISHCLOTHS, MOPS, OR THE LIKE. ASBURY HAMILTON, Brooklyn, N. Y. Filed Dec. 11, 1919. Serial No. 344,062. 1 Claim. (Cl. 15—56.)



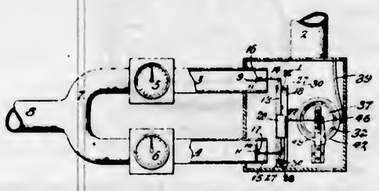
A holder for dish cloths, mops or the like, comprising, a rod bent upon itself between its ends for providing oppositely arranged strands, the forward portions of the strands being slightly spaced for forming a relatively long holding member, said strands at the rear end of the holding member being bent outwardly to provide a substantially elliptical portion, said strands being twisted closely together at the rear end of the elliptical portion for providing a relatively short shank, said strands at the rear end of the short twisted shank being bent outwardly in opposite directions and continuing rearwardly longitudinally and spaced laterally for a substantial distance for providing an open handle portion, the spaced strands of the handle portion converging rearwardly, the outwardly bent portions serving as a thumb rest whereby the thumb may readily slide the hand rearwardly upon the rearwardly converging strands, and a knob secured to the rear ends of said strands and retaining them spaced, said knob extending laterally beyond such ends to serve as a stop for the hand when moved rearwardly upon the converging strands.

1,386,174. RADIATOR-PROTECTOR. THOMAS P. HARRIS, Clarinda, Iowa. Filed Jan. 28, 1919. Serial No. 273,664. 1 Claim. (Cl. 257—132.)



In a radiator protector, the combination of two protector members, one capable of sliding movement relative to the other, and designed to be placed against the front of a radiator, one of said protector members being provided with openings and the other being provided with vertical slots, and a means for securing both of said members to a radiator and at the same time permitting an adjustment of one of the members relative to the other, said means comprising fastening devices extended through said openings and through said slots, and designed to be extended through the radiator, and being provided with means on their rear ends for engaging the rear surface of the radiator to frictionally hold the protector members in any adjusted position relative to each other and in position against the front of the radiator, for the purposes stated.

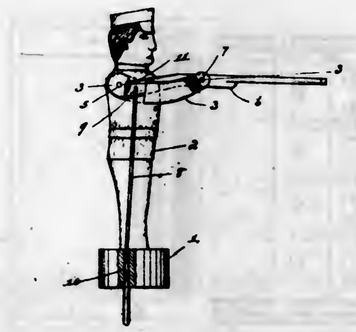
1,386,175. MEANS FOR STRAIGHTENING CARS AND THEIR LOADS. AUGUSTUS C. HINCKLEY, Pocatello, Idaho. Filed Oct. 8, 1920. Serial No. 415,546. 7 Claims. (Cl. 104—254.)



1. The herein described means of straightening cars and their loads, comprising a wall or frame at either side of a railway track; beams or abutments carried by said walls and vertically adjustable relatively thereto, certain of said beams or abutments extending lengthwise of and in proximity to the inner or opposing faces of said walls or frames and others thereof extending transversely of the track, each of said beams or abutments being adjustable to a position in horizontal plane with the displaced portion of the car or of the load; the car or load and any selected abutment being movable, one relatively to the other.

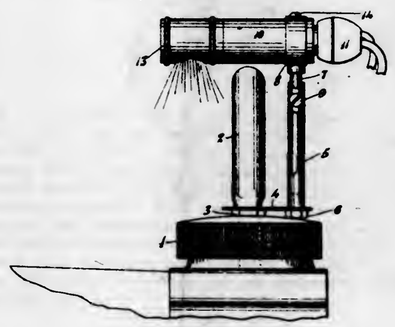
1,386,176. DISASSEMBLABLE BATHING APPARATUS. FRANK A. HOLMES, Waterloo, Iowa. Filed July 26, 1920. Serial No. 399,212. 1 Claim. (Cl. 4—26.)

In combination, a tub containing an inner closed encircling chamber arranged about a central closed bottom upwardly-opening space, said tub having an opening into said chamber and a closure for said opening, a burner in said chamber, a flue in communication with said chamber, a rose-head supported removably above said tub, and a pump removably associated with both said rose-head and tub and in communication with both to supply the former from the latter with a liquid under pressure.



1,386,177. PRESSURE-CONTROLLED FLOW-DIRECTING MEANS FOR COMPOUND METERS. AUGUST G. JETTE and AXEL JOHNSON, Buffalo, N. Y. Filed Aug. 1, 1918. Serial No. 247,735. 14 Claims. (Cl. 73—167.)

1. A pressure controlled flow-directing compound meter comprising a pressure chamber having a gas inlet and a plurality of outlets which are connected, respectively, with a plurality of indicators, measuring total valumes of gas passing therethrough, and means which are responsive to the variations in pressure in said chamber and which operate to direct the gas from said chamber into one or another of said outlets.

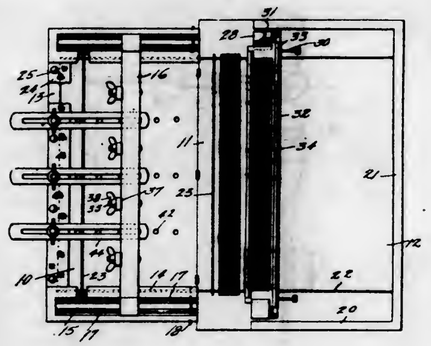


14. An apparatus of the character described comprising a plurality of meters, means automatically controlled by the pressure of the fluid being metered whereby the flow to the meters at relatively high pressures will all be directed through one meter only, and at relatively low pressures through the other meter only, while the flow of fluid at pressures intermediate relatively high and low pressures will be divided the parts going respectively through different meters.

1,386,178. TOY SOLDIER. CARL H. KALLENBERG, Troy, N. Y. Filed Sept. 13, 1920. Serial No. 409,817. 2 Claims. (Cl. 46—40.)

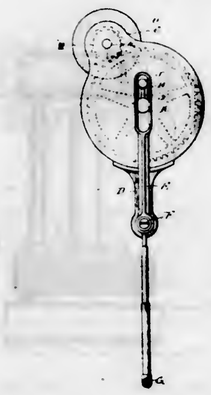
1. A toy-soldier comprising in combination a body having a shoulder-block; an arm pivoted upon the body adjacent to the shoulder-block; a toy-gun pivotally connected to the outer end of said arm at a distance from the butt end of the gun approximately equal to the distance from said pivotal connection to said shoulder-block; and a rod pivotally connected with the butt of the gun.

1,386,179. MOTOMETER-LAMP. JOHN R. KERNS, Covington, Ky. Filed Nov. 8, 1920. Serial No. 422,437. 1 Claim. (Cl. 240—2.)



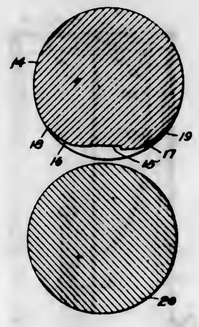
A motometer lamp, comprising in combination with a motometer, a tubular standard mounted adjacent said motometer, a rod arranged to telescope in said standard, a set screw to secure said rod in desired adjustment in the standard, an annular head on the free end of said rod, a socket arranged to fit in said head and to be longitudinally and rotatably adjustable therein, a set screw to secure said socket in desired adjustment; said socket being arranged to receive an electrical bulb and an electrical plug, and electrical connections in said socket between said plug and bulb.

1,386,180. PLAITING DEVICE. LAURA L. KNAUR, Denison, Tex. Filed Sept. 10, 1920. Serial No. 409,438. 7 Claims. (Cl. 223—40.)



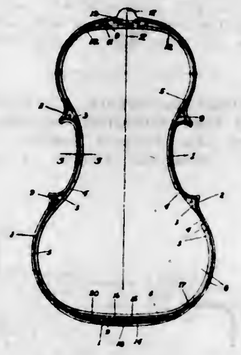
1. In a plaiting device, a base, a plurality of plaiting knives, plaiting and holding fingers suspended over the

base and coöperating with the knives to hold the goods while said knives are being placed in position, and means



for clamping and holding the goods after it has been plaited.

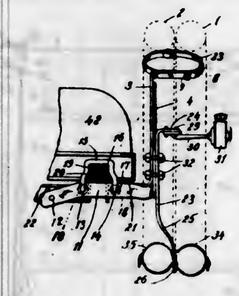
1,386,181. GRINDING IMPLEMENT. JOHN L. KOTYNEK, Omaha, Nebr. Filed Nov. 15, 1919. Serial No. 338,148. 1 Claim. (Cl. 74—14.)



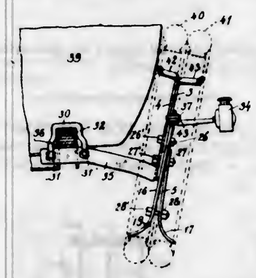
The combination with a casing having a horizontally disposed rotatable shaft therein provided with a rotatable element, said casing having a supporting bracket adjacent the lower sides thereof, of a foot actuated treadle for operating said shaft, said treadle being pivotally mounted on a downwardly extending arm extending downwardly from the lower end of the casing and located below the casing supporting bracket, the upper end of the treadle being provided with an elongated slot, an arm having a crank pin carried by said rotatable shaft, said crank pin being disposed in the elongated slot of the treadle, said casing carried shaft being disposed above the casing supported bracket and a foot engaging member carried by the lower end of the treadle and forming means whereby the treadle may be rocked on its pivotal point for rotating the shaft within the casing.

1,386,182. CONICAL DISK AND METHOD OF MAKING SAME. OTTO B. LINDQUIST, Tarentum, Pa. Filed Apr. 22, 1919. Serial No. 291,936. 6 Claims. (Cl. 80—16.)

1. The method of forming a radially tapered circular plate which consists in roller forge beveling a blank in opposite directions, then in roller forge beveling said blank equally in all radial directions.



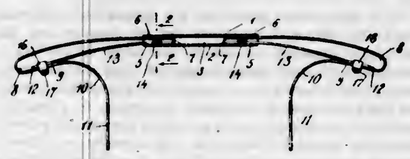
1,386,183. VIOLIN-BODY. WILLIAM J. LUCAS, Fresno, Calif. Filed Mar. 8, 1920. Serial No. 364,031. 4 Claims. (Cl. 84—275.)



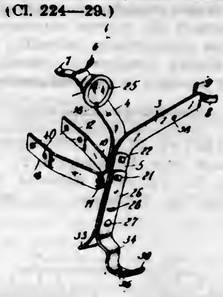
2. A body for violins and the like comprising relatively thin sides, triangular edgings following the interior contour of the sides and flush with the top and bottom edges thereof, the edgings being considerably wider than the thickness of the sides, whereby relatively large gluing area is had for the securing of the belly and back members of the body, and dowel pins projecting outwardly from the sides into recesses in the belly and back for positively alining the parts and preventing displacement.

1,386,184. AUTOMOBILE-TIRE HOLDER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Nov. 29, 1916. Serial No. 134,060. 11 Claims. (Cl. 224—29.)

10. In automobile tire holders, tire supporting members and connected resilient vertically rigid and horizontally yieldable attaching arms having bearing faces adapted to be clamped edgewise against an automobile and support the tire holder therefrom, each of said attaching arms having a second bearing face arranged at an angle to the first, and said bearing faces being arranged at different distances from the point of connection of the arms and supporting members.

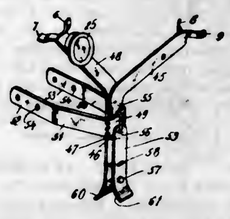


1,386,185. AUTOMOBILE-TIRE HOLDER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Sept. 15, 1917. Serial No. 191,526. 12 Claims. (Cl. 224—29.)



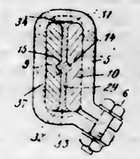
12. In demountable rim tire holders adapted for use with Ford or similar automobiles, a pair of members formed of steel having rearwardly extending attaching members and upwardly extending tire and rim supporting members arranged to be substantially rigid in a vertical plane and adapted to be held together, and downwardly extending holding means for applying coöperative wedging radial pressure against the tire and rim and said supporting members.

1,386,186. RESILIENT AUTOMOBILE-BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Feb. 10, 1920. Serial No. 357,757. 14 Claims. (Cl. 293—55.)



10. The automobile buffer comprising attaching members each comprising an inwardly extending narrow duplex connector portion formed of vertically arranged resilient strip and having a narrow connector loop and coöperating duplex alining connector members comprising two similar channel connectors to fit vertically over the duplex connector portions of said attaching members and clamping bolts passing through said connector members and connector portions adjacent said connector loops to adjustably secure said connector portions in vertically rigid position.

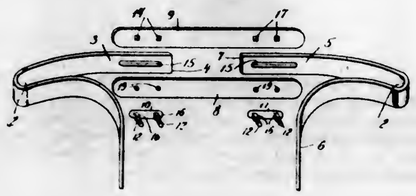
1,386,187. TIRE-HOLDER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Mar. 19, 1920. Serial No. 367,044. 10 Claims. (Cl. 224—29.)



2. In automobile tire holders, a pair of connected resilient strip members having upwardly and outwardly extending diverging tire supportinf arms, a connected depending retainer arm and coöperating clamping means to hold the tire, said retainer arm being formed with a supporting end to support an extra tire.

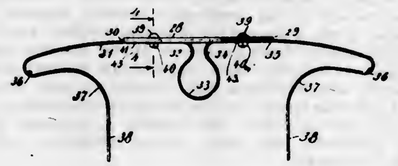
1,386,188. TIRE-HOLDER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Mar. 27, 1920. Serial No. 369,419. 7 Claims. (Cl. 224—29.)

4. In automobile tire holders, coöperating supporting arms having separated upper ends adapted to support a tire rim and having overlapping junction portions and holding arms, a one-piece coöperating resilinet strip attaching member having a narrow alining junction socket adapted to coöperate with said junction portions and a junction bolt connecting said junction portions thereto, said attaching member having separated substantially vertically rigid attaching arms adapted to coöperate with the transverse rear spring of an automobile and be clamped thereto.



1,386,189. AUTOMOBILE BUMPER OR BUFFER DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 31, 1919, Serial No. 334,672. Renewed June 18, 1921. Serial No. 478,717. 18 Claims. (Cl. 293—55.)

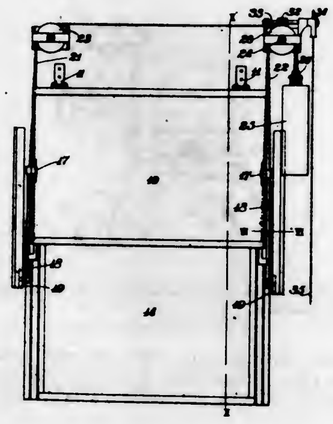
2. The automobile buffer comprising a resilient strip buffer front member having grooved connector portions and attaching members having grooved connector portions coöperating with the connector portions of said buffer front member, interposed connector alining members arranged between each of said coöperating connector por-



tions and comprising a connector member fitting within the grooves in said connector portions and comprising external alining flanges engaging the edges of said connector portions to promote the vertical alinement thereof, and clamping devices substantially embracing said connector portions and alining members to strongly and reliably hold said buffer members in adjusted position.

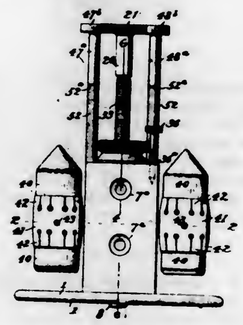
1,386,190. ADJUSTABLE AUTOMOBILE-BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Dec. 27, 1919. Serial No. 347,760. Renewed June 18, 1921. Serial No. 478,718. 7 Claims. (Cl. 293—55.)

7. The automobile buffer having a resilient buffer front comprising an apertured spring strip connecting portion and a coöperating reinforcing connecting member arranged on one side of said connecting portion and formed with duplicate connecting holes and a U-bolt connecting device comprising a yoke having a flat face coöperating with said reinforcing connecting member and comprising shanks extending into the connecting holes of one of said reinforcing connecting members and into said inner connecting portions to adjustably connect such elements.



1,386,191. RESILIENT AUTOMOBILE-BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Feb. 27, 1920, Serial No. 361,821. Renewed June 18, 1921. Serial No. 478,719. 7 Claims. (Cl. 293—55.)

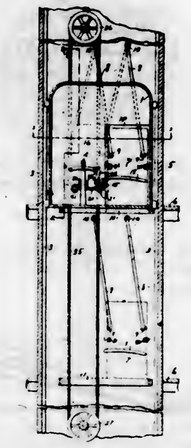
6. The automobile buffer comprising attaching members, end loops adapted to extend into protective position adjacent the vehicle wheels and buffer front members integral with said end loops, said buffer front members having a yieldable connection adapted to permanently connect and vertically aline the adjacent parts of said front members, a front reinforcing member having flanged alining means and connecting devices adapted to engage said reinforcing front member to aline and hold in adjusted position the parts of said buffer front member on either side of said yieldable connection.



1,386,192. DOOR OR SHUTTER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 30, 1919. Serial No. 307,839. 9 Claims. (Cl. 189—51.)

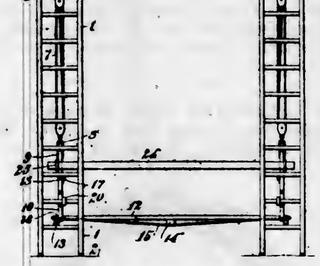
9. In a door or shutter, the combination of a hinged upper section, a lower section slidable into coincidence with the upper section, a deflecting arm for the sections hinged at one end to one of the sections and sliding in a

guide at its other end and means for actuating said deflecting arm and the lower section.



1,386,193. APPARATUS FOR DISPENSING DENTAL MATERIALS. CHARLES WILBUR MEGUIAR, Sonora, Ky. Filed Feb. 8, 1917. Serial No. 147,511. 26 Claims. (Cl. 221—96.)

1. A dispensing apparatus for dental use comprising a vertically disposed container for mercury or the like, a vertically disposed receptacle for alloy or the like, the receptacle for alloy being supported from the mercury container and adapted to be rotated from a position in which its discharge end is arranged uppermost to a position in which its discharge end is arranged lowermost whereby to discharge material therefrom, the mercury container having an outlet in the base thereof, a valve to control said outlet, and vertically movable actuating means to move said valve and rotate said receptacle whereby the mercury and amalgam may be simultaneously discharged.



1,386,194. SAFETY ATTACHMENT FOR ELEVATORS. GEORGE J. MEYER, Milwaukee, Wis. Filed Aug. 5, 1919. Serial No. 315,510. 15 Claims. (Cl. 187—49.)

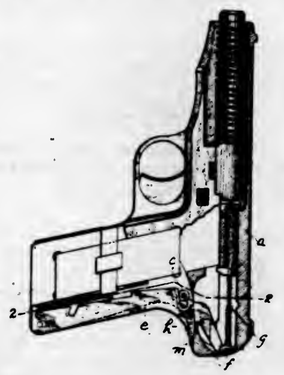
15. The combination with a landing door and car, of an elevator system, of interlocking members connected with the door and car respectively and adapted to allow the door to move freely into interlocking relation to the car when the door is opened and the car is in correct position

of adjustment without added resistance due to the interlocking members.

1,386,195. ADJUSTABLE SCAFFOLD. PHILIP W. MINNIGAN, Dayton, Ohio. Filed June 30, 1920. Serial No 393,120. 5 Claims. (Cl. 304—19.)

1. In an adjustable scaffold, the combination with a pair of ladders, of a yoke for each ladder, each yoke having hook-shaped end portions to engage the outer portions of the ladder rails and having an intermediate loop spaced from said hook-shaped portions and extending to the inner side of said ladder and adapted to rest upon a rung thereof, adjustable suspending devices connected at their upper ends to the loops of the respective yokes, a platform supporting member connected with the lower end of each suspending device, and a platform carried by said supporting members.

1,386,196. DOOR-CHECKING DEVICE. NEIL D. MUNN, Dresden, Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,284. 5 Claims. (Cl. 16—88.)



3. In a device of the character described, the combination of a cylinder; a plunger rod having a plunger secured thereto to reciprocate in the cylinder, said plunger being adapted to allow fluid to pass by freely when moving outwardly in the cylinder, the head of the cylinder and the outer end of the rod being adapted to be pivotally secured

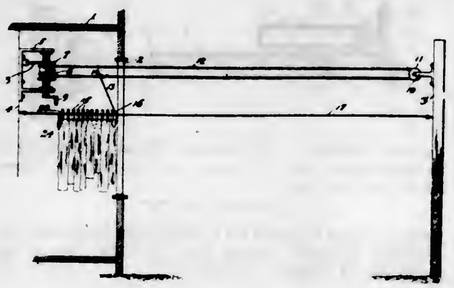
to a door and door jamb; a liquid reservoir located above the cylinder and communicating only with the head thereof; means for controlling the flow of air and liquid

from the cylinder to the reservoir when the plunger is moving inwardly in the cylinder; and spring means tending to close the door.

1,386,197. SELF-LOADING PISTOL. HEINRICH ORTGIES, Erfurt, Germany. Filed Apr. 1, 1919. Serial No. 286,814. 4 Claims. (Cl. 42—3.)

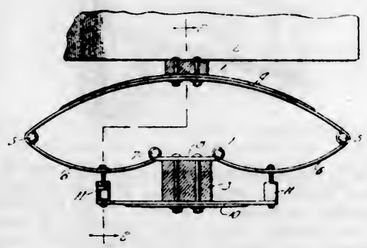
1. In an automatic pistol, the combination, with a cocking lever having a recess therein; of a bolt mounted for axial sliding movement transversely of the handle of the pistol and provided with a collar conforming to the shape of said recess but normally disalined therefrom; and a controlling spring acting to automatically shift said bolt axially in a direction to engage said collar in said recess when the cocking lever has been forced inward, whereby said lever will be locked against return movement.

1,386,198. MOVING-PICTURE-MACHINE SHUTTER. MILTON L. PARRET, Marshalltown, Iowa. Filed Sept. 14, 1920. Serial No. 410,250. 1 Claim. (Cl. 88—19.3.)



The combination with a moving picture projection machine, a light breaker or shutter device comprising a cylindrical shaped member having a pair of series of obliquely arranged members adapted to be intermittently moved into the path of light for partially shutting off the light during the movement of the film from one picture to the other for substantially eliminating the flicker.

1,386,199. CLOTHES-DRYING APPARATUS. RADE N. PEROVICH, Washoe, Mont. Filed Oct. 19, 1920. Serial No. 418,018. 4 Claims. (Cl. 68—3.)

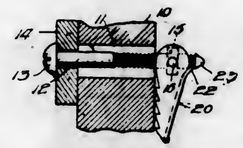


2. In an apparatus of the class described, the combination of an endless driving line, a track line contiguous to said driving line, load-supporting means adapted to

travel upon said track line, a connecting link coiled at one end around the driving line and having its other end surrounding said track line, and connecting means for said

link and load-supporting means whereby, when the driving line is driven, the connecting link will cause the load-supporting means to travel upon the track line.

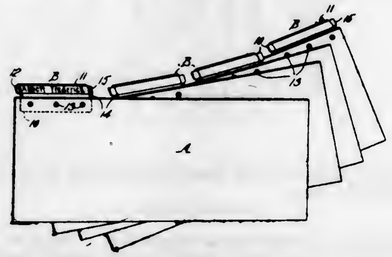
1,386,200. VEHICLE-SPRING. OSCAR PETERSON, Melrose Park, Ill. Filed Sept. 2, 1919. Serial No. 321,220. 2 Claims. (Cl. 267—46.)



2. In combination with a vehicle, a spring device having a downwardly turned semi-elliptic supporting member, a plurality of intermediate members having their outer ends pivotally connected to the ends of the supporting member and their inner ends pivotally connected to the vehicle axle, a foundation spring member rigidly attached to the vehicle axle below the last named members and resilient pneumatic means for connecting the foundation and intermediate members.

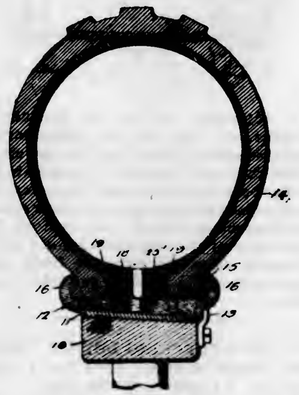
1,386,201. SPECK-DYE COMPOSITION. OSCAR L. PETERSON, Danielson, Conn. Filed Oct. 28, 1920. Serial No. 420,306. 3 Claims. (Cl. 8—6.)

1. A dyeing composition comprising 4.6 per cent. sodium chlorid, 3 per cent. copper sulfate, 1 per cent. tartar emetic, 9.2 per cent. alkali, 27.7 per cent. water, and 55.4 per cent. hematim paste.



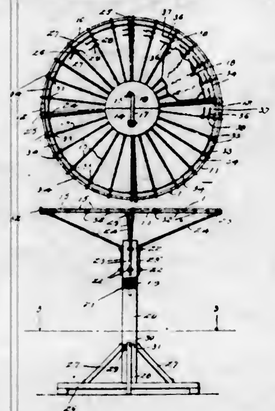
1,386,202. ATTACHING DEVICE. THOR O. PETERSON, New York, N. Y., assignor to U. S. Expansion Bolt Co., New York, N. Y., a Corporation of New York. Filed July 24, 1918. Serial No. 246,618. 8 Claims. (Cl. 85—3.)

1. In a device of the kind described, the combination with a bolt of a nut threaded on the bolt, an arm pivoted to the nut capable of swinging in advance of the bolt into substantial alinement therewith, the arm being formed to engage the bolt when the arm is swung transversely there-



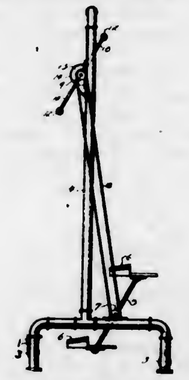
of, and the nut being formed with means to engage the arm when the latter is alined with the bolt, substantially as described.

1,386,203. INDEX. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed May 17, 1917. Serial No. 169,212. 9 Claims. (Cl. 40—23.)



1. An index tap comprising a relatively stiff body-piece which projects from and is substantially rigid with a guide or the like, and a flexible transparent cover-piece which covers one side of the body-piece and is retained in shape thereby and forms therewith a pocket for an index slip, said body-piece having a portion adjacent to one edge of said pocket which holds the cover spaced from the face of the body-piece to facilitate the insertion of the index slip.

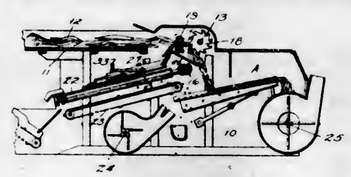
1,386,204. PNEUMATIC TIRE. WILLIAM H. RICHARDS, Knoxville, Tenn. Filed Aug. 5, 1920. Serial No. 401,370. 13 Claims. (Cl. 152—22.)



1. In a tire of the character described, a tire casing, a plurality of cells arranged within the tire casing, each cell being provided at its inner portion with an integral heel to be arranged between and engage with the beads of the tire casing, and inflating means carried by the heel.

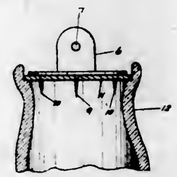
1,386,205. TABLECLOTH-STRETCHER. CASIMIR RYBIEK, Chicago, Ill. Filed Mar. 21, 1921. Serial No. 454,119. 8 Claims. (Cl. 45—24.)

2. A stretching frame of circular form having a hub and a rim, a plurality of radial arms between the hub and the rim, and stretching hooks having means to frictionally adjustably engage and support the same on the arms.



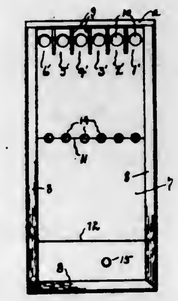
1,386,206. EXERCISING APPARATUS. OTTO LUDVIG SAMUELSON, Chicago, Ill. Filed May 26, 1919. Serial No. 299,915. 1 Claim. (Cl. 46—69.)

In an exercising apparatus, connected frame supports, an upright frame carried thereby, a crank shaft arranged upon said frame supports and spaced away from said frame, one end of said crank shaft being extended beyond the adjacent side of the frame, pedals for said crank shaft, a second crank shaft carried by said frame and disposed upon the opposite side thereof with relation to the said first crank shaft, the ends of said second crank shaft being extended beyond the sides of the frame, chain connection between the extended ends of said crank shafts at one side of said frame, means connecting said frame and an extended end of said second crank shaft at the opposite side of said frame for frictionally retarding rotation of the latter shaft, and an indicator associated with said means.



1,386,207. POPCORN-HUSKING DEVICE. JOHN H. SIEGEL, Masonville, Iowa. Filed Sept. 30, 1920. Serial No. 413,688. 3 Claims. (Cl. 130—5.)

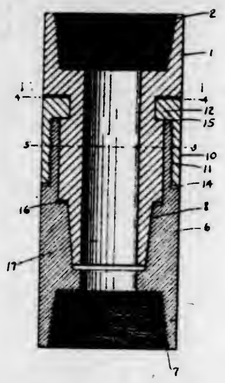
1. In combination with a husking machine having snapping rolls, husking rolls and means for operating said rolls, a riddle or chute device having a pair of members capable of sliding longitudinally relative to each other for lengthwise adjustment, one of said members being provid-



ed with channel shaped portions and raised projections at the bottom of said channel shaped portions, the other of said members being provided with corresponding channel shaped portions.

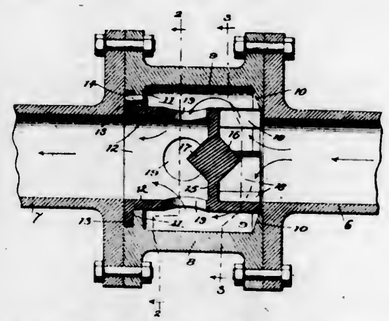
1,386,208. CLOSURE-LIFTER. WALTER SMITH, Chicago, Ill. Filed June 21, 1920. Serial No. 390,345. 2 Claims. (Cl. 65—47.)

1. A device of the class described, comprising a plate having a lip struck upwardly therefrom to constitute a handle; penetrating points inclined in opposite directions struck downwardly from the sides of said plate; and a penetrating central point struck downwardly from said plate and perpendicular thereto and longer than the said inclined points, adapted to penetrate and anchor the device in position to engage said inclined points, substantially as described.



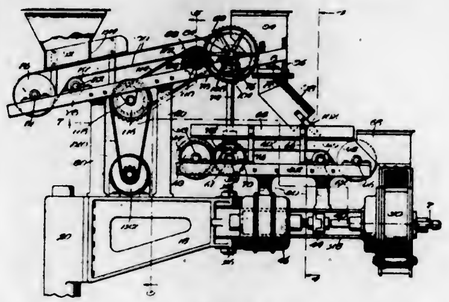
1,386,209. AMUSEMENT DEVICE. FRED STROUD, Omaha, Nebr., assignor of one-half to Hamlin G. Ansell, Omaha, Nebr. Filed June 17, 1920. Serial No. 389,565. 2 Claims. (Cl. 46—61.)

2. In an amusement device, a table having a plurality of numbered apertures formed in one of its sides and having a rail-member at one of its sides projecting above its top, and having a plurality of second apertures formed in its top adjacent to said rail-member, said table also having its top provided with lines disposed parallel with said rail-member, a plurality of object-balls adapted to be placed on one of said lines and bearing numbers corresponding to the numbers of the first named apertures, partitions between said second apertures abutting upon the rail-member and extending inwardly of the table,



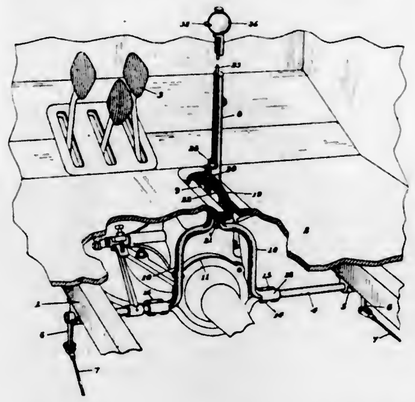
inclined conduits each having a part disposed below in the vertical plane of a second aperture, and a cue-ball adapted to have movements from one of said lines for moving the object-balls to said second apertures.

1,386,210. TOOL-JOINT. AVERY H. THOMAS, Houston, Tex. Filed Jan. 19, 1920. Serial No. 352,489. 6 Claims. (Cl. 285—175.)



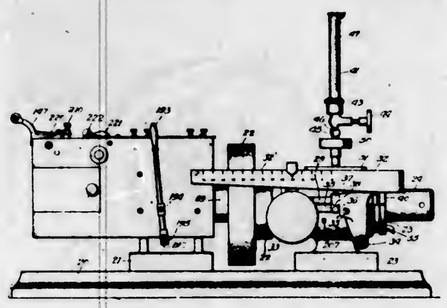
6. A connection between sections of pipe comprising in combination a pin member threaded at one end for connection with a pipe and reduced in diameter at the other end, and a box member threaded at one end and recessed at the other end to receive said pin, keys on one of said members extending longitudinally thereof for the greater portion of its length, and keyways on the other to receive said keys and a collar on the latter of said members to hold said keys firmly in said keyways.

1,386,211. STEAM-DRIER. ALBERT E. TOMPKINS, Hants, England. Filed Mar. 23, 1921. Serial No. 454,889. 5 Claims. (Cl. 183—80.)



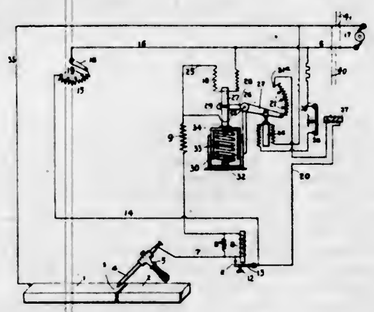
1. In a steam drier, the combination with a casing structure including a steam inlet passage, a steam discharge passage, said passage being opposed to each other, an annular separating chamber of larger diameter than said steam passages interposed between them, and a tangential water discharge port leading from the periphery of said separating chamber adjacent said discharge passage, of a deflector obstructing direct flow between said steam passages; fixed spiral vanes arranged in annular series and extending between said deflector and the periphery of said inlet passage; and an annular baffle surrounding said steam discharge passage and extending toward said deflector and beyond said water discharge port.

1,386,212. SAND-THROWING MACHINE. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed July 3, 1920. Serial No. 393,954. 8 Claims. (Cl. 22—36.)



1. In mechanism of the class described, the combination with a pivotal support, an arm pivoted thereto and swinging horizontally on the support, a secondary horizontally swinging arm pivoted to the first arm, a sand throwing head at the outer end of the swinging arm, means carried by the secondary arm for operating said head, a sand conveyer belt mechanism extending along the secondary arm and delivering to the sand throwing head, another sand conveying belt mechanism extending along the length of the first swinging arm and delivering from above to the first conveyer mechanism, means for supplying sand to the second sand conveyer mechanism at a point above the main support, and one single means for driving both of said sand conveyer mechanisms, for the purposes set forth.

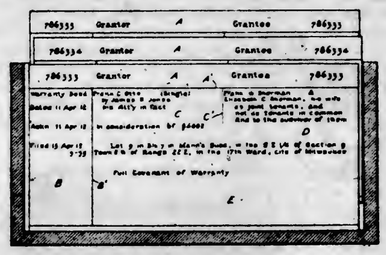
1,386,213. AUTOMOBILE CONTROL MECHANISM. DEVANEY CLAUDE EDWARD TRAINOR, Toronto, Ontario, Canada, assignor of one-third to James Aitken Mackerrow and one-third to Henry Claydon, Toronto, Ontario, Canada. Filed Aug. 16, 1919. Serial No. 318,058. 1 Claim. (Cl. 74—39.)



In automobile control mechanism, the combination with a controller shaft shaped to extend around the lower side of a crank case, of a pair of arms having enlarged lower ends and hinged portions forming clamps adapted to grip said controller shaft on opposite sides of said crank case, said arms being shaped to extend around the top side of said crank case, a hand lever rigidly connected to the upper ends of said arms, and a sector.

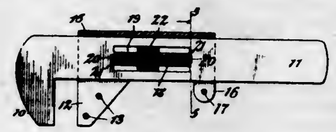
1,386,214. LUBRICANT-TESTING MACHINE. VANDIVER J. VAN HORN, Chicago, Ill. Filed Oct. 4, 1916. Serial No. 123,639. 27 Claims. (Cl. 265—10.)

1. In a machine of the character described the combination of a driving member; a member to be driven thereby; a recording index; a structure movably responsive to relative displacement of said driving and driven members, connected to said index; a strip moved in timed relation upon which to record a curve to be described by said index; means for moving the strip; and means to change the speed of the strip-moving means with relation to the driving member.



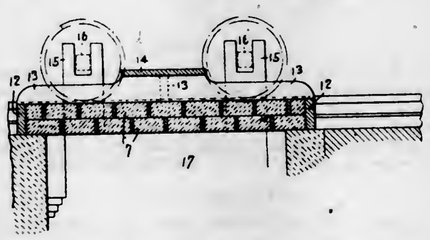
1,386,215. ELECTRIC WELDING SYSTEM. DAVID H. WILSON, Paterson, N. J., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed Nov. 24, 1913. Serial No. 802,699. Renewed Feb. 24, 1916. Serial No. 80,121. 10 Claims. (Cl. 219—8.)

1. In an electric welding system, a source of current supply, a welding circuit connected therewith including a welding tool, and automatic compensating means comprising resistance connected therewith, said compensating means being responsive to current variations therein to compensate for the variation of resistance in the welding arc.



1,386,216. TITLE-RECORD. JOHN F. WOODMANSEE, Milwaukee, Wis. Filed Jan. 31, 1917. Serial No. 145,605. 4 Claims. (Cl. 283—36.)

1. In a system of records of real estate titles, a set of serially numbered manifold abstract cards, each having the grantor's name at one end, and the grantee's name at the other end, each card containing an abstract of one instrument affecting the title, and each having at both ends near the upper margin, an identifying designation of the instrument to which the abstract relates, in combination with a tract index containing entitled subdivisions, each provided with the serial numbers of all

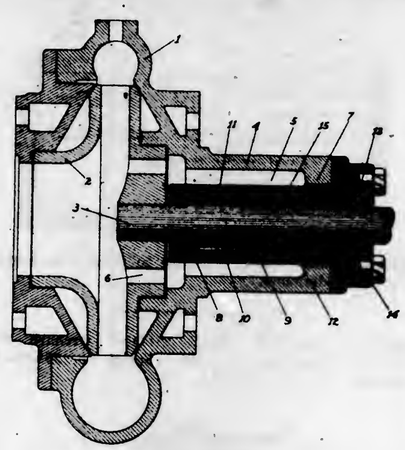


cards containing matter relating to titles and property in such subdivisions.

1,386,217. WRENCH. JOHN ZILLIOX, Orchard Park, N. Y. Filed Nov. 14, 1919. Serial No. 338,024. 8 Claims. (Cl. 81—173.)

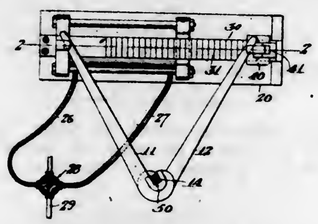
4. A wrench comprising two jaws, a longitudinal bar connected with one of said jaws and provided with a longitudinal slot and with notches at opposite ends of said slot, a carriage slidable lengthwise on said bar and carrying the other jaw, an externally screw threaded adjusting rod arranged with its ends in said notches while its intermediate part is arranged in said slot, the sides of said notches being pressed to form lips which confine the ends of the rod against lateral displacement from said notches, and a rotatable screw nut mounted on said rod and engaging with said carriage.

1,386,218. FURNACE COVER OR DOOR. JAMES D. ADAMS, Belle Vernon, Pa. Filed July 10, 1920. Serial No. 395,301. 2 Claims. (Cl. 263—216.)



1. As a new article of manufacture, a furnace cover or door formed of cast-metal with a brick lining, the metal forming the casting filling the spaces between said bricks and surrounding same.

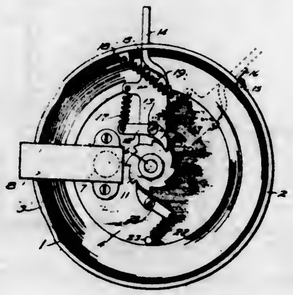
1,386,219. WATER-COOLED BEARING FOR PUMP-SHAFTS. ALFRED W. ARCHER, Stockton, Calif., assignor to Sterling Iron Works, Stockton, Calif., a Corporation. Filed Aug. 31, 1920. Serial No. 407,089. 5 Claims. (Cl. 64—28.)



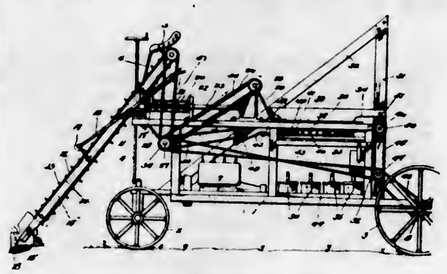
1. In a centrifugal pump, a casing, a runner therein, a shaft projecting from the casing and fixed to the runner.

a circular extension formed with the casing and concentric with and spaced from the shaft, and a bearing sleeve

for the shaft fixed to the casing and positioned in the extension and spaced therefrom, the extension opening into the casing all about the bearing.



1,386,220. JACK. LEONARD A. ANDERSON, Los Angeles, Calif., assignor of one-half to Roscoe Moss, Los Angeles, Calif. Filed Mar. 1, 1920. Serial No. 362,607. 10 Claims. (Cl. 255—35.)

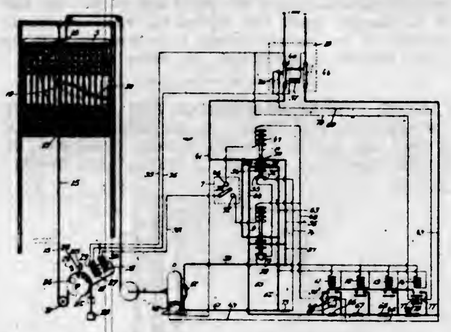


1. A jack for tool joints comprising a frame; a chock for receiving a wrench handle; means for securing said chock to said frame; a movable chock for receiving a wrench handle; a cylinder; a piston in said cylinder; means for securing said piston to said frame; and means for securing said cylinder to said movable chock.

1,386,221. SUGAR CONTAINER AND DISPENSER. SIGVALD EDMUND ENGELHARDT BACHE, Chicago, Ill. Filed Aug. 9, 1920. Serial No. 402,409. 1 Claim. (Cl. 221—108.)

In a sugar container and dispenser, a stand formed with an elongated slot, a perforated partition in said stand, a chute extending through said stand and registering with the perforated portion of said partition, a feed wheel arranged to rotate upon said partition, said feed wheel being formed with a circle of perforations adapted to register consecutively with the perforation in said partition, a drum arranged upon said partition and extending above said feed wheel, a spacer ring disposed between said drum and feed wheel upon said partition, a sugar shed integral with said spacer ring and projected over a portion of said feed wheel to closely cover any perforation in said wheel while the same is in alinement with the perforation in said partition, a shaft for said feed wheel extending centrally through said partition, a ratchet wheel upon said shaft, and a hand lever fulcrumed to said shaft for engagement with the said ratchet wheel whereby an intermittent movement may be imparted to said shaft, the free end of said lever projecting through the slot in said stand.

1,386,222. ONION-HARVESTER. JAMES BAILEY, Martel, Ohio. Filed July 6, 1920. Serial No. 394,209. 5 Claims. (Cl. 55—9.)

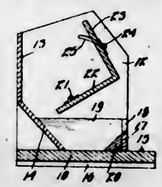


1. An onion harvester comprising uprooting means, an elevator arranged to receive the onions from the uprooting means, a belt disposed adjacent the rear end of the elevator to receive the onions and trash from the elevator, said belt comprising members spaced apart to permit onions to drop therethrough but prevent the passage of trash, cutters disposed in rear of said endless belt to sever tops from the onions, and means for conveying the onions with the tops from the said endless belt and delivering them to the cutters.

5. An onion harvester comprising uprooting means, means for conveying the onions from the uprooting means, a cutting mechanism disposed in rear of said conveying means and consisting of a transversely notched guide and a reciprocatory cutter moving in the guide and across the transverse notches of the same, and means for receiving the onions from the conveying mechanism and causing them to present the tops to the said reciprocating cutters.

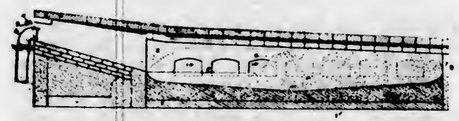
1,386,223. ELEVATOR CONTROL. EDWIN F. BANFIELD, Atlantic Highlands, N. J. Filed Dec. 11, 1918. Serial No. 266,216. 12 Claims. (Cl. 187—31.)

1. An elevator control having a source of power for raising and lowering the elevator car, an electromagnetic switch for controlling said source in raising the car, an electromagnetic switch for controlling said source in lowering the car, means actuated by the car operator for controlling both said electromagnetic switches, a safety switch for causing the operation of either electromagnetic switch to prevent further movement of the car independently of said means, and a member extending along



the elevator shaft and operable by the movement of the car door in any position of the car to control said safety switch.

1,386,224. PRODUCTION OF PECTOUS SUBSTANCES. BERTIE THOMAS PERCIVAL BARKER, Long Ashton, Somerset, England. Filed Nov. 5, 1919. Serial No. 335,873. 2 Claims. (Cl. 99—11.)

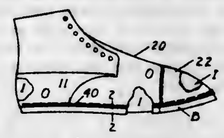


2. The herein described process for producing pectous substances from plant tissue containing pectose and its derivatives, consisting in removing the natural acid therefrom, drying the residual pulp, subjecting the same to the action of steam to render the pectous substance soluble, and employing a solvent to extract the pectous substances from the steamed pulp.

1,386,225. FEED-TROUGH STRUCTURE. PETER BARLAND, Anaconda, Mont. Filed Apr. 9, 1919. Serial No. 288,868. 4 Claims. (Cl. 119—53.)

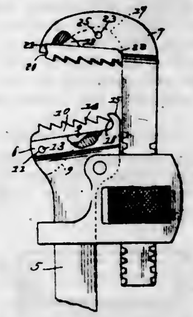
1. A feeding trough comprising a base and upstanding ends, a plate disposed above the base and pivoted between the ends and its upper surface comprising an inclined plane for guiding the feed into the trough and its lower plane functioning as a feed guard, a section rigidly secured to the plate and standing substantially at right angles above such plate and means carried by the last mentioned section to adjust the combined element without disturbing the angular relation.

1,386,226. METALLURGICAL PROCESS. JOSEPH WALTER BASS, San Francisco, Calif. Filed May 3, 1920. Serial No. 378,667. 3 Claims. (Cl. 263—25.)



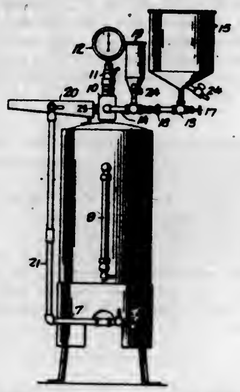
3. The method of melting borings, turnings, or other small metallic pieces in the bulk, which consists in spreading them in bulk form along the bottom of a furnace, applying heat to the upper surface of the spread out portion so as to cause a crust to form over the entire surface of the material spread out, causing the products of combustion of fuel to flow from one end of the spread out mass over the upper side of said mass and agitating portions of said metal successively in the direction of flow of products of combustion from one end of the material to the other.

1,386,227. PROCESS OF REFINING CRUDE ELECTRIC-FURNACE SILICON. FREDERICK MARK BECKET, Niagara Falls, N. Y., assignor to Electro Metallurgical Company, Niagara Falls, N. Y., a Corporation of West Virginia. Filed Sept. 26, 1919. Serial No. 326,505. 2 Claims. (Cl. 252.)



1. Process of refining crude electric furnace silicon containing iron, consisting in crushing the crude material and subjecting the particles to the solvent action of hydrofluoric acid at sufficiently low temperature to avoid substantial loss of silicon.

1,386,228. SHOE-UPPER. BENJAMIN BEHRMANN, Manchester, N. H. Filed July 19, 1918. Serial No. 245,758. 6 Claims. (Cl. 36—45.)

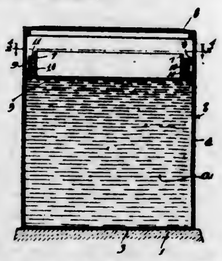


1. A shoe upper which consists of a vamp comprising one or more pieces, a toe-cap fastened thereto, one or more pieces of side lining, one or more pieces of doubler, and a stiffener for a box-toe, all such pieces being formed without lasting allowances, combined with a continuous band attached to and projecting beyond the bottom edges thereof to form a lasting allowance, together with a main lining which has a lasting allowance.

1,386,229. WRENCH. MARK BELCHER, Goose Creek, Tex. Filed Mar. 3, 1921. Serial No. 449,476. 3 Claims. (Cl. 81—180.)

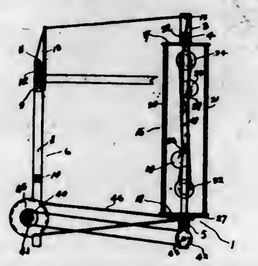
2. In a wrench, a stationary jaw and a movable jaw, the said movable jaw having a recess in its inner face and its inner surface at the outer end of the jaw, a face plate having a projection extending from its inner surface seated in the first mentioned recess of the movable jaw, and a projection on its outer edge fitting in the second mentioned recess of the movable jaw, the said face plate having a curved inner edge fitting to the contour of the jaw, and means for securing the projections of the face plate to the said movable jaw.

1,386,230. HAT-CLEANING MACHINE. NICHOLAS BENENATI, New York, N. Y. Filed Feb. 3, 1920. Serial No. 355,997. 2 Claims. (Cl. 223—26.)



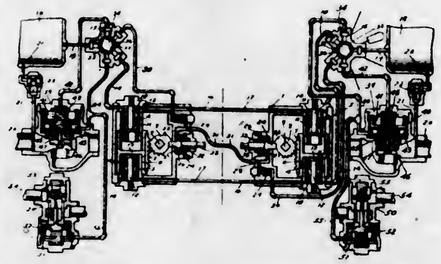
1. In a hat cleaning apparatus, the combination of a boiler, a steam dome on the top of same, lateral steam pipes from the dome, a cylindrical tank supported by one of the pipes, a substantially oval tank carried by the other pipe, steam outlets at the ends of the pipes and in the tanks, a pressing table above the boiler and at the side opposite the tanks, and gas burners for the boiler and the pressing table.

1,386,231. ELECTRICAL IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. FREDERIC BILLON, Solothurn, Switzerland. Filed Feb. 13, 1918. Serial No. 216,905. 1 Claim. (Cl. 171—209.)



In an electrical ignition apparatus for an internal combustion engine, for producing any desired time-succession of the ignitions, the combination of a stator of which one pole piece is subdivided so as to form two groups of pole tips, said groups being located axially side by side, but separated by a gap, and a rotor of which one pole piece is subdivided so as to form two groups of pole tips, said groups being located axially side by side, but separated by a gap, while the pole pieces of the other pole of both said stator and said rotor are located respectively opposite said gaps.

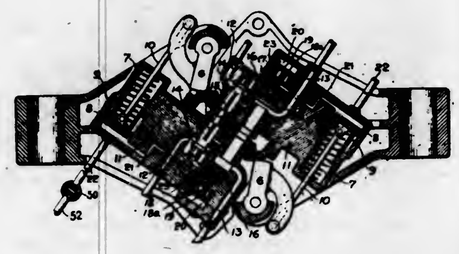
1,386,232. APPARATUS FOR FIGHTING FIRE IN LIQUID RECEPTACLES. ROBERT E. BOLE, Los Angeles, Calif. Filed Aug. 4, 1919. Serial No. 315,041. 3 Claims. (Cl. 220—88.)



3. The combination of a receptacle for an inflammable liquid, a floating blanket member limiting the exposed surface of said liquid and having a peripheral channel, and a flame smothering material in the channel, the channel extending above the liquid and so that the heat of the flaming liquid will expand the flame smothering material in the channel causing it to overflow upon the liquid surface to extinguish the flame.

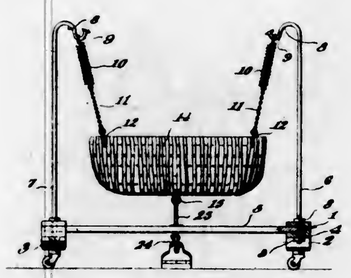
1,386,233. TWISTING-MACHINE FOR YARNS, COTTONS, AND THE LIKE. ALLEN ARTHUR BOWERMAN, Hope Bay, British Columbia, Canada. Filed Nov. 24, 1920. Serial No. 426,191. 5 Claims. (Cl. 28—34.)

3. A twisting machine comprising in combination, a plurality of stationary spool supports, a rotatable frame having a single aperture through which the several strands from the spools associated with said supports are adapted to be passed into the frame, a plurality of rotatable rollers disposed to rotate about an axis at right angles to the axis of rotation of said frame, and means for rotating said frame and one of said rollers.



1,386,234. CONTROL MECHANISM FOR FLUID AND ELECTRIC COUPLINGS. THOMAS R. BROWN, Sparkill, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 22, 1914. Serial No. 840,203. 22 Claims. (Cl. 173—333.)

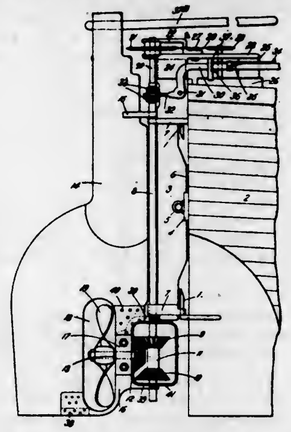
17. The combination with counterpart car couplers, of electric contact makers carried on each side of each coupler with circuits leading therefrom, and electric reversing switches for reversing the electric circuit connections after impact of the couplers and operation to make a number of circuit connections through the coupler equal to the total of contact makers on both sides of each car coupler.



1,386,235. CAR AND TRAIN-PIPE COUPLING. THOMAS R. BROWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Original application filed Mar. 6, 1917, Serial No. 152,695. Divided and this application filed July 5, 1919. Serial No. 308,874. 4 Claims. (Cl. 284—5.)

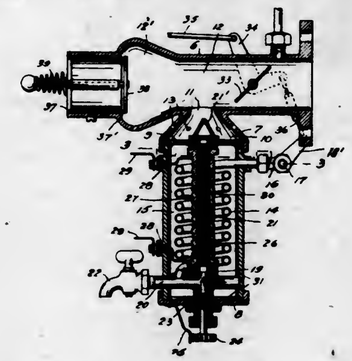
1. In a coupler having passages for automatically connecting the train pipe lines, a closing piston valve for the brake pipe passage, a small valve for venting fluid from the chamber behind said piston, another piston for actu-

ating said vent valve, and a tappet valve operated by the coming together of the counterpart couplers for supplying fluid to said actuating piston.



1,386,236. CRADLE. FRANK NORTH CHAMBERS, Davison, Mich. Filed Feb. 27, 1919. Serial No. 279,621. 2 Claims. (Cl. 5—56.)

1. In a cradle, the combination of a supporting structure including standards and a bar adjacent the lower ends of said standards for holding them in spaced apart relation, said bar provided with a vertical slot extending longitudinally of the bar, a container, means yieldably connecting said container to said standards, to permit vertical bouncing or lateral swinging movement of the container, a foot pedal oscillatable below the said bar of said supporting structure, and a rod connecting said foot pedal and the lower portion of said container, said rod extending through the slot of said bar and guided thereby to impart vertical bouncing movement to said container upon oscillation of said foot pedal.

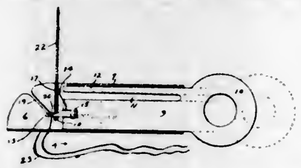


1,386,237. STEERING AND PROPELLING MECHANISM FOR BOATS. PETER COPLAND, Portsmouth, England. Filed Apr. 13, 1920. Serial No. 373,675. 3 Claims. (Cl. 115—18.)

1. In a steering and propelling mechanism for boats, a vertically movable driving shaft, a forked lever pivotally mounted and engaging with said vertical shaft for the purpose of raising and lowering the same, means for locking the forked lever in three different positions, a rudder rotatably mounted on said vertical shaft, a lever secured to said rudder, said lever being used for operating the rudder for steering while the forked lever remains stationary in its locked position, a propeller shaft with a propeller thereon mounted in the rudder, a bevel wheel on the propeller shaft, and two bevel wheels

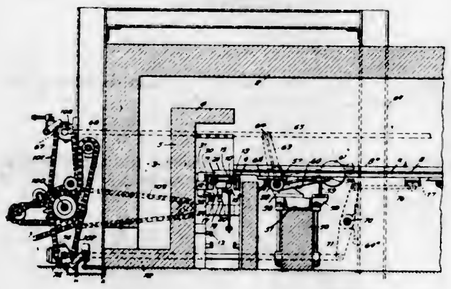
mounted on the vertical shaft on opposite sides of the bevel wheel on the propeller shaft.

1,386,238. CARBURETER. WILLIAM R. CLARK, Seattle, Wash. Filed Aug. 7, 1919. Serial No. 315,973. 5 Claims. (Cl. 48—103.)



1. A carbureter having a mixing chamber, a heating chamber, a charging chamber interposed between the aforesaid chambers and separated by an imperforate partition from said heating chamber, said charging chamber communicating with the mixing chamber between the inlet and outlet ends thereof, said charging chamber being provided with air inlet openings, a vaporizer provided within said heating chamber, a discharge nozzle provided for the vaporizer in said charging chamber, an electro-heating device for the vaporizer provided in said heating chamber, a throttle valve in the mixing chamber, a valve for regulating the supply of an explosive fluid to said vaporizer, and means for regulating said valves simultaneously.

1,386,239. NEEDLE-THREADER. BUEL COUCH, Sioux City, Iowa. Filed Jan. 16, 1917. Serial No. 142,608. 2 Claims. (Cl. 223—36.)



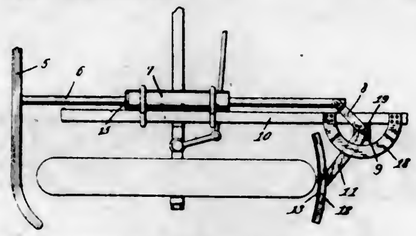
1. In a needle-threader, a body consisting of a blank folded upon itself to afford two parallel sides, a plunger slidable between the sides, one end portion of the body having a thread passage between the sides, and a needle-

receiving hole extending downwardly from the upper edge of said portion and between the sides, a needle seat formed in the body at the bottom of said hole adapted to aline the needle eye longitudinally of the body and a

threading hook on the plunger adapted to pass through the needle eye, the sides of said end portion being slotted to admit a bight of thread for engagement by the hook.

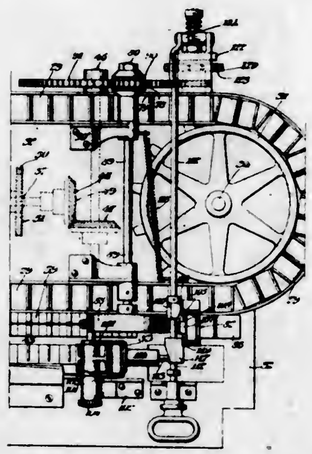
1,386,240. GLASSWARE-MACHINE. EDMA H. CURTIS, Jr., Norwood, Ohio. Filed Dec. 24, 1917. Serial No. 208,589. 11 Claims. (Cl. 49—47.)

7. In a leer, the combination with interspaced fixed and movable supports for glassware in the leer, and a conveyer member having fixed supports corresponding to the fixed supports of the leer, of a driving member common to the movable supports and the conveyer, and adapted to move the movable supports to unload the conveyer member and to move the conveyer member into and out of the leer, said driving member timed to thrust forward the movable supports after the conveyer member is in place in the leer, then lift the supports, then withdraw the supports, and then move the conveyer member out of the leer.



11. A leer having a forward burner chamber, and an arch extending rearward from the chamber walls to provide an overhead passage from the burner chamber into the leer, a conveyer in the leer, and located beneath said arch, and means within the leer for automatically raising the glassware from the conveyer.

1,386,241. LUMINOUS ATTACHMENT FOR ELECTRIC SWITCH CONTROLLERS. FRANK O. DECK, Milwaukee, Wis. Filed Feb. 14, 1920. Serial No. 358,728. 1 Claim. (Cl. 240—1.)

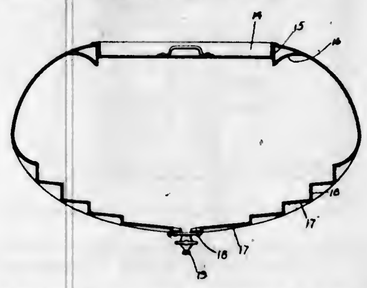


In combination with an electric switch of the push button type, a circular plate having a luminous face, transparent material covering the plate, a clamping ring having a series of tabs bent to engage the underside of the plate, and a plurality of resilient arms extending at right angles from the plate forming means for attaching it to the end of the push button.

1,386,242. AUTOMATIC BRAKE. ROBERT E. DIXON, St. Louis, Mo. Filed Dec. 7, 1920. Serial No. 428,057. 1 Claim. (Cl. 180—83.)

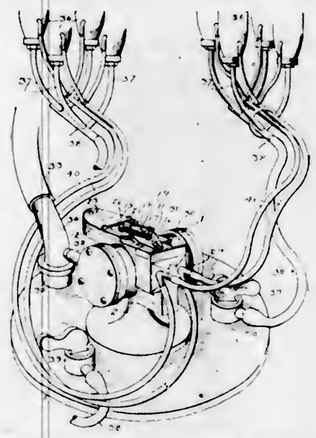
In combination with the front wheels and bumper of a motor vehicle, a brake including a bell crank lever, a brake shoe carried by the bell crank lever, a rod connecting the bell crank lever and bumper, whereby movement of the rod in one direction forces the brake into engagement with the wheel, means for normally holding the brake out of contact with the wheel, and a guard disposed above the bell crank lever to restrict vertical movement of the brake.

1,386,243. BOX-FILLING MACHINE. JOSEPH C. DONNELLY, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 7, 1918, Serial No. 233,081. Patent No. 1,326,187. Divided and this application filed June 5, 1919. Serial No. 301,981. 9 Claims. (Cl. 193—24.)



1. The combination with a carrier having a succession of tray holders comprising spaced transverse walls, and means for impelling the carrier, of a tray-feeding element terminating in a tray receiving and supporting member adjacent the path of the walls of said holders, a yielding stop with which the leading trays successively contact when they are delivered to said member, a rotary feed wheel overhanging the carrier and having spaced projections which contact with the inner walls of the successive trays on the said member and also with the succeeding walls of the tray holders, and impositive driving means for actuating said wheel at a normally higher speed than the carrier.

1,386,244. METHOD OF TREATING BRINE. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Sept. 26, 1918. Serial No. 255,813. 13 Claims. (Cl. 204—58.)



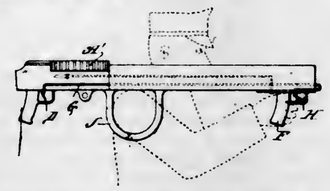
1. In a method of treating a brine of the character described, the steps which consist in precipitating any iron and manganese therein; then precipitating magnesium; freeing any ammonia present; and finally precipitating any alkaline earth metal, so as to leave a pure solution of sodium chlorid, substantially as described.

1,386,245. WASHING-MACHINE TUB. VERNOR B. EDWARDS, Middletown, Ind. Filed Apr. 22, 1921. Serial No. 463,532. 2 Claims. (Cl. 259—75.)

1. A washing machine tub comprising a body portion having a plurality of downwardly inclined ledges separated from each other by downwardly extending wall portions, the lowermost ledge being positioned adjacent the lowermost portion of the tub, whereby said tub will completely drain the water to the lowermost portion thereof when stationary.

1,386,246. PULSATOR FOR MILKING-MACHINES. JOHN G. G. EKLUNDH, Columbus, Ohio, assignor to The Universal Milking Machine Company, a Corporation of Ohio. Filed Jan. 23, 1919. Serial No. 272,679. 18 Claims. (Cl. 31—101.)

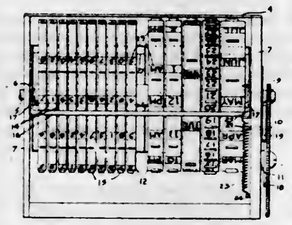
1. A pulsator mechanism of the class embodying a pulsator valve, and fluid pressure operated means for alternating said valve, characterized by a free floating unattached control valve capable of both reciprocatory and oscillatory movement governing the action of the fluid pressure upon said operating mechanism, and means to reverse said valve by the action of said operating mechanism.



5. The combination with a pulsator valve and fluid pressure operated means for actuating the same, of a control valve governing the action of the fluid pressure upon said operating means, an actuating spring therefor, said fluid pressure operated means being adapted to shift said valve to place said spring under tension, said spring being adapted upon its retraction to actuate the valve to an alternate position.

9. The combination with fluid pressure operated pulsator mechanism, of a movable control valve governing the action of the fluid pressure upon said mechanism, and an oscillatory member actuated to and fro by said fluid pressure operated mechanism and having a substantially V shaped cam surface, the path of travel of which intersects that of the control valve and adapted to shift said valve alternately from one side of said oscillatory member to the other to alternate operative positions, substantially as specified.

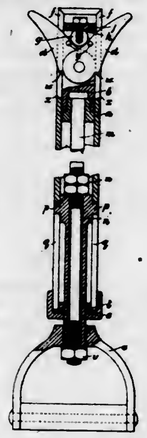
12. The combination with fluid pressure operated pulsator mechanism, including two independent intake ports adapted to be connected with teat cups and a suction passage with which said ports are to be alternately connected, a movable control valve adapted to govern the action of the fluid pressure on said mechanism, of an oscillatory member actuated to and fro by said mechanism, one end of said member having a passage way therein adapted upon movement of said member to alternately connect said ports with the suction passage, the opposite end of said member engaging with and actuating the control valve to alternate positions upon said to and fro movement of said oscillatory member, substantially as specified.



15. The combination with fluid pressure operated pulsator mechanism, a control valve governing the action of the fluid pressure upon said mechanism, and a pulsator valve, of an intermediate connection between the control valve and pulsator valve actuated by said mechanism to effect the reversal of both of said valves.

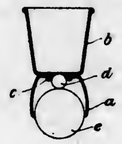
1,386,247. FIREARM. JOHN R. FORDYCE, St. Louis, Mo., assignor of one-half to Emil P. Pierson, Washington, D. C. Filed Jan. 22, 1918. Serial No. 213,141. 5 Claims. (Cl. 42—3.)

4. A magazine gun, comprising a barrel, an ammunition magazine, a trigger and suitable mechanism arranged at the rear end of said barrel for effecting the explosion of the ammunition, a hand grip arranged in proximity to the extreme front end of the barrel and adapted to be grasped by one hand of the user when the gun is arranged in such a position that the weight of same is borne by the shoulder of the user, and a second trigger arranged in proximity to said hand grip and operatively connected with the trigger first referred to so as to enable the gun to be fired or operated by the hand which grasps the hand grip at the front end of the barrel.



1,386,248. EDUCATIONAL AND AMUSEMENT DEVICE. JOSEPH GALLEAZZI, San Francisco, Calif. Filed Oct. 25, 1920. Serial No. 419,299. 1 Claim. (Cl. 35—9.)

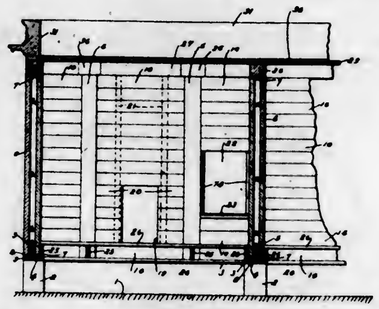
An educational and amusement device embodying in its construction a casing, one wall of which is provided with



an opening, a shaft rotatably mounted within the casing, a plurality of disks mounted so as to rotate upon said shaft and provided with indicia on their peripheries arranged to be presented to view opposite said opening, a plurality of stop members on said disks, stops with which said stop members are adapted to engage to hold the disks against rotation upon the shaft, and means operated by rotation of the shaft for moving said stops out of stopping position whereby the disks are free to rotate with the shaft.

1,386,249. ROTARY SCRAPING-TOOL. JAMES SANDFORD GANDER, Forest Gate, England. Filed Mar. 8, 1921. Serial No. 450,725. 2 Claims. (Cl. 83—64.)

1. A scraping tool for scraping inside surfaces comprising a casing, a sliding member disposed in said casing, scrapers carried by said sliding member, said casing having slots therein to permit movement of said scrapers, a pin disposed in said casing between the said scrapers adapted to extend them when said sliding member is moved in one direction, means for moving said sliding member, means for preventing the cutters from opening prematurely, and means for retaining said scrapers in the extended position.

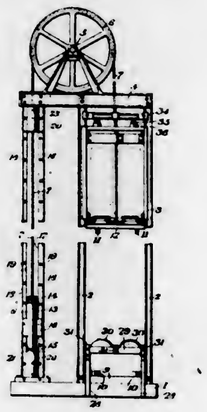


1,386,250. CASTER. CYRIL ROBERT PRESTON GARDNER and HAROLD PARKER, London, England. Filed May 26, 1921. Serial No. 472,648. 1 Claim. (Cl. 16—26.)

A caster comprising a socket member and an attachment member, means for securing the attachment member and the socket member by an extension on the one passing through a hole in the other, said connection forming a ball seat, an antifriction ball adapted to rest on said seat and a caster ball adapted to bear on the antifriction ball and to be retained in said socket member.

1,386,251. HOUSE CONSTRUCTION. DANIEL GARZA, New Orleans, La. Filed Sept. 11, 1920. Serial No. 409,515. 6 Claims. (Cl. 72—16.)

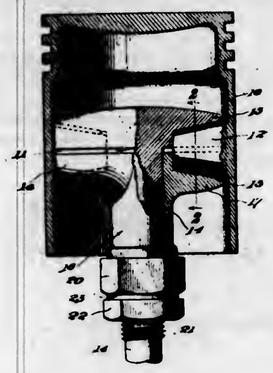
1. In a device of the class described, a base slab having a vertical opening; superposed blocks having openings defining a vertical flue communicating directly with the opening in the slab, the blocks being supported on the slab; and a ventilating box supported on the uppermost block



and provided with a passage constituting a vertical continuation of the flue, the box having a lateral outlet for the flue.

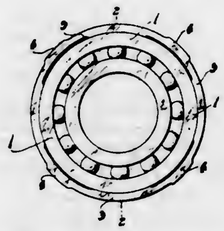
1,386,252. DENTIFRICE. WILLIAM T. GREEN, Summit, N. J. Filed May 17, 1920. Serial No. 382,143. 6 Claims. (Cl. 167—9.)

1. A dentifrice comprising yeast and an abrasive agent.



3. A dentifrice comprising yeast, precipitated calcium phosphate, saccharin, powdered ginger, alcohol, pancreatin, diastase, phosphoric acid and a flavoring agent.

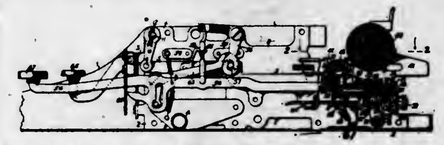
1,386,253. AUTOMATIC LOWERING-MACHINE. ALBERT D. HEYL, Philadelphia, Pa. Filed Nov. 14, 1919. Serial No. 338,047. 3 Claims. (Cl. 187—28.)



1. An automatic lowering machine, comprising a framework having gig guides, a gig coöperating with said guides, an upper and a lower dash pot for said gig, a sheave carried by said frame-work, a cable connected with said gig and passing over said sheave, a counterbalance comprising a plunger having a piston head at its upper and lower end, one end of said counterbalance being connected to said cable, guide flanges on said counterbalance, vertical guides with which said flanges coöperate, an upper cylinder having one end closed and its other end open and provided with vents and adjustably secured to said guides, and a lower cylinder provided with vents and having its upper end open and its lower end closed and adjustably secured to the counterbalance guides.

1,386,254. PISTON CONNECTION. EINAR HILTON and AARON GIRODAT, Gull Lake, Saskatchewan, Canada. Filed Nov. 26, 1919. Serial No. 340,760. 11 Claims. (Cl. 74—108.)

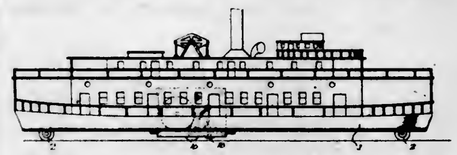
10. In a piston connection, the combination with a piston, of a pair of diametrically opposed bearing lugs carried by the piston, and a pair of independent and adjustable members carried by the piston rod for engaging the upper and lower surfaces of the lugs.



1,386,255. ROLLER, BALL, AND OTHER BEARING. ALFRED HAROLD HINDLE, Birmingham, and STANLEY WHITBY SAVAGE, ALBERT EDWARD DABBS, and ABSALOM LIDDLE, Manchester, England, assignors of one-half to John George William Gruban, London, England. Filed Apr. 29, 1919. Serial No. 293,552. 6 Claims. (Cl. 64—36.)

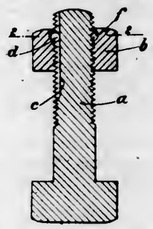
1. A bearing having a single resilient element adapted to receive and transmit pressure from the shaft, a plurality of distance pieces on the interior of the element extending continuously from one edge of the element to the opposite edge and forming between them spaces extending continuously from one edge to the opposite edge, and a plurality of distance pieces upon the exterior of the said element extending continuously from one edge of the element to the opposite edge in staggered relation to those on the interior thereof and forming between them spaces which extend continuously from the one edge to the opposite edge.

1,386,256. TYPEWRITING-MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 24, 1921. Serial No. 447,533. 10 Claims. (Cl. 197—60.)



1. In a typewriting machine, the combination of a carriage comprising a sheet metal bed plate which has its main body portion substantially L-shaped in cross section and has its edge portions bent to form two covered bearing roller receiving ways each presenting two track faces one at substantially right angles to the other, a carriage support substantially L-shaped in cross section and having a cast metal body portion and roller receiving ways disposed opposite to the ways in the carriage bed,

both ways on the carriage support being formed by bends in sheet metal plates detachably secured to the cast metal body portion, and bearing rollers in said ways.

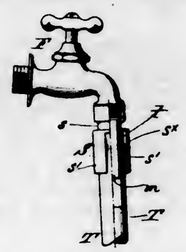


1,386,257. [WITHDRAWN.]

1,386,258. AUTOMATICALLY-REVERSIBLE MECHANICAL TOY. WALTER H. HUTH, Chicago, Ill. Filed Apr. 12, 1919, Serial No. 289,633. Renewed Jan. 29, 1921. Serial No. 441,072. 8 Claims. (Cl. 46—48.)

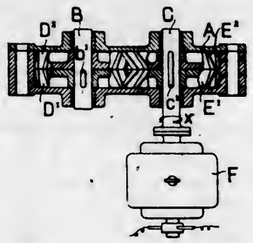
7. In an automatically reversible mechanical toy, the combination of traction means to propel the toy in either direction, a motor to operate said means, and mechanism controlled automatically by any stoppage of the toy to reverse the propelling means, so that if any portion whatsoever of the toy strikes an obstruction which stops the toy, the direction of travel will thereby be reversed.

1,386,259. NUT-FASTENER. LOUIS JOURDAN and ANDRÉ TRÉMAUX, St. Etienne, France. Filed Dec. 27, 1919. Serial No. 347,720. 1 Claim. (Cl. 151—25.)



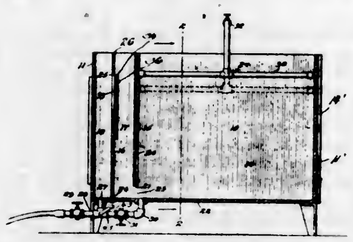
A locking device for preventing the unscrewing of screws and nuts comprising the combination of a nut having in its screw-threaded surface, an uninterrupted annular groove of a substantially rounded cross section concentric with the screw-threaded surface, a bolt having a longitudinal groove in its screw-threaded surface and a ball adapted to be retained at the intersection of both grooves, said longitudinal groove comprising two opposite cylindrical parts having substantially the same radius as the ball and a flat part tangent to both said cylindrical parts and substantially at right angles to a radial plane passing through the point of contact of the ball with the nut when said ball is in contact with said cylindrical part.

1,386,260. HOSE-COUPLING. GOTTLOB KLUMPP, New York, N. Y. Filed Jan. 31, 1920. Serial No. 355,495. 3 Claims. (Cl. 285—82.)



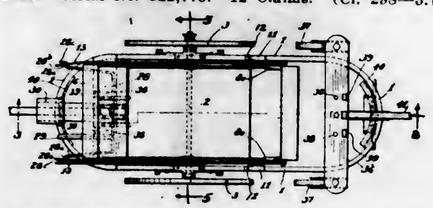
1. A hose coupling of the character designated, comprising a socket sleeve consisting of a plurality of longi-

tudinally extending arms each bent upon itself to form an inturned spring barb jaw, and means for attaching



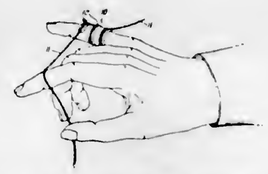
said socket sleeve to a fluid conduit, for the purpose described.

1,386,261. GEAR-DRIVEN PUMP. ERNST LAGE, Kiel-Gaarden, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Dec. 3, 1920. Serial No. 428,079. 2 Claims. (Cl. 103—44.)



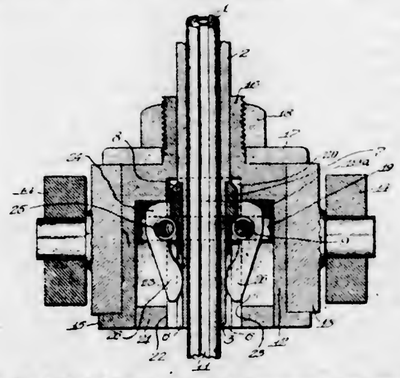
1. An arrangement of the class described comprising a casing provided wihh inlet and outlet openings, intermeshing herring-bone wheels rotatably mounted in said casing, shafts for supporting said herring-bone wheels, each of said wheels being formed in two sections, both sections of one of said wheels being keyed to its respective supporting shaft, one of the sections of the other wheel being keyed to its supporting shaft and means for driving the first mentioned shaft.

1,386,262. PRINT-WASHING TANK. VERA F. LANGTON and JAMES J. UNDERWOOD, New York, N. Y. Filed May 2, 1919. Serial No. 294,251. 17 Claims. (Cl. 95—97.)



1. A photographic washing tank having an open top, two spaced apart partitions therein dividing the tank into a washing compartment adapted to receive a tray of prints to be washed, and into a refuse water conducting and water level regulating passageway, means for feeding water across the top of the washing compartment, the inner of the two partitions being spaced from the bottom of the tank to provide an intake to the passageway for drawing the refuse water from the bottom of the washing compartment, the outer of the two partitions having its upper edge horizontally disposed and spaced below the top of the tank and below the top of the inner partition thereby to provide means for maintaining a water lever to the water in the washing compartment, and a discharge outlet from the portion of the passageway between the outer partition and the end wall.

1,386,263. REVOLVING-BOTTOM DUMP-WAGON. ELISHA G. LEDYARD, Sioux Falls, S. D. Filed Sept. 10, 1919. Serial No. 322,775. 12 Claims. (Cl. 298—5.)

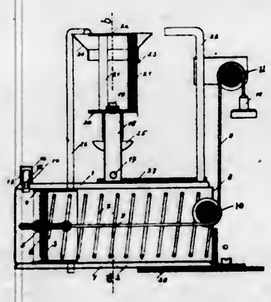


1. A dump wagon having a body portion, a bottom pivoted at its center, and means for normally holding the bottom rigidly in position with respect to the body portion, and capable of being withdrawn to permit the rotation of the bottom.

1,386,264. YARN-HOLDER. MAX LEVY, New York, N. Y. Filed Mar. 4, 1920. Serial No. 363,262. 2 Claims. (Cl. 66—17.)

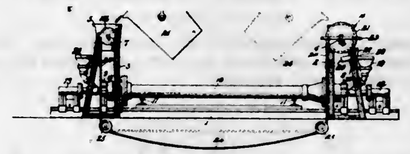
1. A yarn holder, comprising a helix of open tubing, each coil of the helix being adapted to yieldingly directly engage a human finger whereby said yarn holder is capable of being held without locking means on fingers differing in thickness.

1,386,265. YIELDABLE JOINT. THEODORE G. LINDERME, Detroit, Mich. Filed Aug. 8, 1919. Serial No. 316,079. 6 Claims. (Cl. 192—116.)



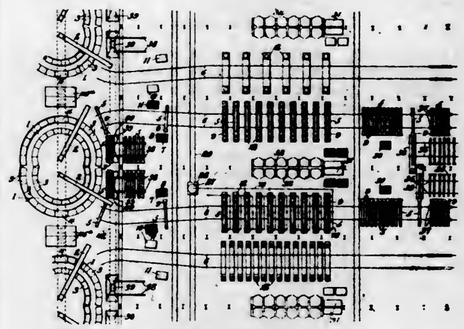
1. In a yieldable joint, a reciprocatory and rotary member, a slip member adapted to raise said reciprocatory member and rotate therewith, a housing inclosing said slip member, yieldable means in said housing normally engaging said slip member so that said housing may elevate said reciprocatory member, and a yieldable support surrounding said slip member and supporting said yieldable means.

1,386,266. STOCKING. WILLIAM J. LONGTIN, Philadelphia, Pa., assignor to Allen Hosiery Company, Wayne Junction, Germantown, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,858. 1 Claim. (Cl. 66—4.)



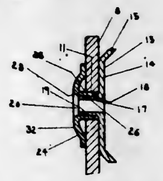
A stocking provided with a welt and consisting of a tubular continuous knitted web of fine yarn and gage extending through the leg and knee portions, and having at the front of the knee portion a reinforcement of splicing yarn extending in uniform courses with the first mentioned yarn to the welt, to, with the welt, resist garter strain and present a uniform appearance at the knee and leg portions.

1,386,267. BURNER FOR LIQUID FUEL. PAUL LUCAS, Berlin-Friedenau, Germany. Filed Feb. 6, 1918. Serial No. 215,714. 4 Claims. (Cl. 158—50.3.)



1. In a burner of the character described, the combination with a fuel reservoir, of a pump cylinder in communication therewith, a piston movable in said cylinder, compressible means tending to normally hold said piston in inoperative position within the cylinder, and downwardly movable means for moving said piston in one direction in the cylinder.

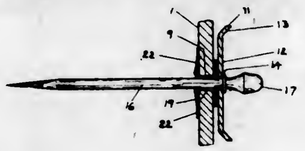
1,386,268. MEANS FOR POURING METAL IN THE FORMATION OF CAST-IRON PIPE. JAMES R. McWANE, Birmingham, Ala. Filed Mar. 23, 1920. Serial No. 368,170. 14 Claims. (Cl. 22—65.)



1. In the casting of iron pipe and the like centrifugally in rotatable molds having pouring gates at opposite ends, connected mechanical means for introducing molten metal into the mold through both gates simultaneously.

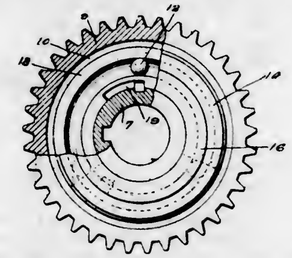
1,386,269. FOUNDRY PLANT FOR THE PRODUCTION OF CAST-IRON PIPES AND OTHER COLUMNAR-FORM ARTICLES CENTRIFUGALLY. JAMES R. McWANE, Birmingham, Ala. Filed Mar. 23, 1920. Serial No. 368,172. 15 Claims. (Cl. 22—20.)

1. A pipe foundry plant including a pit with means thereat for lining flasks with refractory material, a pipe run extending from the pit toward the other end of the plant, a group or battery of centrifugal casting machines in the line of the pipe run, means for extracting the pipes from the flasks, means for returning the flasks to the pit for cleansing and relining, and means for disposing of the formed pipes.



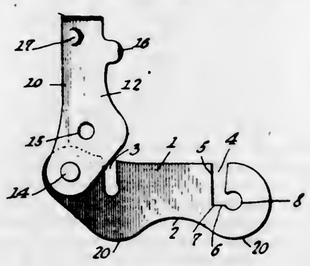
1,386,270. HAT-PROTECTOR. JOHN MAGUIRE, Attleboro, Mass. Filed Dec. 16, 1920. Serial No. 431,087. 3 Claims. (Cl. 132—70.)

3. In a device of the type set forth, a hat having an opening therein, a thin circular plate embodying a body portion and an inclined peripheral flange and a substantially central tubular extended portion having a rounded mouth and an external thread, said tubular portion being passed loosely through said opening with the entire face of the body portion seated against the outer face of the wall of the hat, and a coöperating member embodying a circular plate with a centrally located sleeve having an internal thread adapted to loosely engage the thread of said



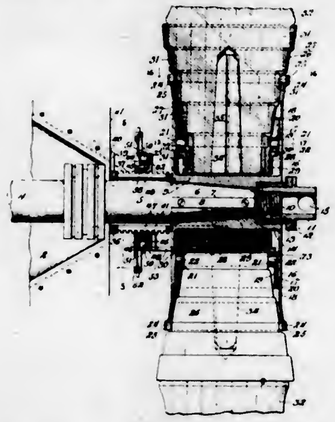
extension, said sleeve being located within the opening in the hat and movable over the extension, the portion of the last-named plate intermediate its marginal edge and the sleeve being elevated and spaced from the walls of the hat, said last-named plate having a flaring mouth.

1,386,271. HAT-PROTECTOR. JOHN MAGUIRE, Attleboro, Mass. Filed Dec. 16, 1920. Serial No. 431,088. 3 Claims. (Cl. 132—70.)



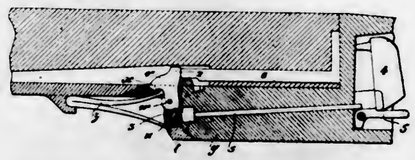
1. In a hat protector, a hat provided with a hole adapted to receive a pin, a guard plate exterior of the hat provided with a central opening registering with the hole, an outwardly inclined peripheral flange upon the plate, and ductile clamping arms extending through the hole and affixed to the plate by means of folds forming bearing bases for the penetrating portions.

1,386,272. SPROCKET GEAR-WHEEL. FRANK L. MORSE, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Oct. 28, 1915. Serial No. 58,312. 5 Claims. (Cl. 74—29.)



1. A sprocket wheel comprising a hub portion, a rim portion mounted thereon with the capacity of relative rotary movement, a friction producing means for holding said parts together with a certain limited degree of pressure when power is transmitted in one direction, and a device for automatically clamping said parts rigidly together when the power is transmitted in the opposite direction.

1,386,273. CHAIN-CONNECTOR. THOMAS W. OLSON and ANTON IVERSON, Osage, Iowa. Filed May 11, 1921. Serial No. 468,792. 1 Claim. (Cl. 24—69.)

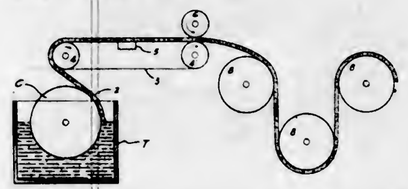


In a chain connector, a body provided in one edge with a notch and having an angular slot including transverse and longitudinal branches, the transverse branch opening through said edge of the body, the opposite edge of the body having a recess defining projections; a U-shaped latch comprising arms and a bend, the arms having openings registering with the notch, the arms of the latch being provided with resilient, inwardly inclined tongues, engaging the body, and projecting beyond the base of the recess, the ends of the tongues lying within a line tangent to the projections, the bend of the latch resting on the body at the inner end of the transverse branch, and constituting a closure for the transverse branch, the longitudinal branch projecting beyond the bend of the latch, the body being received between the arms; and a pivot element uniting the body and the arms.

1,386,274. VARIABLE-PITCH PROPELLER FOR AIRPLANES. CLARENCE LYMAN PARKER, Los Angeles, Calif. Filed Oct. 19, 1920. Serial No. 417,915. 15 Claims. (Cl. 170—163.)

1. A propeller for airplanes, comprising a hub for receiving the airplane drive shaft, said hub being provided with sockets, a stepped taper sleeve in each socket with the large end of the sleeve outermost, a propeller blade for each socket, and a stepped ferrule for each propeller blade adapted to enter a stepped socket.

1,386,275. EJECTOR MECHANISM FOR DROP-DOWN GUNS. HARRY HERBERT PAYNE, Birmingham, England, assignor of two-thirds to John White, Birmingham, England. Filed Aug. 21, 1919. Serial No. 319,026. 1 Claim. (Cl. 42—48.)

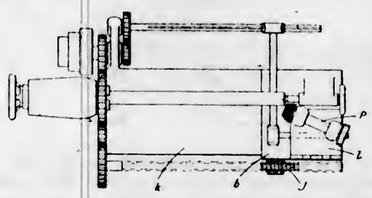


In combination with the frame and the pivotally mounted barrel of a firearm, a movable cartridge ejector carried by the barrel, a pivotally mounted spring actuated ejector hammer also carried by the barrel and having a tooth, and a cocking element for the ejector hammer and comprising a rod slidable longitudinally in a bore in the frame and movable forwardly by the firing hammer, said rod having an enlargement at its front end and a tooth on the front side of said enlargement, the tooth of the said cocking element coacting with the tooth of the ejector hammer to move said ejector hammer to cocked position during initial breaking movement of the barrel, then moving past and disengaging said tooth of said ejector hammer and releasing the latter as the barrel reaches fully broken position, and said tooth of the ejector hammer reëngaging and exerting camming action on the tooth of the cocking element to move said element rearwardly in the path of the firing hammer, when the barrel is returned to closed position.

1,386,276. MOLDED ARTICLE IN LAMINATED FORM AND PROCESS OF MAKING THE SAME. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of West Virginia. Filed Sept. 29, 1917. Serial No. 193,984. 8 Claims. (Cl. 92—55.)

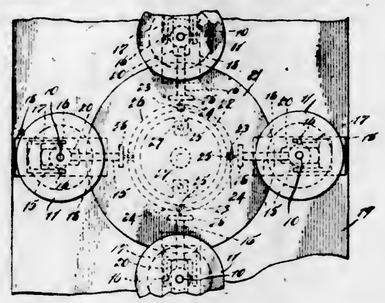
1. The process of producing articles of the character described, which comprises the steps of forming upon a foraminous surface a layer of moldable material containing none or only a comparatively small percentage of comminuted fusible waterproofing material conforming to the shape of the article desired to be produced, and forming adjacent to said first-mentioned layer a second layer containing a comparatively large percentage of comminuted fusible waterproofing material, and subsequently immersing the articles in a bath of waterproofing material.

1,386,277. BUILDING-FELT OR CONSTRUCTION MATERIAL. RAY P. PERRY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Oct. 8, 1918. Serial No. 257,396. 5 Claims. (Cl. 92—21.)



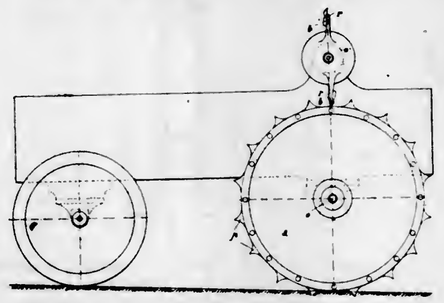
1. As an article of manufacture, a sheet of porous, flexible building felt containing rounded particles of waterproofing material too large to pass through a hundred mesh screen.

1,386,278. METHOD OF RECOVERING AMMONIUM CHLORID. EMILE PIRON, New York, N. Y. Filed Sept. 2, 1920. Serial No. 407,743. 4 Claims. (Cl. 23—21.)



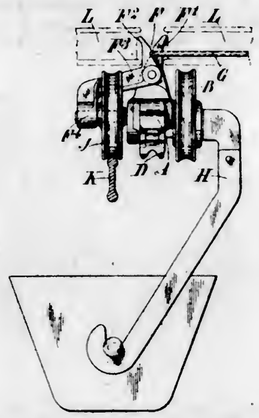
1. The method of recovering ammonium chlorid from coke oven gases, which consists in reducing the temperature of the gases without the addition of water to about the dew point thereof, and then washing the gases with liquid to absorb the ammonium chlorid contained in the gases.

1,386,279. MILLING SCREW-THREADS. GEORGE RICHARDS and LESLIE NEWMAN BURT, Westminster, London, and JAMES EDWARD FREEBORN, Walthamstow, England, assignors to The Richards Thread Milling Machine Company, (1918,) Limited, Westminster, London, England. Filed Apr. 8, 1920. Serial No. 372,315. 3 Claims. (Cl. 10—154.)



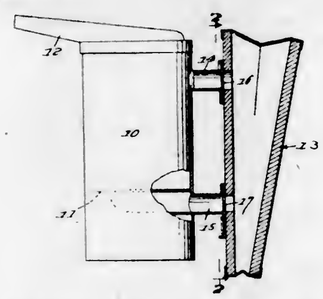
2. The herein described method of milling screw-threads with the aid of a hob, consisting in imparting to the rotating hob a gradual axial motion and imparting to the workpiece an additional relative rotative speed of one revolution for each advance of the hob for a distance equal to the pitch of the thread cut.

1,386,280. BEVERAGE-MIXER. FRANK G. SCHNEIDER, New York, N. Y., assignor to Sanitary Beverage Mixer Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 1, 1920. Serial No. 427,505. 8 Claims. (Cl. 259—131.)



1. In a mixing device, a rotatable carrier, a threaded spindle supported by the carrier and rotatable thereby, means carried by the carrier to engage the threads on said spindle, a weight carried by the spindle adapted to cause said spindle to lag when the carrier is rotated, whereby said spindle will be moved downwardly after the carrier has been placed in motion, and means carried by the spindle to contact with said carrier, when said spindle has been moved downwardly to its full extent, whereby said spindle will be rotated by the rotation of the carrier.

1,386,281. DRIVING-WHEEL FOR MACHINES MOVING OVER SOFT GROUND. JACQUES GUSTAVE SCHULZ, Paris, France. Filed July 30, 1920. Serial No. 400,176. 1 Claim. (Cl. 280—158.)

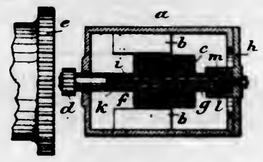


The combination with a spiked driving wheel for machines intended to move over soft ground, of a rotary scraper-wheel adapted to rotate about an axis of fixed relative position in the frame of the machine, and scrapers carried by the said wheel scraper so as to remove the soil between the projections of the said driving wheel, the outer profile of the said driving wheel being such that at each rotation of the same, the scraping edges of the scrapers carried by the said scraper-wheel pass with a slight clearance over the entire surface of each projection, the rotation of the said scraper-wheel being in opposite direction to that of the said driving wheel so that upon the rotation of the said two wheels the scrapers carried by the said scraper-wheel successively enters the depressions between the projections of the said driving wheel.

1,386,282. AERIAL ROPEWAY ON THE SINGLE-ROPE SYSTEM AND THE LIKE. HERBERT FREDERICK HENRY SHIELDS, Welling, England, assignor of one-half to the British Ropeway Engineering Company, Limited, London, England, a British Company. Filed Feb. 28, 1921. Serial No. 448,463. 7 Claims. (Cl. 104—208.)

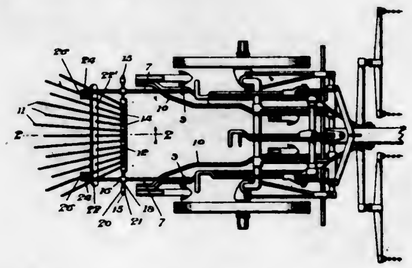
1. In a monocable or single-rope transportation plant, the combination of a rail, a boxhead supported by and arranged to travel along the same, a traction rope operated on the single-rope system and supported in positional relation to said rail, and gripping means on the boxhead operated by contact with said rail and arranged to grip said rope.

1,386,283. BEE-SMOKER. ORVILLE W. SHRADER, Boaz, Ala. Filed June 8, 1920. Serial No. 387,327. 2 Claims. (Cl. 43—128.)



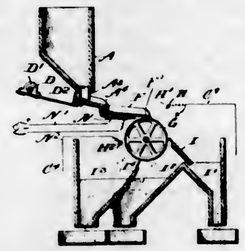
2. A bee smoker having a fire box or furnace provided with a terminal discharge pipe or outlet and an intermediate fuel supporting grate, and means for introducing an air blast into the furnace and provided with selective control devices whereby the blast may be introduced just below the plane of the discharge pipe or below the plane of the supporting grate.

1,386,284. [WITHDRAWN.]



1,386,285. ELECTRIC STARTING-MOTOR. HERMANN STEINHART, Stuttgart, Germany, assignor to the Firm of Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Dec. 12, 1919. Serial No. 344,500. 1 Claim. (Cl. 290—38.)

In combination with a flywheel of an internal combustion engine provided with gear teeth, an electric motor comprising a hollow shaft, a casing, a bolt fixed to the said casing and situated within the said shaft, a fixed abutment at the end of the said bolt, a movable abutment at an end of the hollow shaft, an armature and a pinion on the said



shaft, a field magnet for affecting the said armature, and a pressure spring arranged upon the said bolt and between the said abutments and operating to displace the armature with respect to the field magnet and to keep the pinion *d* out of engagement with the teeth on the said flywheel.

1,386,286. SOIL-PULVERIZER. HENRY STRIEGEL, Wilder, Kans. Filed July 27, 1920. Serial No. 399,313. 7 Claims. (Cl. 55—127.)

1. A soil pulverizer comprising a pair of rearwardly extending bars, a pair of longitudinally spaced transverse bars, rearwardly and downwardly extending teeth anchored to one transverse bar and slidable through the other, and means for attaching said transverse bars to the first named bars for the relative vertical adjustment of said transverse bars to change the angular position of said teeth.

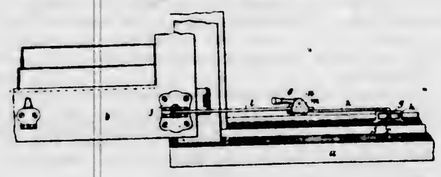
1,386,287. APPARATUS FOR SEPARATING SUBSTANCES OF DIFFERENT DIELECTRIC CAPACITIES. HENRY M. SUTTON, WALTER L. STEELE, and EDWIN G. STEELE, Dallas, Tex. Filed Sept. 24, 1904. Serial No. 225,852. 43 Claims. (Cl. 83—49.)

1. In a dielectric separator, the combination with means for producing dielectric hysteretic impedance in the material to be separated, of a relatively movable non-repellent electro-static separating means, and means for separately collecting the separated material.

1,386,288. DENTAL SURGICAL INSTRUMENT. JAMES H. TAYLOR, Owensboro, Ky. Filed Oct. 25, 1920. Serial No. 419,203. 4 Claims. (Cl. 32—34.)

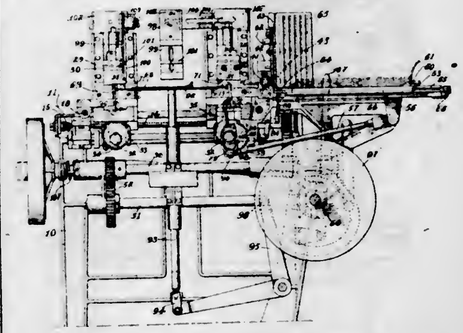
1. A dental surgical instrument comprising a pair of pivoted handle members, tooth clamping means carried by one of said members, and a cutting blade carried by the other member.

1,386,289. DENTAL SURGICAL INSTRUMENT. JAMES H. TAYLOR, Owensboro, Ky. Filed Oct. 25, 1920. Serial No. 419,204. 1 Claim. (Cl. 32—34.)



A dental surgical instrument comprising a pair of pivoted handle members, a jaw extending upwardly substantially at right angles from one of the handle members, a jaw for coaction with the first-mentioned jaw, and a cutting blade extending from the other handle member and curved upwardly and inwardly in advance of and in a line between the said jaws.

1,386,290. SAFETY-INDICATOR FOR RAILWAY-TRACKS. WILLIAM P. THOMSON, Forest Hills, Long Island, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1921. Serial No. 452,567. 15 Claims. (Cl. 238—229.)



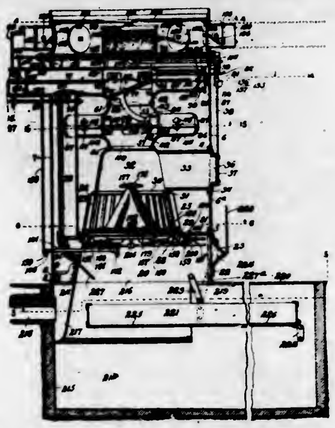
9. A device of the class described consisting of a body adapted to be interposed between rail ends and having a graded resistance to compressive forces.

1,386,291. SHUTTER-FASTENER. JAMES Y. VAN BLARCOM, Paterson, N. J. Filed Sept. 10, 1920. Serial No. 409,310. 3 Claims. (Cl. 292—262.)

1. In combination, the frame and a shutter hinged therein, an arm section connected to the shutter, and a fixed device on the frame forming a bearing on which the arm pivotally swings when the shutter is moved on its hinges, the arm being movable longitudinally of the pivot of said bearing to disengage it from said device and said arm and device having portions interlocking to prevent such movement of the arm in certain positions to which it swings on said pivot but clearing each other to permit said movement in another position to which the arm swings on said pivot.

1,386,292. CORNER CUTTING AND BENDING MACHINE. WILLIAM A. WEIGHTMAN and CHARLES H. NITSCH, Philadelphia, Pa., assignors to Stokes and Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1919. Serial No. 326,496. 30 Claims. (Cl. 93—36.)

1. In a machine for operating on spaced portions of articles varying in size, a plurality of spaced operating elements, means for shifting said elements toward and from a central operating station to accommodate articles varying in size, means for feeding articles to said elements, and means for maintaining said feeding means in approximately fixed relation to the adjacent side of an article located in said operating station, regardless of the size of the article.

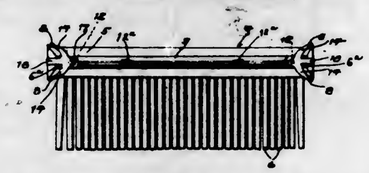


1,386,293. CENTRIFUGAL PUMP. ARTHUR W. WELLINGTON and ARTHUR F. RYAN, San Jose, Calif. Filed Nov. 1, 1920. Serial No. 421,088. 3 Claims. (Cl. 253—199.)

1. A pump mechanism comprising a pump head, a discharge casing column suspended therebelow, a pump

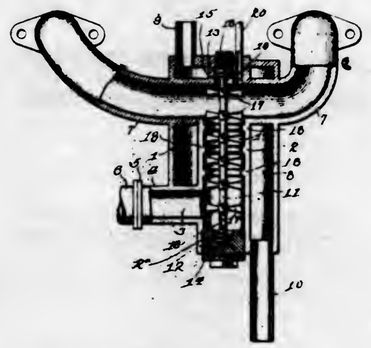
bowl supported by said discharge casing column, an impeller arranged in said bowl, and a flexible driving shaft operatively mounted with relation to said head and said impeller and unsupported against a swinging movement with respect to its normal vertical axis between said head and bowl.

1,386,294. HOT-AIR FURNACE. GEORGE FRANKLIN WENTZ, Lakewood, Ohio. Filed Apr. 11, 1917. Serial No. 161,223. 15 Claims. (Cl. 126—116.)



10. A hot air furnace provided with a fire pot tapering toward the upper end, a cone within the upper end tapering toward the upper end more rapidly than the fire pot and extending above the fuel level of the fire pot, a grate for closing the fire chamber, a gas burner at the lower end of the cone above the grate, and a supplemental grate introducible into the fire pot through the upper end thereof and of a size to surround the cone and be sustained thereby above the gas burned and constituting a supporting grate for garbage and other waste material.

1,386,295. CLOTHES-TONGS. MAX WENZEL, Kansas City, Mo. Filed Oct. 6, 1917. Serial No. 195,121. 1 Claim. (Cl. 68—6.)

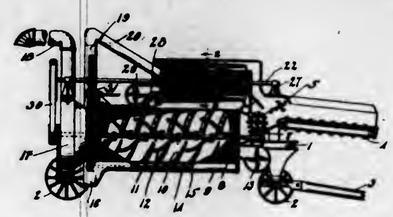


In clothes tongs, a pair of legs of duplicate form excepting the gripping end thereof, the inner face of each of said legs forming an obtuse angle longitudinally of the leg, the vertex of the angle of each of said legs facing the vertex of the angle of the opposing leg and in close proximity thereto, a cavity in the inner side of each of said legs at the vertex of the angle and reaching longitudinally in both directions therefrom, a plate in said cavities, a pin in each of said legs near the vertex of the corresponding angle and through said plate and hingedly connecting said legs so that when said tongs are closed the side of the angle reaching from the vertex to the gripping end of each of said legs is lying against the corresponding side of the opposing leg and when said tongs are open the side of the angle of each leg reaching from the vertex to the opposite end of the tongs is lying against the corresponding side of the opposing leg, a hole with a closed end in each of said legs between the vertex of the angle thereof and the gripping end of the tongs, said holes each counterbored, a pin in said holes, a compression spring on said pin and in the counterbores, the tension of said spring tending to hold the gripping end of said tongs open, and means on the the gripping end of the tongs to hold clothes.

1,386,296. HAIR-DRESSING DEVICE. LAURA M. WESSA, Middleport, Ohio. Filed Feb. 16, 1921. Serial No. 445,364. 6 Claims. (Cl. 132—21.)

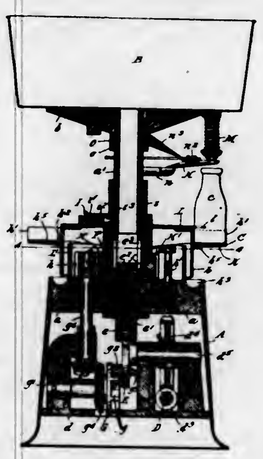
5. A hair dressing device comprising an elongated comb constructed to conform to the contour of the head of the wearer, pins projecting from one side of the back of the comb adjacent the ends of said comb, a hair holding rod having oblong openings formed in its end portions, said openings being adapted to receive the pins of the comb, spring clamps carried by the ends of the comb and adapted to engage said pins, said rod being adapted to adjust itself through the medium of the oblong openings to accommodate a quantity of hair disposed between the rod and the back of the comb.

1,386,297. ATOMIZER AND VAPORIZER. IRVEN H. WILSEY, Chicago, Ill. Filed Feb. 21, 1919. Serial No. 278,374. 2 Claims. (Cl. 123—141.)



1. The combination with a tubular mixture passage, of a rotary mixing device in said passage having an axial shaft, and bearing supports for the ends of the shaft in opposite ends of the passage, one of said supports being of greater diameter than said device and removable to permit the bodily removal of said device through the end of the passage.

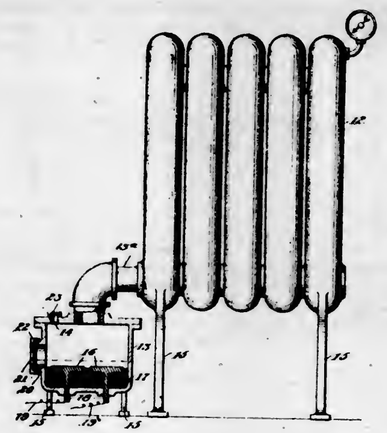
1,386,298. GRAIN-SEPARATOR. HARDIN E. WINSLOW, Spokane, Wash., assignor of one-half to Warren T. Winslow, Spokane, Wash. Filed Sept. 2, 1919. Serial No. 320,991. 1 Claim. (Cl. 130—16.)



The combination in a grain separator with a longitudinal rotary screen and means for carrying straw therefrom, and a threshing device delivering to said screen, of a conveyer for transporting grain from said screen and a second rotary screen co-acting with the conveyer, means in said second screen to convey chaff through its forward

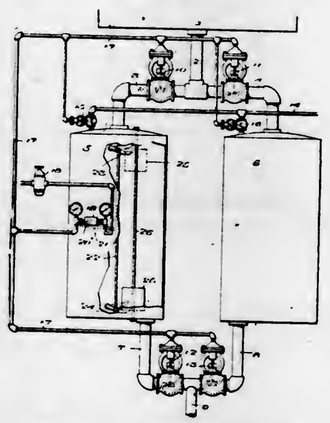
end to be returned by said threshing device to the first screen, an intermediate rotary screen concentric with and surrounding said second screen and increasing in

diameter toward its delivery end, a conveyer at said delivery end, and an outer rotary screen increasing in diameter toward its delivery end opposite the delivery end of the intermediate screen, for the purpose described.



1,386,299. BOTTLE FILLING AND CLOSING MACHINE. KIRK K. WRIGHT, Buffalo, and ROBERT N. CUNDALL, Blasdell, N. Y., assignors to R. G. Wright & Co., Buffalo, N. Y. Filed Apr. 29, 1919. Serial No. 293,454. 16 Claims. (Cl. 226—75.)

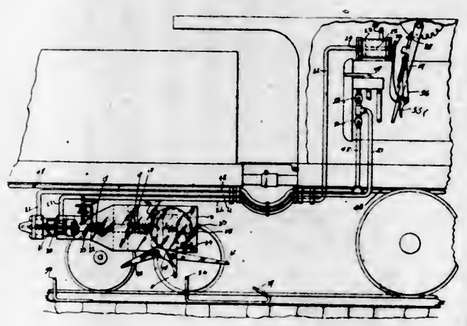
1. In a receptacle filling machine, the combination of a receptacle filling nozzle, a rotatable table adapted to place receptacles carried thereon in operative relation to said nozzle to be filled, a driven shaft for actuating said machine, a cam on said shaft, a plunger connected to said table and engaging said cam whereby said table is intermittently raised and lowered, a driving member for rotating said table, and connections between said driving member and said cam for rotating said table.



1,386,300. ELECTRIC HEATER. CHARLES A. XAARDELL, Utica, N. Y. Filed Oct. 12, 1920. Serial No. 416,524. 1 Claim. (Cl. 219—38.)

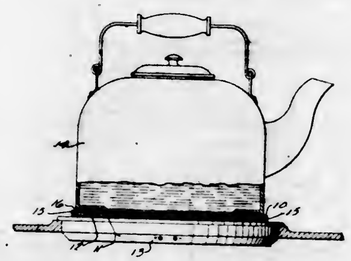
An electric heater comprising a radiator having a plurality of sections, combined with a liquid tight receptacle outside of and near the base of said radiator and with which said radiator sections communicate, said receptacle having a normally closed filling opening, insulating material in said receptacle, electrodes embedded in said insulating material and having exposed surfaces, and suitable electric connections to said electrodes, the electric

communication between said electrodes, to vary the heat to be generated, being governed by the amount of liquid in said receptacle, so that when the liquid is entirely evaporated the current is interrupted until the circuit is again closed by condensation.



1,386,301. APPARATUS FOR TRANSFERRING LIQUIDS. SIDNEY T. ADAIR and HUGH C. FYANS, Au Sable Forks, N. Y.; Catherine Fyans administratrix of said Hugh C. Fyans, deceased. Filed Nov. 8, 1916. Serial No. 130,302. 12 Claims. (Cl. 137—68.)

2. In apparatus of the character described, the combination, with a container adapted to maintain liquid under reduced pressure, of a pair of receivers connected thereto for gravity flow of liquid from said container, each receiver being adapted to receive liquid from the container and to discharge liquid so received, valve means for controlling flow to and from said receivers, and mechanism

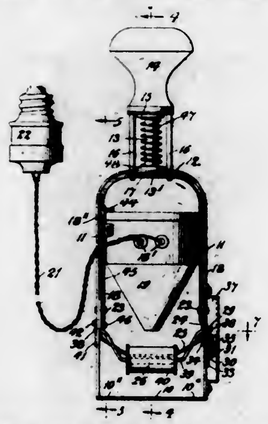


governing said valve means whereby the receivers can be worked in alternation, one filling while the other discharges.

1,386,302. MEANS FOR STOPPING RAILWAY-TRAINS AT DANGER-SIGNALS. EDWARD C. ALLEN, New Haven, Conn. Filed Sept. 15, 1920. Serial No. 410,428. 5 Claims. (Cl. 246—188.)

1. Means for stopping railway trains at danger signals including a cam block adapted to open the train line, a lever connected with said block and including an abutment arm and a tripper arm combined with an abutment and a tripper for actuating said arms.

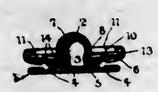
1,386,303. HEAT-CONDUCTING DEVICE. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed Mar. 2, 1920. Serial No. 362,891. 8 Claims. (Cl. 219—44.)



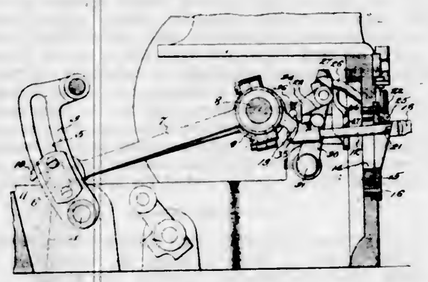
1. A readily deformable heat conducting device comprising an aggregate of small pieces of metal adapted to be interposed between a source of heat and an object to be heated.

1,386,304. OILING DEVICE FOR TURBINE-PUMPS. WILLIAM F. BARNICKOL and ALFRED W. ARCHER, Stockton, Calif., assignors to Sterling Iron Works, Stockton, Calif., a Corporation of California. Filed Feb. 4, 1920. Serial No. 356,166. 4 Claims. (Cl. 64—56.)

1. An oiling system for deep well pumps, comprising a casing, a driving shaft having a bore extending along the length thereof, bearings arranged along the lengths of the casings to support the shaft, and the shaft being provided with orifices extending between the bearing surfaces and bore of the shaft, a delivery tube extending down the well casing, and communicating with the bearing surfaces, and an oil supply connected with the bore at the upper end of the shaft and with the delivery tube.



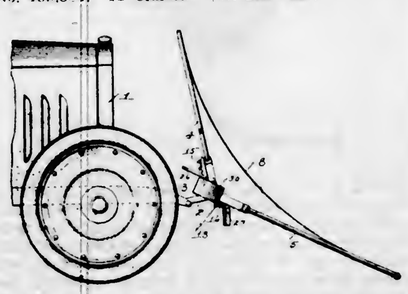
1,386,305. ELECTRIC SEALING DEVICE. CHARLES BARRETT, New York, N. Y. Filed Sept. 1, 1920. Serial No. 407,464. 7 Claims. (Cl. 120—116.)



4. A device of the class described, comprising a frame provided with an upright slot and with a branch slot extending from a point between the ends of said upright slot, a receptacle movable up and down relatively to said frame and provided with a pin arranged to travel in said upright slot, a movable switch located at the junction of the two slots, to connect the upper portion of the upright slot either with the lower portion thereof or with said branch slot, a swinging frame connected with said receptacle and mounted to swing relatively thereto about a horizontal axis, said swinging frame having a pin adapted to travel either exclusively in the upright slot, or partly in the branch slot, according to the position of the switch, a die carried by said swinging frame and adapted to occupy a position either beneath the outlet of the receptacle or to one side thereof, a valve controlling said outlet and operated by the swinging movement of said die-carrying frame, a pivoted sector the ends of which project alternately into the path of the pin on the die-carrying frame, a spring connection between said sector and said switch, and means for holding said sector against accidental movement.

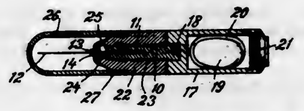
1,386,306. SNAP-FASTENER. CHARLES BAUM, Brooklyn, N. Y. Filed May 8, 1919. Serial No. 295,665. 2 Claims. (Cl. 24—218.)

1. In a snap fastener, the male member having an annular series of stitching holes through its base and thread receiving grooves in the exposed face of the said member, connecting said holes.



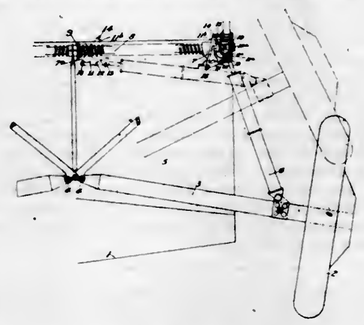
1,386,307. THREAD-CONTROLLING MECHANISM FOR SEWING-MACHINES. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Nov. 5, 1917, Serial No. 200,273. Divided and this application filed Nov. 25, 1918. Serial No. 263,990. 15 Claims. (Cl. 112—243.)

1. In a sewing machine having stitch-forming and work-feeding mechanism, in combination, a take-up, a nipper, and means for simultaneously varying the extent of the take-up's throw and the timing of the nipping action.



6. In a sewing machine, a main-shaft, stitch-forming mechanism, work-feeding mechanism, and thread-controlling mechanism including a nipper, said nipper having a clamping head actuated from said main-shaft, an adjustable abutment coöperating with the clamping head, a feed-regulator, and means governed by the feed-regulator for varying the position of the abutment relative to the clamping head.

1,386,308. SAFETY-FENDER FOR VEHICLES. CHARLES E. BEDAUX, Cleveland, Ohio. Filed Apr. 8, 1921. Serial No. 459,584. 12 Claims. (Cl. 293—25.)



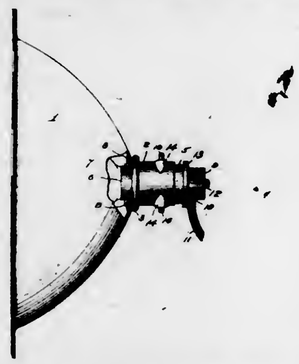
1. In a fender for vehicles; pairs of arms, the arms of one pair being swingably mounted respectively on relatively inclined axes adjacent one side of the vehicle and the arms of the other pair being similarly mounted adjacent the vehicle's other side; a flexible sheet carried by the free ends of the arms; means for swinging the arms of said pairs into diverging position.

1,386,309. DEVICE FOR REMOVING FOREIGN BODIES FROM THE EYE. CARROLL EDWARD BINGMAN, Washington, D. C. Filed Oct. 20, 1920. Serial No. 418,227. 1 Claim. (Cl. 128—357.)

An instrument of the character described embodying a centrally positioned fibrous member having a central longitudinal channel extending the greater portion of its length providing two filament grasping jaws, complementary receptacles cut part way into the faces of the jaws to form seats for the ends of the filaments, a barrel arranged upon the exterior of the jaws and means for tightening the jaws together and forcing the ends of the filaments down upon the seats.

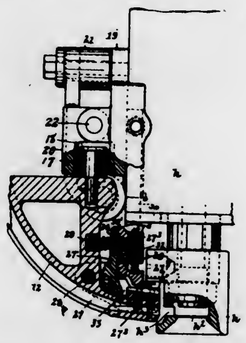
1,386,310. ALIGHTING-GEAR OF AIRCRAFT. HAROLD BOLAS, Clifton, Bristol, England, assignor to George Geach Parnall, Park Row, Bristol, England. Filed Jan. 6, 1921. Serial No. 435,434. 2 Claims. (Cl. 244—2.)

1. Alighting gear for aircraft of a combined seaplane and aeroplane character, comprising in combination a float, two alighting wheels mounted on separate axles, said axles being pivotally mounted within said float, shock absorbing struts pivotally connected to said axles, means mounted on and controlled by a rotatable screw and pivotally connected to the upper end of said struts for simultaneously adjusting the position of the alighting wheels relative to the float.



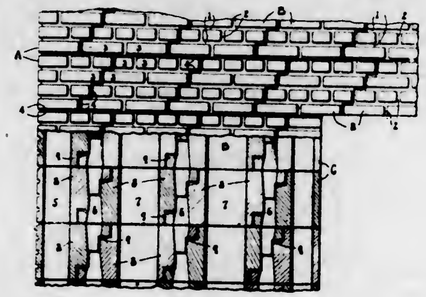
1,386,311. CULINARY UTENSIL. ELMER D. BROWN, Fort Worth, Tex. Filed Mar. 24, 1921. Serial No. 455,235. 1 Claim. (Cl. 294—53.)

A device of the class described comprising a fork having a shank with tines at one end and a handle at the other, said shank having a longitudinally extending slot at its junction with said tines, upstanding apertured flanges disposed on opposite sides of said slot, a coöperating fork having a short shank extending through the slot



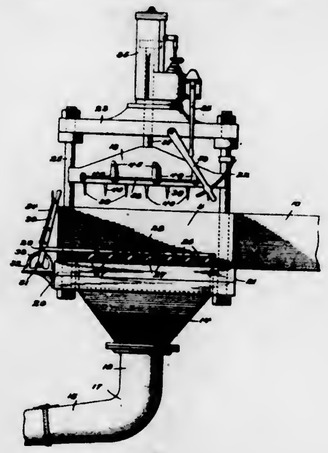
in said first mentioned shank, the shank of said short fork being twisted to provide for this passage, a pintle pivotally connecting said shank in said slot, said pintle extending through said apertured flanges, laterally extending spaced flanges carried by the shank of said first mentioned fork on its rear face near the handle thereof, a bell crank fulcrumed between said flanges and having an operating handle at one end, a rod connected at one end with the other end of said bell crank and at its other end with the terminal of the shank of the pivoted fork.

1,386,312. FOCUSING DEVICE FOR HEADLIGHTS. HERBERT WALDO BROWN, Ashland, Ohio. Filed Apr. 14, 1920. Serial No. 373,798. 2 Claims. (Cl. 240—44.)



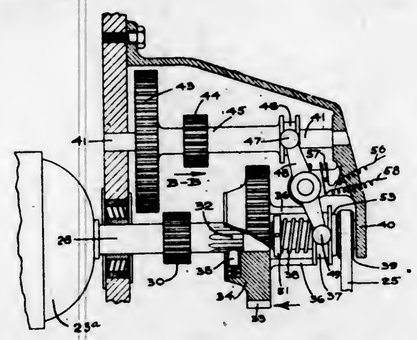
1. A bulb focusing device for automobile electric headlights employing a reflector body with a sleeve at its basic end, comprising a socket for an electric headlight bulb adapted to the interior of the sleeve, and an elastic clip or holding means carried by the sleeve in engagement with the outer wall of the socket, the sleeve being provided with circumferentially spaced passages for the ends of the clip, with said passages having outwardly directed lips for holding and guiding the ends of the spring clip and directing them into biting engagement with the lamp socket when in the sleeve.

1,386,313. BOTTLE-SEALING MACHINE. AMOS CALLESON, Brooklyn, N. Y. Filed Jan. 23, 1920. Serial No. 353,604. 19 Claims. (Cl. 226—88.1.)



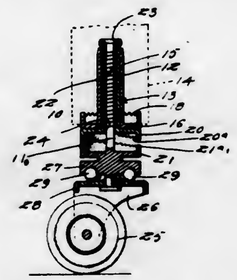
1. In combination, a closure delivery chute member, a closure receiving member, and means to support said members and move one repeatedly past and in closure-transferring relation to the other, one of said members being shiftable in said means with the other each time one of said members moves past the other.

1,386,314. BUILDING-BLOCK. ALBERT H. CARRIER, Asheville, N. C., assignor of one-half to Edwin W. Grove, St. Louis, Mo. Filed May 31, 1917. Serial No. 172,038. 3 Claims. (Cl. 72—36.)



1. In an imitation brick structure, horizontal rows of building blocks each comprising a single block of material having in its front face horizontal and vertical grooves imitating the mortar receiving spaces between bricks, said block also having oppositely disposed stepped ends imitating extended bricks, only one of said stepped ends being in the form of inverted steps, the horizontal bottom faces of the inverted steps and the horizontal top faces of the upright steps being in alinement with said horizontal grooves, said horizontal top and bottom faces being formed at opposite ends of the horizontal grooves, and each of said horizontal top faces being in a horizontal plane lower than the horizontal bottom face of the inverted step at the opposite end of the horizontal groove.

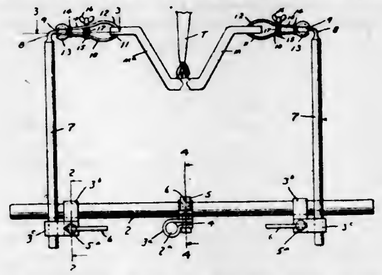
1,386,315. ICE CRUSHING AND CONVEYING MECHANISM. JESSE H. CARY, Valdosta, Ga. Filed Nov. 8, 1919. Serial No. 336,619. 8 Claims. (Cl. 83—62.)



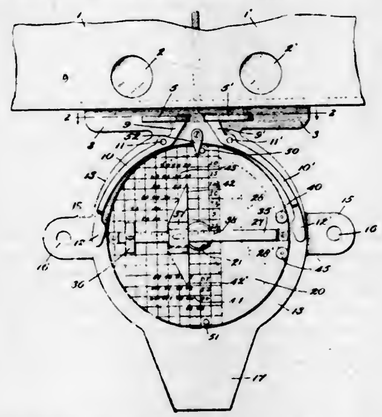
1. In a device of the class described for crushing and delivering ice the combination with a receptacle open at one end adapted to receive and hold a block of ice, the bottom of said receptacle being made up of a series of parallel sections pivoted at their ends and adapted to be turned edgewise to open the bottom, a chute for conveying blocks of ice into said receptacle through its open end, a crushing block having downwardly projecting spikes adapted to enter said receptacle from the top and split or break said block of ice, a flexible and adjustable conveying chute or pipe for the crushed ice and means for turning said sections on their pivots to dump the ice into said chute.

1,386,316. ENGINE-STARTING SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Sept. 5, 1916. Serial No. 118,458. 15 Claims. (Cl. 290—31.)

6. In an engine starting system, the combination with an engine; of an electric machine capable of acting as a starting device; means for imparting motion to the electric machine; change speed gearing between the electric machine and the engine capable of rearrangement to effect a plurality of gearing combinations; and means acting automatically upon the operation of the electric machine as a motor positively to effect a gearing connection of a certain combination between the motor and engine, said automatic means being capable when the engine becomes self-actuating of rearranging the change-speed gearing whereby a different gearing combination is effected when the engine drives the machine as a generator.



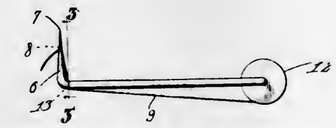
1,386,317. ADJUSTABLE CASTER. WILLIAM A. CLAASSEN, Fond du Lac, Wis. Filed Mar. 24, 1921. Serial No. 455,048. 2 Claims. (Cl. 16—19.)



1. A caster having a spindle, a bearing member movably fitted thereon, means to vary the height of the bearing member on the spindle through movement of the bearing member relatively to the spindle, and means to urge said spindle and bearing member into coupled relation.

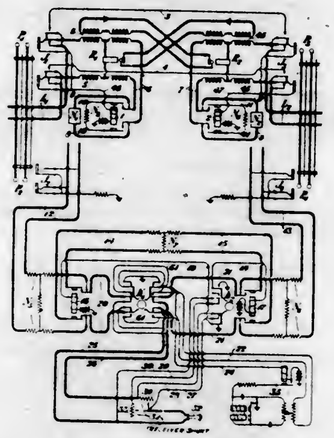
1,386,318. UNIVERSAL WELDING-CLAMP. RICHARD COWAN, Climax, Minn. Filed Dec. 19, 1919. Serial No. 346,070. 2 Claims. (Cl. 113—104.)

1. A welding clamp comprising a rod and a supporting clamp for adjustment of said rod on a horizontal axis, clamps mounted on the end portions of said rod, upright standards having bearings in said clamps and mounted to rotate and slide vertically therein, the upper ends of said standards having inwardly turned goose necks formed thereon and jaws mounted at one end on said goose necks and extending inwardly in opposing relation for supporting the articles to be welded, and said jaws having universal adjustment on said goose necks to allow the accurate fitting together of the edges of the articles to be welded.



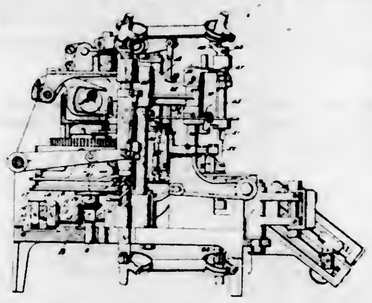
1,386,319. AUTOMATIC WEIGHING-MACHINE. EDGAR H. CRAIG, Rockdale, Tenn. Filed July 20, 1920. Serial No. 397,666. 6 Claims. (Cl. 249—19.)

1. In an automatic weighing machine the combination of a receptacle to hold the material to be weighed; a pivoted receiver adapted to turn through an angle of substantially one hundred and eighty degrees located beneath said receptacle; a disk provided with a scale beam on which said receiver is mounted; a valve controlling the passage of material from said receptacle to said receiver; means moved by the turning of said receiver for controlling the flow of material into said receiver; and a spout into which said receiver empties in its turning movements, substantially as described.



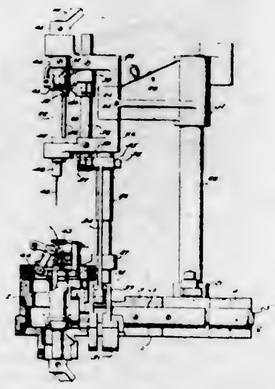
1,386,320. AWL. JACOB DANIELSON, Butte, Mont. Filed Sept. 13, 1920. Serial No. 409,865. 1 Claim. (Cl. 223—37.)

An awl including a body portion having a right angled extremity, the right angled extremity being tapered



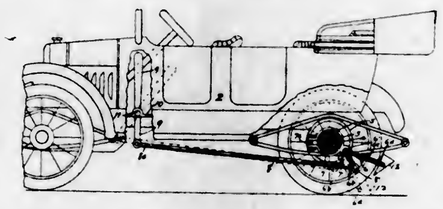
throughout its length to provide a piercing end, said piercing end having an eye formed therein, said body portion having an eye formed adjacent to the right angled end, the opposite extremity of the handle portion extending at right angles thereto, and extending laterally with respect to the first mentioned right angled portion, the right angled portion adapted to provide a combined handle and spool support.

1,386,321. TELEPHONE REPEATER EQUIPMENT. CHARLES S. DEMAREST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 9, 1919. Serial No. 295,912. 3 Claims. (Cl. 179—170.)



1. A transmission circuit including lines interconnected by repeater apparatus, net-works normally connected to said repeater apparatus for balancing said lines, apparatus for testing said repeater apparatus, networks associated with said repeater apparatus for balancing said testing apparatus, and means responding when said testing apparatus is connected to said repeater apparatus for disconnecting said first-mentioned networks from said repeater apparatus and for connecting said second mentioned networks thereto.

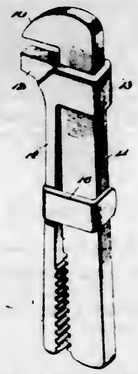
1,386,322. LOOPER MECHANISM FOR SEWING-MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Dec. 31, 1915, Serial No. 69,644. Renewed Jan. 7, 1921, Serial No. 435,761. Divided and this application filed Dec. 17, 1918. Serial No. 267,103. 12 Claims. (Cl. 112—157.)



1. In a sewing machine, in combination with a needle, a looper mounted for bodily endwise and sidewise movements, means including a toggle-device for imparting to the looper one of said movements, and a connection between an element of said toggle device and the looper for imparting to the latter the other of said movements.

1,386,323. NEEDLE-BAR-OPERATING MECHANISM. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Dec. 31, 1915, Serial No. 69,644. Divided and this application filed Dec. 17, 1918. Serial No. 267,104. 6 Claims. (Cl. 112—221.)

1. In a sewing machine, in combination, a work-support, a needle-bar sustained at one side of the work-support and carrying a needle, a rotary crank disposed at the opposite side of the work-support and movable on an axis transverse to said needle-bar, a stud with which the needle-bar is connected and with which it performs reciprocatory movements in unison, and a pitman connected at its opposite ends to said crank and said stud and between its ends being free of connection with moving parts of the machine.

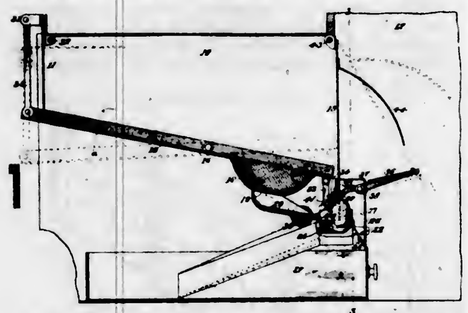


1,386,324. SAFETY-STOP FOR VEHICLES. JAMES D. FARMER, Brownville, N. Y. Filed Nov. 4, 1919. Serial No. 335,617. 1 Claim. (Cl. 188—4.)

In a safety stop for vehicles, the combination with the operating rod, of a rocking member disposed transversely at the rear of the vehicle, a pair of clamps for pivotally securing said member to the rear axle, the medial portion of said member comprising a crank to which said rod is attached, the opposite ends of said member comprising similar cranks disposed concentric to the medial crank which extends across the outer rear faces of the corresponding rear wheels, and a block mounted on each of said end cranks in the paths of said wheels.

1,386,325. WRENCH. ANDREW S. FISHER, Altoona, Pa. Filed Oct. 16, 1919. Serial No. 331,052. 2 Claims. (Cl. 81—130.)

1. A wrench including a fixed jaw having a shank, and a movable jaw slidable upon the shank of the fixed jaw to coöperate therewith and provided with a shank opposed to a face of the shank depending from the fixed jaw, the movable jaw being also mounted to rock transversely to the fixed jaw whereby the shank of the movable

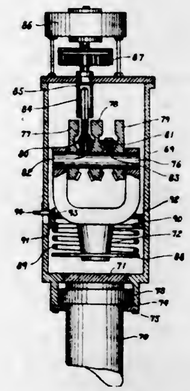


jaw may be swung transversely across said face of the shank of the fixed jaw and said shanks being provided with coacting means whereby the shank of the movable jaw may be swung for adjusting the movable jaw with respect to the fixed jaw.

1,386,326. TROLLEY-WIRE SPLICE. JAMES J. FISHER, Junior, W. Va. Filed Mar. 9, 1921. Serial No. 451,031. 7 Claims. (Cl. 191—44.

1. A splice of the character described including a spliced sleeve formed of companion sections, and coacting means upon the sections abutting for rigidly coupling the sections against endwise pull.

1,386,327. TRAP-NEST. ALBERT O. FORSTER and PERCY M. FORSTER, Berkeley, Calif. Filed Apr. 10, 1919. Serial No. 288,975. 6 Claims. (Cl. 119—47.)

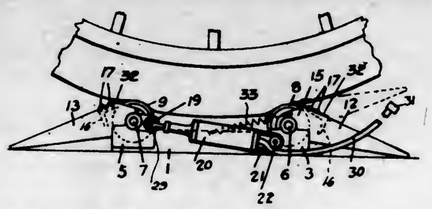


1. A trap nest comprising a housing, an entry opening provided with a normally open door, a pair of exit openings provided with doors, one of the doors being normally locked and the other unlocked, a nest within the housing, an egg tray in communication therewith, means whereby the presence of a hen within the housing will close the entrance door, means whereby the presence of an egg within the tray will lock the normally unlocked exit door and unlock the other exit door, the latter means including locking mechanism normally arranged to lock one of the said exit doors and actuated by the egg to another position to unlock the said normally locked exit door and lock the other exit door, means for automatically locking the entry door closed, and means for releasing the entry door operable exteriorly of the housing.

1,386,328. HATPIN. WILLIAM H. FREDERICK, Earleigh Heights, Md. Filed Sept. 18, 1920. Serial No. 411,057. 1 Claim. (Cl. 132—72.)

In a device of the class described including a hatpin having a ball formed on one end, a locking member comprising a concavo-convex disk having a centrally located aperture, a flange extending from said disk and adapted to be attached to a hat, spaced apart wires extending across said aperture and having their ends fixed to the convex face of the disk.

1,386,329. MECHANISM FOR CONVERTING ROTARY INTO RECIPROCATORY MOTION. RUDOLF GOLDSCHMIDT, Berlin, Germany, assignor to Det Tekniske Forsøgsaktieselskab, Charlottenlund, Denmark, a Company of Denmark. Filed Jan. 10, 1921. Serial No. 436,206. 12 Claims. (Cl. 74—14.)

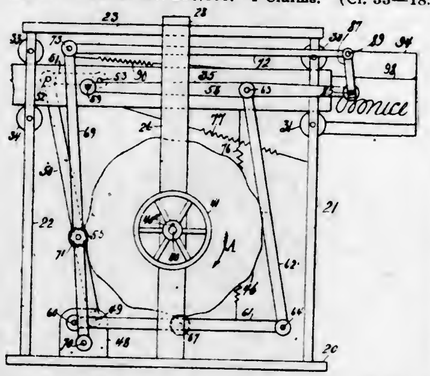


1. Mechanism for converting rotary into reciprocatory motion, wherein continued progressive movement step-by-step in one direction of the path of reciprocation is obtained, comprising a reciprocatory member, a centrifugal weight pivoted thereto, means for rotating said weight and means for impressing a unidirectional impulse upon the reciprocatory member, so that it travels or progresses step-by-step in one direction.

1,386,330. PUMPING DEVICE. JOHN WARWICK GORDON, St. Catharines, Ontario, Canada. Filed Aug. 6, 1920. Serial No. 401,655. 1 Claim. (Cl. 230—27.)

A pumping device for automobiles comprising a supporting base, a pair of shafts journaled therein, a roller journaled upon each shaft, said rollers spaced apart together to form a support for an automobile wheel, a crank arm secured to one of the shafts, a pump pivoted at one end of the supporting base and having its pump rod pivotally connected to the crank arm, an inclined tread plate swung upon the other shaft and adapted to rest upon the ground at one end and to overlie the outer peripheral portion of the adjacent roller whereby the tire revolving in a

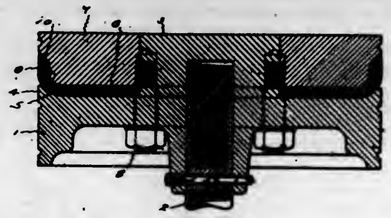
forward direction runs free of the inner end of the tread plate and frictionally engages such inner end when reversed whereby the tread plate is carried upward as



the direction of the rotation of the tire is reversed and into engagement with the tire to form a traction grip to carry the automobile wheel off the supporting rollers.

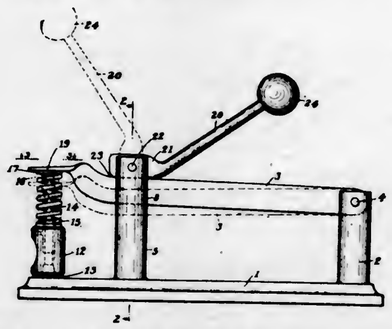
1,386,331. FERTILIZER. JOSEPH C. HECKMAN, Avalon, Pa. Filed Sept. 24, 1920. Serial No. 412,580. 14 Claims. (Cl. 71—9.)

1. The process that comprises dissolving iron oxid in sulfuric acid and substantially neutralizing the solution with granulated blast furnace slag.



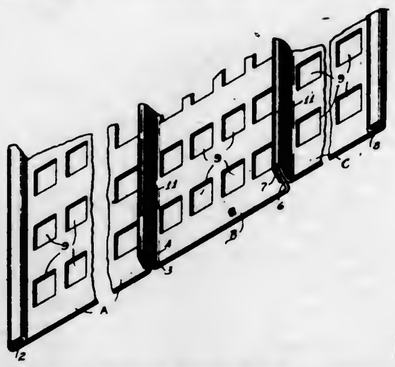
1,386,332. WRITING AND DRAWING APPARATUS. JAMES G. HENDRICKSON, Bayonne, N. J. Filed Mar. 29, 1919. Serial No. 286,200. 4 Claims. (Cl. 33—18.)

1. In an apparatus the combination of a slide bar, a rotatable cam disk for the apparatus, the rotations of the disk causing the slide bar to move in straight translation, a fulcrum pin on the bar, a pencil lever supported on the pin, a second rotatable cam disk for the apparatus, the rotations of the latter disk causing the pencil lever to swing on its fulcrum pin and marking means carried on the pencil lever to mark on an object while the cam disks are being turned.



1,386,333. PISTON FOR OXYGEN-COMPRESSORS. EBENEZER HILL, Norwalk, Conn. Filed Apr. 5, 1921. Serial No. 458,849. 1 Claim. (Cl. 103—63.)

A piston for an oxygen compressor comprising a piston head having a lip with an outwardly curved inner wall around the edge of its wearing face, a cup packing formed of indurated fiber which expands when moistened and contracts when dried fitting the working face of the head, and a packing plate with a curved inner corner fitted within and protecting the cup packing, fastened to the dead, the space between the outwardly curved inner wall of the lip on the head and the curved inner corner of the packing plate being shaped to direct the edge of the cup so that it will extend longitudinally of the piston without crushing at the bend when the cup becomes moistened and expands, and when the cup dries permit it to contact without breaking at the bend and direct the edge of the cup radially outward so it will keep close



contact with the wall of the cylinder in which the piston operates.

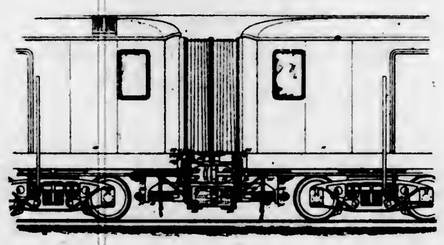
1,386,334. MACHINE FOR COMPRESSING VALVE-SPRINGS. G CLIFFORD HILL and FRANK COOPER, Seattle, Wash. Filed May 4, 1920. Serial No. 378,778. 7 Claims. (Cl. 29—86.3.)

1. A tool of the class described, including a base plate, a supporting post arranged at one end thereof, a lever pivotally connected to said post and normally disposed in a horizontal position, a guide post carried by the base and embracing said lever, the outer end of said lever being disposed at right angles and provided with spaced arms and means for reciprocating said lever in the guide post.

1,386,335. METHOD OF FORMING AND CONSTRUCTING THE MESHED ELEMENTS OF SEPARATOR-SIEVES. DANIEL E. HOFFMAN, Plymouth, Ohio. Filed Oct. 14, 1919. Serial No. 330,579. 15 Claims. (Cl. 113—116.)

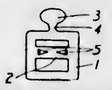
1. The herein described method of constructing a sieve for threshing machines in sections consisting of forming a meshed blank from sheet metal, then folding the blank at one edge upon itself leaving a space between the fold, then turning the folded portion at right angles to the body portion, then turning the opposite edge of the blank at right angles to conform and coincide with the right angled folded opposite edge portion of the blank, then connecting a predetermined number of the folded blanks together by inserting the turned angular edge of one of the blanks in space between the next succeeding or preceding angularly related folded portion of the adjacent meshed blank.

1,386,336. DRAFT FOR TRACTOR-PLOWS. LOUIS M. HOFTRUP, Elmira, N. Y. Filed Dec. 16, 1920. Serial No. 431,211. 7 Claims. (Cl. 97—7.)



1. A draft device for plow beams comprising disks adapted for rigid attachment to the beams, a connecting member having a circular body within which the disks are normally positioned and resilient journaling connections between said disks and body.

1,386,337. CARBON-REMOVER. GEORGE D. HOOVER, Des Moines, Iowa. Filed Mar. 11, 1920. Serial No. 365,048. 1 Claim. (Cl. 87—5.)

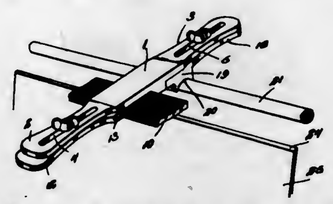


A carbon remover, comprising ether, denatured alcohol, naphthalene, and ammonia water in substantially the proportions of two and one-half ounces, three and one-half ounces, one ounce and ten ounces respectively.

1,386,338. AUTOMATIC AIR-COUPLING. EUGENE L. HORTON, San Francisco, Calif. Filed Jan. 14, 1920. Serial No. 351,453. 6 Claims. (Cl. 285—24.)

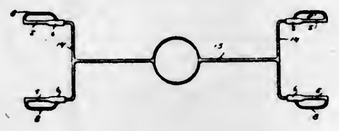
1. In an air and like coupling of the character described, flat abutting heads with connecting fluid passages, hangers suspended from the car and having the lower ends lying horizontally curved into arcs and serving to support the coupling heads and allow for horizontal adjustment, and spring means in conjunction with said hangers to permit vertical adjustment of the heads while supported thereby.

1,386,339. ONE-PIECE BUTTON AND BUCKLE. ERNEST A. ESSMUELLER and LEWIS D. HUGGINS, St. Louis, Mo. Filed Mar. 29, 1920. Serial No. 369,552. 2 Claims. (Cl. 24—73.)



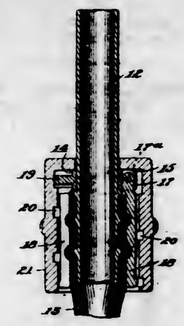
1. The combination of a strap having a button hole at one end, a one piece buckle and button having in its buckle portion a bar intermediate its ends, the opposite end of the strap being clenched to said bar, the button being spaced from the buckle portion by a reduced neck bent slightly outwardly at its outer end to offset a portion of the button from the longitudinal axis of the buckle portion, the outer part of the button lying substantially in the plane of the buckle portion.

1,386,340. FILTERING APPARATUS. ROBERT WÜSTER, Dassel, Germany. Filed Aug. 2, 1920. Serial No. 400,828. 4 Claims. (Cl. 210—112.)



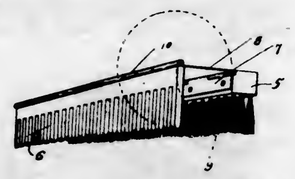
1. A filtering apparatus comprising a pair of telescoping receptacles fitting one within the other in an air-tight manner and adapted to receive one the liquid to be filtered and the other one the filtered liquid and movable relatively to each other, the receptacle designed to receive the liquid to be filtered having a filter formed in its wall.

1,386,341. FILE-HOLDER. CHARLES KAUSEN, Pasadena, Calif. Filed Nov. 12, 1920. Serial No. 423,624. 4 Claims. (Cl. 29—80.)



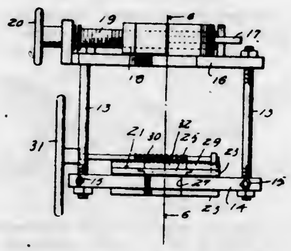
1. A file holder comprising a bar having a fixed jaw and terminal handles, and adjustable members on said bar, one having a jaw for coöperation with said fixed jaw to clamp a file between them and the other having a guide member whereby the holder may be mounted to reciprocate on a suitable support.

1,386,342. SAFETY APPLIANCE. GEOFFREY J. LETCHWORTH, Buffalo, N. Y. Filed Apr. 4, 1919. Serial No. 287,440. 1 Claim. (Cl. 74—33.)



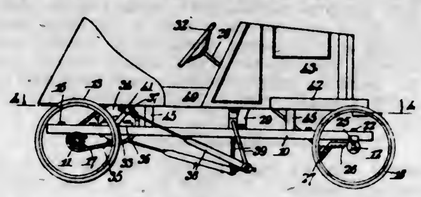
A safety appliance adapted to be attached to a tool handle and consisting of a unitary structure having a handle portion, a guard portion and a socket portion, the guard being arranged adjacent to the handle and in interspaced relation therewith and being secured at one end to the outer end of the handle and at the other end to the socket portion, the socket portion being a continuation of the handle and being recessed at its end to form a socket for the reception of the end of a tool handle.

1,386,343. HOSE-CLAMP. LEMUEL LLOYD, New York, N. Y., assignor to Margaret R. Elkin, New York, N. Y. Filed Mar. 1, 1920. Serial No. 362,609. 3 Claims. (Cl. 285—84.)



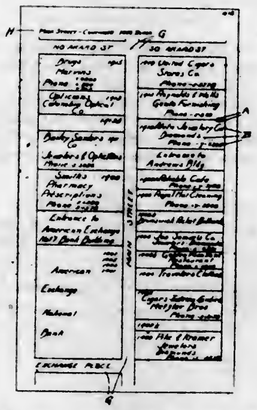
1. The combination with a pipe or delivery nozzle, of a sleeve or collar attached thereto and provided with outwardly projecting slitted lugs, and clamping arms having pins adapted to be engaged with said lugs which latter, when closed together, will pivotally secure the said clamping arms in place.

1,386,344. COMBINATION COMB AND BRUSH. HALVOR A. LUND, Warren, Ariz. Filed July 22, 1920. Serial No. 398,069. 2 Claims. (Cl. 132—88.)



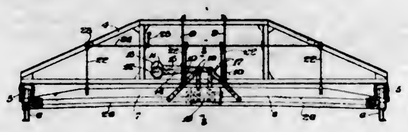
1. A device of the class described comprising a brush including a back and bristles depending therefrom, and a comb hinged to the one side edge of said back and adapted to be positioned in spaced relation to the bristles when set for use.

1,386,345. COMBINATION-WRENCH. WARREN W. MCGOWAN, WILLIAM A. HELLER, and STEPHEN J. TIERNEY, Okmulgee, Okla. Filed May 26, 1920. Serial No. 384,371. 2 Claims. (Cl. 81—119.)



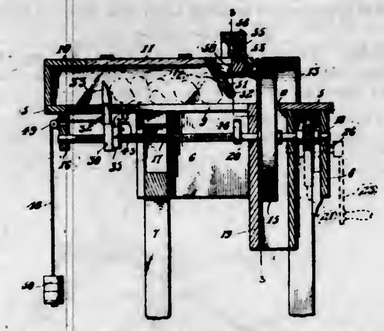
1. A wrench comprising upper and lower plates, rods connecting the plates in spaced relation, adjustable holding jaws carried by the upper plate for gripping a pipe section and capable of moving transversely of the upper plate, guides for said jaws and a wrench element carried by the lower plate to engage and turn the companion pipe section.

1,386,346. COMBINATION-VEHICLE. RUDOLPH A. MACK, Gallipolis, Ohio. Filed June 26, 1919. Serial No. 306,941. 9 Claims. (Cl. 208—118.)



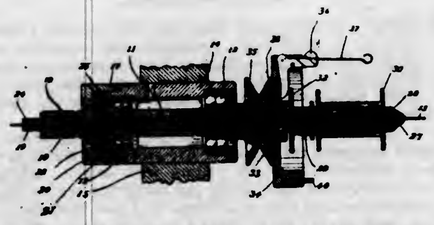
1. In a device of the class described, a frame, drive and steering axles on said frame, a transmission shaft on said frame, cranks on said shaft, one of said cranks being disposed inwardly from the ends of the shaft and in the longitudinal center of the frame, the other of said cranks being located at the ends of said shaft, said central and end cranks adapted selectively to be engaged with different types of propelling apparatus, and a gear on said shaft operatively connected with said drive axle.

1,386,347. STREET-DIRECTORY. FRED N. MARSHALL, Dallas, Tex. Filed May 28, 1920. Serial No. 385,015. 2 Claims. (Cl. 283—34.)



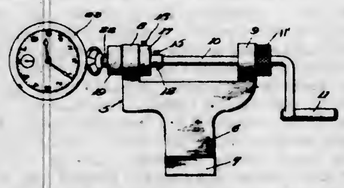
1. A street directory consisting in a compilation in book form of pages diagrammatically outlining the position of various business houses located within the area covered by such pages, each page representing one block, the pages being arranged in alphabetical order by streets, the diagram of each business house in the various pages disclosing the nature of the business, street number, and phone number, in combination with a separate alphabetical index of persons and firms within the bounds of the district covered by the directory and giving the street addresses, whereby a convenient cross index is provided.

1,386,348. STRIKE-OFF FOR ROAD-FINISHING MACHINES. GLENWAY MAXON, Jr., Milwaukee, Wis. Filed Aug. 21, 1920. Serial No. 405,082. 4 Claims. (Cl. 94—45.)



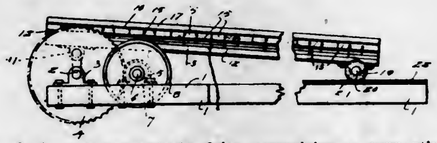
1. In a road finishing machine, a strike off device comprising a plurality of reciprocating strike off members, and means for moving said members transversely of the roadway toward and away from each other.

1,386,349. FRUIT AND VEGETABLE CUTTER. GEORGE MODNICKI, Toledo, Ohio. Filed May 11, 1921. Serial No. 468,502. 5 Claims. (Cl. 146—11.)



1. In combination with a rotatable cutter and means for feeding vegetables thereto, means for simultaneously operating said cutter and said feeding means, of means to automatically render said feeding means inoperative upon approach of said feeding means to a point adjacent said cutter, said feeding means embodying a pair of split nut members, a feed screw, means to normally hold said nut members in engagement with said screw, and means rotatable with the screw and engageable with said retaining means to release the latter.

1,386,350. SERVING-SPINDLE. GEORGE M. MONTGOMERY, Windsor Locks, and GEORGE L. MASON, Warehouse Point, Conn., assignors to The J. R. Montgomery Co., Windsor Locks, Conn., a Corporation. Filed Oct. 20, 1919. Serial No. 331,816. 14 Claims. (Cl. 28—6.)

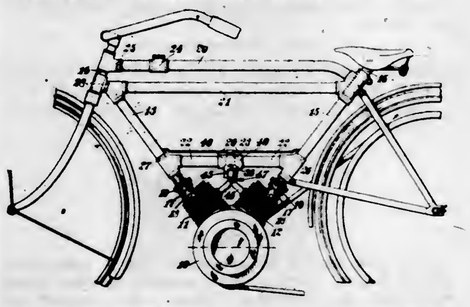


8. A serving spindle having a non-rotatable longitudinally movable thread guide, a spindle journaled on said thread guide, a flier carried by said spindle, a spool carrying sleeve journaled on and movable longitudinally of said spindle and adapted to frictionally engage a portion of said thread guide, means carried by said flier for automatically controlling the friction between said sleeve and thread guide, and means for moving the guide longitudinally to change the tension of the strand.

1,386,351. WATCH-WINDING ATTACHMENT. ELMER C. NIELSEN, Rawlins, Wyo. Filed Nov. 14, 1919. Serial No. 338,066. 3 Claims. (Cl. 81—7.5.)

1. A watch winder comprising a standard having alined barrels, a crank including a shaft received in one of said barrels, means retaining said shaft against axial displacement toward the other barrel, a winding arbor mounted in the other barrel and having means retaining the same against axial displacement toward the crank shaft, and cooperating means carried by the shaft and arbor for detachably associating the two in driving relation.

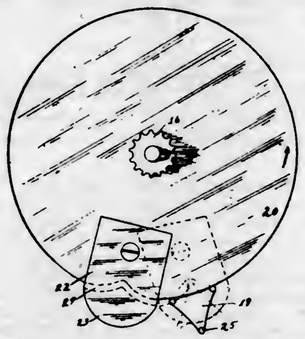
1,386,352. CONCENTRATE-DRIER. JONAS NORBERG, Latouche, Alaska. Filed Apr. 4, 1918. Serial No. 226,790. 2 Claims. (Cl. 34—38.)



2. An ore concentrate drier comprising a supporting structure having rails, an inclined drier pan positioned above said supporting structure and including a bottom plate, an electric heater secured to the under face of said bottom plate to supply heat thereto, a transverse shaft mounted beneath the lower end of said drier pan and heater, wheels mounted on said shaft and resting on said rails whereby the drier pan may travel longitudinally of said supporting structure, a crank shaft mounted transversely beneath the upper end of said drier pan and heater, an operating shaft, mounted on said supporting structure, and driving connection between said operating shaft and said crank shaft to impart a jogging movement to said drier pan.

1,386,353. SAFETY-RAZOR. EDWARD P. NORTON, Oakland, Calif. Filed Feb. 25, 1920. Serial No. 361,112. 1 Claim. (Cl. 30—12.)

A safety razor comprising a head consisting of a sheet metal blank folded upon itself to provide inner and outer blade gripping jaws, and having extensions forming arms projecting rearwardly from the extremities of the outer jaw across the ends of the inner jaw, a centrally apertured yoke having its ends connected to the said arm, a handle projecting from the inner jaw and passing loosely through the central aperture of the yoke, and a nut threaded on the handle and engaging the central portion of the yoke, whereby to draw the outer jaw inward to clamp a blade disposed between the two jaws.



1,386,354. MOTOR-VEHICLE. JOSEPH GLADSTONE OWEN, Brighton, England. Filed Jan. 26, 1921. Serial No. 440,191. 11 Claims. (Cl. 180—33.)

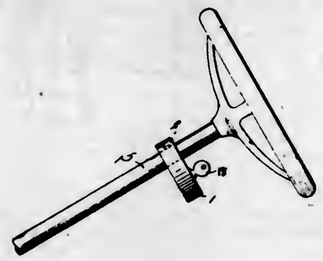
9. In a motor vehicle, in combination, two downwardly converging vehicle frame members, and a motor having

two cylinders secured together at an angle, said cylinders forming continuations respectively of said frame members to support the frame.

1,386,355. INTERMITTENT-MOTION DEVICE. MILTON L. PARENT, Marshalltown, Iowa. Filed July 6, 1920. Serial No. 394,335. 4 Claims. (Cl. 74—41.)

1. In a device of the class described, a fly wheel, an intermittent sprocket shaft rotatably mounted and mounted for adjustment circumferentially of said fly wheel, an intermittent movement member having three sides shaped to conform to the periphery of the fly wheel, projecting pins at the corners of said member, said fly wheel having in its periphery a cam-shaped slot deepest at its central portion, and a plate mounted on said cam wheel, having a registering cam slot and having a curved outer edge on which said pins are adapted to travel.

1,386,356. ELECTRIC HEATER. WILLIAM E. PASIK, De Kalb, Ill. Filed Jan. 19, 1920. Serial No. 352,470. 4 Claims. (Cl. 219—34.)



1. In an electric heater, a hollow cylindrical metallic body, a sleeve of non-electric conducting material arranged in the body, and a longitudinal electric resistance wire arranged in the sleeve in spaced relation to the inner surface thereof.

1,386,357. TURNED SHOE AND METHOD OF MAKING THE SAME. ELLEN M. PATTON, Cincinnati, Ohio. Filed Oct. 14, 1920. Serial No. 416,919. 6 Claims. (Cl. 36—16.)

1. A shoe having an outer sole and a vamp, both having reflexed margins, said reflexed margins having their edges in substantial alinement and being of substantially equal widths, an outer row of stitches passing through and uniting said reflexed margins substantially at an equal distance from the edges thereof, an inner sole having its marginal portion fitted between the vamp and the reflexed portion thereof, and an inner row of stitches passing through the vamp, both soles and both reflexed margins and securing all of said portions together.

1,386,358. LOCK. AMEL L. PAULSON, McCook, Nebr. Filed Oct. 6, 1919. Serial No. 328,855. 2 Claims. (Cl. 70—14.)

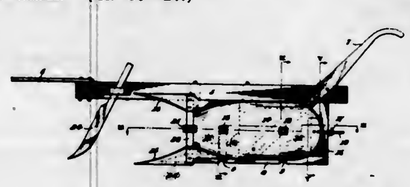
1. In a noiseless lock, the combination of an outer casing, a reinforcing block in said casing, said block having an aperture for removably attaching the device to the article to be locked, a bolt adapted to be moved to a position to project into the aperture when in locked position, a plate to which said bolt is attached, springs bearing against said plate and tending to press the bolt toward locked position, a key operated tumbler operatively connected with the bolt, and resilient means in constant operative connection with said tumbler and tending to press them toward locked position at all times, whereby the lock is prevented from rattling under vibration.

1,386,359. METHOD OF MAKING DRY YEAST. WILLIAM B. D. PENNIMAN, Baltimore, Md., assignor, by mesne assignments, to Whitney Yeast Corporation, Boston, Mass., a Corporation of New York. Filed Mar. 6, 1918, Serial No. 220,801. Renewed June 10, 1921. Serial No. 476,604. 3 Claims. (Cl. 99—10.)

1. In the process of making dry yeast, the improvement which comprises the mixing of live yeast cells which have been separated from the culture with soluble and insoluble filler in a moist state, and subjecting the material to agitation, and drying *in vacuo* at a low temperature, *i. e.*, sufficiently low to prevent rapid fermentation.

1,386,360. METHOD OF MAKING DRY YEAST. WILLIAM B. D. PENNIMAN, Baltimore, Md., assignor, by mesne assignments, to Whitney Yeast Corporation, Boston, Mass., a Corporation of New York. Filed Mar. 6, 1918. Serial No. 220,802. 5 Claims. (Cl. 99—10.)

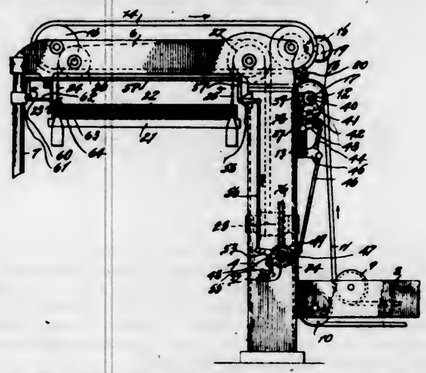
5. In the art of making commercial dry yeast, the improvement which consists in mixing live yeast cells, separate from the mash, with a filler in powdered form, an inorganic salt and water, and subjecting the mixture to drying *in vacuo* at a low temperature as substantially 50 to 60°.



1,386,361. METHOD OF MAKING DRY YEAST. WILLIAM B. D. PENNIMAN, Baltimore, Md., assignor, by mesne assignments, to Whitney Yeast Corporation, Boston, Mass., a Corporation of New York. Filed Mar. 6, 1918, Serial No. 220,803. Renewed June 10, 1921. Serial No. 476,605. 3 Claims. (Cl. 99—10.)

1. In the art of making dry commercial yeast, the improvement which consists in making a liquid culture of alcoholic yeast, adding thickening material to the fermented liquid and granulating the mixture and desiccating it *in vacuo* until it contains about ten per cent. moisture.

1,386,362. ARTICLE OF MANUFACTURE FOR PREVENTING ACCUMULATION OF MOISTURE UPON GLASS SURFACES. MARY COWPER PITTMAN, Washington, D. C. Filed Sept. 7, 1920. Serial No. 408,463. 2 Claims. (Cl. 134—27.)

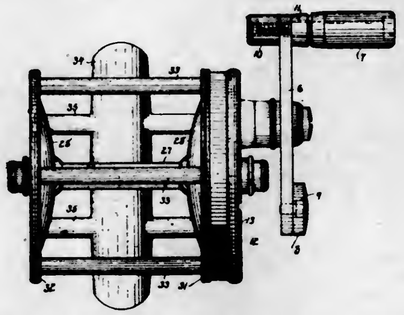


2. A composition of matter comprising a pulp of cured tobacco leaves saturated with a mixture of glycerin and tobacco juice in solution.

1,386,363. REVERSIBLE PLOW. STJEPAN POSAVAC, Chicago, Ill. Filed Aug. 14, 1919. Serial No. 317,568. 1 Claim. (Cl. 97—27.)

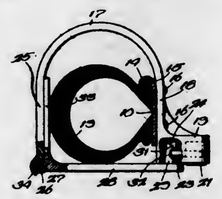
In a reversible plow, a land side, a double mold board having its forward portion disposed contiguous to the land side and extending rearwardly in divergent relation thereto, spaced supporting links having horizontally alined pivotal connections at one end with the land side, the opposite ends of the links being pivotally connected with the mold board permitting the latter to swing with the links from one side of the land side to the other or independently of said links, said links being disposed in upwardly and outwardly inclined positions with respect to the land side when the mold board is operatively positioned, and means detachably engaged with the opposite extremities of the mold board to maintain the latter in operative association with the land side.

1,386,364. PILE-DELIVERY GOVERNOR. CARL G. PRITCHARD, Warren, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1919. Serial No. 346,219. 5 Claims. (Cl. 271—88.)



2. The combination with a sheet-delivery mechanism, of a sheet-receiving table, means normally operative in each cycle of operation of the delivery mechanism for lowering the table, reciprocating means comprising a trip-latch carried by an oscillating lever normally holding said table-lowering means out of operation when actuated in full stroke for inaugurating the action of said table-lowering means when restricted to limited stroke, and means for resetting said latch when tripped on the return stroke of said reciprocating means in position to hold said table lowering means out of operation.

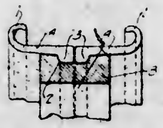
1,386,365. ADJUSTABLE WRENCH-PLIERS. JOHN A. ROBERTS, Rolfe, Iowa. Filed Aug. 15, 1919. Serial No. 317,766. 2 Claims. (Cl. 294—42.)



1. Pliers having handle members, each member having a jaw, said members being pivoted together whereby the jaws may assume usual positions with their gripping faces at an angle to each other, one of said jaws being movable, and means operable independently of movement of the handles to position the movable jaw at different locations with its gripping face substantially parallel with the gripping face of the other jaw.

1,386,366. FISHING-REEL. JOHN D. ROBERTSON, New Haven, Conn., assignor to Winchester Repeating Arms Co., New Haven, Conn., a Corporation. Filed June 8, 1920. Serial No. 387,368. 3 Claims. (Cl. 74—33.)

1. A one-handled fishing-reel having a handle, a handle-grip carried thereby, and a balance-weight located on the same side of the axis of rotation of the handle as the said handle-grip.



1,386,367. TIRE-LOCK. JOHN C. SCHENK, Chicago, Ill. Filed Aug. 7, 1919. Serial No. 315,797. 1 Claim. (Cl. 70—90.)

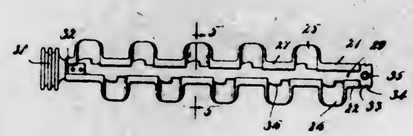
A tire lock comprising a substantially U-shaped member proportioned to accommodate a tire and adapted to be

attached by one leg to a tire carrier, a key releasable lock carried at the end of one leg of said member, a bell crank hinged upon the opposed end of the other leg of said member, one arm of said bell crank being adapted to swing between the legs of said member from a transverse position between the ends of said legs to a position parallel with said legs, the other arm of said bell crank being adapted to be swung by said first mentioned arm from a position in longitudinal alinement with one of said legs to a transverse position closing the space between the ends of said legs, and means carried by the end portion of said last mentioned arm for lockingly engaging with said lock whereby a tire disposed between the legs of said U-shaped member is locked against removal.

1,386,368. DEMOUNTABLE WHEEL-RIM. NICHOLAS SCHENK, St. Louis, Mo. Filed Mar. 29, 1920. Serial No. 369,824. 1 Claim. (Cl. 301—35.)

A demountable rim for vehicle wheels, comprising a tire carrying portion composed of two ring-shaped sections arranged in parallel relation, a lug on the edge of one of said sections that fits in a notch in the meeting edge of the other section, a retaining member arranged inside of said tire carrying portion and composed of a plurality of segmental-shaped parts hinged together in such a manner that a transverse joint is formed between the two end parts, an expansible means adapted to be arranged in the joint between the end parts for expanding said retaining member, means on said retaining member that embraces the sections of said tire carrying portion throughout the entire circumference of the rim, and a transversely-disposed rib on the tire carrying portion arranged in a transversely-disposed groove in the retaining member.

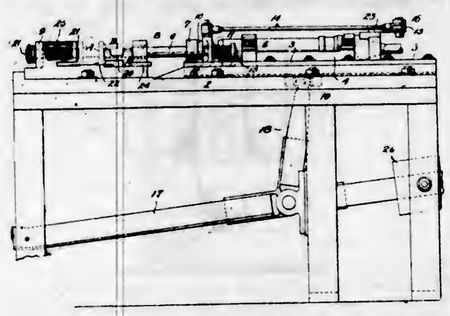
1,386,369. TOWEL-MACHINE. OSCAR SCHWIMMER, Los Angeles, Calif., assignor to Patent Products Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 4, 1919. Serial No. 335,759. 1 Claim. (Cl. 45—32.)



A toweling dispensing means comprising a case having an opening in the front for advancing toweling therethrough and an opening in the bottom at the rear for the withdrawal of toweling, a frictionally held toweling supply roller in said case, a plurality of pairs of rollers jornaled in said case, the pairs of rollers being spaced from each other, one pair of rollers serving to draw toweling from the supply spool and pass the same for use outside of the case, and another pair serving to return used toweling to within the casing, said rollers being provided with intermeshing gearing to that all of said rollers are geared together, a pinion on one of said rollers, a gear meshing with said pinion, a hand crank for operating said gear secured thereto by one directing clutch means, means to limit the rotation of said crank in both directions, a take-up roller, means to operate said take-up roller, and a yielding means connecting said operating means for said take-up roller with one of said returning rollers to operate said take-up roller simultaneously with said feeding and returning rollers.

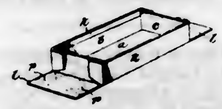
1,386,370. GAS-SHUT-OFF CONTROL FOR WATER-HEATERS. OSCAR SCHWIMMER, Los Angeles, Calif. Filed Aug. 2, 1920. Serial No. 400,861. 5 Claims. (Cl. 122—504.3.)

3. A fusible plug structure comprising a casing having intersecting bores, two of said bores forming an inlet and outlet for fluid, a plug bore arranged for the insertion of and forming a seat for a fusible plug to occlude the passage between said inlet and outlet, and a remold bore disposed out of the path of said inlet and outlet connecting with said plug bore and having a portion of corresponding contour to receive the material of the melted plug and remold the same and arranged to permit removal of the remolded plug.



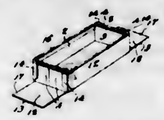
1,386,371. HAIR-WAVER. CHARLES SHEPARD, Boston, Mass. Filed Apr. 19, 1920. Serial No. 374,836. 13 Claims. (Cl. 132—33.)

1. A device of the class described comprising a pair of longitudinally extending members, projections upon each of said members about which hair is adapted to be alternately wound, and means extending between said members for separating the two members whereby the hair is drawn taut upon the device.



1,386,372. MACHINE FOR INSERTING PINS INTO HOLLOW ARTICLES. GEORGE P. SINGER and REGINALD J. HICKMAN, Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 6, 1919. Serial No. 328,718. 7 Claims. (Cl. 29—88.2.)

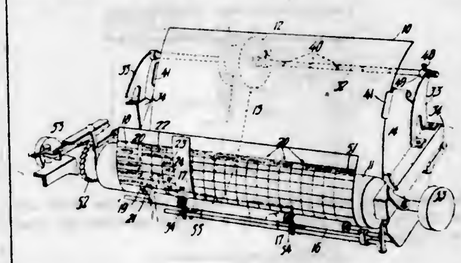
1. In a machine for driving pins into hollow articles, the combination of a seat for the article, an anvil against which it bears, a centering pin carried by the anvil arranged to enter the hollow member of the article, a rest for supporting the pin in position to be driven and a



hammer for driving the pin from its rest into the said hollow article.

1,386,373. METHOD OF MAKING COVERED PAPER BOXES. HARRY BRIDGMAN SMITH, Brooklyn, N. Y. Filed Dec. 20, 1920. Serial No. 431,910. 29 Claims. (Cl. 95—40.)

1. A method of making boxes, comprising forming a box-blank assembly consisting of a shell-sheet and a cover-sheet with engaging areas adhesively coated, separating certain portions of the sheets and shaping the blank into box form and during the shaping inserting certain parts of the blank between said separated portions, and then bringing said separated portions back toward their previous assembly-positions, with an adhesively coated surface of one of them in contact with said inserted portions.

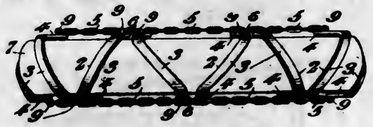


1,386,374. METHOD OF MAKING BOXES. HARRY BRIDGMAN SMITH, Brooklyn, N. Y. Filed Dec. 20, 1920. Serial No. 431,911. 13 Claims. (Cl. 93—40.)

1. A method of making boxes of paper or like materials, comprising preparing a blank-assembly consisting of a shell sheet and a cover sheet having end portions of considerable area in adhesive engagement and large intermediate areas unconnected by adhesive, and shaping the assembly into box-form.

1,386,375. LEDGER-SHEET. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 31, 1919. Serial No. 301,034. 5 Claims. (Cl. 197—132.)

1. In a typewriting machine for use with work-sheets having columns to receive items and columns to receive balances, in combination, a revoluble platen, a carriage, a holder for a narrow figuring strip, a rod on which said holder is mounted, positioned so that the strip will pass around the platen outside of a work-sheet thereon, means to determine the position of the strip holder at points along said rod to correspond with the columns in connection with which said strip is to be used, and feed-rolls ex-

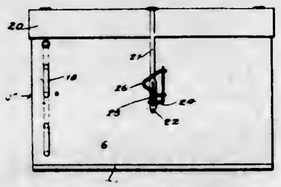


tending along the platen to maintain the strip and the work-sheet in operative relation with the platen irrespective of the position of the strip along the platen.

1,386,376. VAPORIZING APPARATUS. CHARLES W. SNYDER, Los Angeles, Calif. Filed Mar. 27, 1917. Serial No. 157,635. 14 Claims. (Cl. 123—133.)

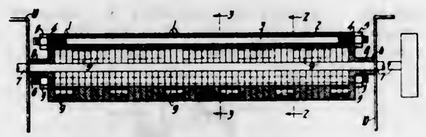
1. A vaporiser comprising a vacuum pump, means communicating with the head end of the pump for admitting liquid fuel during the vacuum stroke of said pump, means for admitting air to said pump at or near the end of the vacuum stroke of said pump, means for varying the amount of both liquid fuel and air entering said pump, and means for allowing the mixture to be emitted from said pump at a pressure no greater than atmosphere.

1,386,377. ANTISKIDDING DEVICE FOR VEHICLE-WHEELS. WILLIAM H. SNYDER, Ashbourne, Pa. Filed May 8, 1920. Serial No. 379,703. 2 Claims. (Cl. 152—2.)



1. An anti-skidding device consisting of bars applicable to a tire and adapted to be disposed transversely obliquely on the tread of a tire, said bars being U-shaped and spaced apart in reversed directions, and flexible members connecting the side terminals of said bars and being continuous around the device on both sides thereof.

1,386,378. COAL-CAR-CHECK HOLDER. JOHN BENJAMIN SPARKS, Raven, Va. Filed Jan. 12, 1921. Serial No. 436,737. 1 Claim. (Cl. 40—15.)

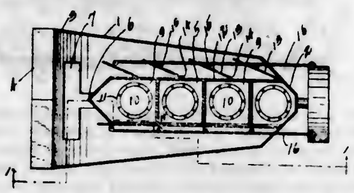


A check holder of the character described comprising a casing, check holding means within the casing, a cover hinged to the casing, a hasp carried by the cover, a keeper

carried by the front wall of the casing and a locking bolt having its intermediate portion extending through the front wall of the casing, the inner end of the bolt being

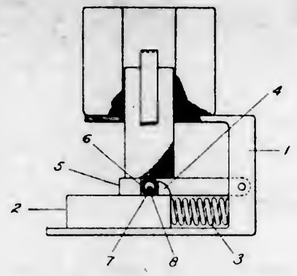
formed into a hook adapted to hold a check, the outer end of the bolt being formed into a bill for securing the hasp to the keeper.

1,386,379. TYPEWRITING-MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 13, 1917. Serial No. 201,742. 10 Claims. (Cl. 197—147.)



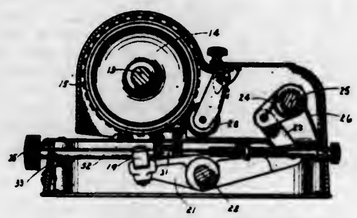
1. A platen comprising a series of disks placed side by side to form a cylinder, said disks having cellular openings therein, the cellular openings in a group of juxtaposed disks being arranged in register with each other, and groups of cellular openings for adjacent groups of disks being arranged in staggered relation with respect to one another, and a granular material in said cellular openings to deaden the sound vibrations.

1,386,380. COATING COMPOSITION AND PROCESS OF MAKING THE SAME. MORTIMER I. STRAUSS, Cleveland, Ohio. Filed May 18, 1917. Serial No. 169,451. 3 Claims. (Cl. 134—26.)



1. The process of forming a composition impervious to and unaffected by gasolene, oils and the like, consisting in dissolving shellac in an alkaline solution, producing a precipitate with an acid, dissolving the precipitate, and adding solid body material.

1,386,381. COOLING-JACKET FOR INTERNAL-COMBUSTION ENGINES. GEORGE H. TAGGARD, Walla Walla, Wash. Filed Jan. 17, 1920. Serial No. 352,162. 3 Claims. (Cl. 123—171.)

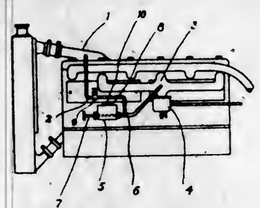


1. In a cooling jacket for internal combustion engines, an outer jacket, an inner jacket, partitions in said inner jacket forming compartments, said compartments extending from the bottom of said outer jacket to the top thereof and having both ends open, closable openings in the sides of said inner jacket, closures hingedly attached to said cooling jacket and operable against said closable openings, and a means for operating said closures through the walls of said outer jacket.

1,386,382. LATCH. JOSEPH S. THOMPSON, Mill Valley, Calif. Filed Oct. 18, 1920. Serial No. 417,789. 1 Claim. (Cl. 292—153.)

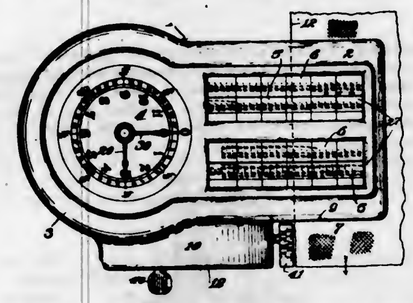
In a latching mechanism the combination of a pawl with two inwardly engaging faces, a latch capable of passing between the engaging faces of the pawl, a loosely supporting tubular roller member, a pin placed so that it passes through the roller member at a point just above its lower inside face when said roller is in latching position, the said roller forming the means of engagement between the latch and pawl, substantially as described.

1,386,383. CHECK-WRITER. CHARLES G. TIEFEL, Fairport, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,969. 7 Claims. (Cl. 197—6.4.)



1. In a machine of the class described, a printing couple comprising a universal platen and a plurality of printing type, said platen and type having their impression faces constructed to shred the paper at different angles for different values, and means for operating the printing couple to print any desired values.

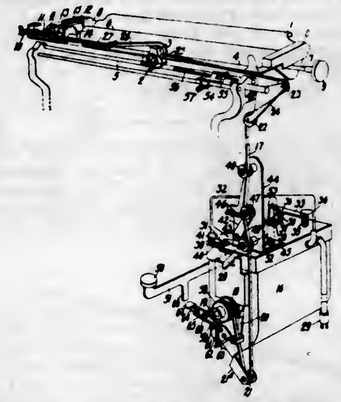
1,386,384. METHOD OF COVERING PAPER OR WOODEN BOXES. OSCAR WM. TRILSCH, Whitestone, N. Y., assignor to Oscar Trilsch Co., Whitestone, N. Y. Filed May 23, 1921. Serial No. 471,815. 3 Claims. (Cl. 93—54.)



1. The method herein described of covering boxes, starting with a rectangular blank of covering material, coated with adhesive, centering the box upon said blank, folding covering blank up against the sides of said box, shearing off at each corner the surplus covering material and turning the upstanding edges inwardly and down into and against the inner surface of the sides of said box.

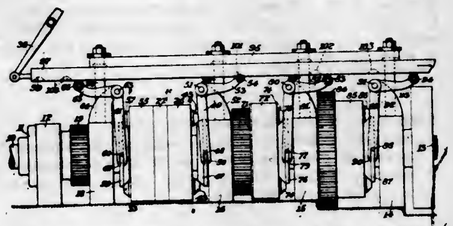
1,386,385. CARBON-REMOVER. GREGORY TOSOSSIAN, Cleveland, Ohio, assignor of one-third to Nelson C. Cotabish and one-third to William J. Higgins. Filed Feb. 9, 1920. Serial No. 357,405. 4 Claims. (Cl. 123—198.)

1. The process of removing carbonaceous deposits from an engine, which consists in running the engine under its own power and then admitting carbon tetrachlorid to the engine cylinder to loosen the carbon and blow it out through the exhaust manifold.



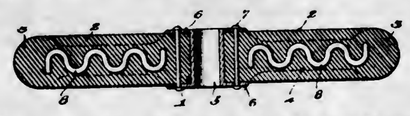
1,386,386. FABRIC-MEASURING AND COST-COMPUTING MACHINE. DOUGLAS TURNER, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 19, 1920. Serial No. 359,855. 8 Claims. (Cl. 33—130.)

1. In a fabric measuring and cost-computing machine, the combination of a housing having a laterally projecting portion forming a knife pocket, said housing having a gap formed therethrough, through which the fabric may pass in measuring the same, a measuring roller mounted in said housing, indicating mechanism actuated thereby, a presser-roller to coöperate with the measuring roller, and to press the fabric against the same, means for forcing the presser-roller toward the measuring roller, means for latching the presser-roller away from the measuring roller, a knife mounted at said knife-pocket for notching the edge of the fabric, and a controlling member lying adjacent said knife pocket for actuating the latching means to release the presser-roller.



1,386,387. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 22, 1919. Serial No. 325,566. 19 Claims. (Cl. 197—66.)

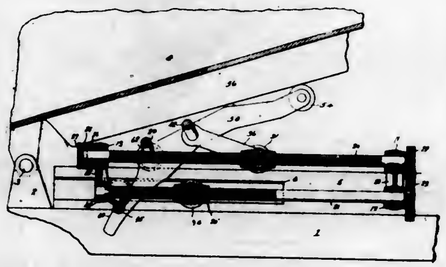
1. The combination with a traveling carriage, of carriage-return means, including an electric motor, a flexible belt connecting said carriage and said motor, to enable the latter to return the former, a normally open switch in the motor-circuit, a normally closed switch in said circuit, means to close said normally open switch, and thereby cause actuation of said motor to return said carriage, a controlling member for said normally closed switch, a spring tending to maintain said controlling member in its normal position, means normally maintaining a buckle or bend in said belt, including a belt-guide on said controlling member, and means for checking said carriage



in its return movement, and thereby causing increased tension of said belt, and a movement of said controlling member, to open said normally closed switch.

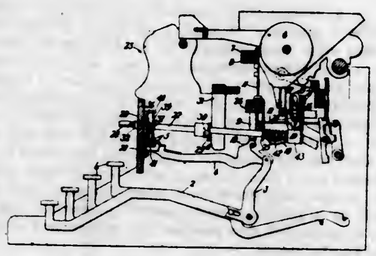
1,386,388. VARIABLE-SPEED-TRANSMISSION APPARATUS. JOSEPH A. WILKIN, Matamoras, Pa. Filed Aug. 13, 1919. Serial No. 317,363. 7 Claims. (Cl. 74—59.)

1. In a transmission apparatus, a shaft, a revoluble member, a plurality of dogs, a sleeve on the said shaft provided with teeth adapted to be engaged by the said dogs, a connection between the dogs and the revoluble member whereby when the revoluble member is turned in one direction the dogs are moved into engagement with the teeth on the sleeve, a collar associated with the said sleeve, a shift bar and devices associated with the collar and shift bar for normally maintaining the collar in such a position as to hold the dogs out of engagement with the teeth on the said sleeve, and when the said shift bar is moved to a predetermined position permitting the said dogs to be moved into position for engagement with the teeth on the sleeve.



1,386,389. VEHICLE-WHEEL. WILLIAM G. WILSON and CHARLES HUDAK, Bridgeport, Conn. Filed Mar. 24, 1921. Serial No. 455,028. 3 Claims. (Cl. 152—29.)

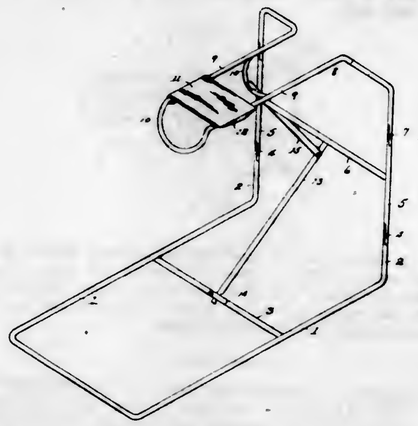
3. An automobile wheel composed of an integral rubber structure having a hub, a tread, a continuous ring-like body between the hub and tread, and spokes arranged in



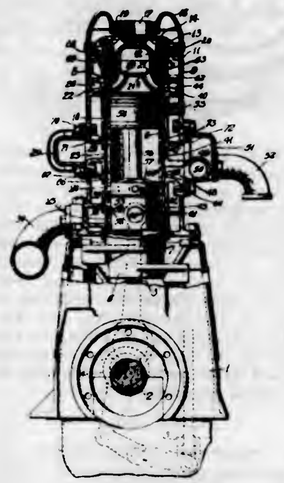
pairs with the spokes of each pair disposed on the respective opposite sides of the body and arranged to register with each other, the spokes having their inner ends connected to the hub and their outer ends extending beyond the circumference of the body and merging into the inner circumference of the tread, said body having radial reinforcements which are formed to have side parts that lie adjacent to the inner side of each of the spoke-forming parts of the pairs of the latter.

1,386,390. BODY-TILTING MECHANISM FOR MOTOR-TRUCKS. PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 12, 1920. Serial No. 402,970. 30 Claims. (Cl. 298—21.)

1. In a tilting mechanism, the combination with a truck body, of two members, one adapted to move with a translatory motion faster than the other, and means operated by the difference in speed of members and adapted to slidably engage and tilt a truck body, said tilting operation being accomplished while the members are moving in the same direction.



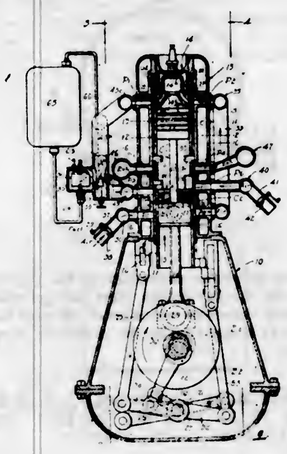
1,386,391. TYPEWRITING-MACHINE. WALTER E. BARNARD, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1918. Serial No. 261,447. 22 Claims. (Cl. 197—157.)



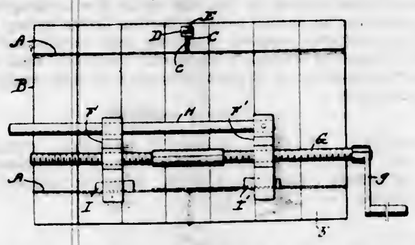
1. In a typewriting machine having polychrome printing means, the combination with a link adapted to vary the color, of a shaft for operating said link, a finger-piece for shifting said shaft transversely of its axis, means for supporting the shaft to cause said shifting to rotate it, and means for detaining the shaft in its rotated position.

1,386,392. BOTTLE-HOLDER. JACOB A. BRANT, Reading, Pa. Filed Oct. 29, 1920. Serial No. 420,348. 3 Claims. (Cl. 248—65.)

1. In a bottle holder, the combination of a base member, an upright member hingedly connected thereto, a bottle carrying rack hingedly connected to the upright member, means connecting the base member with the rack member for locking them in open position, and a bottle clamp carried by the rack member.



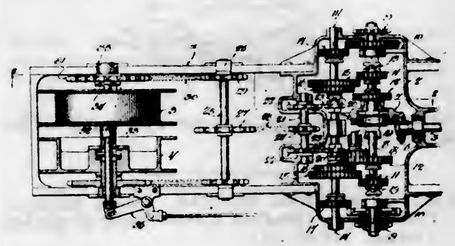
1,386,393. INTERNAL-COMBUSTION ENGINE. JOHN M. CAGE, Long Beach, Calif., assignor to Cage Engine Syndicate Inc., a Corporation of Delaware. Filed June 7, 1917, Serial No. 173,409. Renewed May 26, 1921. Serial No. 472,883. 41 Claims. (Cl. 123—75.)



1. In an engine, the combination of a reciprocable work cylinder and valve sleeve, a head in said work cylinder providing a combustion chamber, a partition fixed in said work cylinder, a reciprocable compound piston in said work cylinder coöperating with the partition in providing gas compression and air chambers, and conduits adapted to receive air and gas from said gas compression and air chambers and deliver the air and gas to said combustion chamber, said work cylinder and valve sleeve being ported and adapted to control the admission, compression and exhaust of air and gas to and from all of said chambers.

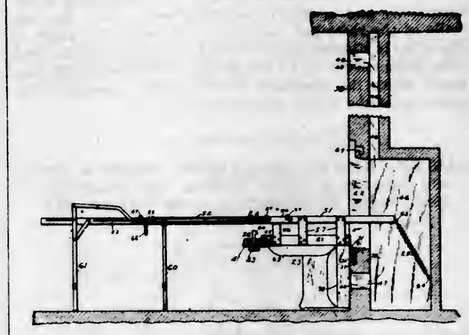
1,386,394. INTERNAL-COMBUSTION ENGINE. JOHN M. CAGE, Long Beach, Calif., assignor to Cage Engine Syndicate, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 3, 1918, Serial No. 252,356. Renewed May 26, 1921. Serial No. 472,884. 27 Claims. (Cl. 123—69.)

1. The combination with a cylinder having air and gas intake and exhaust ports, valvular means controlling the admission of air and gas to and from said cylinder, a piston in said cylinder, a crank shaft, means actuated by said crank shaft articulated with said valvular means and said piston adapted for reciprocating said valvular means and piston in timed relation so that exhaust ports open, air ports open, gas ports open, air and exhaust ports close and gas ports close in the order named.



1,386,395. MEANS FOR TYING AND SEALING SHIPPING-PACKAGES. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 9, 1918. Serial No. 221,458. 6 Claims. (Cl. 100—15.)

1. Means for binding and sealing a shipping package embodying a tie the end portions of which are twisted together and produce an arm or member extending from the plane of the tie, a sealing member embracing said arm or twisted member, and an anchoring staple straddling the arm or twisted member and in contact with said sealing member for retaining the arm or twisted member and the sealing member into close contact with said package.

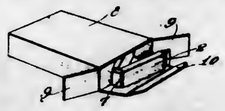


6. In the art of binding shipping packages, the improvement which consists in initially placing tension upon a wire binder by applying strain thereto at separated points, and subsequently placing additional tension upon the wire by twisting together its end portions at a point intermediate the two said separated points at which tension is initially placed upon the binder.

1,386,396. TRANSMISSION. FLOYD CORNELISON, Milwaukee, Wis. Filed Aug. 30, 1920. Serial No. 406,915. 2 Claims. (Cl. 74—58.)

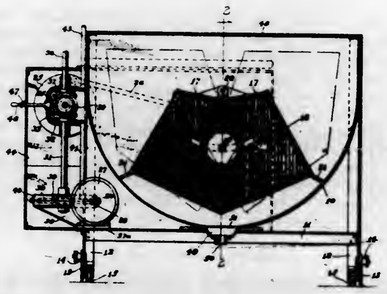
1. In a vehicle, the combination with a power unit, a driven element carried by the vehicle, of a transmission mechanism including a two-part drive shaft having vehicle driving means connected with one part, a driving gear on a part of the shaft, a driven gear on the other part of the shaft, a jack shaft, a driven gear on the jack shaft and adapted to have the drive gear of the two-part shaft meshed therewith, a clutch controlled connection between said element and the jack shaft, and the gear slidably splined to the jack shaft and adapted to be engaged with or disengaged from the driven gear of the two-part shaft whereby to selectively operate either the vehicle or the said element.

1,386,397. CONVERTIBLE FURNITURE. FRED M. DAVIS, Chicago, Ill., assignor to Pullman Couch Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1916. Serial No. 114,365. 4 Claims. (Cl. 5—48.)



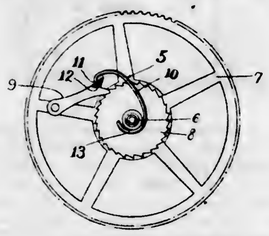
1. A device of the character described, comprising an apertured house-wall, a full-sized double bed mounted in the wall aperture, jointed connecting means for said wall and bed whereby the latter may be swung forward and backward with respect to the aperture for use and storage respectively, said bed including a foldable sectional bed bottom having a plurality of joints and fold lines disposed crosswise of the bed whereby the storage aperture may be of small width and low height, and a small-sized sofa attachment secured to the underside of the bed, adapted to hide said aperture and to serve as a seat when the bed is folded and stored.

1,386,398. SANITARY WRAPPER FOR TOOTHBRUSH-BODIES. LAWRENCE C. DAVIS, Chicago, Ill. Filed July 9, 1920. Serial No. 395,005. 2 Claims. (Cl. 206—56.)



2. A carton having a removable cover at one end thereof, and containing a series of compressed tooth-brush bodies arranged in a pile and separably connected to each

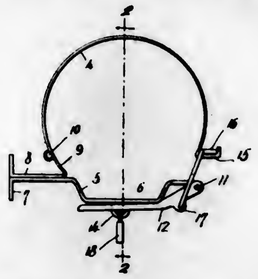
other at alternate ends, said brush bodies being so laid in the carton as to successively appear at the mouth of the



carton as the individual brush bodies are drawn out and severed from the group.

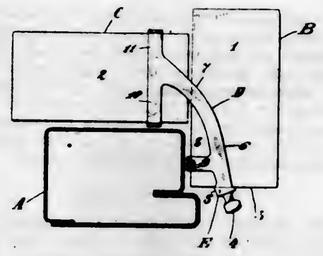
1,386,399. WASHING-MACHINE. GEORGE ENTREKIN, Pittsburgh, Pa. Filed Oct. 9, 1919. Serial No. 329,543. 3 Claims. (Cl. 68—21.)

1. In a washing machine, a stationary tub, a rock shaft extending transversely of the tub, an oscillatory clothes receptacle hung from the rock shaft, a rubbing roller in the receptacle, and a shaft supporting said roller, the end walls of the receptacle having slots in which the shaft of the roller is slidably supported and also free to rotate, said slots being curved on an arc having for its center the axis about which the receptacle oscillates, and running in the direction of the travel of the receptacle.



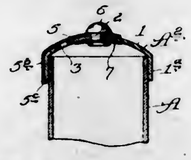
1,386,400. RATCHET MECHANISM. HOMER R. GETTLE and CHARLES S. SCOTT, Bluffton, Ind. Filed Apr. 1, 1920. Serial No. 370,388. 2 Claims. (Cl. 74—16.)

2. In a ratchet mechanism including a shaft, a ratchet wheel and a pivoted pawl, a spring comprising a longitudinally curved body provided at its ends with inturned extremities one of which is engageable about the shaft and the other engaged with the free end portion of the pawl.



1,386,401. TIRE-HOLDER. LOUIS A. GRAMS, Randolph, S. D. Filed Aug. 5, 1918. Serial No. 248,366. 1 Claim. (Cl. 224—29.)

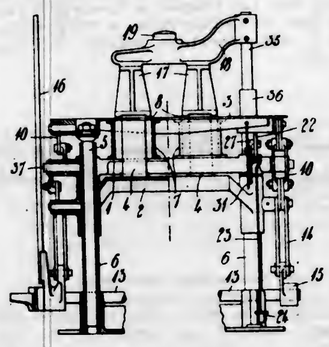
A tire holder comprising a base section having horizontally extending alined ends and a depression between the horizontal ends, a plate secured to one of the horizontal ends and provided with an upwardly extending flange, a flexible strip hingedly connected to the upwardly extending flange and having its free end bent to form a channeled



flange, a lever pivotally connected to the horizontal end opposite to the one having the plate secured thereto, and a link pivotally connected to the lever, the free end of said link adapted to be received in the channeled flange of the flexible strip.

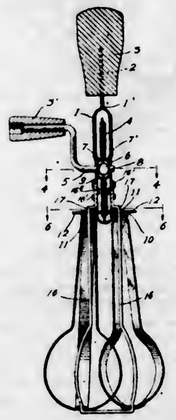
1,386,402. BRICK-ANCHORED BOLT. JOHN K. GREEN, New York, N. Y. Filed Nov. 28, 1919. Serial No. 341,211. 3 Claims. (Cl. 72—108.)

2. An anchor bolt for use with a window cleaner's safety belt adapted to be secured to the bricks of two or more tiers of brick in the wall about a window-opening comprising an anchor head; a parting bridge having flat walls engaging surfaces mounting said anchor-head; a web extending diagonally rearwardly from said bridge and having lipped arms extending therefrom at right angles to each other.



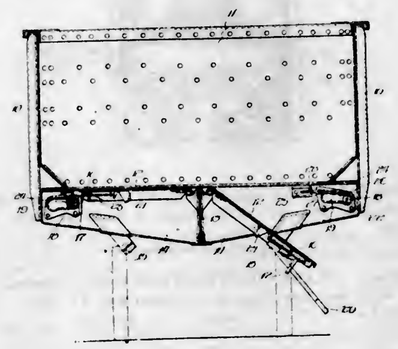
1,386,403. OIL-CUP. ALBERT C. GRUNWALD, Chicago, Ill., assignor to Precision Metal Workers, a Corporation of Illinois. Filed Oct. 8, 1920. Serial No. 415,483. 2 Claims. (Cl. 184—92.)

2. A device of the character set forth, comprising an oil cup equipped at one end with a cap comprising a bowed top wall and a depending flange which embraces the upper portion of said cup, said top wall being provided with a perforation through which oil may be introduced and having a depending flange with an inturned lower edge engaging the lower edge of the flange of said cap, the flange of said closure being provided with a finger piece, a leaf



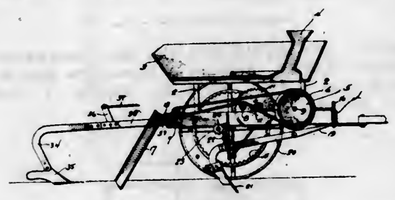
spring bearing against the inner surface of said cap, and an axial pivot connecting said closure to the central portion of said cap and to said spring, for the purpose set forth.

1,386,404. MACHINE FOR PRODUCING HOLLOW BRICKS. BROR OSCAR WALTER HESSELMAN and OSKAR GOTTFRID MEINHARD MATTSSON, Stockholm, Sweden. Filed Apr. 10, 1915. Serial No. 20,513. 14 Claims. (Cl. 25—45.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a machine for molding blocks, the combination of a mold, a support, means for moving the said mold into operative position at one side of the support and into inoperative position away from the support, means for applying pressure to the material in the mold and means for automatically relieving the pressure when the mold reaches its inoperative position.

1,386,405. EGG-BEATER. SIDNEY C. HILLS, Torrington, Conn., assignor to The Turner & Seymour Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Apr. 29, 1921. Serial No. 465,419. 6 Claims. (Cl. 259—131.)

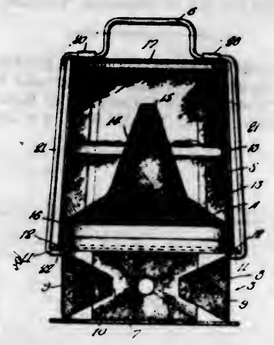


1. In an egg beater, the combination of a round shaft having a locally flattened winged portion, a wheel and a dished washer, each having a winged opening adapted to pass over both the round and flattened portions of said shaft, and a second dished washer having a hole adapted to receive the round portion of said shaft, said washers being secured to said wheel and located so that said winged openings are out of alinement with one another.

1,386,406. DOOR-OPERATING MECHANISM. DAVID HINDAHL, Chicago, Ill., assignor to National Dump Car Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 10, 1919. Serial No. 337,003. 4 Claims. (Cl. 105—309.)

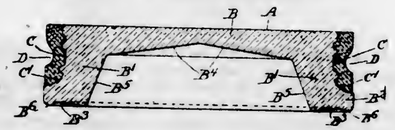
3. In a general service car having a door, a shaft, means whereby said door may be temporarily held in raised position by said shaft, and means including a flexible member connected to said shaft whereby the latter may permanently support said door in raised position.

1,386,407. CANE-PLANTER. EDWARD H. HIPPLE, Honolulu, Hawaii. Filed June 25, 1919. Serial No. 306,605. 1 Claim. (Cl. 111—59.)



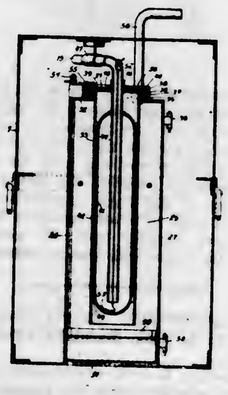
In a device provided with a furrow opener and furrow closer and a seed depositor between the opener and closer, a means for lifting the said members in coöperative relation comprising an arcuate rack mounted to the furrow opener and a pinion co-meshing with the rack, a chain driving the pinion for lowering and lifting the opener, a member operable of the chain interconnected with the furrow closer, a chute pivotally mounted in abutment to the furrow closer whereby upon the movement of the furrow closer the chute will also be moved.

1,386,408. INSECT-TRAP. MARTIN KABBOUSKI, Cicero, Ill. Filed Jan. 5, 1920. Serial No. 349,477. 4 Claims. (Cl. 43—121.)



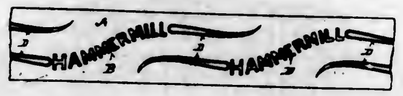
1. A trap having in combinative association a receiving, base unit provided with an angular flanged ring bounding its upper edge; an intermediate, separable cone shaped unit, having an opening at its apex and having an angular flanged ring bounding its lower edge for support

on the flanged ring of the base unit, and a separable, superimposed, storing unit having a ring bounding the



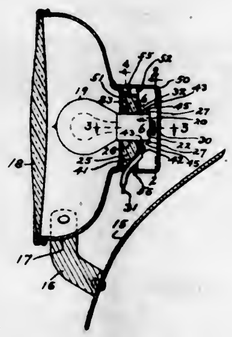
opening at its lower edge for support on the flanged ring of the cone structure, and means to hold the units together.

1,386,409. GLASS CONSTRUCTION UNIT. FREDERICK L. KEPPLER, New York, N. Y. Filed Nov. 12, 1917. Serial No. 201,683. 3 Claims. (Cl. 94—29.)



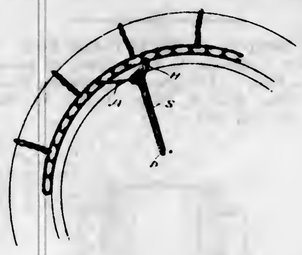
1. As a new article of manufacture a glass tile comprising a relatively thin portion, downwardly depending edges having corrugated outer surfaces, a band of cement material let into said corrugations, the outer surface of said band being channeled.

1,386,410. APPARATUS FOR GENERATING TERPENE OZONID VAPOR. EPHRAIM D. KLOTS, New York, N. Y. Filed June 6, 1916. Serial No. 101,955. 3 Claims. (Cl. 167—9.)



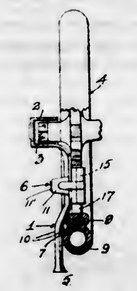
1. A vapor-generating apparatus comprising the combination of a casing, a motor and a blower driven thereby mounted within the casing, an inner compartment located within the casing, an ozonizer mounted within the inner compartment and so constructed that the air passage therethrough doubles back and forth upon itself, a receptacle for the liquid to be ozonized located within the inner compartment and close to the outlet of the ozonizer, a door for the inner compartment permitting removal of the receptacle, a conduit carrying air from the blower to the ozonizer, and an outlet for vapor from said inner compartment.

1,386,411. WATERMARKING DEVICE. FREDERIC P. KLUND, Erie, Pa., assignor to Hammermill Paper Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 1, 1920. Serial No. 385,550. 3 Claims. (Cl. 101—23.)



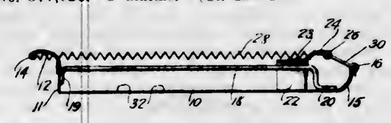
1. In a roll for marking crape paper, spaced marking devices on its periphery adapted to contact with the paper, and means in line with the marking devices adapted to support the roll from contact with the paper when the marking devices thereon are out of contact therewith.

1,386,412. SOCKET FOR INCANDESCENT ELECTRIC LAMPS. OSCAR KROEHLE, Lakewood, Ohio. Filed Feb. 17, 1921. Serial No. 445,777. 11 Claims. (Cl. 240—7.)



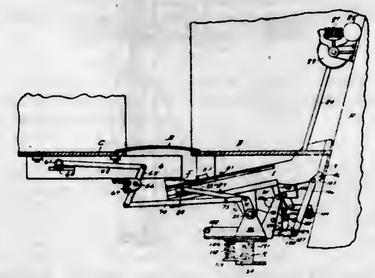
6. In combination, a casing adapted to extend circumferentially of an incandescent electric lamp and considerably larger in diameter at one end than at its other end and having an internal annular flange at its diametrically smaller end, an insulating body arranged at the outer side of said flange and having an opening adapted to receive the base of said lamp, a metal shell at the outer end face of said insulating body and insulated from the aforesaid casing and adapted to receive said base through said opening and forming a contact adapted to be engaged by one terminal of said base, a resilient member insulated from said shell and forhing a contact adapted to be engaged by the other terminal of said base, and means whereby said resilient member, said shell, the aforesaid insulating body and the aforesaid flange are secured together.

1,386,413. WHEEL-CHAIN-TIGHTENING TOOL. ZENON AMABLE LAVOIE, Manchester, N. H. Filed May 26, 1920. Serial No. 384,253. 1 Claim. (Cl. 254—78.)



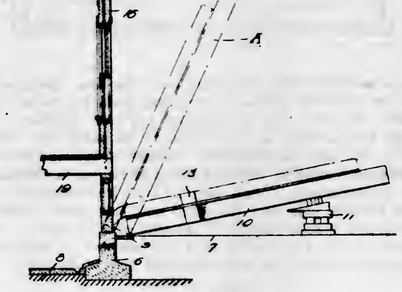
A tool of the character described comprising, a shank having one end thereof enlarged and shaped to provide a laterally disposed hook and an ear spaced from the hook, and an arm comprising, a rod having one end thereof bent upon itself to provide a ring which engages said ear, the opposite end of the rod being bent upon itself to provide a hook which is disposed at right angles to the first hook.

1,386,414. WHEEL-LOCK. RENA S. LAWRENCE, San Francisco, Calif. Filed Dec. 11, 1920. Serial No. 429,949. 4 Claims. (Cl. 70—90.)



1. An automobile lock comprising a bar, key actuated locking means for securing the bar to a wheel of an automobile so that the bar projects outwardly beyond the perimeter of the wheel, and a cap on the inner end of the bar for reception of the hub cap of said wheel.

1,386,415. FLYTRAP. RAGNVALD LELAND, Birch Hills, Saskatchewan, Canada. Filed Apr. 27, 1920. Serial No. 377,026. 3 Claims. (Cl. 43—110.)

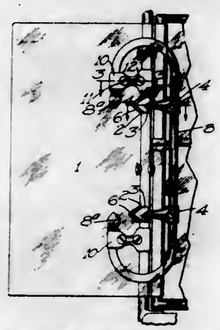


1. A fly trap comprising a flat base plate adapted to receive a fly attracting substance, a raised abutment wall at one end thereof, a hollow slide having an open side adapted to be closed by said wall when thereagainst, tensional means for drawing said slide against said wall, a stiffening rod rigidly attached at its ends to said plate and extending centrally longitudinally thereover, the rod passing freely through said slide, and releasable means for holding said slide when extended.

1,386,416. CONVEYING DEVICE FOR LOCOMOTIVE-STOKERS. HAMILTON LINDSAY, Willoughby, Ohio. Filed Apr. 12, 1919. Serial No. 289,742. 22 Claims. (Cl. 193—62.)

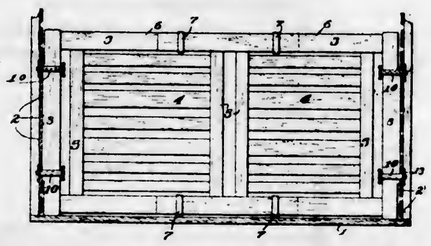
1. In a conveying device, the combination, with a casing, of a reciprocating plunger, said plunger having a series of steps on the inner side thereof.

1,386,417. CONCRETE STRUCTURE AND METHOD OF MAKING THE SAME. WILLIAM F. MARX, Emporia, Kans. Filed Aug. 10, 1920. Serial No. 402,541. 2 Claims. (Cl. 72—16.)



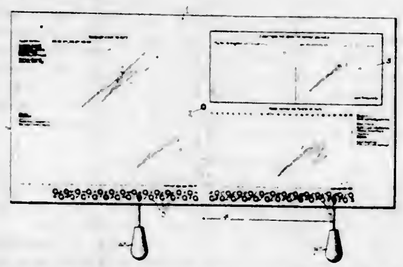
2. A method of making concrete structures consisting in first laying a rigid foundation, next arranging a platform near the foundation after which a layer of concrete is poured on the platform, then laying reinforcing bars on said layer of concrete and depositing a strata of sand thereon following which a second layer of concrete is laid upon the said bars and sand and the concrete permitted to harden, and finally elevating the platform to permit the wall to gravitate into engagement with the foundation and allowing the strata of sand to gravitate therefrom to provide an air space in the wall.

1,386,418. AUXILIARY WINDSHIELD. CHESTER D. MILLER, Los Angeles, Calif. Filed Dec. 16, 1919. Serial No. 345,361. 3 Claims. (Cl. 296—84.)



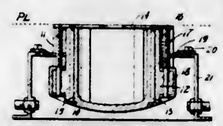
1. An auxiliary wind shield including a transparent shield member, a supporting member consisting of a member curved near its opposite ends, providing spaced apart parallel portions, a pair of clamp members with their one

end clamped to said shield member and with their opposite ends clamped to one of said parallel portions, a pair of



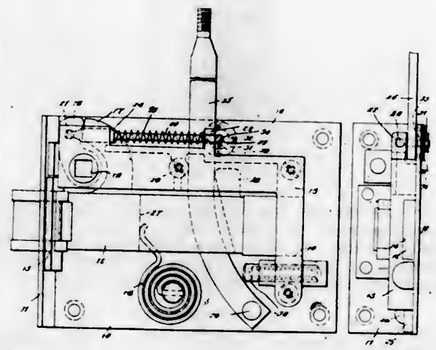
clamp members secured to the other parallel portion of said supporting member and the conventional wind shield post and separate means for clamping same.

1,386,419. STOCK-CAR PARTITION. RAYMOND MILLER, St. Louis, Mo. Filed Jan. 19, 1920. Serial No. 352,349. 3 Claims. (Cl. 119—11.)



1. A partition for stock cars and the like, comprising gate-like members having overlapping portions, means for slidably securing said overlapping portions together and clamps for securing said partition to the sides of a stock car or the like, each of said clamps comprising a bar slidable on a stile of the partition and having a theraded hole therethrough, a bolt having its threaded end disposed in said hole and its other end extending between and beyond spaced boards of the side of a stock car, and a clamp bar at the enod of said bolt adapted to be drawn against the side of the car when said bolt is turned.

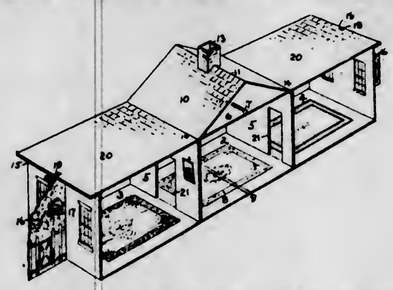
1,386,420. APPARATUS FOR DETERMINING PROPORTIONS IN COMPOUNDS AND MIXTURES. JOHN R. MURLIN and WILLIAM P. GARRETY, U. S. Army. Filed Feb. 24, 1919. Serial No. 279,006. 3 Claims. (Cl. 235—61.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a device of the character described, a card provided with means for suspension at its center of gravity, said card having vertical rows of numbers corresponding to quantities of matter to be included in a mixture, and weights adapted to be suspended on said card; said numbers serving to locate the point of suspension of said weights.

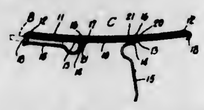
1,386,421. SWITCH OR RECEPTACLE BOX. WILLIAM J. NEWTON, Lynbrook, N. Y., assignor, by mesne assignments, to John G. Livingston, Woodmere, Long Island, N. Y. Filed Mar. 9, 1916. Serial No. 83,086. 1 Claim. (Cl. 247—19.)

A device of the kind described comprising a box provided with a longitudinal recess, a lug slidably mounted within the recess, a bridge member secured to the top of said box and provided with an apertured ear overlying one end of said recess, an apertured abutment overlying the other end of said recess, and a screw rotatably mounted in the recess in the threaded engagement with the lug for adjusting the lug longitudinally of the recess, said screw being provided with unthreaded ends mounted in the apertures of the ear and the abtument, and with shoulders coöperating with said ear and abutment to retain said screw against longitudinal movement.



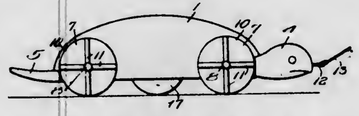
1,386,422. LATCH. LEON OTTINGER, New York, N. Y. Filed Jan. 29, 1920. Serial No. 354,960. 4 Claims. (Cl. 292—173.)

1. In a latch, a rectilinearly movable latch bolt, means for retracting said bolt including independently operable members each adapted to effect retraction of the bolt, and a single means for preventing retraction of the bolt by the actuation of either of said members but permitting, when in its effective position, of the retraction movement of the bolt by pressure directly applied to one end of the bolt.



1,386,423. COLLAPSIBLE TOY HOUSE. HOBART DE LANCEY RAPSON, Philadelphia, Pa. Filed Oct. 14, 1920. Serial No. 416,976. 8 Claims. (Cl. 46—37.)

1. A one story collapsible toy house, consisting of a plurality of rectangular box-like frames open at each end and permanently connected together side by side on parallel hinge parts, to provide a plurality of rooms in the same horizontal alinement said box-like frames arranged to fold partly in opposite directions toward each other



into a flat condition with all of the parts constituting the top, bottom and sides thereof collapsible so as to lie close together in parallel relation.

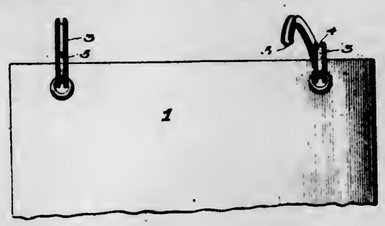
1,386,424. SOFT-COLLAR FASTENER. LUDS REITER, Providence, R. I. Filed Feb. 15, 1921. Serial No. 445,135. 2 Claims. (Cl. 24—81.)

1. A device as characterized, comprising a rigid bar having slide and end flanges, a flat spring bar clamped between said flanges at the rear side thereof, said bar having slots therein, a pair of fingers having their inner ends pivoted within said slots and co-acting with a spring bar to hold the same in opened or closed position, said fingers together with the outer ends of the bar constituting clamps for the reception of the collar wings.

1,386,425. LAND AND WATER TOY. WALTER RENDTORFF, Maywood, Ill. Filed Oct. 11, 1920. Serial No. 415,989. 5 Claims. (Cl. 46—45.)

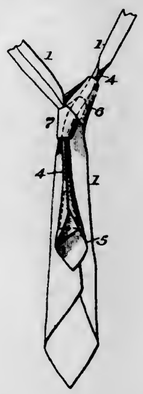
1. A land and water toy having a buoyant body, and a supporting wheel for the body upon which the top may be moved on the land, the wheel being provided with projecting vanes which rotate the wheel as the toy is drawn through the water.

1,386,426. RAIL-LUBRICATOR NOZZLE. JAMES M. RIDDLE, Alamogordo, N. Mex. Filed Oct. 26, 1920. Serial No. 419,761. 2 Claims. (Cl. 299—31.)



1. In a rail lubricating device, a nozzle having an inlet at the top and flaring downwardly from said inlet to present a major and a minor axis, means to secure said nozzle to a supply pipe, an inverted V-shaped spreader in said nozzle substantially along the major axis thereof, and an inverted V-shaped spreader in the nozzle substantially at right angles to the first-mentioned spreader.

1,386,427. PRINTER'S INKING-ROLLER. GUSTAVE RUNGE, Cleveland, Ohio. Filed Mar. 5, 1921. Serial No. 449,864. 5 Claims. (Cl. 91—67.8.)

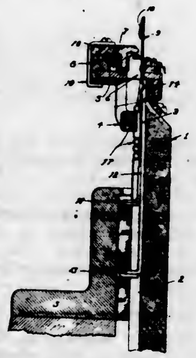


1. An inking roller comprising a shaft, a cushion upon the shaft and a coating of ink distributing composition entirely ensealing the cushion.

1,386,428. LOOSE-LEAF BINDER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership consisting of J. W. Towne, F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson, trustees. Filed Mar. 23, 1920. Serial No. 368,179. 6 Claims. (Cl. 129—1.)

6. A loose leaf binder made of flat wire formed tubular in cross section with the edges disconnected and normally in the form of a segment of a helix the extremities of the ring overlapping each other in the direction of their lengths, and one extremity having a projecting tongue that is bent so as to seat snugly within the other extremity whereby the ends of the ring when forced together in interlocking engagement will abut closely in arcuate disposition in the same plane.

1,386,429. NECKWEAR. WILLIAM C. SCHMIDT, Philadelphia, Pa. Filed Sept. 9, 1919. Serial No. 322,667. 2 Claims. (Cl. 2—11.)

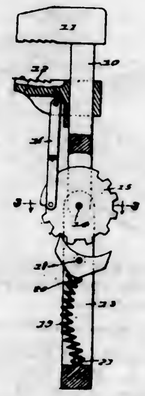


1. A made up four in hand neck scarf consisting of a scarf with a made up knot thereon, a flaring piece of flat and comparatively stiff material inclosed and concealed in the terminal portion of the movable part of the scarf and secured to the sides of said part.

1,386,430. DEVICE FOR SECURING HOOPS ON CASKS, BARRELS, TUBS, AND OTHER RECEPTACLES. JOSEPH FERNAND CLEMENT SCHAFFNER, Paris, France. Filed June 6, 1914. Serial No. 843,513. 1 Claim. (Cl. 217—93.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A device for securing hoops on casks and the like, comprising a plate with simple incisions made along the central longitudinal line, and excisions which unite the incisions with the edges of the plate so as to form tongues alternately on the two sides of the plate.

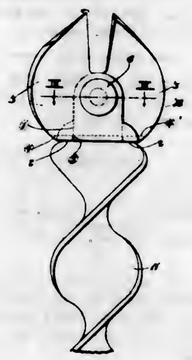
1,386,431. SPRING-NEEDLE KNITTING-MACHINE. WILLIAM SCHWARZE, Philadelphia, Pa., assignor to Rudolph H. Wyner, Boston, Mass. Filed May 15, 1920. Serial No. 381,788. 17 Claims. (Cl. 66—21.)



1. A knitting machine of that type employing spring beard needles, comprising in combination, a needle bed having needle guiding grooves therein, a needle beard presser member, means for producing relative movement between said presser and a needle mounted in one of said grooves in a direction longitudinally of the needle, and means wholly external to a surface defining the bottoms of the several needle grooves, such means acting upon the needle at a point relatively distant from its beard and being operative to flex the needle transversely of its length, whereby to bring its beard into contact with said presser.

1,386,432. VALVE-GRINDING COMPOSITION. CLIFFORD SHATTOCK, Detroit, Mich. Filed June 1, 1921. Serial No. 474,203. 1 Claim. (Cl. 51—280.)

A grinding composition consisting of one pound of carborundum, one-fourth of a pound of ground glass, and one-half pint of a solution made up of lye one-half pint, grease five pounds, and water three gallons.



1,386,433. COMBINATION-WRENCH. WILLIAM B. SHAW, Eaton, Colo. Filed Jan. 30, 1920. Serial No. 355,026. 3 Claims. (Cl. 81—133.)

1. A wrench having a shank carrying a fixed jaw, a movable jaw mounted on the shank for movement toward and from the fixed jaw, a rotatably mounted spur wheel carried by the shank and operatively connected with the movable jaw, the shank being provided with a handle, a reversible dog pivotally mounted on the handle for termi-

nal engagement with the teeth of the spur wheel, and a longitudinally bowed expansion spring terminally engaged respectively with the handle and the dog for holding the latter in its adjusted positions.

1,386,434. MINER'S DRILL. SAMUEL T. SKEEN, Sandoval, Ill., assignor of one-half to Charles E. Stead, Centralia, Ill. Filed Oct. 10, 1919. Serial No. 329,852. 3 Claims. (Cl. 255—69.)

1. A drill comprising a stem having a non-circular bit-receiving shank at one of its ends and provided with end abutments adjacent said shank, and a double bladed bit secured to and embracing said non-circular shank, said bit abutting against the abutments at the end of said stem.

1,386,435. TRAIN-ORDER HOLDER. EMERSON HOWE SMITH, Parsons, Kans. Filed June 24, 1920. Serial No. 391,336. 4 Claims. (Cl. 294—3.)

1. A train order holder having a frame formed from a strip of material reduced to provide a section having flexibility and resiliency, the reduced section being bent to provide a bow having arms converging toward the handle, a loop formed of resilient metal doubled intermediate its length to provide converging arms extending between the converging arms of the bow, a fastener passing through the arms of the bow and loop, and a sleeve positioned about the handle and extending to engage

the converging end portions of the bow arms, the sleeve compressing the arms of the bow to compress the loop and being held in place by frictional engagement.

1,386,436. DENTAL PLIERS. WILLIAM C. SMITH, Milford, Del., assignor to The L. D. Caulk Co., Milford, Del., a Corporation of Delaware. Filed July 29, 1920. Serial No. 399,757. 1 Claim. (Cl. 128—354.)

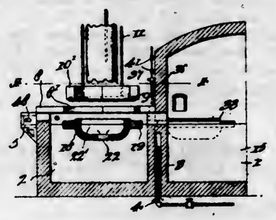
Pliers of the class specified, consisting of a strip of spring metal doubled and having opposing jaws which are continuous from the uniting bend, the jaws being outwardly bowed and having reduced extremities terminating in laterally and obliquely projected beaks which contact at their points only, the metal adjacent to and at a certain distance from the bend being reduced in thickness to provide resilient connecting arms between the jaws and bend, the jaws being fully open between the bend and beaks thereof and having contact in advance of the said connecting arms when the jaws are compressed and closed to relieve the bend and arms of deteriorating strain.

1,386,437. NITROSTARCH EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor, by mesne assignments, to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1918. Serial No. 256,736. 15 Claims. (Cl. 52—11.)

1. An explosive comprising nitro-starch, a deliquescent salt, and sufficient water to hold in solution a substantial amount of the deliquescent salt.

1,386,438. EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1919. Serial No. 315,675. 17 Claims. (Cl. 52—11.)

1. An explosive comprising a nitrated carbohydrate, water in excess of three per cent., and an hydroxid of a metal of the magnesium group having an atomic weight greater than that of magnesium.

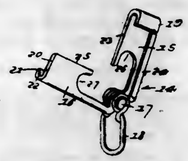


1,386,439. METHOD OF TREATING UNDRIED ORGANIC NITRATES AND THE LIKE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1920, Serial No. 366,390. Renewed Jan. 21, 1921. Serial No. 439,054. 5 Claims. (Cl. 52—21.)

2. In the method of manufacturing explosives and the like containing a solid organic ntirate, the step which comprises displacing water present in the undried organic nitrate by a concentrated solution of an inorganic nitrate.

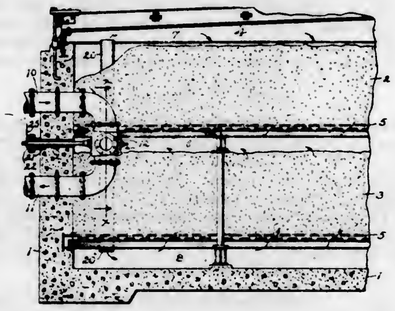
1,386,440. EXPLOSIVE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1920, Serial No. 357,900. Renewed Jan. 21, 1921. Serial No. 439,055. 9 Claims. (Cl. 52—11.)

1. An explosive containing nitro-starch desensitized by the presence of oil in an amount of not less than 10% of the nitro-starch.



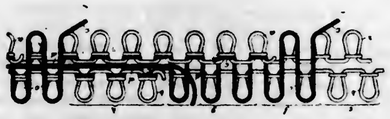
1,386,441. APPARATUS FOR DRAWING GLASS CYLINDERS. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed Mar. 31, 1916. Serial No. 87,936. 12 Claims. (Cl. 49—17.1.)

1. In an apparatus for drawing glass cylinders, a furnace, a forehearth extending from said furnace, a wall between the two, a recess in said wall and cooling means in said recess, a cover for said forehearth having an opening therein, a ring in said opening, a support for said ring, said support extending under said ring, means for raising and lowering said support and ring, and a glass segregating element adapted to float in the glass in the forehearth and to rise into contact with the ring support without adhesion.



9. In a glass drawing apparatus, in combination, a segregating ring, a bait, a drawing head carrying said bait, a hollow cable supporting said drawing head, and means for supplying air through said cable and bait to the cylinder.

1,386,442. AUTOMOBILE CHAIN AND LOCK. PETER H. SPOELSTRA, Pella, Iowa. Filed July 29, 1919. Serial No. 314,007. 2 Claims. (Cl. 24—242.)

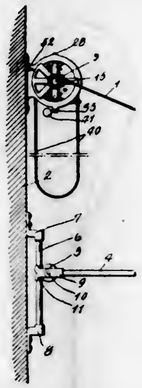


1. A device for connecting the extremities of a chain and consisting of a lock having pivotally connected members provided at intermediate points with registrable link seats, one of said members being provided with a terminal seat for the reception of the extremity of the other member, and the second-named member being provided with a side groove for the reception of the edge of the first-named member.

1,386,443. PURIFIER REVERSE-FLOW MECHANISM. FRANK W. STEERE, Detroit, Mich., assignor to Steere Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 4, 1918. Serial No. 261,123. 14 Claims. (Cl. 183—39.)

1. In combination with a purifier box having a bed of purifying material therein with a space at each side of said bed, of an inlet and an outlet for the box, a conduit communicating with the space at one side of said bed, and a valve for controlling the communication of said inlet and outlet with the space at the other side of said bed and with said conduit.

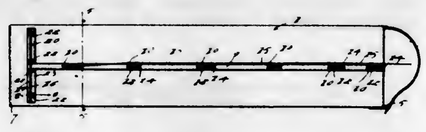
1,386,444. KNITTED FABRIC AND THE METHOD OF PRODUCING THE SAME. GODFREY STIBBE, Leicester, England. Filed July 7, 1919. Serial No. 308,916. 8 Claims. (Cl. 66—4.)



1. A knitted fabric consisting of two independently knitted webs one overlying the other and united by means of a yarn which is additional to the yarns of which said webs are formed, said additional yarn being passed around the bases of the loops of the individual webs wholly below the exposed surfaces of said webs and running from one web to the other to tie them together.

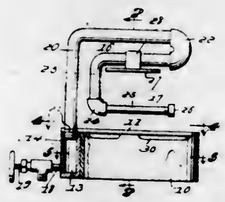
1,386,445. LIME-NITROGEN PROCESS AND PRODUCT. JOB MORTEN AUGUST STILLESEN, Niagara Falls, N. Y. Filed Aug. 8, 1911, Serial No. 643,011. Renewed Nov. 30, 1917. Serial No. 204,782. 22 Claims. (Cl. 23—13.)

5. The process which consists in treating lime nitrogen with water and with carbon dioxid.



1,386,446. AWNING-FIXTURE. CHARLES H. TALLEY, Aurora, Ill. Filed Dec. 9, 1920. Serial No. 429,461. 3 Claims. (Cl. 74—34.)

1. A device as described comprising a casting having means to affix it to a support and provided with a bearing and an internal gear, a cover plate adapted to be secured to the casting and having a bearing therein, a grooved wheel mounted inside the cover plate and having a pinion thereon concentric with the internal gear, a shaft journaled in the bearings and passing through said wheel, a bar on said shaft, pinions on the bar meshing both with the first named pinion and with the internal gear, an operating cable passing about the groove in said wheel, a weighted pawl suspended beneath the wheel and adapted to normally check the movement of said

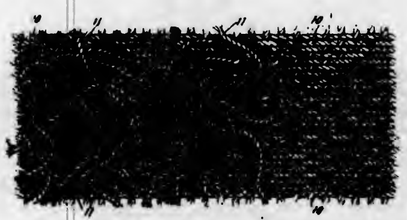


wheel, said pawl having sliding engagement with the cable, and means for connecting said shaft to an awning pole, substantially as described.

1,386,447. COTTON-SACK. PETER J. THOMAS, Sapulpa, Okla. Filed Mar. 13, 1917. Serial No. 154,490. 1 Claim. (Cl. 150—2.)

A cotton sack including an elongated body having a closed end and said body being slitted longitudinally and transversely to provide flaps with overlapping edges, keepers secured to one of the flaps along the longitudinal slit and extending through the other flap, spring pressed locking pins secured to the last named flap and engaging the keepers, means connecting the pins to permit operation thereof simultaneously and spring clips detachably connecting the flaps along the transverse slit and adapted to become disconnected by the flaps being swung open along their longitudinal slit.

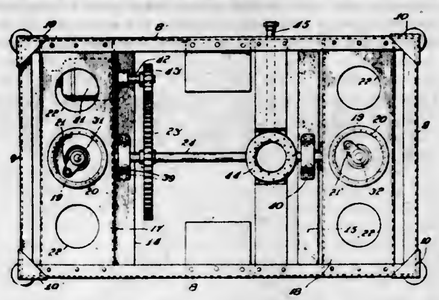
1,386,448. HYDROCARBON-BURNER. WILLIAM E. THOMAS and HARRY J. THOMAS, Florence, S. C. Filed July 27, 1920. Serial No. 399,231. 5 Claims. (Cl. 158—63.)



1. A hydro-carbon burner having a base provided with a fuel chamber and means for controlling the admission of fuel to said chamber, a vaporising tube in connection with the fuel chamber and having a plurality of runs disposed in a common vertical plane in diametrical relation to and above the base and a burner tube in connection with the opposite end of said vaporizing tube and disposed beneath said runs of the vaporizing tube.

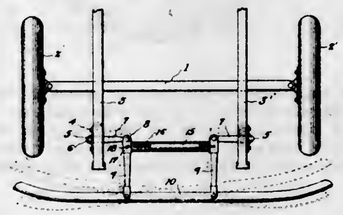
1,386,449. MOTOR-VEHICLE WHEEL. EDWIN B. TRAFTON, Leavenworth, Kans. Filed Jan. 15, 1919. Serial No. 271,272. 1 Claim. (Cl. 152—42.)

A wheel having a plate rigid with the hub, a rim movable axially of the hub, cushioning means intermediate the hub and rim, a plate movable with the rim in contact with the first plate, one of said plates having an offset providing an elongated substantially radially disposed groove with the side walls thereof inclined, a projection on the other plate extending into the groove, means to cushion engagement of the projection with said walls, and said groove being enlarged relatively to the projection to permit axial movement of one plate relatively to the other plate to a limited extent incidental to shocks.



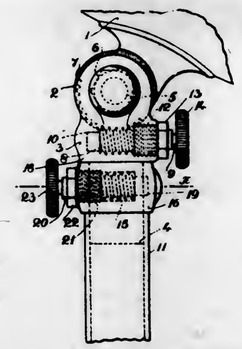
1,386,450. ARTIFICIAL HEDGE, LAWN, AND SIMILAR ARTICLE. RICHARD WALTON TULLY, Sierra Madre, Calif. Filed Oct. 16, 1918. Serial No. 258,352. 3 Claims. (Cl. 41—12.)

1. As an article of manufacture, an artificial hedge, lawn or similar article, comprising a textile fabric, and loose strands secured upon the outer face of the textile fabric and having free ends extending promiscuously from the said face of the fabric, said ends overlying one another and assuming various shapes.



1,386,451. WASHING-MACHINE. WILLIAM A. BROWN, Chicago, Ill. Filed Feb. 5, 1920. Serial No. 356,479. 2 Claims. (Cl. 259—72.)

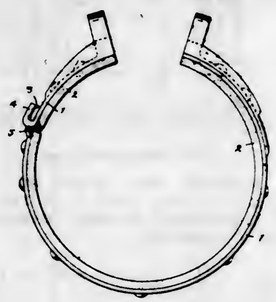
1. In mechanism of the character described, a pair of relatively oppositely rotatable shafts, an agitating member, a crank carried by each shaft having an operative connection with said agitating member for imparting



movement to the latter, and means for rotating said shafts.

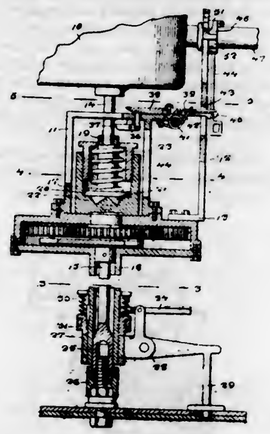
1,386,452. BUMPER. HUGO DOTZER and SAMUEL G. BARNARD, Seattle, Wash. Filed Jan. 5, 1920, Serial No. 349,536. Renewed June 28, 1921. Serial No. 481,228. 5 Claims. (Cl. 293—55.)

4. The combination with a vehicle frame, of a bumper comprising a pair of inwardly directed arms pivotally mounted at opposite points of the frame, a second set of arms pivotally mounted at the free ends of the first arms and extending forwardly therefrom in parallel relation, a bumper bar mounted by pivotal connections at the outer ends of the latter arms and extending transversely across the end of the frame, a tension spring secured at its opposite ends to the forwardly directed arms and a rigid transverse member having its opposite ends engaging the inner surfaces of the said arms on opposite sides of the spring connections therewith, for the purpose set forth.



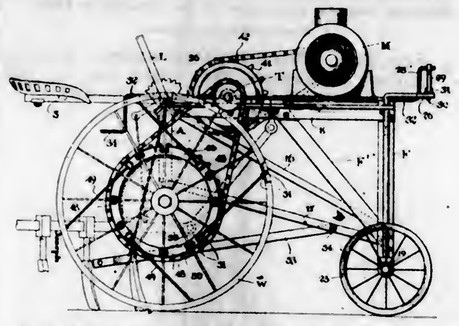
1,386,453. LAMP-BRACKET. EUGENE GEORGE CAMELINAT, Birmingham, England. Filed Dec. 16, 1919. Serial No. 345,420. 3 Claims. (Cl. 248—20.)

1. A lamp bracket for use on motor vehicles comprising two angularly adjustable members, one member provided



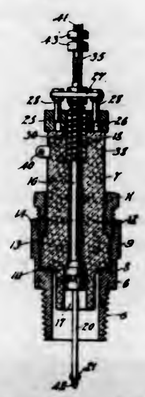
with a housing having one end open, the other member having worm teeth, a worm within the housing of the first-named member and engaging the worm teeth of the other member, and a screw plug closing the open end of said housing and serving as a bearing for one end of the worm.

1,386,454. BAND-BRAKE. VICTOR R. CARLSON, Duluth, Minn., assignor of one-half to Joseph Olson, Duluth, Minn. Filed Nov. 15, 1919. Serial No. 338,280. 2 Claims. (Cl. 188—249.)



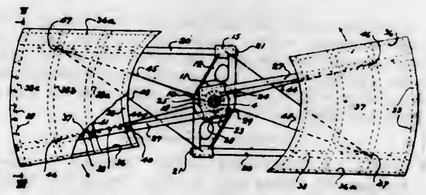
1. A brake band of the character described comprising two separable sections, a T and twin-hook joint connecting the separable ends of the band the neck of said T being bent outwardly sharply to bring the T into proper alinement with the hooks substantially as described.

1,386,455. BOLT-TIGHTENER. HARRY BARTON CLEMENS, Port Orchard, Wash. Filed May 14, 1920. Serial No. 381,391. 8 Claims. (Cl. 81—57.)



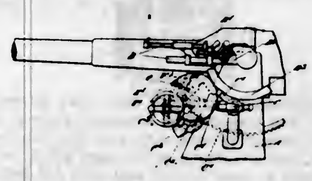
1. The combination with a motor, of a nut tightening machine comprising a casing, a nut engaging member rotatable therein, means connecting the nut engaging member and motor for rotating the former, means controlled by the nut engaging and motor connecting means for controlling the operation of the motor and means yieldingly secured to the casing for holding the latter against rotation.

1,386,456. ATTACHMENT FOR FARMING IMPLEMENTS. JOSEPH FRAZER COOK, San Francisco, Calif. Filed Nov. 10, 1920. Serial No. 423,156. 8 Claims. (Cl. 180—11.)



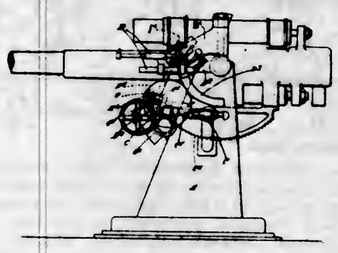
1. An attachment for wheeled farming implements comprising, a frame, beams secured to the frame, a second frame secured to the first frame and said beams, an engine supporting base supported upon and secured to both of said frames, wheels carried by the first frame, and means carried by said beams and the first frame for steering said wheels.

1,386,457. SPARK-PLUG. JAMES STEPHEN COYLE, St. Louis, Mo. Filed June 26, 1920. Serial No. 392,004. 3 Claims. (Cl. 123—169.)



1. In a spark plug, a shell, a hollow core, a stationary electrode, a movable electrode, a washer provided with perforations and carried by said hollow core, and means carried by said movable electrode and movable in the perforations of the washer to guide the movable electrode.

1,386,458. AERONAUTICAL PROPELLER. ROBERT WILLIAM DAVIS, Hiltonia, N. J. Filed July 17, 1918. Serial No. 245,347. 16 Claims. (Cl. 170—167.)

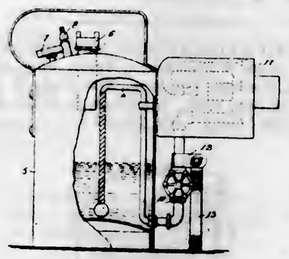


1. A motor driven aeronautical propeller comprising a plurality of blades, and means for conveying waste gases from the motor to said blades and causing them to issue transversely thereof, whereby the gases act as a barrier against the radial flow of the air under the blades.

1,386,459. ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Original application filed Nov. 11, 1918, Serial No. 262,086. Divided and this application filed Mar. 19, 1920. Serial No. 367,296. 2 Claims. (Cl. 89—41.)

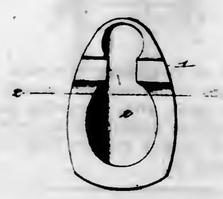
1. In ordnance, the combination with the gun, the gun cradle, the gun carriage, the sight mounted on the cradle, the pointing gear for elevating the gun and the sight together and the ranging gear for elevating the gun without the sight, of a vertical deflection operating device additional to said ranging and pointing gears and mounted in a fixed position on the carriage, and means whereby said device operates upon part of the pointing gear to move the gun in elevation with respect to the sight so as to correct for an advancing or a receding target.

1,386,460. ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Nov. 11, 1918. Serial No. 262,086. 4 Claims. (Cl. 89—41.)



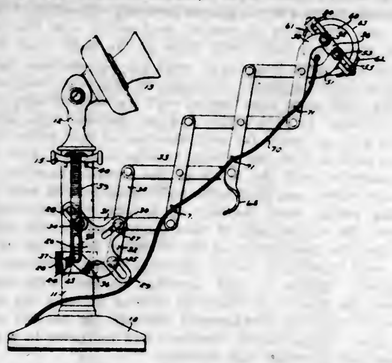
1. In ordnance, the combination with the gun, the gun carriage and the sight, of pointing gear for elevating the gun and the sight together, ranging gear for elevating the gun with respect to the sight and means additional to said ranging and pointing gears and mounted on the carriage for correcting the sight line in a vertical plane for an advancing or receding target.

1,386,461. RADIATOR. WILLIAM A. FINLAYSON, Detroit, Mich. Filed Oct. 2, 1919. Serial No. 327,953. 3 Claims. (Cl. 257—131.)



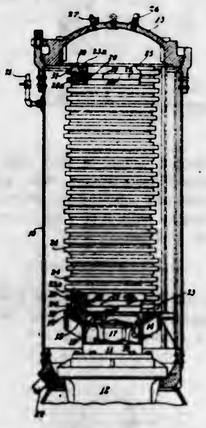
1. A radiator core comprising a series of superposed horizontally disposed units each formed of thin sheet metal and comprising a top wall, a bottom wall, and an intermediate baffle wall, said top and bottom walls and intermediate wall being interlocked at their side and end edges to form a water tight joint and said top and bottom walls being formed with opposed inwardly extending transverse ribs formed by depressing said walls, said ribs engaging the upper and lower sides of the baffle wall and dividing the space inclosed by said top and bottom walls into a series of separate horizontally disposed chambers, said top wall being also formed with an inlet opening for each chamber of said series and the bottom wall being formed with an outlet for each chamber of said series, the several outlets from the several chambers of each unit being connected with the inlets of the several chambers of the unit below, and said baffle wall being formed with an opening within each chamber to provide communication between the upper part of the chamber above the baffle wall and the lower part of the chamber below the baffle wall, said inlet and outlet openings being arranged in staggered relation to said openings in the baffle wall, whereby the fluid to be cooled in passing through the core is caused to travel downwardly through the several vertical rows of superposed chambers and to travel in a circuitous path through each chamber.

1,386,462. TANK. JAMES EDWARD FLITCROFT, Asbury Park, N. J., assignor to Charles E. Schanck, Asbury Park, N. J. Filed May 28, 1920. Serial No. 384,920. 3 Claims. (Cl. 158—46.)



1. A tank, a burner nozzle, a fuel pipe extending between said tank and burner nozzle, said tank resting normally upon its base and serving to support said nozzle, and means attached to said fuel pipe for supporting said tank in an inclined position.

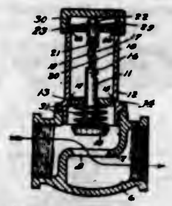
1,386,463. DIATORIC OR PINLESS TOOTH. JOSEPH B. FOSTER, Roanoke, Va. Filed Aug. 14, 1920. Serial No. 403,463. 2 Claims. (Cl. 32—9.)



1. A tooth for plates having a curvilinear aperture formed in its rear surface and extending from the cervical end to a point near the cutting edge of the tooth as and for the purpose set forth.

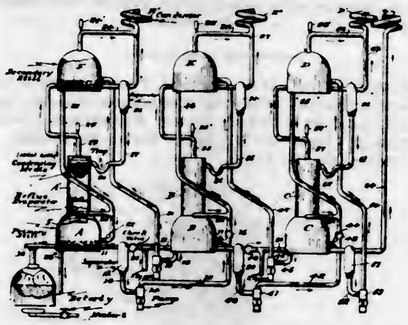
1,386,464. CIRCUIT-CONTROLLING TELEPHONE-RECEIVER SUPPORT. JAMES BRAINERD FURBER, Rahway, N. J. Filed Nov. 1, 1919. Serial No. 334,954. 7 Claims. (Cl. 179—150.)

1. In a telephone, a standard provided with a transmitter support and with a switch having a lever controlling the switch, a receiver, a bracket attached to the standard, an extensible support mounted on the said bracket and carrying at its outer end the said receiver, a member having one end detachably connected with the switch controlling lever, and a pivoted connection between the inner end of the said extensible support and the other end of the said member.



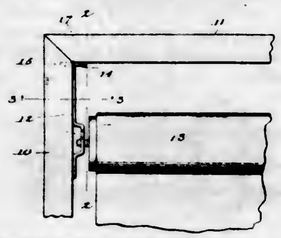
1,386,465. TIRE-VULCANIZING METHOD AND APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1921. Serial No. 459,045. 30 Claims. (Cl. 18—17.)

1. The method of vulcanizing pneumatic tires which comprises the steps of heating and partially vulcanizing the tire from the inside while preventing the blowing of the rubber by applying pressure to the outer surface of the tire, and then heating the tire from the outer side to further vulcanize it.



1,386,466. THERMOSTATIC VALVE. JOHN GARTSIDE, Seattle, Wash. Filed July 6, 1920. Serial No. 394,102. 2 Claims. (Cl. 137—92.)

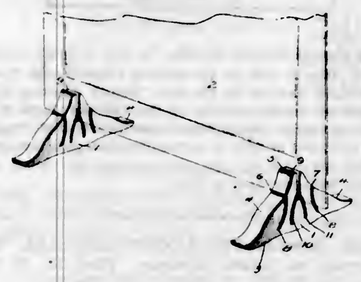
1. A thermostatic valve including a valve casing having a valve seat, a housing communicating with said valve casing, a removable cap for said housing, a valve for said valve seat, a two-part valve stem on said valve and arranged to project into said housing, the two parts of said valve stem being secured together by readily fusible metal, a spring for urging said valve toward said seat, a partition wall in said housing adjacent said removable cap, said partition wall having a central perforation and



having diametrically arranged slots that intersect said perforation and diametrically arranged grooves that are offset with respect to said slots and that intersect said perforation, and a cross pin in the upper end of said valve stem arranged to pass through said slots and rest in said grooves.

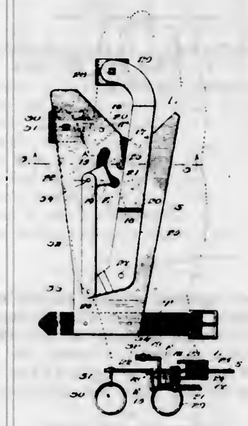
1,386,467. FRACTIONAL-DISTILLATION PROCESS AND APPARATUS. VINCENT T. GILCHRIST, San Francisco, Calif., assignor, by mesne assignments, to Superior Refining Process Co., San Francisco, Calif., a Corporation of California. Filed Mar. 30, 1916. Serial No. 87,860. 16 Claims. (Cl. 196—5.)

1. The method of fractionating vapor consisting in progressively separating the vapor at certain temperatures during its passage to obtain condensates, fractionally distilling each successive condensate by the heat of the vapor previously separated therefrom, whereby an additional condensate and an additional vapor are obtained, and in further heating each successively formed condensate by the heat of vapor of the next previously formed condensate.



1,386,468. COMBINED BRACKET AND FASTENER. SIMON GOLDNER, New York, N. Y. Filed Dec. 6, 1919. Serial No. 342,917. 2 Claims. (Cl. 156—24.)

2. In a means for attaching shade roller brackets to a window frame, the combination with said bracket, of a

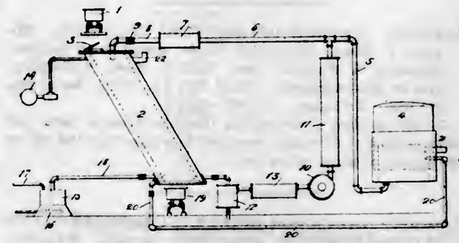


flange bent at a right angle thereto, primary entering and positioning spurs formed on said flange and disposed to project from the bracket opposite to the side at which the flange is disposed, a portion slitted from said flange and bent upwardly at its free end to form a secondary entering and locking spur, said position being normally flexed downwardly to cause the point of said locking spur to lie slightly below the horizontal plane of the upper surface of the flange.

1,386,469. HOLDER OR EXHIBITOR. PAUL R. GOMOLL, Oshkosh, Wis. Filed Sept. 18, 1920. Serial No. 411,139. 4 Claims. (Cl. 40—146.)

1. In a holder or exhibitor for pictures, cards and analogous articles, a support having a comparatively wide base and integral, resilient sides and provided with a plurality of recesses for retaining articles of various thicknesses in various angular positions.

1,386,470. CLIPPING DEVICE. WALTER GOWER, Tampa, Fla. Filed July 29, 1920. Serial No. 399,839. 3 Claims. (Cl. 30—24.)



2. A clipping device of the character described comprising, a supporting plate having a recess formed in one end thereof, a stationary cutting element secured to the plate adjacent the recess and having a portion thereof spaced from the plate, a movable cutting element pivotally supported upon the plate in a manner to move across said recess and disposed at the same side of the plate as the stationary cutting element, and means arranged at the opposite side of the plate from the cutting elements and extending into said recess for actuating the movable cutting element.

1,386,471. METHOD OF REFINING CACAO-OIL. JAMES N. TUTTLE, Lynn, and JOSEPH W. PHELAN, Medford, Mass., assignors to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1919. Serial No. 311,056. 3 Claims. (Cl. 87—12.)

3. The method of refining cacao oil which consists in agitating the oil with alkalized fullers' earth, and filtering off the alkalized fullers' earth from the mixture.

1,386,472. PROCESS OF PREPARING FUEL. CHARLES H. URQUHART, Newark, N. J. Filed Sept. 23, 1919. Serial No. 325,771. 6 Claims. (Cl. 44—1.)

6. The process of preparing fuel from low grade coal which comprises opening up cracks in the coal by heating, introducing a suitable binder into the cracks, and fusing the coal and binder.

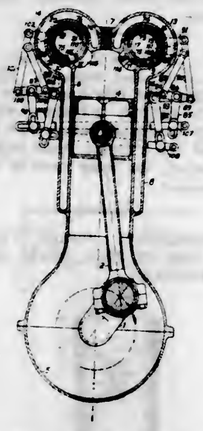
1,386,473. FUEL. CHARLES H. URQUHART, Newark, N. J. Original application filed Sept. 23, 1919, Serial No. 325,771. Divided and this application filed Oct. 28, 1920. Serial No. 420,274. 4 Claims. (Cl. 44—1.)

1. As an article of manufacture, a fuel made from low grade lignitic coal and a binder fused together, said fuel being in substantially the lump form in which the coal comes from the deposit.

1,386,474. FLASHLIGHT. JOSEPH VINCE, Brooklyn, N. Y. Filed June 26, 1920. Serial No. 392,138. 9 Claims. (Cl. 240—8.5.)

2. A light of the class described including a shell, a lamp thereon, a battery removably inclosed by said shell, said lamp presenting a contact opposed to one pole of the battery, conductor means on said battery externally thereof and having means to hold it to the battery independent of the shell to be removable with the battery, said conductor means extending lengthwise of the battery and making contact at its rear end with the other pole of the battery, and means extending through said shell at a side thereof for controlling the circuit through the medium of said conductor means.

1,386,475. MARGARIN AND METHOD OF MAKING THE SAME. EDWARD J. WALL, Cambridge, and JOSEPH W. PHELAN, Medford, Mass., assignors to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1919. Serial No. 311,041. 9 Claims. (Cl. 99—13.)



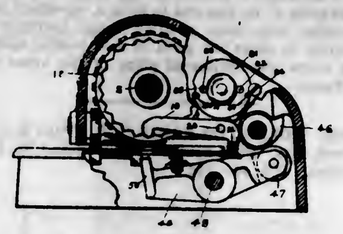
2. The method of making margarin which consists in churning milk or cream to the point of incipient butter formation, adding melted cacao oil and continuing the churning until the butter has completely come.

7. A margarin which consists in an emulsion of cacao oil and butter fat wherein the former is the disperse phase and the latter the continuous phase.

1,386,476. METHOD OF REFINING CACAO-OIL. EDWARD J. WALL, Cambridge, Mass., assignor to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1919. Serial No. 311,054. 3 Claims. (Cl. 87—12.)

3. The method of destroying the objectionable taste and odor of cacao oil which consists in subjecting the oil to the action of ultra violet rays.

1,386,477. VALVE FOR INTERNAL-COMBUSTION AND FLUID-PRESSURE ENGINES. EDWARD WALLACE, Cleveland, Ohio. Filed Jan. 8, 1916. Serial No. 71,033. 6 Claims. (Cl. 123—99.)

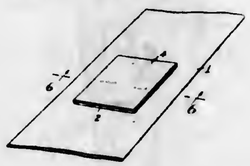


1. The combination with an engine cylinder, of a valve mechanism comprising a casing with a curved seat and connected with the engine cylinder by a port, a pair of curved valves concentrically arranged in the said casing, the valves having ports, means for moving the valves to cause their ports to register with each other and with the port leading to the engine cylinder with a frequency required by the cycle on which the engine operates, and an adjustable curved valve mounted between the said movable valves and arranged to vary the effective size of the opening to the engine cylinder, the latter valve being normally stationary, and means for adjusting the said normally stationary valve.

1,386,478. NITROSTARCH EXPLOSIVE. CHARLES E. WALLER, Allentown, Pa., assignor, by mesne assignments, to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Jan. 15, 1919, Serial No. 271,310. Renewed Jan. 21, 1921. Serial No. 439,056. 5 Claims. (Cl. 52—11.)

1. An explosive comprising nitro-starch, ammonium nitrate, calcium nitrate and water, substantially as and for the purpose described.

1,386,479. CHECK-WRITING MACHINE. ALBERT M. WARD, Rochester, N. Y. Filed Aug. 14, 1920. Serial No. 403,588. 29 Claims. (Cl. 197—6.4.)

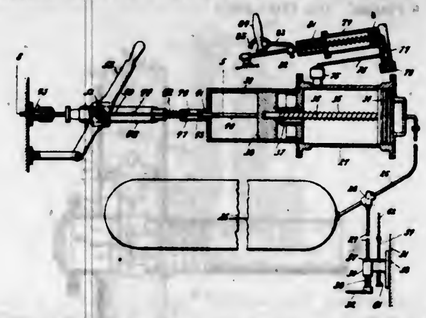


1. In a check-writing machine, a type cylinder having a series of lines of type on the outside thereof, said lines being arranged parallel to the axis thereof, a series of parallel grooves on the outside of the cylinder, each of said grooves having a length complementary to the length of one of the lines of type, a series of characters corresponding with the lines of type, and a series of dents corresponding with the lines of type.

1,386,480. HOLDER FOR HANGING ARTICLES. WILLI WESTFEHLING, Lubeck, Germany. Filed Oct. 28, 1919. Serial No. 334,101. 2 Claims. (Cl. 248—22.)

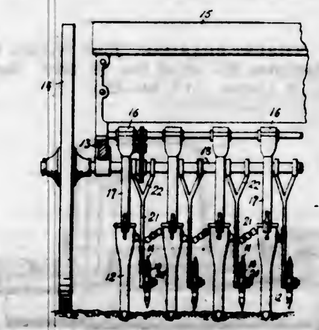
1. A holder comprising clamping members with an interposed spring, a supporting arm carried by one of said members, the pivot of said members having an end extended beyond one of said members and angularly disposed.

1,386,481. PIN-TICKET. CHARLES FREEMONT WHITE, New York, N. Y. Filed Feb. 16, 1921. Serial No. 445,436. 1 Claim. (Cl. 40—25.)



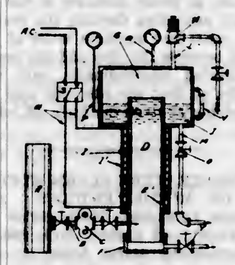
A pin ticket comprising a ticket adapted to be located against one side of the material, a staple adapted to have its ends passed through the material from the side opposite that on which the ticket is located and through the ticket and bent down upon the ticket, and an indicia sheet affixed to the face of the ticket and concealing the ends of the staple.

1,386,482. TRAIN CONTROL. ROBERT L. YOUSE, Philadelphia, Pa., assignor of one-half to Aaron Hendrick, Philadelphia, Pa. Filed Aug. 28, 1918. Serial No. 251,770. 2 Claims. (Cl. 246—188.)



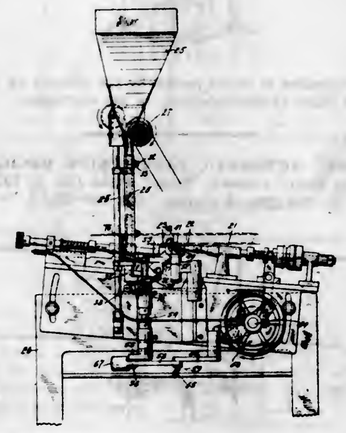
1. In a train control apparatus, a compressed air tank on the locomotive, a cylinder also on the locomotive, a pipe connecting the tank with the cylinder, a valve in said pipe, a stem connected with the valve, an arm on the valve adapted to engage an obstruction along the track to cause the valve to open, a spring for normally holding the valve in closed position, ratchet mechanism for holding the valve

in open position against the action of the spring, manually operated means for releasing the ratchet mechanism to



permit the spring to close the valve, a piston in the cylinder and means connected therewith for closing the throttle and applying the brakes.

1,386,483. WEEDER ATTACHMENT. CHARLES HOWARD ADAMS, Porter, Pa. Filed Jan. 14, 1920. Serial No. 351,886. 2 Claims. (Cl. 97—3.)



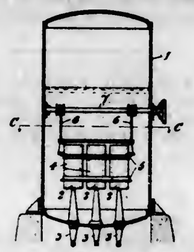
1. In a device of the class described, a carrying frame, a support carried by the frame, seed dropping shoes in spaced relation, radius bars forked at one end and swinging by the forked portion upon said support and prevented thereby from lateral displacement, said radius bars being directed respectively toward the spaces between the shoes, a toothed drum mounted for free rotation upon each radius bar, and means for simultaneously adjusting said shoes and the radius bars and drums carried thereby, vertically.

1,386,484. DISTILLING APPARATUS. CHARLES G. ADSIT, Atlanta, Ga. Filed Sept. 14, 1920. Serial No. 410,289. 20 Claims. (Cl. 204—31.)

1. Distillation apparatus comprising a metallic retort, a primary coil surrounding the same but insulated therefrom, means for supplying liquid to the retort, and means for recovering the vapors distilled therefrom upon the heating of the retort by induced current following the flow of alternating current through the primary coil.

1,386,485. CORK-FEEDING DEVICE. THOMAS ALLATT, Westfield, N. J., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,667. 1 Claim. (Cl. 142—20.)

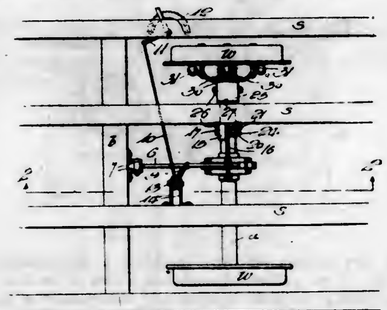
A cork cutting machine, including a work-holder consisting of two arbors for engaging a cork at its flat faces and holding the same substantially horizontally, a tube in which the corks art stacked vertically one on top of another, said tube being spaced from said arbors and provided adjacent its lower end in the plane of said arbors with a discharge opening, a spindle swiveling around a vertical pivot having gripping jaws adapted to engage the corks in said tube at their cylindrical faces, and means for oscillating said spindle around its pivot, thereby causing the same to move from said tube to said arbors, and vice versa, and giving said spindle during each movement a quarter of a turn around its own axis, whereby the corks received in vertical position are presented to said arbors in horizontal position.



1,386,486. PROCESS FOR EXTRACTING POTASSIUM SALTS. JOHN ALLINGHAM, Los Angeles, Calif. Filed Aug. 17, 1918. Serial No. 250,348. 6 Claims. (Cl. 23—22.)

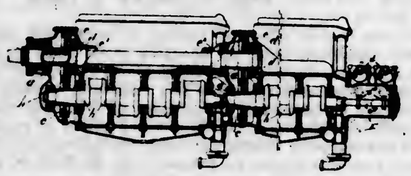
1. The herein disclosed process for extracting potassium, comprising, first, the admixing of the finely divided potassium-bearing rock with common salt and sulfur; second, reducing such admixture in a furnace by heating the same to a suitable temperature under air regulation therein, the maintenance of which reducing action is assisted by the presence of said sulfur; third, the lixiviating of the mass with water after its removal from the furnace, and, fourth, the recovery of the resultant potassium chlorid by crystallization.

1,386,487. ELECTRICAL STEAM AND HOT-WATER BOILER. NILS RICHARD FORSSBLAD, Västerås, Sweden. Filed June 10, 1920. Serial No. 388,033. 6 Claims. (Cl. 219—40.)



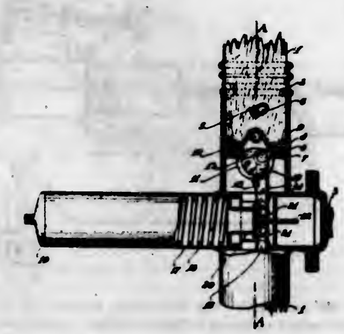
1. A method of controlling the output of electrical steam or hot water boilers of the type wherein the heat is produced by passing an electric current through the water

between submerged electrodes each surrounded by an insulating tube, consisting in varying the length of the in-



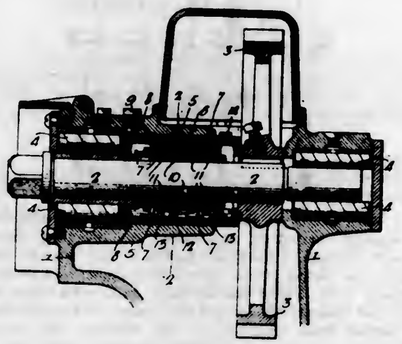
closed columns of water passed by the current by displacing the tubes axially relatively to the electrodes.

1,386,488. AUTOMATIC CAR-BRAKING MECHANISM. LOUIS BERK, Alstown, Wash. Filed July 1, 1920. Serial No. 393,226. 8 Claims. (Cl. 188—181.)



1. In a braking mechanism for securing an axle and wheels of a railway-car against rotation, a sleeve around said axle, centrifugally actuated means to move said sleeve along said axle, a part of a brake mounted between and rotatable with said wheels, a part of a brake mounted for movement into engagement with the first said part of the brake for coöperating therewith to stop rotation of the wheels, and means including a lever connected to and operable by said sleeve for effecting said movement of the second said part of the brake.

1,386,489. MOTOR MECHANISM. MARC BIRKIGT, Bois-Colombes, France. Filed May 31, 1917. Serial No. 172,099. 5 Claims. (Cl. 123—197.)

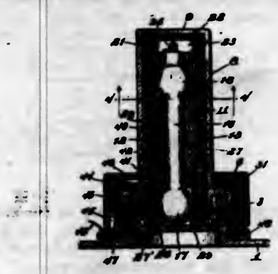


1. The combination of a plurality of engines arranged in tandem relation and having crank casings rigidly connected, the rear end of the casing of the first engine constituting a forward bearing of the crank shaft of the second engine, a counter shaft common to the said engines and adapted to be directly connected to a driven element, and means connecting the driving shafts of the engine individually to said common counter shaft for transmitting at all times the full power generated by the combined engines to the counter shaft.

1,386,490. PROPELLER. ARNO BOEHNER, Scheveningen, Netherlands. Filed Oct. 20, 1920. Serial No. 418,272. 8 Claims. (Cl. 170—163.)

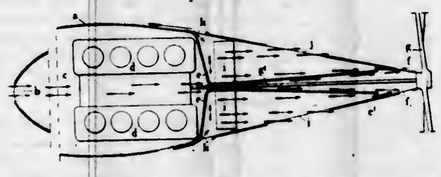
1. A propeller having the blades thereof movable radially under centrifugal force, a spring resisting said movement, and levers intermediate the blades and spring to transmit the outward movement of the blades to the spring in reduced power ratio.

1,386,491. THRUST-BEARING. JOHN WILSON BROWN, Jr., Philadelphia, Pa. Filed Dec. 28, 1920. Serial No. 433,611. 3 Claims. (Cl. 64—25.)



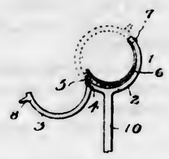
3. The combination in a thrust bearing of a frame, a fixed bearing located in the frame, and means for holding the bearing to the frame, said bearing having a series of internal ribs spaced apart, a slot extending longitudinally through the ribs and a portion of the bearing so as to allow a lubricant to freely circulate in the bottom of the bearing, a shaft extending through the bearing; a sleeve secured to the shaft and having a series of ribs extending into the spaces between the ribs and the bearing, the said sleeve being slotted longitudinally, said slot extending through the ribs so that the ribs will take from the bottom of the bearing a given quantity of lubricant as the shaft rotates.

1,386,492. TEMPERATURE-ALARM SYSTEM FOR RADIATORS OF MOTOR-VEHICLES. ABILIO M. DA SILVA GRAVES, Cambridge, Mass. Filed Jan. 16, 1920. Serial No. 351,811. 7 Claims. (Cl. 200—141.)



1. In a thermostatic alarm device, a casing adapted to be applied to a radiator and having an open portion facing the radiator, a thermostatic device in said casing and including a portion influenced by temperature changes

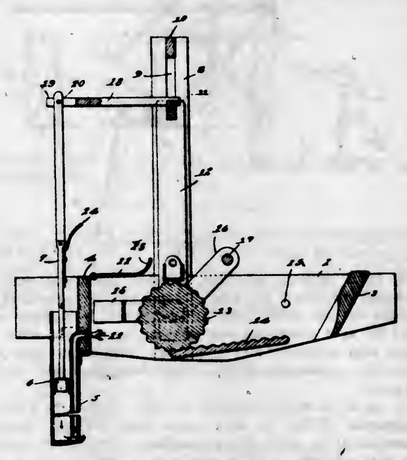
in the radiator arranged in proximity to said opening, and a conducting surface closing said opening and form-



ing a thermic-conductor between said temperature influenced portion of the thermostat and the interior of the radiator.

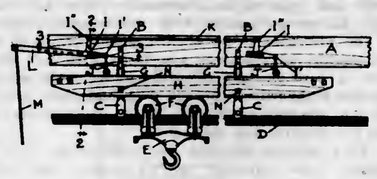
1,386,493. DEVICE FOR COOLING THE MOTORS OF AEROPLANES OR DIRIGIBLE AIRCRAFT. HENRI RAYMOND GUYOT, Paris, France, assignor to Société R. Guyot & Cie., Paris, France. Filed Jan. 5, 1917. Serial No. 140,724. 12 Claims. (Cl. 244—31.)

3. A constructional form of the apparatus described, including a casing having a motor chamber, a forward air inlet into the motor chamber and rear air outlets, means forming an air passage extending rearwardly from the motor chamber to the air outlets, a propeller at the rear having its shaft extending through the passage, and a radiator at the rear of the motor chamber and in communication with the air outlets, said casing having air inlets communicating with the radiator.



1,386,494. CIGARETTE-HOLDER. CRANDALL R. HANEY, Manson, Iowa. Filed Mar. 13, 1920. Serial No. 365,555. 3 Claims. (Cl. 131—10.)

2. A cigarette holder comprising a ring consisting of a stationary portion and a movable portion pivoted together, a spring for holding the movable portion in either of its two positions, a finger piece connected to the movable portion, a rod connected to the stationary portion, and a finger ring connected to the rod.



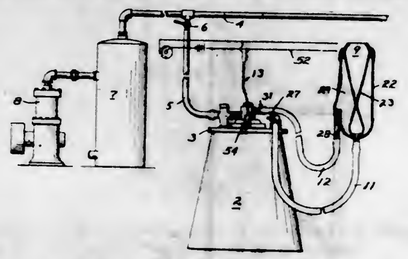
1,386,495. WASHING-MACHINE. SIMON J. HARDING, West Baldwin, Me. Filed Feb. 10, 1920. Serial No. 357,581. 1 Claim. (Cl. 68—20.)

In a device of the class described, in combination with a base, opposed uprights extending from said base, an oscillatory frame supported by said uprights, a ribbed rubbing board beneath the frame and secured to said base, a roller carrier by said frame to co-engage with said rubbing board, a pump secured to said base, connecting means for operating said pump simultaneously with said

roller, of a deflector member hingedly secured to the base and means secured to said pump connecting means to close the deflector upon the downward movement of said connecting means after said deflector has been raised by the roller aforesaid.

1,386,496. BRAKE FOR OVERHEAD CARRIERS. PAUL M. HASSLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed May 10, 1920. Serial No. 380,233. 12 Claims. (Cl. 188—42.)

1. In brakes for carriers running on an overhead track, a timber flexibly located in a position above and approximately parallel with the track, and adapted to come in contact by gravity with the wheels of the carrier to arrest its movement on the track.



1,386,497. NON-FLAMMABLE VOLATILE LIQUID. ALBERT HENNING, London, England. Filed Jan. 5, 1921. Serial No. 435,176. 2 Claims. (Cl. 252.)

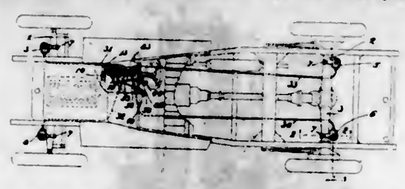
1. A non-flammable volatile liquid consisting of a mixture of methyl chlorid with methyl bromid.

1,386,498. MILKING-MACHINE. PALMER B. HEWLETT, Hollister, Calif. Filed Apr. 7, 1919. Serial No. 287,944. 12 Claims. (Cl. 31—101.)

1. In a milking machine, a chambered casing, a conduit connected to said casing, means for vacuumizing said conduit, a second conduit connected to the casing, a pair of relatively movable valves in said casing for alternately placing the second conduit in communication with the

open air and with said vacuumized conduit, a plunger arranged below and adapted to actuate said valves, an armature secured to said plunger and an electromagnet operatively associated with said armature and disposed below said casing.

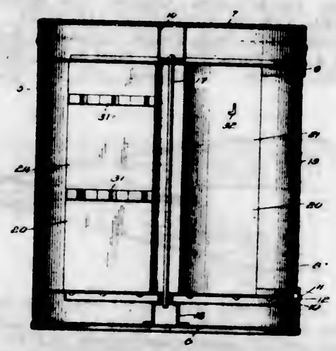
4. In a milking machine, a milk receptacle cover, a pulsator mounted on said cover, an electromagnet arranged on the under side of said cover, a plunger actuated by said electromagnet adapted to contact with and raise said pulsator, and a housing forming a tight joint with the underside of the cover inclosing said electromagnet.



7. In a milking machine, a milk receptacle cover, a chambered casing on said cover, said chamber being in communication with the atmosphere, a conduit connecting said chamber with a teat cup, a valve stem in said casing, a valve fixed to said stem adapted to control communication between said chamber and said vacuumized conduit, a valve movably mounted on said stem adapted to control communication between said chamber and the atmosphere, an electromagnet arranged below said stem and a plunger in said electromagnet adapted to contact with and raise said stem.

10. In a milking machine, a milk receptacle, a vacuum pump connected to said receptacle and adapted to maintain a vacuum therein, a flexible teat cup, a rigid casing surrounding said teat cup, a conduit connecting said receptacle and said teat cup, a conduit connecting the casing and the vacuum pump, a pulsator in said second conduit and adapted to alternately place said second conduit in communication with the vacuum pump and with the atmosphere, an electromagnet arranged below said pulsator, an armature associated with said electromagnet, a core on said armature alined with said pulsator and arranged to contact with and move said pulsator, an electric circuit for said electromagnet and means for interrupting said circuit.

12. In a milking machine, the combination of a milk receptacle cover provided on its upper face with a chambered casing, means for inducing a vacuum in said casing, a valve stem reciprocable in said casing, an electromagnet carried by and beneath said cover, a plunger actuated by said electromagnet, said plunger being disposed in operative relation to said valve stem, a valve fixed on said stem, a second valve loosely carried by said stem, a seat for each of said valves, and a teat cup conduit communicating with said chamber between said seats, the actuation of said valve by said electromagnet causing said conduit to be alternately connected with the vacuum in said casing and with the atmosphere.

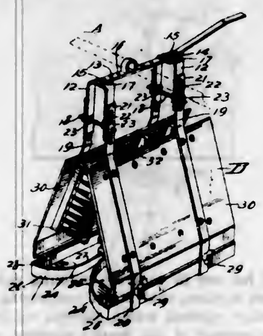


1,386,499. AUTOMOBILE-JACK. SIDNEY HEYMANN, New York, N. Y., assignor of one-half to Philip S. Heymann, Pittsburgh, Pa. Filed Apr. 30, 1920. Serial No. 377,762. 4 Claims. (Cl. 254—86.)

1. In automobile jacks, the combination with a base provided with standards, of a worm shaft journaled in the said standards, a clutch shaft having one end journaled in one of the said standards and the other end journaled in the end of the said worm shaft, a clutch member secured to the said worm shaft, a clutch member driven by the said clutch shaft and movable along the said shaft and arranged to engage the said member on the worm shaft, a lever and connections for operating the said movable clutch member, a gear-operated jack, a

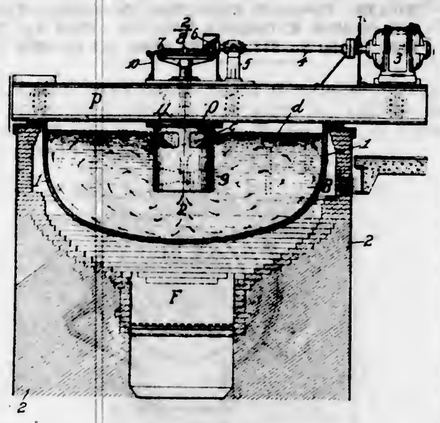
worm pinion supported by the said base on one side of the said worm shaft and in mesh therewith, and a flexible shaft attached to the said pinion and connected with the gearing of the said jack to operate the same.

1,386,500. CABINET. THOMAS J. HILE, Bainbridge, Ga., assignor of one-half to H. G. Bell, Bainbridge, Ga. Filed June 8, 1920. Serial No. 387,304. 1 Claim. (Cl. 211—7.)



In a cabinet of the character described comprising a cylindrical body having a closed bottom and removable top, a doorway formed in said body, door guides one arranged above and the other below the said doorway, anti-friction rollers disposed between the lower guide and the wall adjacent thereto of the body, a slidable door correspondingly shaped to the body and movable upon the anti-friction rollers for opening and closing the doorway, raised spacing members constituting bearings formed concentrically of said top and bottom of the cabinet, a rotatable section vertically supported in said bearings, said section having a plurality of equal, triangular compartments and spaced top and bottom disks therefor and means for positioning and suspending various articles within said compartments.

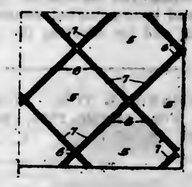
1,386,501. BOTTLE ATTACHMENT. FRED A. HITE, NAPA, Calif., assignor to JOHN A. SANBORN, Oakland, Calif. Filed Aug. 8, 1917. Serial No. 184,610. 1 Claim. (Cl. 40—4.)



The combination with a bottle, of a sheet of material adhesively secured thereto and forming with the side thereof a pocket, and a lining in said pocket in which the handle of a brush may be disposed.

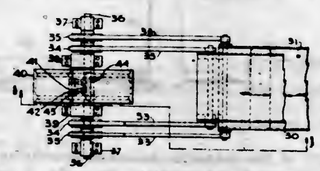
1,386,502. BOLL-WEEVIL CATCHER. REED R. HITT, Energy, Tex., assignor, by direct and mesne assignments, to Hitt Boll Weevil Machine Company, a Corporation of Texas. Filed Dec. 16, 1919. Serial No. 345,322. 3 Claims. (Cl. 43—133.)

1. A device of the character described comprising a pair of inverted substantially U-shaped hangers, a connecting bar adjustably secured to said hangers, pairs of downwardly divergent arms adjustably connected to the hangers and having inwardly and upwardly extending extension rests, a pair of pans supported on said rests, means for detachably securing the pans to the arms, and plant brushing and boll weevil guiding means carried by the arms above the pans.



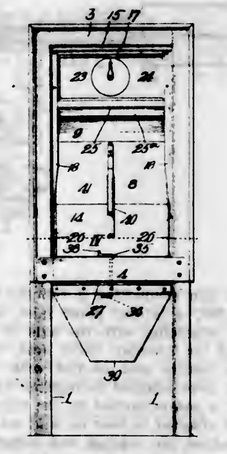
1,386,503. PROCESS OF TREATING LEAD BULLION. GEORGE P. HULST, Hammond, Ind., and MILO W. KREJČI, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,069. 18 Claims. (Cl. 75—15.)

1. In the treatment of lead bullion, the process which consists in subjecting a bath of molten lead to agitation, and simultaneously feeding thereto without oxidation a suitable reagent operating to segregate therefrom the impurities in the form of dross.



1,386,504. PRINTING-BLOCK FOR BLOCK-PRINTING MACHINES. RALPH G. JACKSON, Chester, Pa., assignor to Congoleum Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1920. Serial No. 351,874. 1 Claim. (Cl. 101—36.8.)

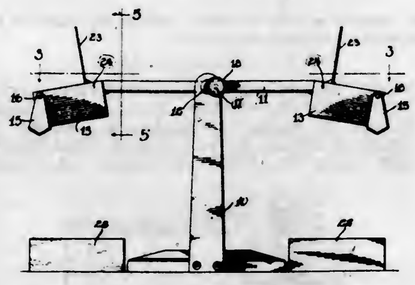
A rule for applying a body of pigment to a surface in a single line, said rule having two narrow surfaces separated by a groove of such depth as to hold a given amount of pigment so that, when an impression is made,



the pigment will be deposited, leaving the edges of the impression comparatively sharp.

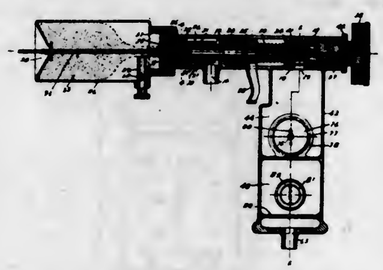
1,386,505. MEANS FOR OPERATING RECIPROCATING CONVEYERS OR SCREENS. RICHARD S. JACOBSEN, Chicago, Ill., assignor to Jacobsen & Schraeder, Incorporated, Chicago, Ill., a Corporation. Filed Sept. 11, 1916. Serial No. 119,584. 24 Claims. (Cl. 74—14.)

1. Means for operating reciprocating conveyers or screens, comprising in combination, a pair of bearings, a uniformly rotating power-driven pulley centrally mounted on said bearings, a non-uniformly rotating shaft extending through said bearings and through said pulley and to one side of the axis of revolution of the same, and connecting means for said pulley and shaft, transmitting to said shaft a motion substantially as described.



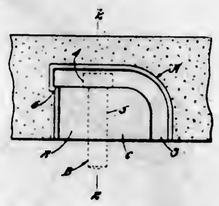
1,386,506. SELF WEIGHING AND SACKING MACHINE. JAMES E. JEWELL, Kansas City, Mo. Filed July 21, 1919. Serial No. 312,224. 2 Claims. (Cl. 265—68.)

1. A self weighing and sacking machine comprising a hopper having a front discharge opening, a vertically slidable door controlling said opening, a weighing device secured forward of the upper portion of the hopper, a bar pivotally suspended from the weighing device, a pair of rods depending from said bar, a receptacle secured to



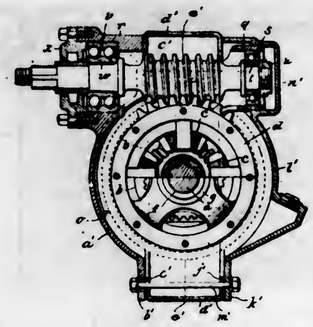
the lower ends of said rods, a hinged dumping bottom for said receptacles, a rock shaft having a crank arm for underlying and holding the bottom of the receptacle in closed position, and lever-actuated means for limiting the opening movement and for effecting the closing movement of said bottom.

1,386,507. MECHANICAL TOY. JONATHAN S. JONES, Oak Park, Ill. Filed July 26, 1920. Serial No. 399,139. 11 Claims. (Cl. 46—37.)



1. A toy of the character described embodying a beam pivotally mounted intermediate its ends, a receptacle carried by the beam on each side of and spaced from the pivot, each of said receptacles adapted to receive a supply of material and having a discharge outlet, and freely swinging cut-offs individual to the receptacles for opening and closing the respective outlets, the positions of said cut-offs with relation to the respective receptacles being controlled by the movements and positions of the receptacles.

1,386,508. PAINT-GUN. WALTER KELLY, Boston, Mass. Filed Nov. 1, 1920. Serial No. 420,935. 19 Claims. (Cl. 91—45.)

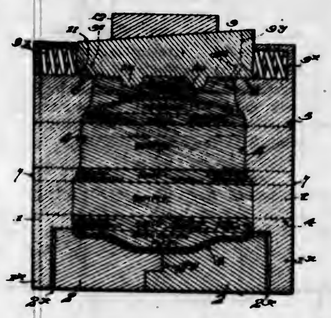


1. A paint gun comprising a tubular barrel having a lateral air inlet, a lateral paint inlet, and an air and paint outlet, coinciding with the axis of the barrel, and surrounded by an annular valve seat, a longitudinally movable tube within and coaxial with the barrel, and having an air port adapted to register with the air inlet of the barrel, a nozzle carried by the tube and having an annular valve adapted to bear on said seat, said tube and nozzle forming an air conduit and coöperating with the barrel in forming an annular paint conduit surrounding the air conduit, said annular valve and annular valve seat being adapted to prevent the delivery of paint to the barrel outlet, a spring which normally projects the tube and barrel to close the tube air port and the nozzle valve, and means for manually retracting the tube and nozzle to open said air port and valve.

1,386,509. INSERT FOR CONCRETE CONSTRUCTION. EDWIN W. KIRMES, Melrose, and ARTHUR C. WALWORTH, Jr., Newton, Mass. Filed May 19, 1919. Serial No. 297,987. 1 Claim. (Cl. 72—105.)

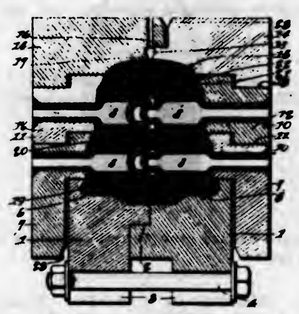
An insert for use in concrete building construction to hold a headed member, said insert comprising a shell having an entrance opening which extends up from the bottom for the passage of the headed member, said opening being widened at one end to form a T-shaped passage, said widening continuing up on one side of the chamber and thence across the top, forming at the top horisontal wing portions to receive and support the head of said member, the inner face of the wall of the horisontal wing portions of the chamber extending laterally beyond the plane of the outer face of the vertical side walls of the chamber which receives the shank portion of the headed member, thereby allowing the concrete in which the insert is embedded to extend underneath the horisontal wing portion of the chamber, so that the horisontal lower wall thereof is supported directly by the concrete and the strain of the load is transmitted to the concrete.

1,386,510. REAR-AXLE STRUCTURE FOR MOTOR-VEHICLES. EDWARD L. KRAFT, York, Pa., assignor of one-half to Allen R. Cosgrove, York, Pa. Filed Apr. 29, 1920. Serial No. 377,603. 9 Claims. (Cl. 74—99.)



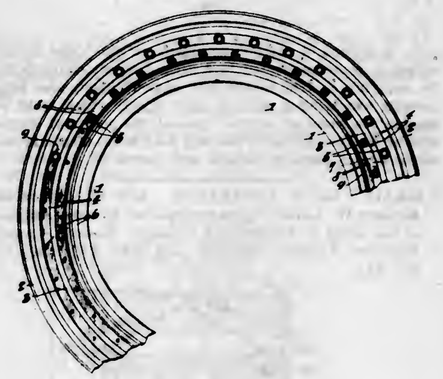
1. A rear-axle drive embodying a worm, a worm-gear and planetary gearing constituting the differential, a casing for said gearing connected to the axle housing and embodying a front wall carrying bearings for said worm-gear and also supports for the rear as well as the front bearings of the worm, and a rear cover-plate removable from the casing separately from said bearings, the opening covered by the rear cover-plate being sufficiently large to permit the removal of the worm-gear and its connected planetary gears while the worm and its bearing-supports are in their operative position.

1,386,511. LADDER ATTACHMENT. EMIL C. KRAHL, Cleveland, Ohio. Filed July 26, 1919. Serial No. 313,613. 1 Claim. (Cl. 228—60.)



A new and improved lifting or hoisting device for attachment to the upper portion of a ladder comprising two base members adapted for attachment to the side members of the ladder, members secured to the base members and extending outwardly sidewise from said base members, a crook shaped derrick member secured to each sidewise extending member, a cross bar extending between and supported by the upper ends of the derrick members, pulleys carried by said cross member, platform forming members extending rearwardly from each cap member and ropes or cables having their ends connected to said cap members and extending over said pulleys and arranged to form slings.

1,386,512. TIRE-MOLD. HENRY M. LAMBERT, Portland, Oreg. Filed Feb. 19, 1919, Serial No. 278,018. Renewed Feb. 4, 1921. Serial No. 442,590. 10 Claims. (Cl. 18—38.)



1. In a tire mold, the combination with the base and side plates of the mold, a sectional annulus for covering the gap between the side plates, said annulus having a tapered exterior surface, and a tapered band or ring adapted to be forced into engagement with said tapered surface to secure the annulus sections together and hold the same in position with respect to the side plates, said side plates having core pipe holes and core pipes passed through said holes from one plate to the other.

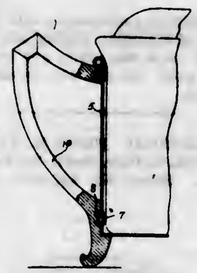
1,386,513. TIRE-MOLD. HENRY M. LAMBERT, Portland, Oreg. Filed Jan. 2, 1920, Serial No. 348,758. Renewed Feb. 4, 1921. Serial No. 442,591. 7 Claims. (Cl. 18—38.)

4. In a tire mold, in combination with a base and tread forming plates, of separable section side plates and lugs relatively fixed to said side plates and projecting into the chamber of the mold, substantially as shown and for the purpose described.

1,386,514. TIRE-MOLD. HENRY M. LAMBERT, Portland, Oreg. Filed Jan. 2, 1920. Serial No. 348,759. Renewed Feb. 4, 1921. Serial No. 442,592. 2 Claims. (Cl. 18—38.)

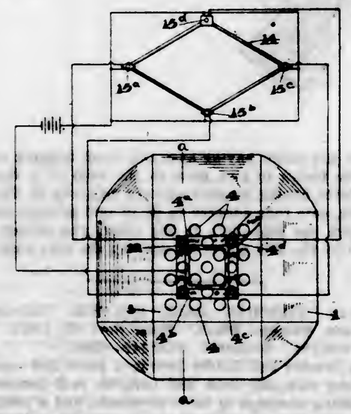
1. In tire molds having base and tread forming sections and side plates to give form to the sides of a tire, said side plates having annular grooves adjacent to the molding face, core rods adapted to lie in said grooves and project from one side plate to the other, and spacer blocks carried by the side plates for spacing the core rods apart.

1,386,515. CROCHET-BALL HOLDER. LEONARD M. LARSON, Tacoma, Wash. Filed Nov. 17, 1920. Serial No. 424,731. 5 Claims. (Cl. 242—136.)



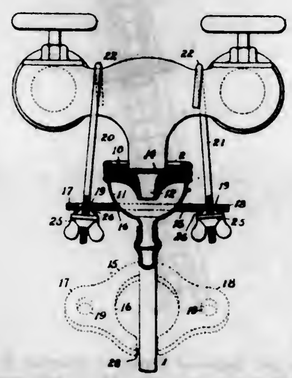
2. A crochet ball holder having a plate and oppositely extending clamping arms and hangers, said hangers having bearing openings in their terminals, and a pintle having oppositely extending arms mounted in said bearing openings in the extremities of said hangers, said spindle be-

ing, adapted for terminal arrangement adjacent to said plate, said plate being concaved toward the clamping arms



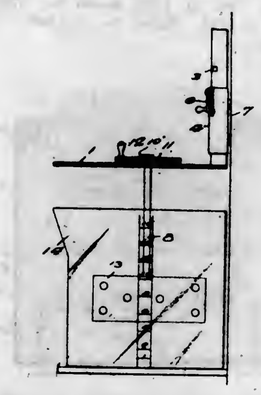
and convexed toward said pintle to engage a ball of yarn upon the latter.

1,386,516. METHOD OF CASTING. WILLIAM LEAHY, New York, N. Y. Filed Dec. 4, 1920. Serial No. 428,346. 4 Claims. (Cl. 22—203.)



1. A method of casting, by means of which one metallic object is to be connected to a second object characterized by applying a rivet to the last named object, and subsequently attaching a mold to said object, which mold will engage the same at points adjacent the points of disposition of the rivets, and in pouring fluid metal into said mold to cause said metal to engage said rivets.

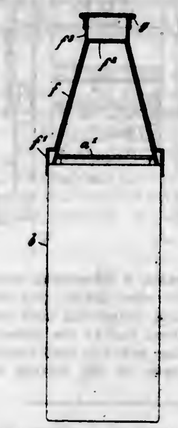
1,386,517. GAME APPARATUS. ROY W. LELLIS and EUGENE W. ADAMS, Toronto, Ontario, Canada, assignors of one-third to Frederick P. Hambly, Toronto, Canada. Filed Oct. 7, 1920. Serial No. 415,318. 3 Claims. (Cl. 46—61.)



1. In game apparatus, the combination of a board having a plurality of openings therein large enough for the passage of balls; a common movable ball support located below said board and adapted to retain balls in said openings; releasable means for holding the ball support in ball supporting position, and a trough adapted to receive balls from the ball support when the latter is moved from its ball supporting position.

1,386,518. BATH-SPRAY. HENRY F. LOOMIS, Reading, Pa. Filed Feb. 11, 1920. Serial No. 357,855. 1 Claim. (Cl. 285—108.)

A freely rockable bath-spray faucet attachment comprising a hemispherical faucet-contact cup having a washer of resilient material peripherally fixed to the rim thereof, said washer having a conically apertured central portion forming a faucet seat and yieldingly depending into the hollow of the cup; an apertured clamping plate rockably seated upon the curved wall of said cup; and faucet engaging clamping hooks having clamping nuts adjustably seated in said plate.

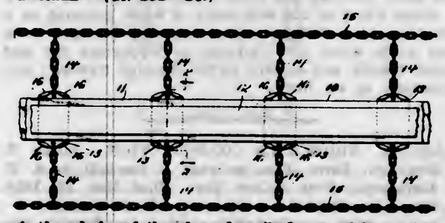


1,386,519. CHEMICAL-MIXING DEVICE. ERNEST F. MERCER, Cleveland, Ohio. Filed Sept. 24, 1917. Serial No. 192,948. 1 Claim. (Cl. 220—55.)

In an apparatus of the class described a supporting structure including an upstanding member carrying a laterally extending receptacle supporting shelf, a tubular vertically disposed guide fixed to said structure above said shelf and overhanging the shelf, said guide being angular in cross section and having an opening in one corner, a vertically movable cover, a standard carried by said cover and of the same cross sectional contour as said guide being provided at one corner with a plurality of ratchet-like notches, said standard being slidably mounted

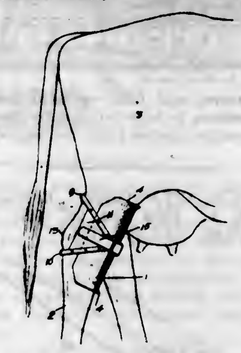
in said guide and the notches in the standard positioned to register with the opening in the guide, and a spring pressed laterally swinging catch mounted on the guide and having a nose extending into the opening thereof for engagement with one of said notches to lock the standard in adjusted position relative to the guide and thereby hold the cover in adjusted position.

1,386,520. APPLIANCE FOR PREPARING ICED BEVERAGES OR FOR COOLING LIQUIDS. JOHN BATTEN MITCHELL, London, England. Filed Dec. 20, 1918. Serial No. 267,690. 1 Claim. (Cl. 220—10.)



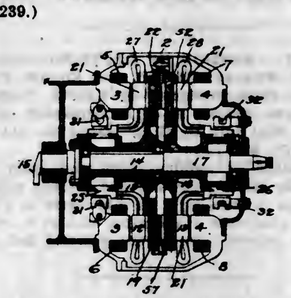
In apparatus for preparing iced beverages, the combination of a cylindrical vessel consisting of a cylinder adapted to contain the liquid to be cooled and an insulating jacket over which the said cylinder projects, with an approximately frusto-conical hood or decanter mounted on the said vessel, the said hood being composed of an inner cone inclosing at its base the edge of the said cylinder and closed at its top by a strainer, and an outer cone mounted on the inner cone and having at its base a flange fitting over the circumference of the jacket, substantially as described.

1,386,521. PROCESS FOR THE MANUFACTURE OF ARTIFICIAL THREADS, RIBBONS, FILMS, OR PLATES, FROM VISCOSE. MAX MÜLLER, Finkenwalde, near Stettin, Germany. Filed July 17, 1920. Serial No. 397,144. 10 Claims. (Cl. 18—54.)



1. The herein-described process of manufacturing artificial threads and other structures from viscose which consists in squirting the viscose into a precipitating bath comprising acidified waste lye of sulfite cellulose.

1,386,522. TIRE-CHAIN. EDWARD MOORE, Pana, Ill., assignor of one-half to Ethelyn Van Syckle Galvin, Pana, Ill. Filed Aug. 2, 1919. Serial No. 314,973. 1 Claim. (Cl. 152—16.)

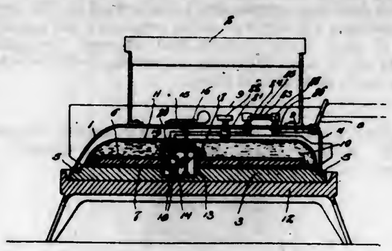


A tire chain of the class described comprising a tread member formed of a plurality of fabric strips, a tread strip formed of elastic material, anti-skid plates arranged in spaced relation and secured transversely between the layers of fabric, said plate projecting beyond the outer edges of the fabric strips and being secured to the short chain sections, longitudinal chains connecting the opposite ends of said chain sections and disposed circumferentially of the tire, outwardly projecting studs provided on the outer ends of said plates.

1,386,523. KICKING-BOOT. WILLIAM NELSON, Wolcott, N. Y. Filed Nov. 18, 1920. Serial No. 424,921. 1 Claim. (Cl. 119—127.)

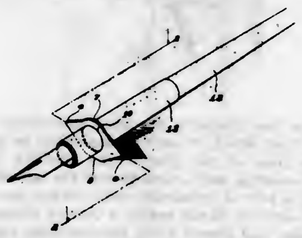
A boot of the character described, comprising a transversely curved shield or splint adapted to be positioned across the front of the joint of the hind leg of a cow, means for securing said shield around the leg, said means comprising a pair of triangular metal plates, one of which is secured directly to the shield, a pair of straps secured to said plates and spaced apart between their ends, and a buckle supported on the shield and operatively and adjustably connected to one of said plates, whereby the adjusting means for the shield is against the shield and not against the leg of the animal on which the shield is used.

1,386,524. POWER-TRANSMISSION APPARATUS. ALFONS H. NEULAND, San Francisco, Calif. Filed Feb. 19, 1917. Serial No. 149,461. 43 Claims. (Cl. 172—239.)



1. In an electric power transmission apparatus, a driving armature, a driven armature in inductive relation therewith, a field structure coöperating with said driving armature and a field structure coöperating with said driven armature.

1,386,525. ELECTRIC IRON. JOSÉ A. OCA-BALDA and GODFREY ALFRED DE LANGIS, New York, N. Y. Filed Aug. 6, 1920. Serial No. 401,770. 7 Claims. (Cl. 219—25.)

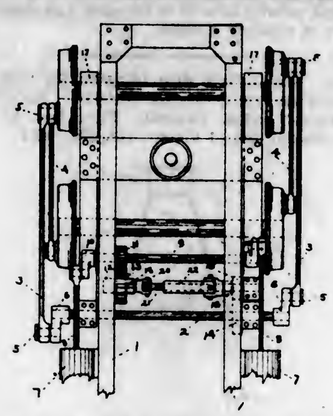


1. In combination with an electric iron, thermostatic means for breaking the current permanently when a

certain temperature has been reached and means for turning on the current by hand after an elapse of time in which the iron has become slowly cold and has reached a

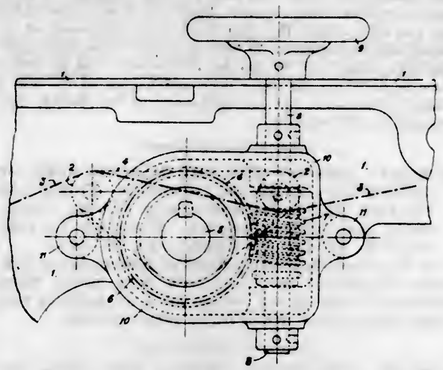
certain temperature, said hand operated means setting the parts in condition to be acted upon by the thermostat when the temperature reaches again the highest limit.

1,386,526. PENCIL ATTACHMENT. Edward W. Owen, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,879. 1 Claim. (Cl. 120—104.)



A device of the character described comprising a body formed from a flat plate having pointed ends, one flat side and a curved side, an opening formed in said plate substantially centrally thereof, said opening being adapted to receive a writing implement, and resilient legs formed from the said plate within the confines of said central opening, said resilient legs being adapted to be bent at right angles to the plate to embrace the staff of the writing implement to retain the plate thereon.

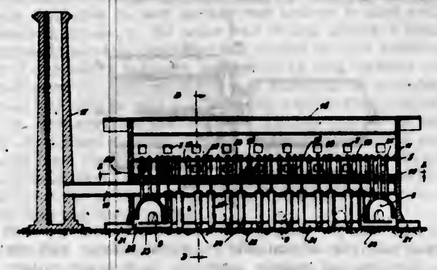
1,386,527. METHOD OF REFINING CACAO-OIL. Joseph W. Phelan, Medford, and Edward J. Wall, Cambridge, Mass., assignors to Kalmus, Comstock & Westcott, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 15, 1919. Serial No. 311,055. 4 Claims. (Cl. 87—12.)



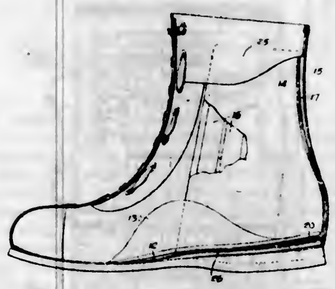
1. The method of refining cacao and other similar oils containing volatile, gustable and odorous substances, which consists in exposing it in thin layers to a current of gas under conditions of operation such as to retain its color and to remove some of the gustable and odorous substances.

1,386,528. DRIVING MECHANISM FOR LOCOMOTIVES. Samuel Pickering, Bellevue, Wash. Filed Jan. 17, 1921. Serial No. 437,746. 2 Claims. (Cl. 105—121.)

1. In a locomotive having driving wheels journaled in swinging trucks, driving means for said wheels comprising a shaft journaled in the main frame and extending transversely thereof, a spur gear wheel fixedly attached to said shaft and located interiorly of the frame, a bracket mounted on the main frame having a stub shaft journaled therein carrying a spur gear wheel adapted to mesh with said first gear wheel, a shaft journaled in the truck frame and extending transversely thereof, a spur gear wheel fixedly attached to said shaft and located interiorly of the truck frame, a bracket mounted on the truck frame and located oppositely and below the first bracket, having a stub shaft journaled therein carrying a spur gear wheel adapted to mesh with the gear wheel on said shaft journaled in the truck frame, a telescoping member extending between said opposite stub shafts, and universal joints interposed between and connecting each stub shaft with its respectively adjacent end of the telescoping member, means for transmitting power to said mechanism and for communicating the same to the driving wheels.



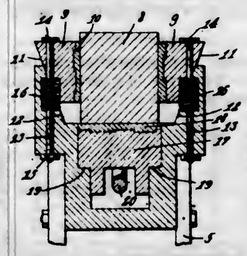
1,386,529. WEB-TIGHTENING MECHANISM. Thomas Vicars and Edward Lynton Vicars, Earlestown, England. Filed Jan. 5, 1921. Serial No. 435,266. 1 Claim. (Cl. 64—5.)



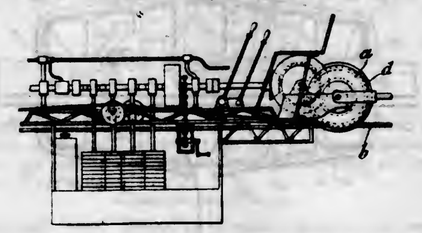
A biscuit or like embossing or cutting machine web tightening mechanism, comprising in combination with the shaft carrying the roller supporting arms or levers, a worm wheel on the said shaft, a worm mounted on a hand operated shaft; a casing inclosing the said worm and worm wheel and carrying or supporting the said worm spindle, and secured to the machine framing; substantially as set forth.

1,386,530. BRICK-KILN CONSTRUCTION. James T. Pokorny, Paris, Tex., assignor of one-half to A. T. Eddingston, Port Arthur, Tex. Filed Mar. 22, 1918. Serial No. 224,042. 4 Claims. (Cl. 25—189.)

1. In a brick manufacturing plant, a fire chamber, drying and firing chambers arranged in superposed relation above the fire chamber, the floor of the drying chamber having openings therein to admit the heated air circulating about the exterior of the fire chamber, and fuel conducting pipes connecting the firing room with the fire chamber.

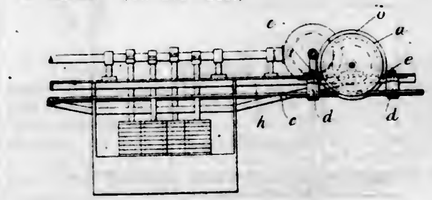


1,386,531. COMBINED ANKLE-STAY AND ARCH-SUPPORT. Abraham Posner, Brooklyn, N. Y. Filed Dec. 5, 1919. Serial No. 342,710. 3 Claims. (Cl. 36—71.)



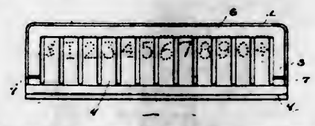
1. A shoe insert, comprising a combined arch support and ankle stay, the arch support having a base provided at one side with an upwardly extending flange, the said ankle stay arranged to extend above the ankle and having its lower portion fitting around the back of the base and along portions of the sides of the base with one side fitting snugly on the rear portion of the flange of the support, and means fastening the said arch support and ankle stay together.

1,386,532. CROSSHEAD. Ray D. Regan, Susquehanna, Pa. Filed Nov. 22, 1920. Serial No. 425,804. 3 Claims. (Cl. 74—84.)



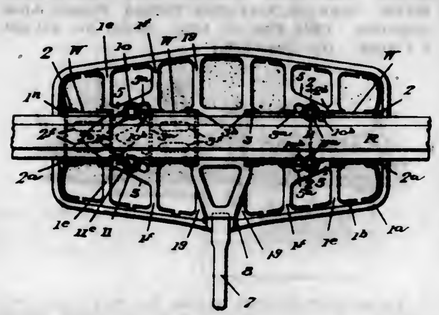
1. In combination with a cross head and the guide bars supporting the same, said cross head having a groove to accommodate each guide bar, the walls of said grove being inclined to receive adjustable gibs, said gibs having inclined walls contacting with the inclined walls of the groove, adjusting bolts extending through the gib and cross head for adjusting the gibs with respect to the cross head, and an adjustable gib engaging the underface of each guide bar.

1,386,533. TRACTION SYSTEM FOR CABLE-RAILWAYS. Stewart Alexander Rogers, Buenos Aires, Argentina. Filed Dec. 15, 1920. Serial No. 431,034. 8 Claims. (Cl. 104—235.)



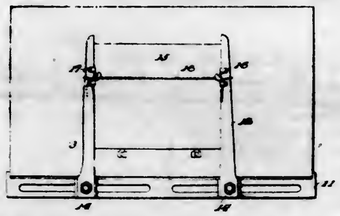
1. An auxiliary traction system for cable ways comprising two drums mounted on any driven parts of the power unit one on either side thereof said drums being of the same diameter as the driving wheels of said unit, two driving cables arranged one on either side of the cable way, clamping devices for anchoring said driving cables, means for keeping said driving cables in a state of tension, and means for removing the tension from said driving cables.

1,386,534. TRACTION SYSTEM FOR CABLE-RAILWAYS. Stewart Alexander Rogers, Buenos Aires, Argentina. Filed Mar. 24, 1921. Serial No. 455,239. 3 Claims. (Cl. 104—235.)



1. In auxiliary traction systems for cable railways in which the traction cables are warped in single coils on the winding drums the combination with said cables and said winding drums of guide rollers located fore and aft of said drums and at such a transverse distance apart as will insure the cable passing on to said drum at a point out of line with its point of leaving said drum.

1,386,535. CHECK-PROTECTOR. Fred E. Rothe, Chicago, Ill. Filed Dec. 22, 1919. Serial No. 346,494. 1 Claim. (Cl. 101—20.)

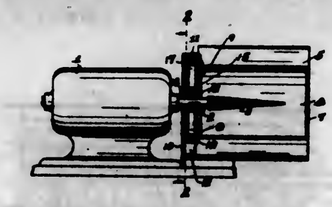


A check protector comprising a base member having a plurality of projections struck therefrom and forming independent characters, a one piece top member, said base member having one edge folded over upon itself and lying in facial abutment with the adjacent edge portion of said top member, the engaging portions of said base member and folded over portion being crimped to securely connect the base and top member, a plurality of independent resilient strips cut from said top member and each having a series of holes therein for the reception of said projections, and a guard limiting the movement of said strips.

1,386,536. RAILROAD-RAIL FASTENING. JOSEPH A. SILVER, New York, N. Y. Original application filed Aug. 5, 1919, Serial No. 315,471. Divided and this application filed Nov. 18, 1919, Serial No. 338,880. Renewed Feb. 23, 1921. Serial No. 447,225. 22 Claims. (Cl. 238—347.)

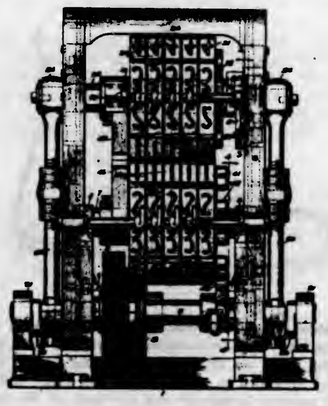
2. The combination with a rail support; an anti-creeping yoke engaging the rail flanges; bolts engaging the rail and passing through the yoke and said support, and nuts engaging the bolts.

1,386,537. CORD-RETAINING MEANS. WALTER H. SMITH, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, a Corporation of Pennsylvania. Filed Apr. 8, 1919. Serial No. 288,626. 12 Claims. (Cl. 101—408.)



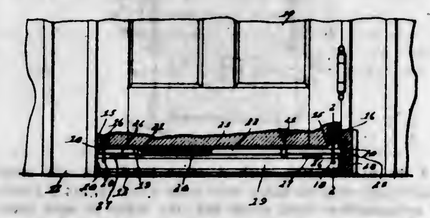
1. The combination with a pair of platen grippers, of cord retaining and locking clips, each clip open on one side to removably engage said gripper, and each clip having a cord engaging lip, and a cord extending around the lips and the gripper arms and locked under said clips.

1,386,538. CONCRETE SASH-WEIGHT. EDWARD A. STEPHENS, Los Angeles, Calif. Filed Mar. 16, 1920. Serial No. 366,348. 6 Claims. (Cl. 16—20.)



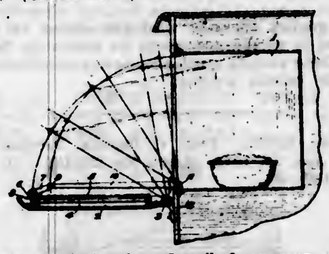
3. A sash-weight comprising, in combination, a cement block with a pulley wheel pocket in one end; a detachable bearing member adapted to be arranged across the pocket; a pulley wheel disposed in the pocket and having running engagement with the bearing member; and a fastening device for holding the bearing member in place; the block consisting of interlocking sections all secured together by the same fastening means.

1,386,539. DUST-COLLECTOR FOR LATHES, &c. CARL G. SMOCK, Santa Ana, Calif. Filed May 27, 1920. Serial No. 384,699. 1 Claim. (Cl. 51—270.)



A dust collector for a rotatable member including a shell curved partially around said rotatable member with the axially extending edges of said shell in circumferentially spaced relation and reversely curved upon themselves to form pockets, a discharge conduit leading from said shell and suction means coöperating therewith.

1,386,540. METAL-STAMPING MACHINE. WILLIAM T. SULLIVAN, Cincinnati, Ohio. Filed Apr. 22, 1920. Serial No. 375,731. 8 Claims. (Cl. 101—18.)



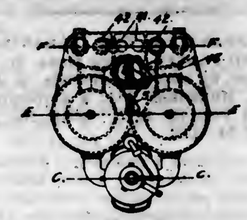
1. In a machine of the class described, a frame, a pair of die wheels relatively having a series of coöperating companion dies rotative for bringing the companion dies thereof into a coöperative position for stamping a piece of material inserted therebetween, and means for reciprocating one of said die wheels toward and from the other comprising a shaft for supporting and journaling the die wheel, bearings for said shaft slidably mounted in said frame, a rotative crank shaft, and connecting rods connecting with said crank shaft and respectively with the opposite ends of said die wheel supporting shaft.

1,386,541. DOOR ATTACHMENT. FRANK O. SWENSON, Austin, Tex. Filed Feb. 12, 1919. Serial No. 276,612. 1 Claim. (Cl. 20—68.)

In combination with a hinged door provided with a pocket disposed longitudinally of its base and communicating with sockets formed therein adjacent to its ends, a coil spring secured in each of said sockets, a depressible weather strip disposed in said pocket, U-shaped yoke members connected to said springs and secured to said strip, brackets secured to the inner wall of said pocket, a longitudinally movable operating rod carried by said brackets, provided with a flat head, and guided by said brackets and projecting through one end of said pocket, a lug extending from one side of said rod, a spring surrounding said rod and exerting a pressure between said lug and one of said brackets, cam elements formed on the upper edge of said strip, cam elements formed on the lower face of said rod and adapted to engage the first mentioned cam elements to force the weather strip outward against the tension of the last mentioned spring.

1,386,542. OVEN-DOOR. MICHAEL THIERY, Cincinnati, Ohio. Filed Sept. 3, 1920. Serial No. 408,062. 1 Claim. (Cl. 126—200.)

In a device of the class described, an oven casing, a glazed oven door providing a closure for the casing hingedly connected to the casing, a cover plate pivotally secured upon the inside face of the door for covering the glazed portion of the door when the door is open, and a link having one end pivotally connected to the inside of the oven casing opposite the hinged end of the cover plate, and its opposite end pivotally connected to said cover plate for swinging said plate with the swinging movement of the door to a position parallel with the plane of the door covering the glazed portion thereof when the door is open and to a position at right angles to the door when the door is closed.

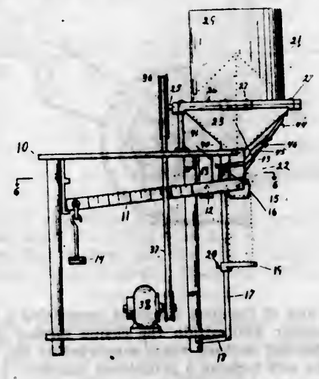


1,386,543. LOCKING DEVICE FOR MOTOR-VEHICLES. DAVID M. TILLER, Broken Arrow, Okla., assignor of one-eighth to J. Robert Hall, one-eighth to C. Burckhartt Talbot, and one-eighth to Sylvester P. Hasen, Broken Arrow, Okla. Filed Apr. 1, 1920. Serial No. 370,451. 2 Claims. (Cl. 70—126.)

1. Pedal locking means for motor vehicles comprising two approximately straight members of substantially the same length hinged together at one end, having pockets to receive respectively the clutch and brake pedals and prevent independent movement of either, the lock as a whole adapted to pass behind the reverse pedal and hold it in forward position, one of said members provided on its inner face adjacent its free end with a lock housed therein, and the other member provided on its inner face near its free end with a keeper to be engaged by the bolt of the lock for locking the two members together.

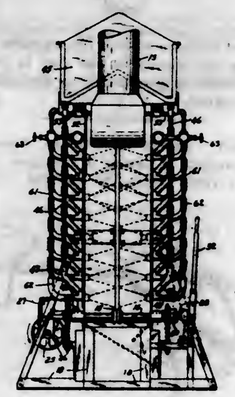
1,386,544. INTERNAL-COMBUSTION ENGINE. AUGUST L. WOLFF, Chicago, Ill. Filed Apr. 17, 1916, Serial No. 91,752. Renewed Oct. 22, 1920. Serial No. 418,766. 19 Claims. (Cl. 123—122.)

1. In an internal combustion engine including in combination cylinders, a plurality of fuel supply conduits communicatable with the cylinders adapted to supply various qualities of fuel, a thermostat actuated by the heat of a cylinder, a multiple fuel supply valve operated by the thermostat adapted to communicate the conduits with the cylinders to vary the quality of the fuel in communication with the cylinders in proportion to the variation of the heat of the cylinder.



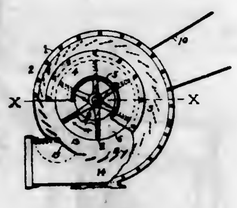
1,386,545. TOY. HENRY H. WORGAN, Carnegie, Pa., assignor of one-half to Amos N. Worgan, Carnegie, Pa. Filed Sept. 1, 1920. Serial No. 407,395. 3 Claims. (Cl. 46—46.)

1. A sounding toy comprising a handle provided with a depending supporting yoke, a trigger member pivoted on said yoke and having a head, a guide bar projecting from the handle and having a bell at its outer end and a stop at its inner end, said head straddling said bar forwardly of the stop, and a projectile mounted upon and adapted to be propelled on the bar by said head when the trigger member is operated to strike and sound the bell.



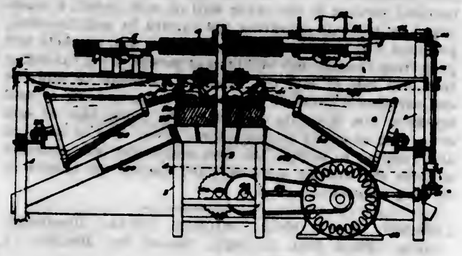
1,386,546. AUTOMATIC SCALE. RICHARD J. ZANONE, New Albany, Ind., assignor to Weighing Machine Manufacturing Company, Louisville, Ky., a Corporation of Kentucky. Filed May 13, 1919. Serial No. 296,736. 3 Claims. (Cl. 249—58.)

1. In a weighing mechanism, a hopper, a shaft journaled therein, a central disk mounted on said shaft, smaller



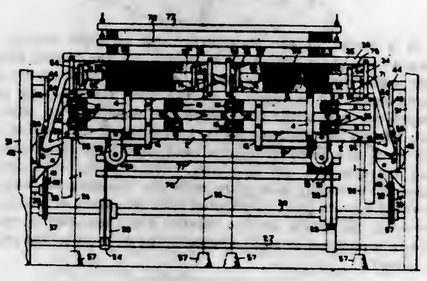
disks mounted on the shaft in proximity to the journals and a plurality of arms extending from the central disk to each of the end disks.

1,386,547. APPARATUS FOR CLEANING METAL SHEETS AND PLATES. ADAM ZISKA, Jr., Milwaukee, Wis., assignor, by mesne assignments, to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Feb. 15, 1917. Serial No. 148,898. 7 Claims. (Cl. 51—14.)



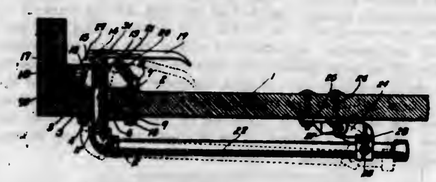
4. Apparatus for cleaning metal sheets, comprising means for supporting and advancing the sheets in an upright position, a plurality of sand blast nozzles arranged in fixed positions on opposite sides of the path of movement of the sheets and diagonally with relation thereto, the said fixed nozzles having their axes inclined with reference to the sides of the sheets, so as to direct the sand blasts obliquely against said sheets to simultaneously clean both sides thereof.

1,386,548. HIGH-PRESSURE SUCTION FAN AND BLOWER. ENOCH J. BLACKMON, Sherman, Tex. Filed Dec. 9, 1920. Serial No. 429,576. 2 Claims. (Cl. 230—11.)



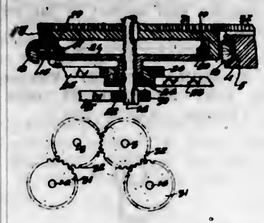
1. A device of the class described comprising a fan casing, a circular wall within the casing formed of transversely disposed inclined vanes supported by the sides of said casing and forming a cylindrical chamber, a fan positioned in said chamber, a deflector valve disposed in the chamber adjacent to the cylindrical wall.

1,386,549. FRUIT-GRADER. ORIN N. BOYER, Long Beach, Calif. Filed July 29, 1920. Serial No. 399,959. 10 Claims. (Cl. 130—32.)



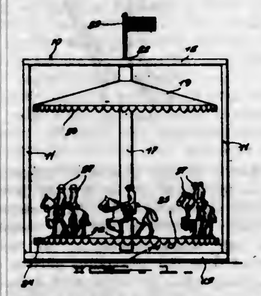
1. A grading apparatus including means for grading according to weight, and means for separating from said grades those articles which are above predetermined sizes for their various weights.

1,386,550. LOOM. JOHN C. BROOKS, Paterson, N. J. Filed Apr. 23, 1919. Serial No. 292,121. 11 Claims. (Cl. 139—69.)



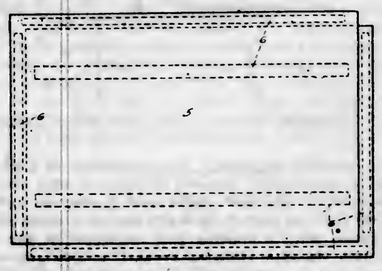
1. In a loom of the type using an air blast to deliver weft threads into the warp sheds, the combination with shed-forming mechanism, of means to measure off a length of filling for each pick and then to release said length so that the end thereof is free from restraint, and pneumatic means to deliver the measured length to the shed.

1,386,551. LATCH. CLARENCE R. BUMBARGER, Kansas City, Mo., assignor to George W. Johnson Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Nov. 22, 1920. Serial No. 425,687. 10 Claims. (Cl. 292—195.)



1. A latch comprising a pivoted elbow lever, one arm of which is an operating arm, and a latch bolt supported by and at right angles to the other arm and parallel with the operating arm.

1,386,552. CITRUS-FRUIT-JUICE EXTRACTOR. GEORGE E. CARNEY, Long Beach, Calif. Filed Aug. 25, 1920. Serial No. 405,848. 7 Claims. (Cl. 100—47.)

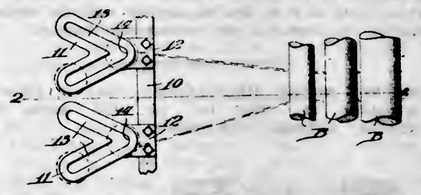


1. In a fruit juice extractor, a rotary member provided with pockets adapted to receive fruit, and a series of revoluble, rotatably mounted members adapted to enter said pockets to squeeze the juice from the fruit positioned therein.

1,386,553. MERRY-GO-ROUND. EDWARD J. COOK, Brainerd, Minn. Filed July 13, 1920. Serial No. 395,948. 1 Claim. (Cl. 46—27.)

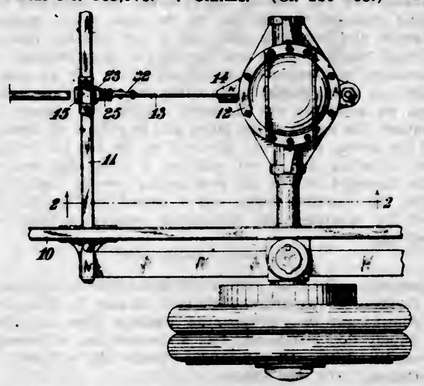
A toy merry go round comprising a rectangular supporting frame including upper and lower cross bars and vertical side bars, supporting feet pivotally connected with the bottom cross bar and disposable selectively to lie therealong or in a position extending at right angles thereto, a standard removably journaled within said frame, a platform detachably engaged upon said standard and carrying figures, and a roof member detachably engaged upon the upper portion of the standard, all of said elements being removable and detachable whereby the entire device may be knocked down to occupy but little space.

1,386,554. WALL-BOARD. JOHN EASTON DALGLISH, Somerville, Mass. Filed Sept. 15, 1920. Serial No. 410,356. 1 Claim. (Cl. 72—124.)



A building unit composed of a slab of plastic material having rabbeted edges, wooden strips embedded in the body of the slab and also in the rabbeted edge portions thereof, said edge strips running in the direction of the length of the edges of the slab, and a reticulated binder sheet around the strips, said sheet being also embedded in the slab.

1,386,555. METHOD OF MAKING A CATALYST. ARTHUR L. DAVIS, Liberty, Mo., and KENNETH D. JACOB, Helena, Ark., assignors to The United States of America. Filed Jan. 3, 1920. Serial No. 349,280½. 5 Claims. (Cl. 23—28.)

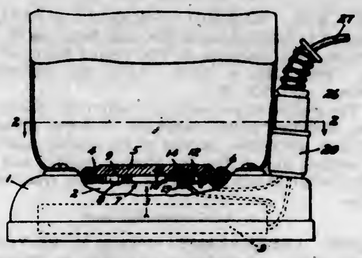


4. The method of preparing a catalyst for chemical synthesis, including mixing solutions of ferric nitrate and ammonium molybdate, heating to the boiling point, filtering, washing and drying the filtrate, igniting and reducing the resultant product with a fluid free from catalytic poisons.

1,386,556. CREEL-FRAME. JOSEPH M. DE VITO, Torrance, Calif., assignor of two-fifths to William L. Groves, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,453. 10 Claims. (Cl. 242—131.)

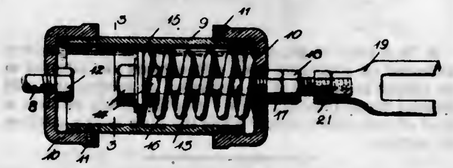
9. In a creel frame, a support, a pair of bobbin holders arranged for movement upon said support and adapted to be shifted into and out of a position of service, and said support being provided with a bearing which receives a part of each bobbin holder while the same is in a position of service.

1,386,557. AUTOMOBILE-VEHICLE. CHARLES KEARNS EDWARDS, Chingford, London, and ALFRED SIDNEY COLLING, Finchley, London, England. Filed June 2, 1920. Serial No. 385,976. 7 Claims. (Cl. 180—85.)



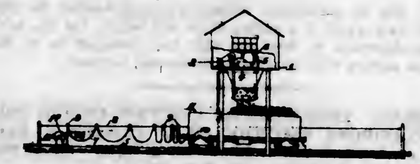
1. For an automobile vehicle, a torque member for the rear axle which is a spring blade and which, for the purpose described, is deep and thin and arranged as to its cross section with its greater dimension vertical.

1,386,558. THERMOSTATIC ELECTRIC SWITCH FOR FLATIRONS AND THE LIKE. CLARENCE S. FAY, Los Angeles, Calif. Filed Oct. 4, 1919. Serial No. 328,580. 4 Claims. (Cl. 200—138.)



1. A thermostatic switch for flat irons and the like, comprising a plate, a post extending from the plate, a

thermostatic element connected to the post, a pivotally mounted switch blade, one end of said switch blade being flexibly connected to the thermostatic element, a contact point in position to be engaged by the switch blade when the thermostatic element is cold, a cam carried by the

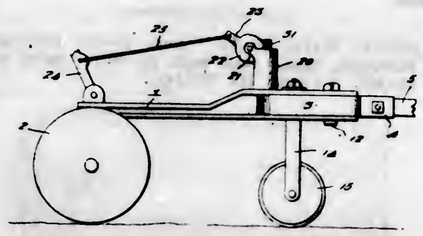


switch blade and having a point and a leaf spring fixed to the plate, and having a yielding hump in position to be engaged by the point of the cam so as to cause the switch blade to snap into engagement with the contact point by the tension of the thermostatic element.

1,386,559. **BRAKE MECHANISM.** JOHN P. FEGELY, Allentown, Pa. Filed Dec. 10, 1920. Serial No. 429,752. 2 Claims. (Cl. 188—217.)

2. The combination with a brake mechanism including a brake band, an operating lever and a pivoted operating rod, of a cylinder arranged on the operating rod, caps arranged on the ends of the cylinder, the operating rod being extended through one of the caps, a nut engaged thereon and engaging said cap, a rod slidably passing through the other cap and having one end threaded, an abutment member on the inner end of the rod, an expansible coil spring engaging the latter and the last mentioned cap, an adjusting nut threaded on the rod whereby to regulate the length of the latter and to govern the tension of the spring, a lock nut threaded on the rod for holding the adjusting nut in set position, a bifurcated member also threaded on the rod and having pivotal connection with the operating lever, and a second lock nut on the rod for retaining the bifurcated member in adjusted position.

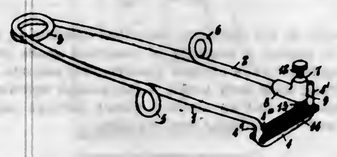
1,386,560. **MEANS FOR CONTROLLING RAILROAD-CARS AT LOADING-POINTS.** FRANK L. FLEMING, Pittsburgh, Pa., assignor to Phillips Mine and Mill Supply Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1920. Serial No. 417,695. 3 Claims. (Cl. 303—18.)



1. In means for controlling cars, the combination of a stationary source of supply of compressed air, a pipe leading therefrom to a fixed point, an extensible air conduit in communication through said pipe with said source of supply, a valve arranged on said pipe and adapted to control the passage of air through said conduit, means for coupling said conduit to the air brake appliances of a car.

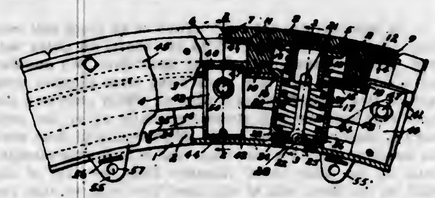
1,386,561. **HOISTING DEVICE.** EDWARD B. FOSTER, Quartzsite, Ariz. Filed July 17, 1920. Serial No. 396,968. 2 Claims. (Cl. 24—241.)

1. In a device of the character described, a shank member, provided with screw threads intermediate its length, a block rigid with said shank member and protruding laterally therefrom, a hook member hingedly connected to said shank member at the opposite side of the axis thereof from the protruding portion of said block, said hook member being provided with a recess to engage said block, a sheath sleeved upon the shank member and adapted to secure said hook member in engagement with said block, and a nut engageable with the screw threads of the shank for releasably retaining the sheath in its engaged position with respect to the hook member.



1,386,562. **QUICK-STEERING MECHANISM FOR AGRICULTURAL AND OTHER WHEELED MACHINES.** JOHN J. FRAWLEY, Stillwater, Minn. Filed May 17, 1920. Serial No. 381,973. 1 Claim. (Cl. 280—85.)

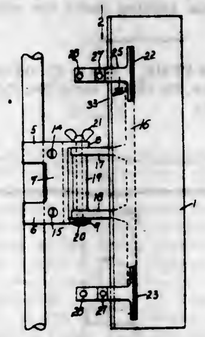
In a steering mechanism, the combination of a wheeled frame, a horizontally disposed swinging member pivotally connnected to the said frame and having an internal arcuate rack on one of its walls and an arcuate slot in its bottom wall, a steering pole connected to and movable with the said swinging member, a spur gear intermeshed with the arcuate rack of the said swinging member and disposed in the member, and a steering wheel connected and movable with the said spur gear, said connec-



tion extending loosely through said arcuate slot, the swinging member further having an arcuate groove in the upper side of the rack bearing wall and a central vertical bore in said wall and in communication with said groove, a vertical spring-pressed pin carried by the frame and arranged for coöperation with said groove and vertical bore, and means on the frame and connected with said pin to retract the pin and to hold the same in retracted position.

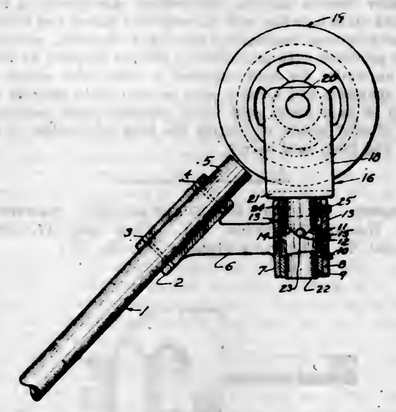
1,386,563. **GASLIGHTER.** GAIUS C. FULLER, Cincinnati, Ohio, assignor to The G. C. Fuller Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 19, 1919. Serial No. 346,117. 4 Claims. (Cl. 67—6.1.)

1. In a gas-lighter, a holder for spark-producing material having an opening through it from end to end, a screw threaded in one end part of said opening for bearing directly against spark-producing material in the other end part of said holder, a support for said holder, attached to said holder substantially at right angles to said opening, an abradant entirely outside of said holder, and a support for said abradant, yieldably connected to said holder support, whereby the spark-producing material is continuously held against said abradant substantially at right angles to said abradant, to be dragged along said abradant, whereby said screw is adapted to adjust said spark-producing material against said abradant and said abradant tends to hold said material in said holder against said screw.



1,386,564. **SPRING-TIRE.** FRANK C. GEISDORF, Los Angeles, Calif. Filed May 20, 1920. Serial No. 382,743. 6 Claims. (Cl. 152—38.)

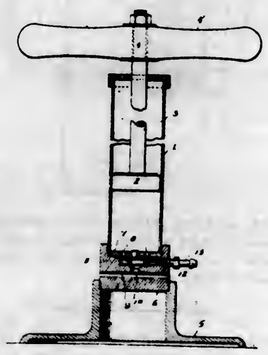
6. A tire of the character described comprising a base; an intermediate member spaced radially beyond said base; a tread portion supported upon said intermediate member; supporting cups extending inwardly from said intermediate member toward said base; supporting members within said cups received against the inner surface of said tread portion; springs within said supporting cups between said supporting members and the bases of said supporting cups; and connecting rods supported upon the base of the tire and extending within said supporting members; and a visual indicator comprising a pin extending from each of said connecting rods beyond the base of the tire.



1,386,565. **AUXILIARY WINDSHIELD.** GEORGE GLAUDEL, Los Angeles, Calif., assignor, by direct and mesne assignments, of one-half to George L. Mitchell, Santa Monica, Calif. Filed June 4, 1919. Serial No. 301,839. 3 Claims. (Cl. 296—84.)

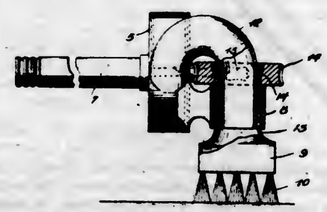
1. A device for supporting a supplemental wind shield and which is attachable to the usual wind shield side support, comprising a pair of spaced vises having separable jaws to extend transversely across the inserted plate and between which it is vertically adjustable, a bar on the ends of which the vises are arranged, a clamp attachable

to the support, said bar having an intermediate means extending laterally, and a pivot member connecting said means and said clamp, the planes of the vises and the connecting means being acute.



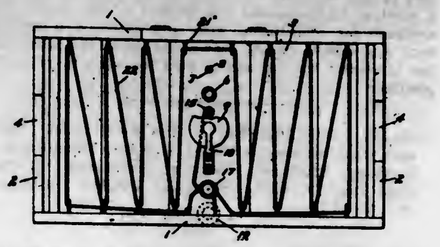
1,386,566. **GRAVITY TROLLEY-RUDDER.** FRED GRAY, Lankershim, Calif., assignor of one-half to George E. Wallace, Los Angeles, Calif. Filed Dec. 30, 1918, Serial No. 268,958. Renewed Apr. 23, 1921. Serial No. 463,900. 1 Claim. (Cl. 191—60.1.)

A gravity trolley rudder comprising the combination with a straight pole, of a socket fitting upon the pole; pins inserted through the socket and through the pole, the socket being a fixed distance below the end of the pole; an arm extending backwardly from the socket substantially in a horizontal plane; a vertical bearing at the rear end of the arm and having a straight bore; a supporting cam comprising a straight sleeve fitting loosely in the lower end of the bore and held in place by a set screw and having a V-shaped upper end so as to produce two low points in diametrical alinement and two high points in diametrical alinement at right angles to the low points and inclined faces connecting the low points to the high points; a trolley wheel fork comprising a crosshead and arms extending upwardly from the crosshead; a swiveled post extending downwardly from the crosshead and fitting loosely in the cam sleeve; a pin mounted loosely through the swiveled post and resting upon the cam face; a retaining sleeve mounted on the post before the pin is inserted; a set screw for holding the retaining



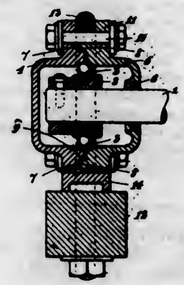
sleeve in place; a spindle inserted through the arms; and a trolley wheel upon the spindle, the periphery of the trolley wheel being close to the end of the pole so that the end of the pole serves as a guide to prevent the trolley wire from hooking under the wheel.

1,386,567. AIR-PUMP. JOHN R. HAFSTROM, Morocco, Ind. Filed Jan. 30, 1920. Serial No. 355,280. 2 Claims. (Cl. 230—27.)



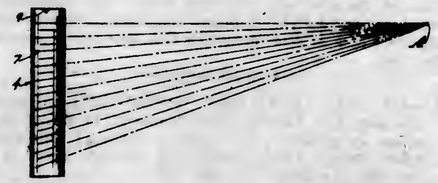
1. In a pump, a barrel, a reciprocatory piston therein, a coupling carried by said barrel and provided with a chamber therein opening out toward said barrel, a perforated plate between said chamber and barrel and having its perforations registering with said chamber, said coupling provided with passageways therein forming an inlet and an outlet for said chamber, a disk valve seated in said chamber, and a valve stem on said valve slidably engaged in said plate, said valve operable upon reciprocation of said piston to control the inlet and outlet of air into and from said barrel.

1,386,568. ROTARY FOUNTAIN-BRUSH. LAWRENCE H. HARGIS, Texarkana, Tex. Filed Aug. 17, 1920. Serial No. 404,099. 2 Claims. (Cl. 15—37.)



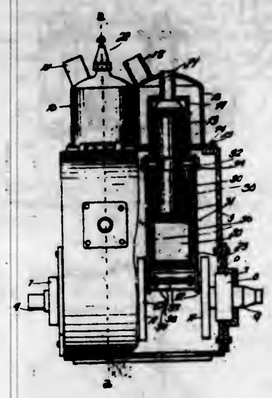
2. In a rotary fountain brush a shell having a liquid inlet, a liquid operated rotor journaled in the shell and including a forwardly extending worm shaft, a forwardly arranged bearing carried by the shell, a rotary brush head having a perforated bottom, an upstanding hollow shaft carried by the brush, and rotatable in the bearing and having its upper end projecting above the same, a worm gear arranged above the bearing and driven by the worm shaft and provided with a central opening in which the upper end of the hollow shaft is fixed, and a goose neck having one end communicating with the shell at one side and its opposite end passing through the opening in the worm gear.

1,386,569. INCUBATOR AND BROODER. OSCAR W. HEED, Tulare, Calif. Filed May 27, 1920. Serial No. 384,777. 1 Claim. (Cl. 219—19.)



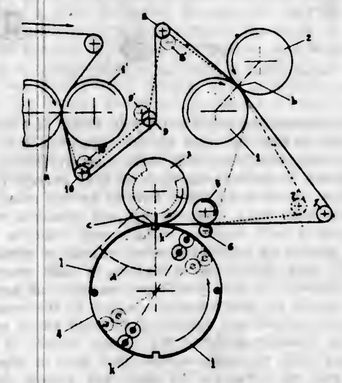
A device of the character described comprising a chamber to be heated, a plurality of insulated hooks extending along opposite walls of said chamber, an electric heating wire strung upon said hooks, a thermostat mounted upon said chamber, and an electric circuit through said thermostat and through said heating wire.

1,386,570. BALL-BEARING. KNUT WALDEMAR HEYMAN, Stockholm, Sweden. Filed Mar. 26, 1918. Serial No. 224,819. 7 Claims. (Cl. 64—36.)



5. In ball bearings the combination of an inner ball race ring, adapted to be attached to the shaft, an outer ball race, divided transversely to the shaft into two annular parts, said outer ball race parts being made integral with each of two parts forming a housing which embraces the inner race ring as well circumferentially as at the ends and the inner edges of which lie substantially in flush with the inside of the inner race ring, that is to say lie substantially at the same radial distance from the axis of the shaft as the inner side of the inner race ring, so that the said outer race ring forms a dust proof housing for the whole bearing, a number of catches arranged at intervals on the periphery of the housing, said catches consisting of U-shaped clamps, which hold the outer race parts together.

1,386,571. DIRECT-READING BURETTE. ALBERT M. JACKSON, Los Angeles, Calif. Filed July 29, 1920. Serial No. 399,960. 4 Claims. (Cl. 73—166.)

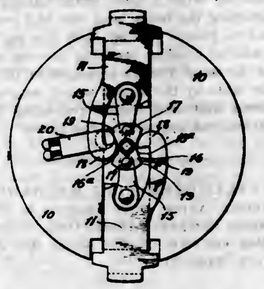


1. The combination with a burette, of a transparent graduated sleeve slidable longitudinally along said burette.

1,386,572. EXPLOSION-MOTOR. GEORGES JEANTET, Bilbao, Spain. Filed July 11, 1917. Serial No. 179,978. 3 Claims. (Cl. 123—74.)

1. An internal combustion engine having a crank case, a piston-cylinder secured thereto and projecting within and beyond such crank case, a conduit formed lengthwise the cylinder within the crank case, the lower end of the cylinder within the crank case having a fuel inlet port and also a fuel outlet port leading to said conduit, the upper portion of the cylinder beyond the crank case having a fuel inlet port leading from said conduit and also an exhaust outlet port, a piston movable in the cylinder and forming the sole controlling means for all of said ports, and crank means connected to said piston and operating beyond the cylinder and wholly within the crank case.

1,386,573. ROTARY PRINTING-PRESS. PAUL MARTIN, Roubaix, France. Filed May 31, 1913. Serial No. 771,036. 3 Claims. (Cl. 101—117.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a rotary or other printing press for printing webs comprising printing and impression cylinders, the combination of cutting and delivery drums, means of regulation capable of varying the duration of contact of said cutting and delivery drums, two supplementary cylinders rotating intermittently for feeding the paper during the period of time corresponding to the time of impression of the impression cylinders and the pressure periods of said cutting and delivery drums, a brake and a clutch for regulating the starting and stopping of said supplementary cylinders in a precise manner.

1,386,574. SAFETY-CATCH FOR PINS AND BROOCHES. MOAD H. LE MARR, Los Angeles, Calif. Filed Aug. 25, 1920. Serial No. 405,952. 3 Claims. (Cl. 24—157.)

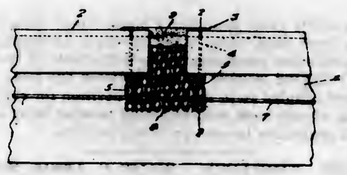
3. A safety catch including a blank folded upon itself to form a hook, said folded blank having a depression forming a projection extending between the folds of said hook, and a retaining member pivoted between the folds of said hook and adapted to be swung into position for closing the opening of said hook, said retaining member being engaged by said projection in open or closed position.

1,386,575. TIME-LOCK. ROLLIN C. LEWIS, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Dec. 22, 1920. Serial No. 432,500. 4 Claims. (Cl. 70—26.)

1. In a time lock, the combination of a bolt adapted to be projected by a spring and provided with a hook shaped end, a crank adapted to be actuated by time mechanism and means connecting the crank and bolt for retracting the latter the said hook on the bolt resting in the path of movement of the crank so as to be engaged by the latter in the event of a breakage of the mechanism connecting the crank and bolt.

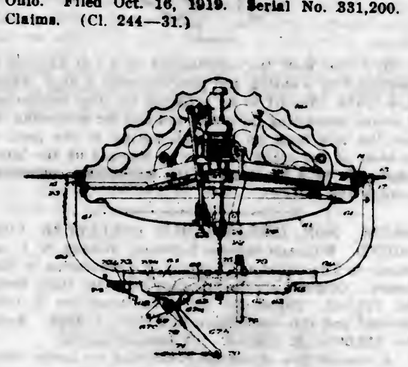
1,386,576. NON-INFLAMMABLE CELLULOSE COMPOUND. WILLIAM GODSON LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Original application filed Sept. 10, 1912, Serial No. 719,543. Patent No. 1,199,799, dated Oct. 3, 1916. Divided and this application filed Sept. 1, 1916. Serial No. 118,003. 12 Claims. (Cl. 106—40.)

1. A composition of matter containing an acetyl cellulose and tricresylphosphate in admixture with a solvent common to both.



1,386,577. ATTACHMENT FOR POOL-TABLES. JAMES H. MCCOOL, Ellsworth, Kans. Filed June 5, 1920. Serial No. 386,795. 3 Claims. (Cl. 46—6.)

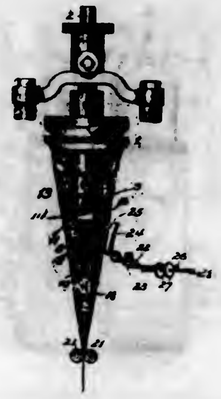
1. In combination with a pool or billiard table, of oppositely disposed downwardly inclined racks arranged there-



on, said racks having their confronting faces spaced from each other and the said ends open and a pivoted gate normally closing the open confronting ends of the racks.

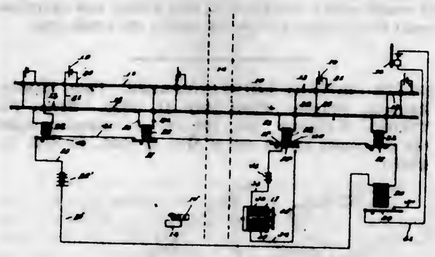
1,386,578. ATTACHMENT FOR POOL-TABLES. James H. McCool, Ellsworth, Kans. Filed Nov. 9, 1920. Serial No. 422,866. 1 Claim. (Cl. 46—12.)

In combination with a pool table having an inclined track for directing the balls from the ball receiving pockets, of a woven pocket having both its top and bottom open, a flat arched member securing the top of the pocket to the top of the table, frames arranged in the pocket, connected to the table by the means which secures the arched member thereto, and said frames retaining the pocket in spread condition and supporting the track.



1,386,579. VALVE-OPERATING MECHANISM. Alger G. Maranville, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 331,200. 19 Claims. (Cl. 244—31.)

1. A control mechanism comprising, an element yieldably held in one position, a rocking lever, and manually controlled devices for successively operating the element in opposite directions by movement of the rocking lever in one direction.

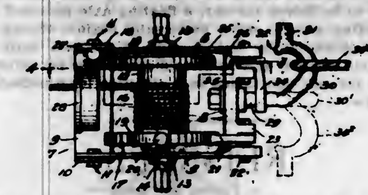


1,386,580. CIRCULAR-KNITTING MACHINE. John Loyn Marshall and Robert Evan Davis, Fort Payne, Ala. Filed Dec. 16, 1920. Serial No. 431,169. 7 Claims. (Cl. 66—7.)

1. The combination with a rotatable member of a circular knitting machine, of a part connected with said rotatable member and normally rotatable therewith, a spring-pressed finder carried by said part to engage the fabric tube and to enter a hole therein, whereby said part may be connected with a defective fabric tube and caused to move therewith in the direction of travel of the fabric tube to disconnect said part from operative relation with the rotatable member of the machine, and a lever for operating stop mechanism, said lever having an arm in the

path of movement of said part when the latter is moved by the fabric tube.

1,386,581. RAILROAD-GATE. Lewis Millen and William Judson Griffith, Glenmary, Tenn. Filed Jan. 30, 1920. Serial No. 355,023. 2 Claims. (Cl. 246—130.)



1. In combination with a railway track and crossing, said track having its rails on the opposite sides of the crossing insulated from each other and electrically energized, relay magnets connected to said energized rails, a common circuit including a battery having relay armatures for said relay magnets, contact elements for the armatures in said common circuit, said common circuit having therein an additional relay magnet, a signal in a normally open circuit, an armature in said circuit disposed opposite the last mentioned magnet and a contact in said circuit for said armature, a gate at the crossing, a lock circuit including a battery, a solenoid and a movable armature therefor designed when said circuit is closed to engage with the gate to lock said gate in closed position, and an armature in said lock circuit disposed adjacent to one of the armatures for the energized track relay magnets, all as and for the purpose set forth.

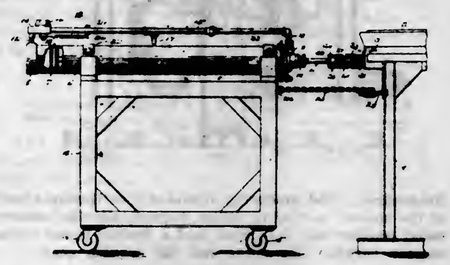
1,386,582. PORTABLE HAND-WINDLASS. Theodore V. Nutter, Seattle, Wash. Filed July 6, 1920. Serial No. 394,026. 4 Claims. (Cl. 254—161.)

1. In a hand-windlass, a frame having bearing boxes in the side members thereof, a shaft journaled in said boxes, a drum on said shaft, means for rotating said drum, a hook shank swiveled in an end member of said

frame to rotate about an axis longitudinal of the latter, a hook formed integral with said shank and directed

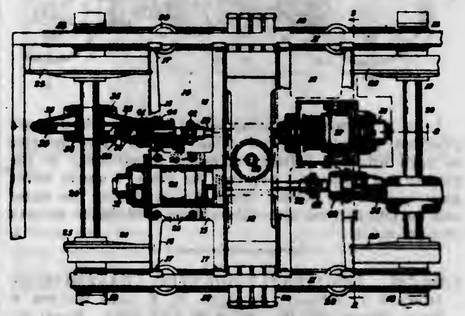
laterally therefrom, and means engageable with said shank for releasably securing the hook in selected revoluble positions.

1,386,583. HOISTING-HOOK. John Paterson, Jr., Edinburg, N. D. Filed Apr. 3, 1918. Serial No. 226,517. 2 Claims. (Cl. 294—84.)



1. A self-releasing hoisting hook comprising in combination, a hook member formed in the shape of an elongated link open at one side, provided with a weight disposed at the same side of the major axis of the body as its open portion, and having an arcuate slot formed transversely through its end portion opposite to the hook proper, and a supporting member for said hook member, including a pivot extending through the said slot of the hook member to pendently support the same by engagement at the one end of the slot nearest said weight when a load of considerable magnitude is pendently supported from the hook portion proper, and to engage the other end of the arcuate slot when the load is relieved sufficient to permit swinging of the hook member responsive to the force of gravity acting upon said weighted portion of the hook member, the hook member initially swinging and then riding on said pivot in the descent of the weighted portion so as to quickly release the load.

1,386,584. HARROW. Robert Witherr Payne, Drakes Branch, Va. Filed Nov. 4, 1919. Serial No. 335,657. 1 Claim. (Cl. 55—8.)

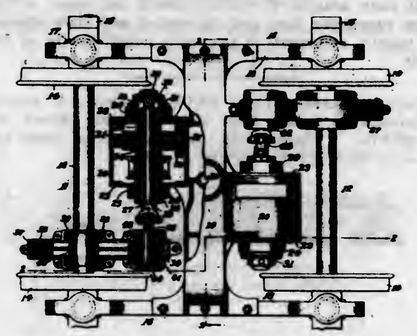


A harrow including longitudinal bars, each of said bars comprising an angle iron, said angle irons having openings formed in spaced relation with each other, said openings being formed in the vertical walls of the angle irons to provide bearings, said angle irons having slots formed in the horizontal walls thereof, the slots being disposed adjacent the bearing openings, teeth supporting bars arranged in pairs having curved surfaces and relatively straight surfaces, the curved surfaces adapted to contact with the walls of the bearings for permitting movement of the teeth supporting bars, teeth carried between the teeth supporting bars of each pair, means for securing the bars in engagement with the teeth, said teeth adapted to be positioned in the slots and adapted to move therein, said teeth adapted to restrict lateral movement of the teeth supporting bars, and the ends of said slots adapted to restrict movement of the teeth longitudinally of the slots.

1,386,585. ASSEMBLING DEVICE. Emory R. Berry, Davenport, Iowa. Filed Jan. 10, 1920. Serial No. 350,675. 2 Claims. (Cl. 29—84.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

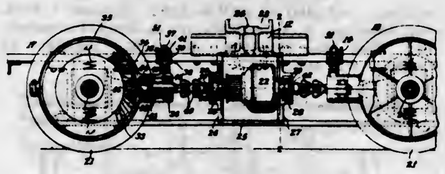
1. In a device for inserting a floating piston in a cylinder, a portable table, a flexible connection for anchoring the table, an air motor mounted on the portable table and a head flexibly secured to the piston-rod of said motor for forcing said floating piston within the cylinder.

1,386,586. CAR-MOTOR MOUNTING. Howard J. Murray, Brooklyn, N. Y., and Walter S. Rugg, Pittsburgh, Pa. Filed May 27, 1918. Serial No. 236,853. 14 Claims. (Cl. 105—118.)



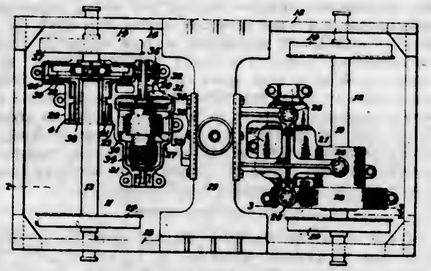
1. In a railroad vehicle, the combination with a wheel truck, having unsprung parts including wheels with a driven axle mounted in said truck and having some freedom of movement relative thereto, and spring supported parts including a frame structure having side sills with a plurality of side sill supporting springs supported from said unsprung parts, of a power unit for driving the wheels including a high speed electric motor hung from said resiliently supported frame structure and capable of vertical movement relative to the axle to bring its armature in line horizontally with said axle, and a flexible driving connection between said motor and axle, said connection including means for reducing the speed of rotation of the motor transmitted to the axle.

1,386,587. MOTOR-CASING-TRUCK CONSTRUCTION. Howard J. Murray, Brooklyn, N. Y., and Walter S. Rugg, Pittsburgh, Pa. Filed May 27, 1918. Serial No. 236,854. 18 Claims. (Cl. 105—49.)



1. In an electrically driven vehicle, the combination with a pair of running gears, a bolster constituting a

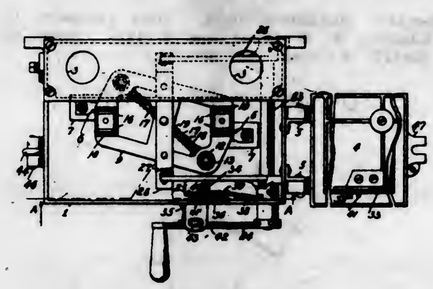
structural part of the vehicle frame-work and positioned between said running gear, means for supporting the same resiliently from the running gears, an electric motor with



its magnetic field producing elements constituting a part of the bolster thereby to utilize magnetically the massive metal constituting the frame, and a flexible power transmission between the motor and the running gear.

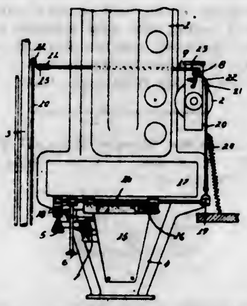
1,386,588. SINGLE-MOTOR BOLSTER. HOWARD J. MURRAY, Brooklyn, N. Y., and WALTER S. RUGG, Pittsburgh, Pa. Filed May 27, 1918. Serial No. 236,855. 16 Claims. (Cl. 105—118.)

1. In a vehicle, the combination with a wheel truck provided with two driven axles, free to move relative to each other, a bolster extending transversely of the vehicle and positioned between the axles, a single motor positioned on the bolster, means for cushioning the motor and flexible driving connections from said motor to both of said axles.



1,386,589. RESILIENTLY-MOUNTED TRANSMISSION. HOWARD J. MURRAY, Brooklyn, N. Y., and WALTER S. RUGG, Pittsburgh, Pa. Filed May 27, 1918. Serial No. 236,856. 12 Claims. (Cl. 105—131.)

1. In a device of the class described, the combination of a spring supported motor and transmission containing casing, a motor mounted in said casing, a reducing gear train mounted in said casing and operatively connected to the motor to be driven thereby, a floating axle provided with supporting wheels, and a universally flexible driving connection between the last element of the gear train and said axle whereby free relative movement is permitted between the axle and casing in a direction longitudinally of the axle.



REISSUES.

15,169. ELECTRICAL SWITCH. BRYSON D. HORTON, Detroit, Mich. Filed Dec. 12, 1918. Serial No. 267,093. Original No. 1,184,454, dated May 23, 1916, Serial No. 809,880, filed Jan. 2, 1914. 28 Claims. (Cl. 200—50.)

1. In an iron-clad switch of the character described, a quick make and break mechanism, including a rock shaft, a pair of arms mounted thereon, a bridge piece provided with abutments, resiliently attached to the outer ends of the arms, guide rods provided with abutments, a pair of telescoping rods interposed between the abutments of the guide rods and bridge piece and helical springs mounted upon the telescoping rods.

15,170. AUTOMATIC ACCELERATOR. JOHN H. LEITCH, Detroit, Mich., assignor of one-half to Anthony Nelson, Detroit, Mich. Filed June 18, 1917. Serial No. 175,501. Original No. 1,222,874, dated Apr. 17, 1917, Serial No. 117,971, filed Sept. 1, 1916. 3 Claims. (Cl. 74—107.)

3. In a motor vehicle, the combination with the engine and change speed gearing including means for controlling the operation of said change speed gearing to effect different changes, of a plurality of pedals for actuating said controlling means, said pedals requiring simultaneous operation to effect one of said changes, and an accelerator operated by either of said pedals as the controlling means is actuated, thereby to pick up the load.

15,171. VEHICLE-WHEEL. GUSTAV SCHADEE, New York, N. Y., assignor, by mesne assignments, of two-thirds to Emma G. Gallagher and one-third to Alice Schadee, New York, N. Y. Filed Apr. 23, 1919. Serial No. 292,187. Original No. 1,272,122, dated July 9, 1918, Serial No. 192,884, filed Sept. 24, 1917. 4 Claims. (Cl. 152—33.)

1. A tire including an inner and outer rim, tubes interposed and inflatable therebetween, and seats laterally adjustable with respect to the outer rim for bodily supporting each tube at its outer circumference.

15,172. APPARATUS FOR TREATING AND CANNING MILK. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed June 6, 1921. Serial No. 475,432. Original No. 1,340,921, dated May 25, 1920, Serial No. 261,545, filed Nov. 7, 1918. 14 Claims. (Cl. 99—2.)

11. In apparatus for filling cans with milk and thereafter capping and sealing them, the combination of a casing containing a normally closed chamber having a thereinto inlet for empty, and therefrom outlet for filled and capped cans, means to open and close said inlet and outlet; a can-filling device, a cap-placing and a cap-sealing device located in said chamber; means to feed the empty cans into the chamber, means to therethrough feed them successively to the filling and sealing devices and therefrom out of the chamber; means to bring the cans into, and during their filling and sealing detain them in, alinement with the filling and sealing devices, means to actuate the filling and sealing devices while the cans are therewith alined, means to pump air out of the chamber during closure of its said inlet and outlet; and means to, through said inlet and outlet, permit the cans to enter and withdraw from the chamber without admitting air.

14. In apparatus for filling cans with milk and thereafter capping and sealing them, the combination of a casing containing a normally closed chamber having a thereinto inlet for empty, and therefrom outlet for filled and capped cans; a can-filling device, a cap-placing and a cap-sealing device located in said chamber; means to feed the empty cans into the chamber; means to therethrough feed them successively to the filling and sealing devices and therefrom out of the chamber; means to bring the cans into, and during their filling and sealing detain them in, alinement with the filling and sealing devices; means to actuate the filling and sealing devices while the cans are therewith alined; means to pump air out of the chamber during closure of its said inlet and outlet; and in said outlet and inlet for cans an air lock comprising a plurality of rotatable, cylindrical valve members each having an opening for passage of the cans therethrough which accommodates two or more cans.

15,173. CURTAIN-LIGHT. RUSSELL E. TUPPER, Cochituate, Mass. Filed Feb. 5, 1920. Serial No. 356,442. Original No. 1,312,087, dated Aug. 5, 1919, Serial No. 263,205, filed Nov. 19, 1918. 5 Claims. (Cl. 296—145.)

1. A clamping device for sheet material, comprising a section of sheet metal folded over upon itself to compose two spaced members, one of said members having a projection on its inner surface, and one member having a spur projecting therefrom, whereby sheet material can be clamped between said members and other sheet material can be held by said spur.

DESIGNS.

58,527. EMBOSSED WALL-PAPER. ALBERT AINSWORTH, Swarthmore, Pa., assignor to Becker, Smith & Page, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,220. Term of patent 7 years.

The ornamental design for embossed wall paper as shown.

58,528. EMBOSSED WALL-PAPER. ALBERT AINSWORTH, Swarthmore, Pa., assignor to Becker, Smith & Page, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,221. Term of patent 7 years.

The ornamental design for embossed wall paper as shown.

58,529. EMBOSSED WALL-PAPER. ALBERT AINSWORTH, Swarthmore, Pa., assignor to Becker, Smith & Page, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,222. Term of patent 7 years.

The ornamental design for embossed wall paper as shown.

58,530. FACE-PLATE FOR COMBINATION INDICATING INSTRUMENTS FOR MOTOR-DRIVEN VEHICLES. BENJAMIN H. ANIBAL, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,477. Term of patent 14 years.

The ornamental design for a face plate for combination indicating instruments for motor driven vehicles illustrated in the accompanying drawing.

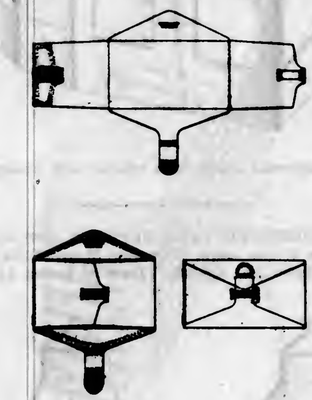
58,531. FACE-PLATE FOR SWITCH MECHANISM FOR MOTOR-DRIVEN VEHICLES. BENJAMIN H. ANIBAL, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,478. Term of patent 14 years.

The ornamental design for a face plate for switch mechanism for motor driven vehicles illustrated in the accompanying drawing.

58,532. INSTRUMENT-BOARD FOR MOTOR-VEHICLES. BENJAMIN H. ANIBAL, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,479. Term of patent 14 years.

The ornamental design for an instrument board for motor vehicles illustrated in the accompanying drawing.

58,533. SURGICAL MIRROR. ALEXANDER A. ANZELL, New York, N. Y. Filed Sept. 26, 1919. Serial No. 326,695. Term of patent 14 years.

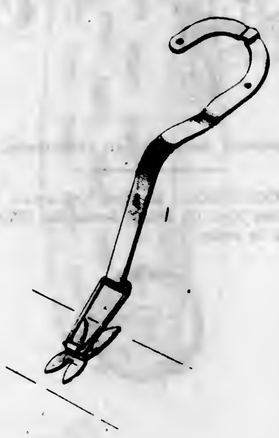


The ornamental design for a surgical mirror, as shown.

58,534. GLASS GOBLET OR OTHER SIMILAR ARTICLE OF MANUFACTURE. JOSEPH O. BALDA, Newark, Ohio, assignor to Central Glass Works, Wheeling, W. Va., a Corporation of West Virginia. Filed Feb. 18, 1921. Serial No. 446,183. Term of patent 14 years.

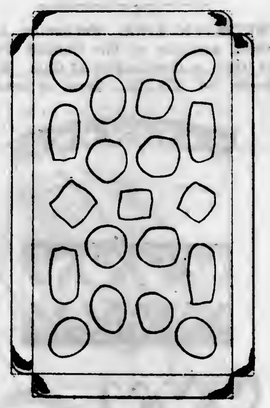
The ornamental design for a glass goblet or other similar article of manufacture, as shown.

58,535. ENVELOP. REUBEN BALOSK, Newark, N. J. Filed July 13, 1920. Serial No. 396,021. Term of patent 14 years.



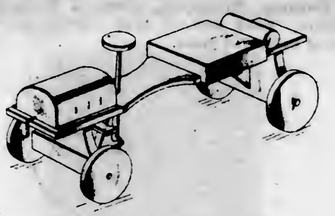
The ornamental design for an envelop as shown.

58,536. DIRECTION-INDICATOR FOR VEHICLES. GEORGE E. BATES, Syracuse, N. Y. Filed Nov. 16, 1920. Serial No. 424,562. Term of patent 7 years.



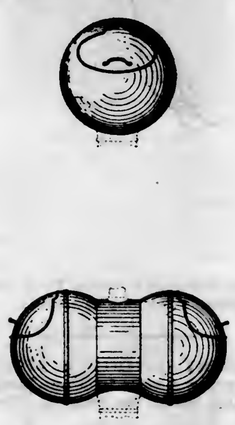
The ornamental design for a direction indicator for vehicles, substantially as shown.

58,537. CORRECTION-INDICATOR FOR A DICTATION-MACHINE. GEORGE W. BEARLS, New Rochelle, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed Sept. 6, 1918. Serial No. 252,976. Term of patent 14 years.



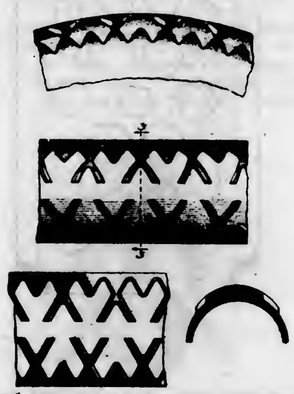
The new and ornamental design for a correction indicator for a dictation machine as shown.

58,538. BOX-TRAY OR ARTICLE OF SIMILAR NATURE. MATTHEW GEORGE BECKER, Chicago, Ill. Filed Dec. 9, 1919. Serial No. 343,606. Term of patent 3½ years.



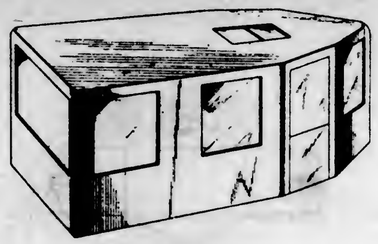
The ornamental design for a box tray or article of similar nature as shown.

58,539. AUTO-COASTER. EDDIE L. BERARD, North Bennington, Vt. Filed May 14, 1921. Serial No. 469,573. Term of patent 14 years.



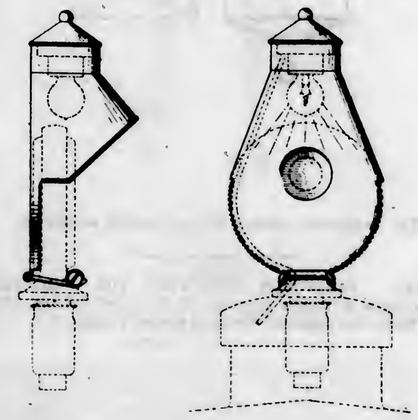
The ornamental design for an autocoaster, as shown.

58,540. STERILIZER. MANUEL BLICKMAN, New York, N. Y. Filed Nov. 10, 1919. Serial No. 337,027. Term of patent 14 years.



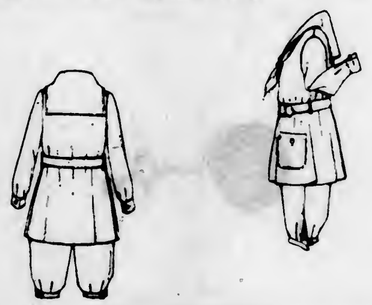
The ornamental design for a sterilizer, as shown and described.

58,541. PNEUMATIC TIRE. FREDERICK A. BOLLINGER, Akron, Ohio, assignor to The Oldfield Tire Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 14, 1921. Serial No. 452,322. Term of patent 14 years.



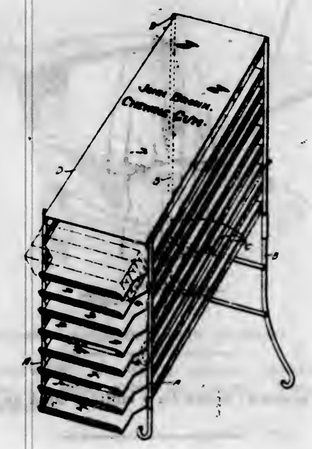
The ornamental design for a pneumatic tire as shown.

58,542. VEHICLE-BODY. CHARLES H. BOWMAN, Washington, D. C. Filed Feb. 19, 1920. Serial No. 359,939. Term of patent 14 years.



The ornamental design for a vehicle body, substantially as shown.

58,543. COMBINED LAMP SUPPORT AND CASING. WILLIAM J. CALLAHAN, Worcester, Mass. Filed Dec. 6, 1920. Serial No. 428,830. Term of patent 14 years.

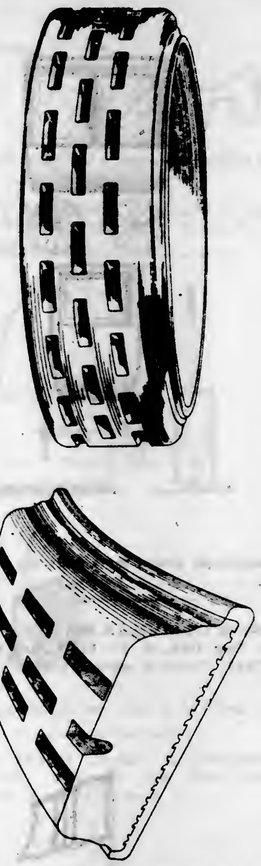


The ornamental design for a combined lamp support and casing, as shown.

58,544. LADY'S SPORT-COSTUME. LUCIA J. CARLETON, Dorchester, Mass. Filed Jan. 6, 1921. Serial No. 435,524. Term of patent 7 years.

The ornamental design for a lady's sport costume, as shown.

58,545. GUM-PACKAGE-DISPENSING RECEPTACLE OR SIMILAR ARTICLE. THEODORE E. CARCELIUS, St. Louis, Mo., assignor to Multiplex Display Fixture Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1921. Serial No. 462,451. Term of patent 14 years.

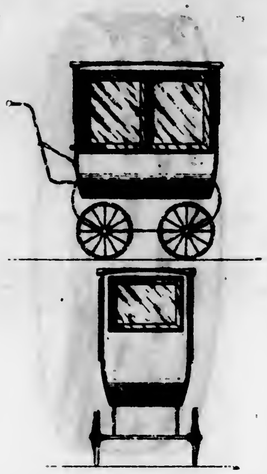


The ornamental design for a gum-package dispensing receptacle or similar article substantially as shown and described.

58,546. PANELED STOCK-POT. HOWARD A. CHURCH, Elkhart, Ind. Filed Feb. 4, 1921. Serial No. 442,555. Term of patent 7 years.

The ornamental design for a paneled stock pot, as shown.

58,547. SOLID-RUBBER TIRE. LEE E. CLOUGH, Akron, Ohio, assignor to The Mason Tire & Rubber Company, Kent, Ohio, a Corporation of Ohio. Filed Feb. 2, 1921. Serial No. 442,001. Term of patent 7 years.



The ornamental design for a solid rubber tire as shown.

58,548. WASHING-MACHINE CASING. ROBERT G. CLYNE and KITTY RAYBURN, St. Louis, Mo. Filed Aug. 2, 1920. Serial No. 400,874. Term of patent 14 years.

The ornamental design for a washing machine casing, as shown.

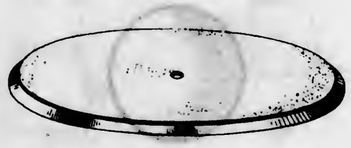
58,549. BODY FOR A BABY-CARRIAGE. Joseph E. Crate, Loudonville, Ohio. Filed May 2, 1921. Serial No. 466,287. Term of patent 14 years.

The ornamental design for a body for a baby carriage, as shown.

58,550. BANK OR SIMILAR ARTICLE. Mary Beatrice Cusick, New York, N. Y. Filed June 1, 1918. Serial No. 237,817. Term of patent 7 years.

The ornamental design for a bank or similar article as shown.

58,551. MILITARY CLOAK AND SKIRT. Katherine Cowan Dalton, Washington, D. C. Filed May 24, 1918. Serial No. 236,434. Term of patent 3½ years.

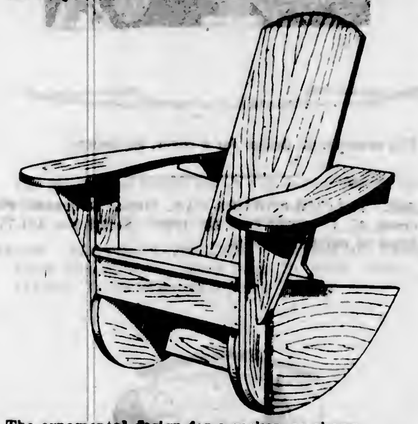


The ornamental design for a military cloak and skirt, as shown.

58,552. TALKING-MACHINE. John A. Davis, Washington, D. C. Filed June 19, 1920. Serial No. 390,263. Term of patent 7 years.

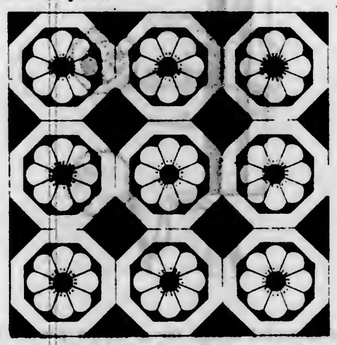
The ornamental design for a talking machine, as shown and described.

58,553. TURNTABLE FOR TALKING-MACHINES. John A. Davis, Washington, D. C. Filed June 19, 1920. Serial No. 390,264. Term of patent 7 years.



The ornamental design for a turntable for talking machines, as shown and described.

58,554. CHAIR. Joseph H. Dodson, Kankakee, Ill. Filed Dec. 11, 1920. Serial No. 430,061. Term of patent 14 years.

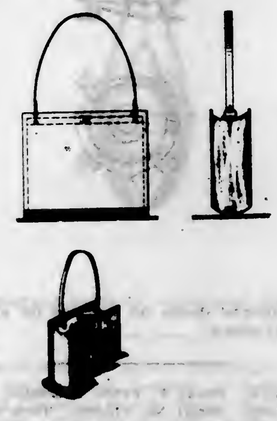


The ornamental design for a chair, as shown.

58,555. ROCKER. Joseph H. Dodson, Kankakee, Ill. Filed Dec. 11, 1920. Serial No. 430,062. Term of patent 14 years.

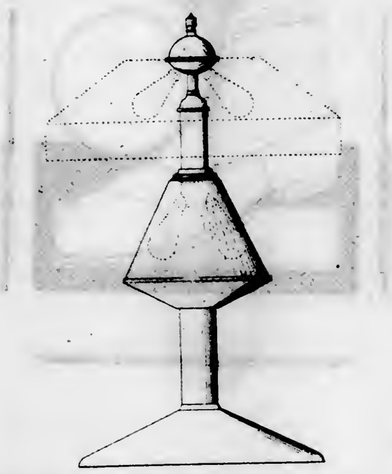
The ornamental design for a rocker, as shown.

58,556. LINOLEUM. William J. Donnelly, Butte, Mont. Filed Aug. 27, 1919. Serial No. 320,315. Term of patent 14 years.



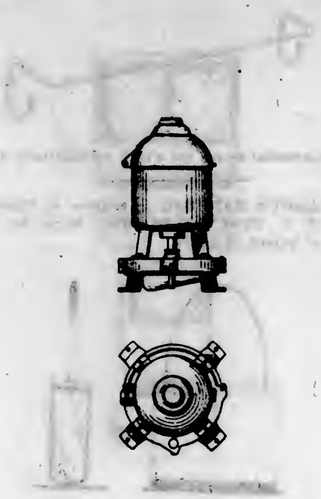
The ornamental design for linoleum, as shown.

58,557. RACK. Clifford Clinton Dudley, Wallingford, Conn., assignor to H. L. Judd Company, Wallingford, Conn., a Corporation of New York. Filed Feb. 21, 1921. Serial No. 446,958. Term of patent 14 years.



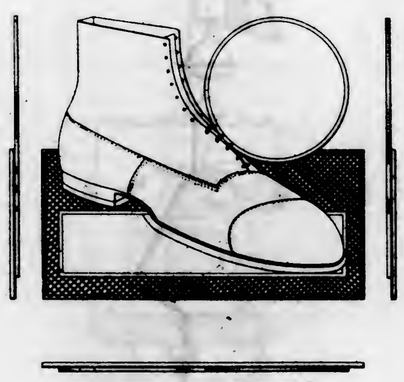
The ornamental design for a rack substantially as shown.

58,558. LADY'S HANDBAG. Abraham C. Fisher, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,920. Term of patent 3½ years.



The ornamental design for a lady's handbag, as shown.

58,559. LAMP-STAND. Joseph G. Fitzgerald, San Francisco, Calif. Filed Nov. 29, 1920. Serial No. 427,244. Term of patent 14 years.

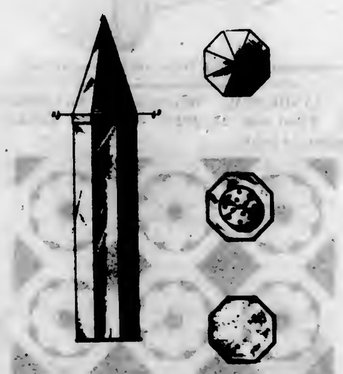


The ornamental design for a lamp stand, as shown.

58,560. CASING FOR AN ELECTRICAL GENERATOR. Ralph I. Frost, Augusta, Kans., assignor to The Geo. W. Brown & Son State Bank, trustee, Augusta, Kans. Filed Dec. 6, 1920. Serial No. 428,828. Term of patent 14 years.

The ornamental design for a casing for an electrical generator as shown.

58,561. SIGN. Oscar F. Funk, Lancaster, Pa. Filed Dec. 9, 1920. Serial No. 429,600. Term of patent 7 years.

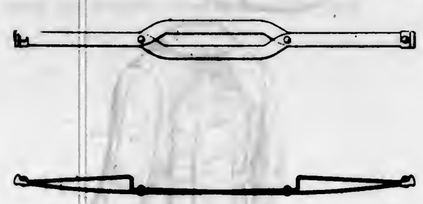


The ornamental design for a sign, as shown.

58,562. COVER. Samuel Geisman, New York, N. Y. Filed Nov. 27, 1920. Serial No. 426,818. Term of patent 14 years.

The ornamental design for a cover, as shown.

58,563. TALCUM-POWDER CAN. Henry Goldberg, Paterson, N. J. Filed Dec. 18, 1920. Serial No. 431,773. Term of patent 14 years.



The ornamental design for a talcum powder can, as shown.

58,564. BROOCH OR THE LIKE. Berta B. Gunnor, Beckley, W. Va. Filed Aug. 2, 1918. Serial No. 248,084. Term of patent 7 years.

The ornamental design for a brooch or the like as shown.

58,565. AUTOMOBILE BUMPER-BAR. Lewis P. Halladay, Decatur, Ill. Filed Oct. 29, 1920. Serial No. 420,573. Term of patent 14 years.

The ornamental design for an automobile bumper bar as shown.

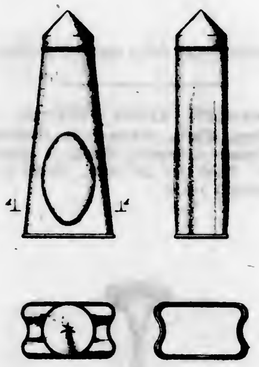
58,566. FLATIRON-HOLDER. William H. Hawkes, South Nyack, N. Y. Filed Sept. 29, 1920. Serial No. 413,616. Term of patent 7 years.

The ornamental design for a flatiron holder as shown.

58,567. SUSPENDED LIGHT-FIXTURE. Carl H. Heide, Seattle, Wash., assignor to Perfeclite Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 20, 1920. Serial No. 418,334. Term of patent 7 years.

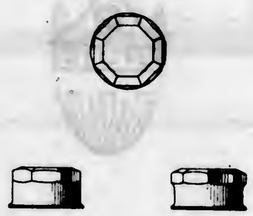
The ornamental design for a suspended light fixture as shown.

58,568. SUSPENDED LIGHT-FIXTURE. Carl H. Heide, Seattle, Wash., assignor to Perfeclite Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 20, 1920. Serial No. 418,335. Term of patent 7 years.



The ornamental design for a suspended light fixture as shown.

58,569. STAPLE-PULLER. OLE HERMANSON, Sun Prairie, Wis. Filed Oct. 28, 1920. Serial No. 420,900. Term of patent 7 years.

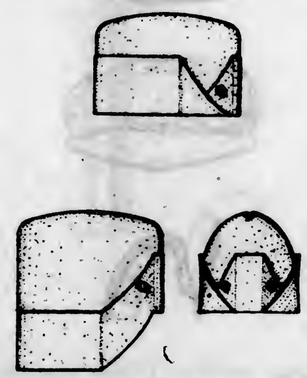


The ornamental design for a staple puller, as shown.

58,570. POWDER-CONTAINER. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed Dec. 18, 1920. Serial No. 431,775. Term of patent 14 years.

The ornamental design for a powder container, substantially as shown.

58,571. CAP FOR POWDER-CONTAINER TOPS. FRANK S. HYATT, Brooklyn, N. Y. Filed Dec. 31, 1920. Serial No. 434,373. Term of patent 3½ years.



The ornamental design for a cap for powder container tops, as shown.

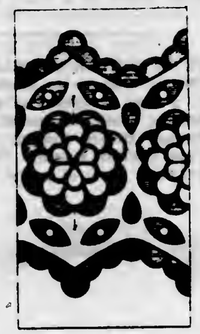
58,572. OVERCOAT, ULSTER, OR A SPORT SACK-COAT. SAMUEL S. JACKSON, Columbus, Ohio. Filed Dec. 30, 1919. Serial No. 348,494. Term of patent 7 years.

The ornamental design for an overcoat, ulster, or a sport sack coat, substantially as shown.

58,573. KNITTED CAP. ELMER N. JOHA, Milwaukee, Wis., assignor to Reliable Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 30, 1921. Serial No. 465,841. Term of patent 14 years.

The ornamental design for a knitted cap, as shown.

58,574. DOLL. FREDERICK KAUPMANN, Jr., Brooklyn, N. Y., assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Sept. 3, 1920. Serial No. 408,048. Term of patent 14 years.

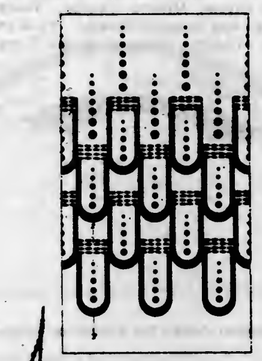


The ornamental design for a doll, as shown.

58,575. DOLL. FREDERICK KAUPMANN, Jr., Brooklyn, N. Y., assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Sept. 3, 1920. Serial No. 408,049. Term of patent 14 years.

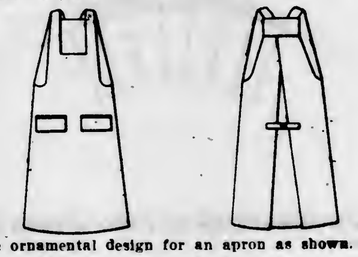
The ornamental design for a doll, as shown.

58,576. TRIMMING FOR WEARING-APPAREL. FRANK J. KEIL, New York, N. Y. Filed May 20, 1921. Serial No. 471,243. Term of patent 3½ years.



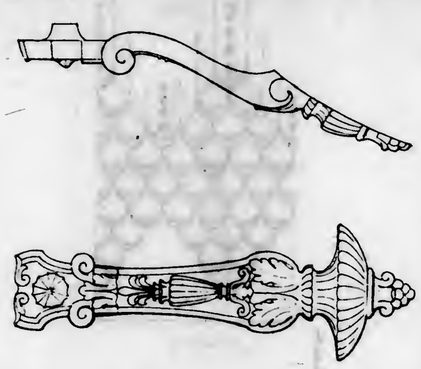
The ornamental design for a trimming for wearing apparel as shown.

58,577. TRIMMING FOR WEARING-APPAREL. FRANK J. KEIL, New York, N. Y. Filed May 20, 1921. Serial No. 471,244. Term of patent 3½ years.



The ornamental design for a trimming for wearing apparel as shown.

58,578. TRIMMING FOR WEARING-APPAREL. FRANK J. KEIL, New York, N. Y. Filed May 28, 1921. Serial No. 473,406. Term of patent 3½ years.

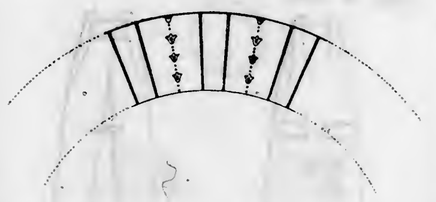


The ornamental design for a trimming for wearing apparel as shown.

58,579. APRON. ISAAC B. KELLER, Philadelphia, Pa. Filed Jan. 29, 1920. Serial No. 354,939. Term of patent 14 years.

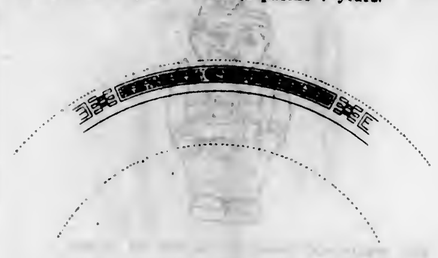
The ornamental design for an apron as shown.

58,580. ARM FOR LIGHTING-FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,294. Term of patent 3½ years.



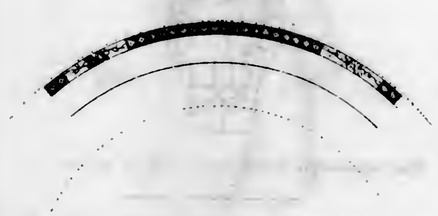
The ornamental design for an arm for lighting fixtures, as shown.

58,581. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,501. Term of patent 7 years.



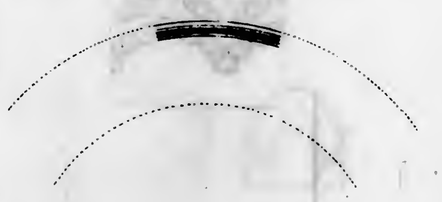
The ornamental design for a plate or similar article, as shown.

58,582. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,502. Term of patent 7 years.



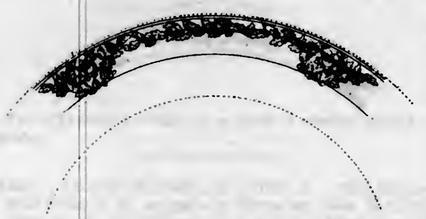
The ornamental design for a plate or similar article, as shown.

58,583. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,503. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

58,584. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,504. Term of patent 7 years.

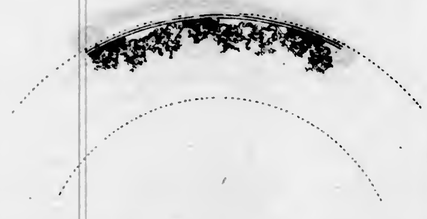


The ornamental design for a plate or similar article, as shown.

58,585. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,505. Term of patent 7 years.

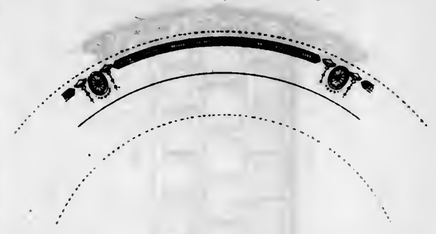
The ornamental design for a plate or similar article, as shown.

58,586. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,506. Term of patent 7 years.



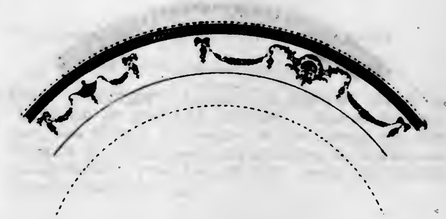
The ornamental design for a plate or similar article, as shown.

58,587. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,507. Term of patent 7 years.



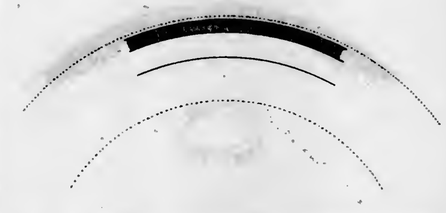
The ornamental design for a plate or similar article, as shown.

58,588. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,508. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

58,589. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,509. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

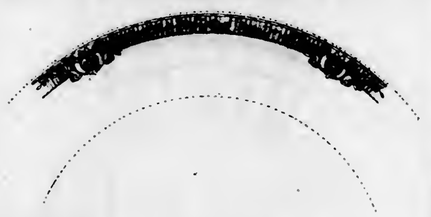
58,590. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,510. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

58,591. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,511. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

58,592. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,512. Term of patent 7 years.

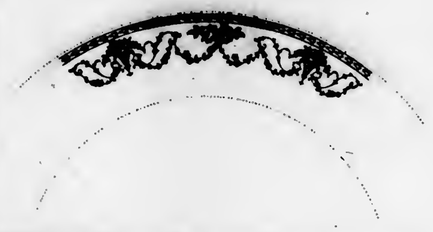


The ornamental design for a plate or similar article, as shown.

58,593. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,513. Term of patent 7 years.

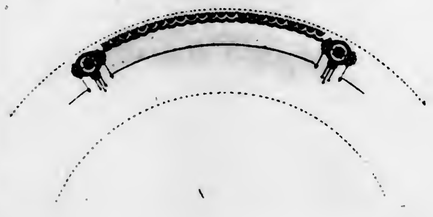
The ornamental design for a plate or similar article, as shown.

58,594. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,514. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

58,595. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,515. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

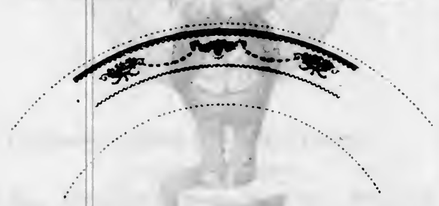
58,596. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros., New York, N. Y., a Firm composed of Shikae Morimura, Kaisaku Morimura, Shigeki Morimura, Isamu Morimura, Saneyoshi Hirose, Minoru Tanaka, Yasukata Murai, Taru Murai, and Eunoske Jinushi. Filed Oct. 16, 1920. Serial No. 417,517. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

58,597. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 31, 1921. Serial No. 441,430. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

58,598. PLATE OR SIMILAR ARTICLE, Teiji Kotato, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 31, 1921. Serial No. 441,431. Term of patent 7 years.

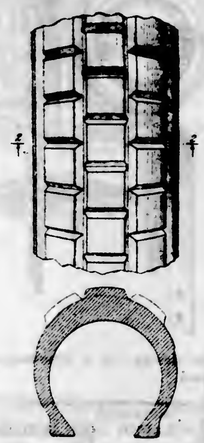


The ornamental design for a plate or similar article, as shown.

58,599. PLATE OR SIMILAR ARTICLE. Teiji Kotato, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 31, 1921. Serial No. 441,432. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

58,600. PLATE OR SIMILAR ARTICLE, Teiji Kotato, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 31, 1921. Serial No. 441,433. Term of patent 7 years.

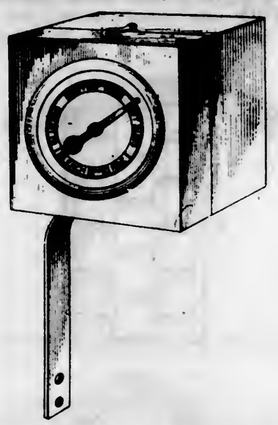


The ornamental design for a plate or similar article, as shown.

58,601. PRONGED SETTING FOR A JEWEL-MOUNTING. Jacques Kreisler, New York, N. Y. Filed July 15, 1920. Serial No. 396,616. Term of patent 7 years.

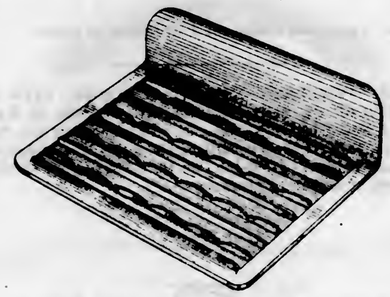
The ornamental design for a pronged setting for a jewel mounting, as shown.

58,602. TIRE-TREAD. Herbert W. Kuglin, Princeton, N. J., assignor to Globe Rubber Tire Manufacturing Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 10, 1920. Serial No. 350,710. Term of patent 14 years.



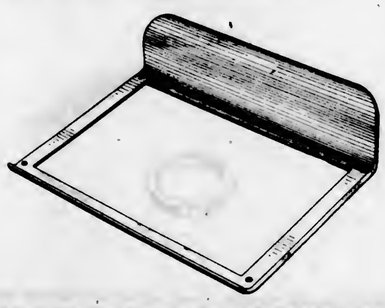
The ornamental design for a tire tread as shown.

58,603. JEWELRY — NAMELY, A FINGER-RING OR ARTICLE OF SIMILAR NATURE. Isidore H. Lapidus, New York, N. Y., assignor to Eles Jewelry Co., New York, N. Y., a Firm consisting of Isidore H. Lapidus and Lazar Seliber. Filed Jan. 20, 1921. Serial No. 436,755. Term of patent 14 years.



The ornamental design for jewelry—namely, a finger ring or article of similar nature as shown.

58,604. TIME-INDICATOR FOR USE IN LAUNDRIES. Eli E. Labocque, Pawtucket, R. I. Filed Apr. 29, 1921. Serial No. 465,539. Term of patent 3½ years.



The ornamental design for a time-indicator for use in laundries, as shown.

58,605. FOOT-SCRAPER FOR AUTOMOBILES. Fremont P. Livingston, Denver, Colo. Filed Oct. 13, 1920. Serial No. 416,764. Term of patent 14 years.

The original design for a foot scraper for automobiles, as shown.

58,606. FOOT-MAT FRAME FOR AUTOMOBILES. Fremont P. Livingston, Denver, Colo. Filed Oct. 13, 1920. Serial No. 416,765. Term of patent 14 years.

The original design for a foot mat frame for automobiles, as shown.

58,607. JAR. James Maurice Luchessa, Cambria, Calif. Filed Dec. 2, 1920. Serial No. 427,911. Term of patent 14 years.

The ornamental design for a jar, substantially as shown.

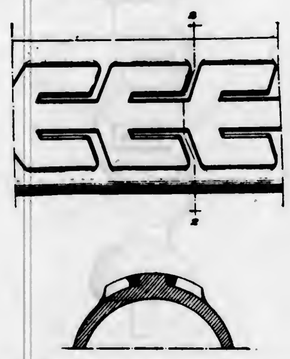
58,608. STATUETTE, WATCH-FOB, EMBLEM, BADGE, RADIATOR-CAP, OR AN ARTICLE OF SIMILAR NATURE. Mary Marston, Omaha, Nebr. Filed Jan. 10, 1921. Serial No. 436,359. Term of patent 7 years.

The ornamental design for a statuette, watch fob, emblem, badge, radiator cap, or article of similar nature, substantially as shown.

58,609. GEM-SETTING OR SIMILAR ARTICLE. Joshua W. Mayer, New York, N. Y. Filed Jan. 19, 1921. Serial No. 438,455. Term of patent 7 years.

The ornamental design for a gem setting or similar article, as shown.

58,610. NON-SKID TIRE. Harry McCreary, Indiana, Pa. Filed June 11, 1920. Serial No. 388,366. Term of patent 14 years.



The ornamental design for a non-skid tire, as shown.

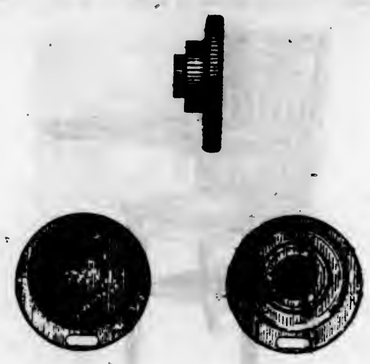
58,611. BADGE. Edgar C. McUpson, Washington, D. C., assignor of one-half to Reuben B. Browning, Spartanburg, S. C. Filed June 22, 1920. Serial No. 390,922. Term of patent 3½ years.

The ornamental design for a badge, as shown.

58,612. AUTOMOBILE-TIRE. Brainerd L. Mellinger, Kansas City, Mo. Filed Feb. 10, 1921. Serial No. 444,050. Term of patent 7 years.

The ornamental design for an automobile tire as shown.

58,613. STUDY-CHAIR. Otto E. Mosser, Port Washington, Wis., assignor to The Wisconsin Chair Company, Port Washington, Wis. Filed Dec. 24, 1920. Serial No. 433,081. Term of patent 14 years.



The ornamental design for a study chair, substantially as shown.

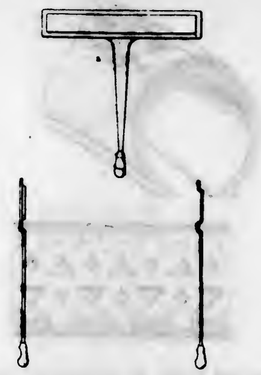
58,614. CABINET FOR PHONOGRAPHS. Ralph W. Morrison, Omaha, Nebr. Filed Dec. 26, 1919. Serial No. 347,615. Term of patent 3½ years.

The ornamental design for cabinet for phonographs as shown.

58,615. SOUND-BOX CASING. WALDO G. MOSES, Yonkers, N. Y. Filed May 5, 1919. Serial No. 295,600. Term of patent 7 years.

The ornamental design for a sound-box casing, substantially as shown.

58,616. LENS. ALPHONS G. MULLER and CHARLES MCMULLEN, Flemington, N. J. Filed Aug. 7, 1920. Serial No. 402,017. Term of patent 14 years.



The ornamental design for a lens, substantially as shown.

58,617. WEDDING-RING. CHARLES B. NAMIOT, New York, N. Y. Filed Nov. 12, 1920. Serial No. 423,734. Term of patent 14 years.

The ornamental design for a wedding ring as shown.

58,618. PEN AND PENCIL CLIP BLANK. WILLIAM NEUSWANGER, Glenwood Springs, Colo. Filed Jan. 28, 1919. Serial No. 273,657. Term of patent 14 years.

The ornamental design for a pen and pencil clip blank, as shown.

58,619. BRACKET FOR PILLOW-SHAM HOLDERS. HARRY F. OLLIS, East Lexington, Mass. Filed Dec. 15, 1920. Serial No. 430,967. Term of patent 14 years.

The ornamental design for a bracket for pillow sham holders as shown.

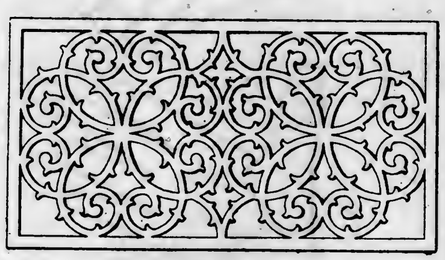
58,620. HAND-GRIP FOR A FILE OR SIMILAR ARTICLE. JOHN L. OSGOOD, Buffalo, N. Y. Filed Apr. 19, 1921. Serial No. 462,715. Term of patent 14 years.

The ornamental design for a hand grip for a file or similar article, substantially as shown and described.

58,621. HAND-GRIP FOR A FILE OR SIMILAR ARTICLE. JOHN L. OSGOOD, Buffalo, N. Y. Filed Apr. 19, 1921. Serial No. 462,716. Term of patent 14 years.

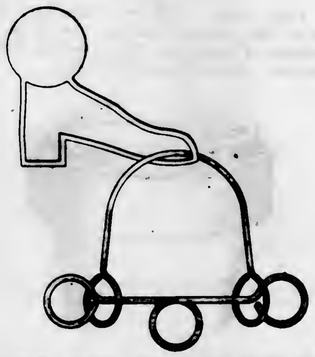
The ornamental design for a hand grip for a file or similar article, substantially as shown and described.

58,622. HAND-GRIP FOR A FILE OR SIMILAR ARTICLE. JOHN L. OSGOOD, Buffalo, N. Y. Filed Apr. 19, 1921. Serial No. 462,717. Term of patent 14 years.



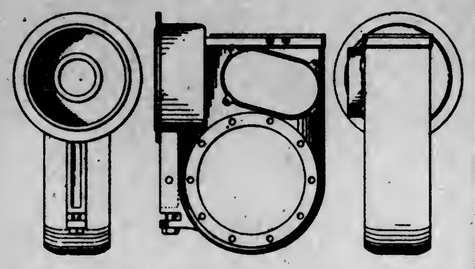
The ornamental design for a hand grip for a file or similar article, substantially as shown and described.

58,623. HAND-GRIP FOR A FILE OR SIMILAR ARTICLE. JOHN L. OSGOOD, Buffalo, N. N. Y. Filed Apr. 19, 1921. Serial No. 462,718. Term of patent 14 years.



The ornamental design for a hand grip for a file or similar article, substantially as shown and described.

58,624. GRILLE FOR PHONOGRAPH-CABINETS AND ORGANS. SISSAG K. OUZOUN-BOGHOSSIAN, Washington, D. C. Filed Apr. 4, 1921. Serial No. 458,553. Term of patent 3½ years.



The ornamental design for a grille for phonograph cabinets and organs, as shown.

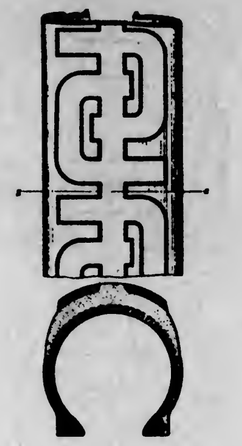
58,625. PUZZLE DEVICE. CHARLES R. PALMER, Cincinnati, Ohio. Filed Mar. 28, 1919. Serial No. 285,937. Term of patent 7 years.

The ornamental design for a puzzle device as shown.

58,626. TRANSMISSION-CASE FOR A TRACTOR. CARL T. PENTON, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 450,102. Term of patent 14 years.

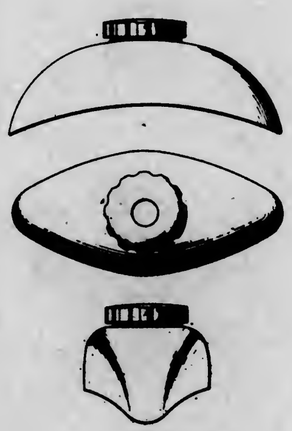
The ornamental design for a transmission case for a tractor as shown.

58,627. GLOVE. EDUARDO PERRONE, Gloversville, N. Y. Filed Feb. 10, 1919. Serial No. 276,237. Term of patent 14 years.



The ornamental design for a glove as shown.

58,628. CAN. ISAAC C. POPPER, New York, N. Y., assignor to The Theros Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1919. Serial No. 344,480. Term of patent 14 years.

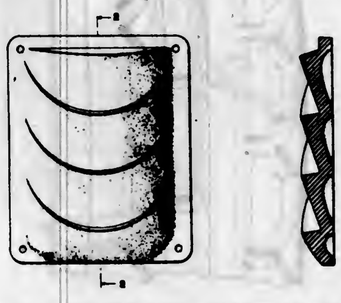


The ornamental design for a can, as shown.

58,629. AUTOMOBILE-TIRE TREAD. JAMES R. KILBY, Dunbar, W. Va., assignor to Dunbar Tire and Rubber Company, Charleston, W. Va., a Corporation of West Virginia. Filed June 26, 1920. Serial No. 392,086. Term of patent 14 years.

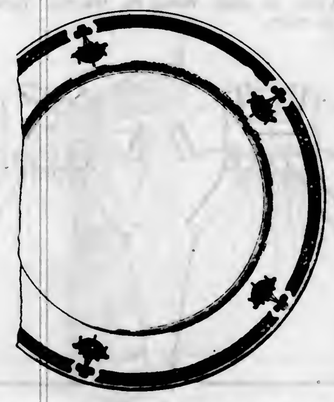
The ornamental design for an automobile tire tread, as shown.

58,630. RADIATOR-FILLING CAP. FLOYD A. BUCKMAN, Fort Wayne, Ind. Filed Feb. 24, 1921. Serial No. 447,620. Term of patent 7 years.



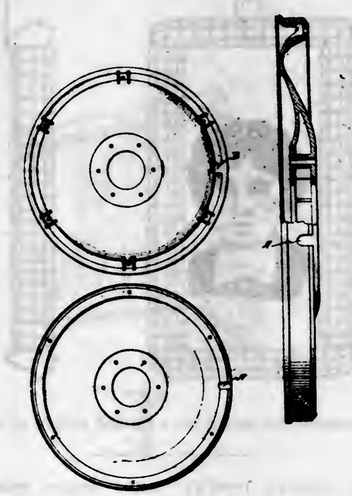
The ornamental design for a radiator filling cap as shown.

58,631. DISPLAY-CARD. SAMUEL SAMPSON, New York, N. Y. Filed Nov. 16, 1020. Serial No. 424,583. Term of patent 3½ years.



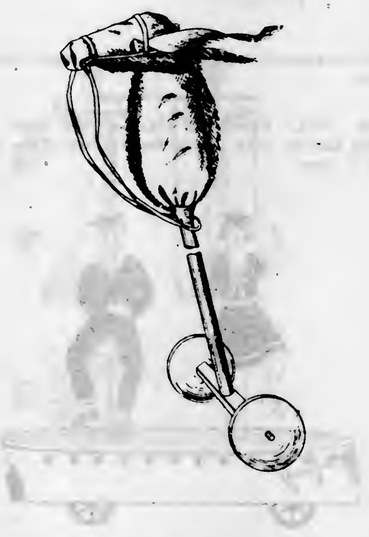
The ornamental design for a display card, as shown.

58,632. HEEL-REST. WALTER E. SANDERS, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 5, 1920. Serial No. 356,409. Term of patent 7 years.



The ornamental design for a heel rest as shown.

58,633. PLATE OR SIMILAR ARTICLE. EMIL L. SCHNEPF, Trenton, N. J., assignor to Maddock Pottery Company, Trenton, N. J. Filed Mar. 9, 1921. Serial No. 450,964. Term of patent 14 years.

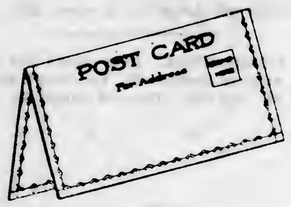


The ornamental design for a plate or similar article, as shown.

58,634. WHEEL-DISK. FRED. C. SCHOENTHAL, Buffalo, N. Y. Filed Apr. 5, 1920. Serial No. 371,496. Term of patent 14 years.

The ornamental design for a wheel disk, as shown.

58,635. HOBBYHORSE. BESS SHINN and LITA SHINN, White Sulphur Springs, W. Va. Filed Mar. 26, 1920. Serial No. 369,161. Term of patent 3½ years.

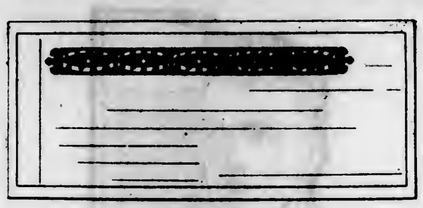


The ornamental design for a hobbyhorse, as shown.

58,636. FRAMED PICTURE. CHARLES SMYKOWSKI, Youngstown, Ohio. Filed June 30, 1920. Serial No. 393,194. Term of patent 3½ years.

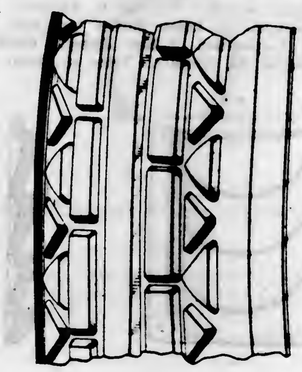
The ornamental design for a framed picture as shown.

58,637. SEALED POSTAL CARD. STEVEN STEFANKO, Glen Carbon, Pa. Filed July 13, 1920. Serial No. 396,025. Term of patent 7 years.



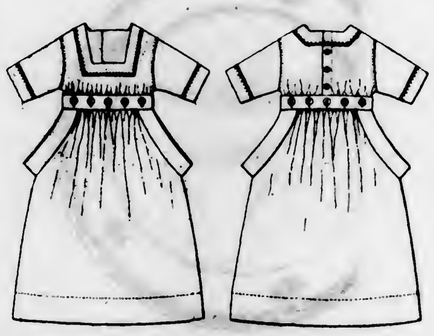
The ornamental design for a "sealed postal card" as shown.

58,638. TOY. FERDINAND STRAUSS, New York, N. Y. Filed May 21, 1921. Serial No. 471,505. Term of patent 7 years.



The ornamental design for a toy, as shown.

58,639. BANK-CHECK. BENJAMIN F. STUART, San Antonio, Tex. Filed Nov. 24, 1919. Serial No. 340,413. Term of patent 3½ years.

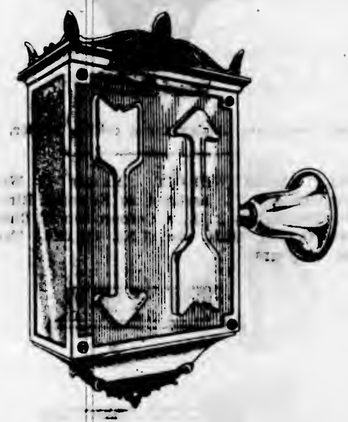


The ornamental design for a bank check, as shown.

58,640. PNEUMATIC-TIRE TREAD. FRANK R. TALBOTT, Springfield, Ohio, assignor to The Victor Rubber Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 27, 1920. Serial No. 433,518. Term of patent 14 years.

The ornamental design for a pneumatic tire tread, as shown.

58,641. DRESS. JUNE RAND TAYLOR, Los Angeles, Calif. Filed Nov. 13, 1920. Serial No. 424,002. Term of patent 3½ years.



The ornamental design for a dress, as shown.

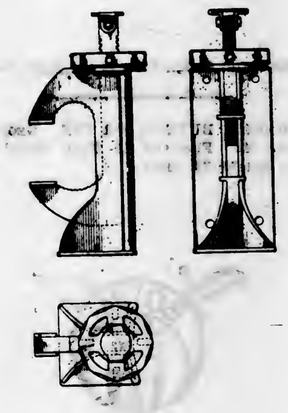
58,642. BUTTON OR BADGE. FRANK A. THILL, Cincinnati, Ohio. Filed Oct. 21, 1920. Serial No. 418,630. Term of patent 7 years.

The ornamental design for a button or badge as shown.

58,643. ELEVATOR-SIGNAL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y. Filed Feb. 16, 1921. Serial No. 445,556. Term of patent 7 years.

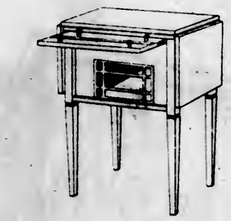
The ornamental design for an elevator signal, as shown.

58,644. ELEVATOR-SIGNAL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y. Filed Feb. 16, 1921. Serial No. 445,557. Term of patent 3½ years.



The ornamental design for an elevator signal as shown.

58,645. ELEVATOR-SIGNAL. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y. Filed Feb. 16, 1921. Serial No. 445,558. Term of patent 7 years.



The ornamental design for an elevator signal as shown

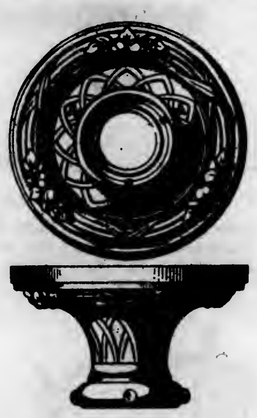
58,646. COMBINATION LIFTING-JACK AND VISE. DANIEL P. NICK, Seattle, Wash. Filed Aug. 10, 1920. Serial No. 402,705. Term of patent 14 years.

The ornamental design for a combination lifting jack and vise as shown.

58,647. PHONOGRAPH-CASE. JOHN M. WADDELL, Greenfield, Ohio. Filed Apr. 2, 1919. Serial No. 287,086. Term of patent 7 years.

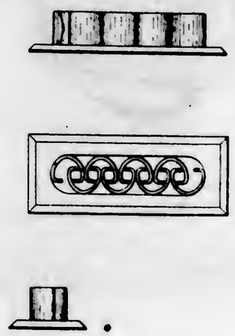
The ornamental design for a phonograph case as shown.

58,648. PHONOGRAPH-CASE. JOHN M. WADDELL, Greenfield, Ohio. Filed Apr. 2, 1919. Serial No. 287,087. Term of patent 7 years.



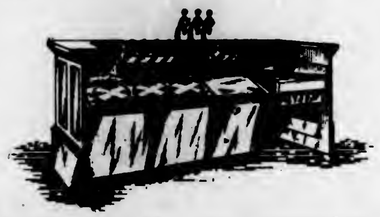
The ornamental design for a phonograph case as shown.

58,649. BADGE, BUTTON, OR PIN. GEORGE WALTER, Baltimore, Md. Filed Oct. 11, 1920. Serial No. 416,327. Term of patent 3½ years.



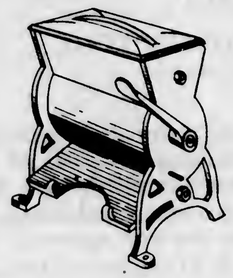
The ornamental design for a badge, button, or pin, as shown.

58,650. CEILING-HOLDER. LESTER R. WELLMAN, Chicago, Ill., assignor to Friedly-Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 22, 1920. Serial No. 432,619. Term of patent 7 years.



The ornamental design for a ceiling holder, as shown.

58,651. PAPER-WEIGHT. PHILIP C. WENTWORTH, Providence, R. I., assignor to National Ring Traveler Co., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 21, 1920. Serial No. 418,628. Term of patent 14 years.

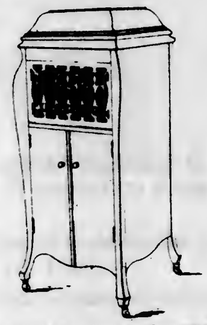


The ornamental design for a paper weight or like article of manufacture as shown.

58,652. SODA-FOUNTAIN. FRANK T. WIECHERT, Lakewood, Ohio. Filed Sept. 22, 1920. Serial No. 412,102. Term of patent 3½ years.

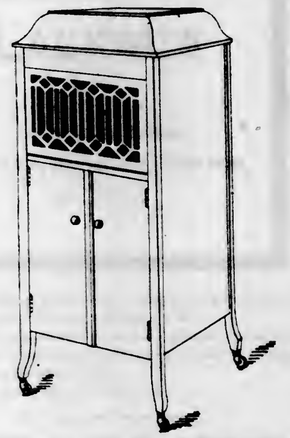
The ornamental design for a soda-fountain, as shown.

58,653. TOOTHPICK-VENDER. MILES WILSON, Canastota, N. Y., assignor to George E. Chambers, Oneida, N. Y. Filed Mar. 8, 1921. Serial No. 450,638. Term of patent 14 years.



The ornamental design for a toothpick vender as shown.

58,654. SIFTER-TOP RECEPTACLE. MORRIS WOLF, New York, N. Y. Filed Dec. 2, 1920. Serial No. 427,910. Term of patent 3½ years.



The ornamental design for a sifter top receptacle, as shown.

58,655. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed May 5, 1920. Serial No. 379,138. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

58,656. PHONOGRAPH-CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora, Inc., a Corporation of New York. Filed May 5, 1920. Serial No. 379,139. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 22, 1922.

[PUBLISHED AUGUST 15, 1922.]

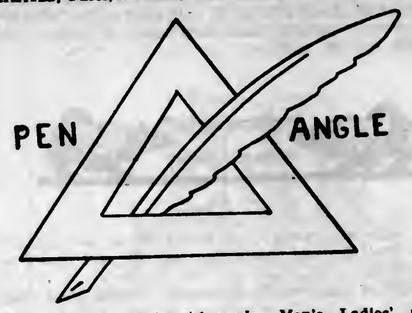
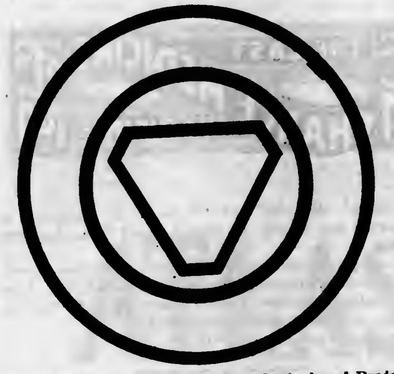
Claims use since about Sept. 1, 1919.



Ser. No. 127,854. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DRUG PRODUCTS CO., INC., New York, N. Y. Filed Feb. 2, 1920.

Particular description of goods.—Alteratives, Analgesics, Anaphrodisiacs, Anesthetics, Anodynes, Antacids, Anthelmintics, Antichlorotics, Anti-Emetics, Anti-Epileptics, Antigalactagogues, Antigonorrheics, Antihidrotics, Antilithics, Antineuralgics, Antiparasitics, Antiperiodics, Antiphlogistics, Antipyretics, Antirheumatics, Antisialagogues, Antispasmodics, Antisymotics, Aperients, Aphrodisiacs, Astringents, Cardiac Sedatives, Cardiac Stimulants, Carminatives, Cathartics, Cerebral Depressants and Stimulants, Cholagogues, Constructives, Counter-Irritants, Demulcents, Deodorants, Deoxidizers, Depilatories, Depressants, Diaphoretics, Digestives, Discutients, Disinfectants, Diuretics, Echolics, Emetics, Emmenagogues, Errhines, Escharotics, Expectorants, Galactagogues, Gastric Tonics, Hemostatics, Hypnotics, Irritants, Laxatives, Motor-Depressants, Motor-Excitants, Mydriatics, Myotics, Narcotics, Nervines, Nutrients, Oxytocics, Ptyalagogues, Purgatives, Pustulants; Refrigerants, (Medicinal;) Resolvents, Respiratory; Depressants, Respiratory; Stimulants, Restoratives, Rubefacients, Sedatives, Sialagogues, Soporifics, Sternutatories; Stimulants, (Cardiac, Cerebral, Hepatic;) Stomachics, Styptics, Sudorifics, Tenifuges, General Tonics, Vasoconstrictors, Vasodilators, Vascular, Sedatives, Vermicides, Vesicants; Chemicals and Drugs—Namely, the Following: Acacia, Acetanilid, Acetone, Acetphenetidin; Acids—Namely, Acetic, Acetic Anhydrid, Glacial Acetic, Acetylsalicylic, Arsenous, Arsenic Trioxid; Benzoic, Boric, Carbolic, Chromic, Citric, Gallic, Hydriodic, Hydrobromic, Hydrochloric, Hydrofluoric, Hypophosphorous, Lactic, Molybdic, Nitric, Nitrohydrochloric, Oleic, Oxalic, Phosphoric, Glacial Phosphoric, Phosphotungstic, Pyrogallic, Salicylic, Stearic, Sulfuric; Sulfuric, Aromatic; Sulfurous, Tannic, Tartaric, Trichloracetic; Aconite-Root, Aconitin Crystals; Allspice (Pimenta) for Medicinal Purposes, Aloes, Aolin, Althea; Aluminum Compounds—Namely, the Following: Alum, Ammonium; Alum, Exsiccated; Alum, Chrome; Alum, Ferric; Aluminum Acetate, Aluminum Nitrate, Aluminum Sulfate; Ammonium and Ammonium Compounds—Namely, Ammonia-Water; Ammonium Benzoate, Bromid, Carbonate, Chlorid, Chromate, Citrate, Hypophosphite, Iodid, Molybdate, Nitrate, Oxalate, Persulfate, Phosphate, Salicylate, Sulfate, Sulfocyanate, Tartrate, Valerate, Amyl Acetate, Amyl Nitrite, Amylopsin, Anise; Antidote Arsenic; Antimony and Potassium Tartrate, Antipyrin, Aqua Ammonia, Arnica-Flowers and Arnica-Root, Aromatized Castor-Oil, Arsenic Iodid, Asbestos-Wool, Aspirin, Atropin, Atropin Sulfate, Baking-Powder, Balsam Peru, Balsam Tolu; Barium Compounds—Namely, Barium Acetate, Carbonate Chlorid, Dioxid, Hydroxid, Nitrate, Sulfate; Belladonna, Bensaldehyde, Benzoin; Bensol, (Benzene;) Benzonaphthol, Betanaphthol, Betanaphthol Benzoate; Bismuth Compounds—Namely, Bismuth Milk; Bismuth Citrate, Nitrate, Oxid, Oxychlorid, Oxyiodid, Subcarbonate, Subgallate, Subnitrate, Subsalicylate; Bismuth and Ammonium Citrate; Bloodroot, Borax, Buchu, Burrow's Solution, Cacao-Butter for Medicinal Purposes, Cadmium Iodid, Cadmium Nitrate, Cadmium and Potassium Iodid, Cadmium Sulfate, Caffein, Caffein Benzoate; Caffein, Citrated; Caffein Hydrobromid, Caffein and Sodium Benzoate, Caffein and Sodium Salicylate; Calcium Compounds—Namely, Calcium Acetate, Bromid, Carbonate, Chlorid, Glycerophosphate, Hypophosphite, Lactate, Lactophosphate, Oxid, Phenolsulfonate, Phosphate, Sulfid; Calendula, Calisaya-Bark, Calomel, Calumba, Camphor; Camphor, Monobromated; Cantharides, Capsicum, Carbon Disulfid, Carbon Tetrachlorid, Cardamom, Cardamom Compound, Cascara Sagrada, Caustic Potash, Caustic Soda, Cerium Oxalate; Chalk, Precipitated; Chamomile, Charcoal; Chloral, Camphorated; Chloral, Hydrated; Chloramin T, Chlorosane, Chlorinated Eucalyptol, Chloroform, Cinchona, Cinchona Compound; Cinchona, Red; Cinchonidin, Cinchonidin Salicylate, Cinchonidin Sulfate, Cinchonin, Cinchonin Sulfate, Cinnamon, Cassia, Cloves, Cobalt Chlorid, Cobalt Nitrate, Cocain and Cocain Salts, Cochineal, Codein and Codein Salts, Colchicin, Cold-Cream, Collodion, Confection Senna, Copper Acetate, Copper Sulfate, Corrosive Sublimate; Creosote, (Wood;) Creosote Carbonate, Cresol, Cubeb, Cudbear, Diacetylmorphin, Diastase from Malt, Diastase from Pancreas, Dichloramin T, Digitalin, Digitalis, Digitoxin, Eriodictyon, Ether; Ether, Acetic; Ethyl Bromid, Ethyl Chlorid, Eucalyptol, Eucalyptus, Eugenol, Fennel, Food Allergens, Foxglove, Gentian, Gentian Compound, Ginger for Medicinal Purposes, Glycerin, Glycerites; Glycyrrhiza, (Licorice-Root;) Gold Chlorid, Gold and Sodium Chlorid, Gualac Resin, Gualacol Carbonate, Gum-Arabic, Gum-Benjamin, Halazone Tablets; Hellebore, American; Hemoglobin, Henbane, Hexamethylenamin, Hydrastin, Hydrastin Hydrochlorid, Hydrogen Peroxid, Hyoscyamus, Hypodermic Tablets, Iodin, Iodoform, Ipecac; Iron and Iron Compounds—Namely, Iron, Reduced; Iron Albuminate, Arsenate, Cacodylate, Carbonate; Carbonate, Saccharated; Chlorid, Ferric; Ferrocyanid, Glycerophosphate, Hydroxid with Magnesium Oxid, Hypophosphite, Lactophosphate; Oxid, Red, Saccharated; Peptonate, Peptonate with Manganese, Phenolsulphate, Phosphate, Pyrophosphate, Subcarbonate, Subsulfate, Sulfate, Iron and Ammonium Citrate, Iron and Ammonium Sulfate, Iron and Ammonium Tartrate, Iron and Manganese Peptonate, Iron and Potassium Tartrate, Iron and Quinin Citrate; Iron, Quinin, and Strychnin Citrates; Iron and Strychnin Citrate, Jalap; Kaolin, Medicinal; Kaolin Poultice, Krameria, Lanolin; Lard, Benzoinated, Laudanum, Lavender Compound, Lead Acetate, Lead Carbonate, Lead Nitrate, Lead Oxid, Lead Peroxid, Leucocyte, Licorice, Lime for Medicinal Purposes; Lime, Chlorinated; Lime, Hydrated; Lime, Sulfureted; Medicinal Liquid Petroleum, Lithia Tablets, Lithium Benzoate, Lithium Bromid, Lithium Carbonate, Lithium Citrate, Lithium Glycerophosphate, Lithium Salicylate, Lithium Tartrate, Litmus-Paper, Lobelia, Lupulin, Mace, Magma Bismuth, Magma Magnesia; Magnesium Compounds — Namely, Magnesia; Magnesium Carbonate, Chlorid, Citrate, Glycerophosphate, Hypophosphite, Phosphate, Salicylate, Sulfate; Magnesium and Ammonium Phosphate; Manganese Compounds—Namely, Manganese Chlorid, Citrate, Dioxid, Glycerophosphate, Hypophosphite, Oxid, Sulfate; Marigold, Matricaria, Menthol; Mercury and Mercury Compounds—Namely, Mercury; Mercury, Ammoniated; Mercury Bromid, Chlorid, Iodid, Oleate, Oxid, Salicylate, Subsulfate, Sulfid, Tannate; Mercury and Ammonium Chlorid, Mercury with Chalk; Methyl Acetate, Methyl Salicylate, Methylthionin, Milk of Bismuth, Milk of Magnesia, Morphin, Morphin Salts, Mustard for Medicinal Purposes, Myrrh, Nickel Nitrate, Nickel Sulphate, Nickel and Ammonium Sulfate, Nutmeg for Medicinal Purposes, Nux Vomica; Oil Betula, Oil Bitter Almond; Oil, Camphorated; Oil, Castor; Oil, Castor, Aromatised; Oil, Cod-Liver; Oil, Ethereal; Oil Peppermint for Medicinal Purposes, Oil Theobroma, Oleoresin Capsicum, Oleoresin Cubeb, Oleoresin Ginger, Oleoresin Male Fern, Ophthalmic Tablets, Opium, Opodeldoc, Orange-Peel for Medicinal Purposes, Ox-Gall, Pancreatin, Paprika for Medicinal Purposes, Paraldehyde, Paregoric, Pareira, Pepper for Medicinal Purposes, Pepsin, Saccharated; Peptone, Peptonising-Powder, Peptonising-Tubes; Petrolatum, Liquid; Phenasone, Phenolphthalein; Phenyl Salicylate, (Salol;) Phenylacetamid; Physostigmin, (Eserin;) Physostigmin Salicylate, Physostigmin Sulfate, Pilocarpin Hydrochlorid; Pilocarpus, (Jaborandi;) Pimenta, Podophyllin; Potassium Compounds—Namely, Potassa, Sulfureted; Potassium Acetate, Benzoate, Bicarbonate, Binoxalate, Bisulfate, Bitartrate, Bromate, Bromid, Carbonate, Chlorate, Chlorid, Chromate, Citrate, Dichromate, Ferricyanid, Ferrocyanid, Glycerophosphate, Hydroxid, Hypophosphite, Iodid, Nitrate, Oxalate, Permanganate, Persulfate, Phenolsulfonate, Phosphate, Sulfate, Sulfid, Sulfocarbolate, Sulfocyanate, Tartrate; Potassium and Sodium Tartrate; Protargentum, Pyrogallol, Quinin; Quinin Salts—Namely, Quinin Bisulfate, Dihydrochlorid, Glycerophosphate, Hydrobromid, Hydrochlorid, Hypophosphite, Phosphate, Salicylate, Sulfate, Tannate, Valerate; Quinin and Urea Hydrochlorid, Rennin, Resin Jalap, Resin Podophyllum, Resin Scammony, Resorcinol, Rhatany, Rhubarb, Saccharin, Salol; Salt, Carlsbad, Artificial; Salt, Kissingen, Artificial; Salt, Vichy, Artificial; Sanguinaria, Santonin, Scopolamin Hydrobromid, Seidlitz-Powder, Senna; Silver, Colloidal; Silver Nitrate, Silver Protein, Sodium Compounds—Namely, Sodium Acetate, Acid Phosphate, Arsenate, Arsenite, Benzoate, Bicarbonate, Biphosphate, Bisulfate, Bisulfite, Bitartrate, Borate, Bromid, Cacodylate, Carbonate, Chlorate, Chlorid, Citrate, Cyanid, Glycerophosphate, Glycerocholate, Hydroxid, Hypophosphite, Iodid, Nitrate, Nitrite, Nitroprussid, Oxalate, Phenolsulfonate, Phosphate, Phosphate Compound, Pyrophosphate, Salicylate, Sulfate, Sulfite, Tartrate, Thiosulfate; Sodium and Ammonium Phosphate; Solargentum, Spartein Sulfate, Squill; Strontium Compounds—Namely, Strontium Acetate, Arsenite, Bromid, Chlorid, Iodid, Lactate, Nitrate, Salicylate; Strophanthin, Strychnin Salts and Compounds, Sugar of Milk, Sulfonethylmethane, Sulfonmethane, Sulfur, Suppositories, Suprarenals, Tartar Emetic, Terpin Hydrate, Theobromin, Theobromin and Sodium Salicylate, Thiosinamin, Thromboplastin, Thymol, Thymol Iodid; Thyroid Gland, Dried; Tin Chlorid, Stannous; Toluol, (Toluene;) Tragacanth, Uranium Acetate and Nitrate, Urease, Valerian, Vanillin, Veratrum Viride, White-Pine Bark, White-Pine Compound, Wild Cherry, Yerba Santa; Zinc Compounds—Namely, Zinc Acetate, Bromid, Carbonate, Chlorid, Iodid, Oxid, Phenolsulfonate, Stearate, Sulfate, Sulfid, Valerate; Biological Products—Namely, the Following: Antitoxins, Serums, Bacterial Vaccins; Smallpox-Virus, Antirabic Vaccin, Leucocyte Extract, Veterinary Products, Ophthalmic Mallein, Mallein Solution. The Above-Mentioned Producas May be in Any One or Another of the Following forms: Ampuls, Crude Drugs, Crystals, Elixirs, Extracts, Gases, Liquids, Lozenges, Mixtures, Ointments, Powders, Serums, Solids, Solutions, Spirits, Syrups, Tablets, Pills, Tinctures, Troches, and Vaccins.

Claims use since Apr. 22, 1919.



Ser. No. 130,059. (CLASS 39. CLOTHING.) PENMANS LIMITED, Paris, Ontario, Canada. Filed Mar. 22, 1920.

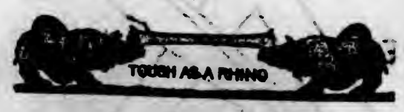
Particular description of goods.—Men's, Ladies', and Children's Knitted Underwear, Hosiery; Sweater and Jersey Coats.

Claims use since Mar. 25, 1903.

Ser. No. 131,252. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) BAUSCH & LOMB OPTICAL CO., Rochester, N. Y. Filed Apr. 17, 1920.

Particular description of goods.—Optical and Projection Lenses, Mangin Mirrors, Magnifying-Glasses, Optical Prisms, Searchlight-Mirrors, Condensers, (Optical;) Lens-Barrels, Lens-Mounts, Microscopes and Parts and Repairs Therefor, Microscope-Micrometers, Microtomes, Range-Finders, Field-Glasses, Opera-Glasses, Telescopes, Transits, Levels, Sextants, Projection Apparatus Consisting of Stereopticons, Magic Lanterns and Screens and Parts and Repairs Therefor, Transit-Micrometers, Photographic Ray-Filters, Photographic Shutters, Photomicrographic Cameras, Alidades and Theodolites, Gun Sights, Centrifugal Machines or Centrifuges Used for Scientific Analysis and Laboratory-Incubators.

Claims use since Jan. 9, 1909.



Ser. No. 131,840. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) UNITED BELT MANUFACTURING COMPANY, St. Louis, Mo. Filed Apr. 29, 1920.

ROYAL STAG

Particular description of goods.—Leather Belting.

Claims use since Apr. 23, 1919.

Ser. No. 131,860. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) CUPPLES COMPANY MANUFACTURERS, St. Louis, Mo. Filed Apr. 30, 1920.

No claim being made to the words "Tough as a Rhino" and to the tubes and tires apart from the mark shown in the drawing.

Particular description of goods.—Rubber Tires and Tubes.

Claims use since on or about Sept. 25, 1916.

Ser. No. 132,533. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CUMBERLAND F. JONES, Chicago, Ill. Filed May 17, 1920.

The words "Medicine" and "Trade Mark" appearing on the drawing are hereby disclaimed apart from the mark as shown.

Particular description of goods.—For Medicine—to wit, Blood Medicine, Kidney Medicine, Cough Medicine, Pain-Killer, Bladder Medicine, Female Tonic, Laxative for Constipation, Asthma Medicine, Dyspepsia.

Claims use since Jan. 1, 1917.

Ser. No. 133,759. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) WALTER M. LEVY, New York, N. Y. Filed June 15, 1920.

VA-KNIT-IE

Consisting of the word "Va-Knit-Ie."

Particular description of goods.—Jersey Cloth in the Piece.

Claims use since May 25, 1920.

Ser. No. 133,759. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) LINDON W. BATES, Mount Lebanon, N. Y. Filed June 16, 1920.

COLLOIDAL

Particular description of goods.—A Stable Mobile Fuel Comprising an Admixture of Liquid Hydrocarbon and Pulverized Solid Carbonaceous Substances.

Claims use since Sept. 25, 1919.

Ser. No. 133,830. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) LAMBORN & CO., New York, N. Y. Filed June 17, 1920.

Particular description of goods.—Belting Made from Canvas, Treated Canvas, or Leather.

Claims use since December, 1918.

Ser. No. 134,113. (CLASS 43. THREAD AND YARN.) CARAVEL COMPANY, INC., New York, N. Y. Filed June 24, 1920.

Particular description of goods.—Cotton, Wool, Linen, Silk, Artificial Silk, Ramie, Vegetable, and Fiber Thread, Spool-Thread, Yarn, Crochet and Knitting Thread, Floss, Skein-Yarn, Mercerized or Otherwise Processed Yarn, and Textile Thread.

Claims use since about June 8, 1918.

Ser. No. 134,291. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) MARCUS PEYTON ANDREWS, Richmond, Va. Filed June 28, 1920.

A. S. B.

Particular description of goods.—Brooms Specifically Adapted for Applying Stucco.

Claims use since June 8, 1920.

Ser. No. 134,762. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE TURNER MANUFACTURING CO., Port Washington, Wis. Filed July 9, 1920. Under ten-year proviso.

Simplicity

Particular description of goods.—Internal-Combustion Engines.

Claims use since first part of August, 1889.

Ser. No. 134,876. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) BASTIAN-MORLEY CO., La Porte, Ind. Filed July 13, 1920.

THE ROYAL

Particular description of goods.—Gas Water-Heaters.

Claims use since Oct. 8, 1915.

Ser. No. 134,895. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) HAYWOOD TIRE & EQUIPMENT COMPANY, Marion, Ind. Filed July 13, 1920.

TIRE SURGERY

Particular description of goods.—Tire-Repair Equipment, Consisting of Retreading-Molds, Sectional Repair-Molds, Relining-Molds, Side-Wall Molds, Tube-Repairing Molds, Clamps.

Claims use since August, 1918.

Ser. No. 135,384. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SUPERIOR LAMP MFG. CO., New York, N. Y. Filed July 24, 1920.

Exclusive right to the use of the word "Products" is hereby disclaimed.

Particular description of goods.—Electric Lamps, Battery-Boxes, Electrically-Operated Warning-Signals and Horns, and Electrical Searchlights and Spotlights.

Claims use since Nov. 7, 1919.

Ser. No. 136,366. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) EASTERBROOK ALLCARD & CO. LIMITED, Sheffield, England. Filed Aug. 23, 1920.

Particular description of goods.—Twist-Drills for Use in Machines; Milling-Cutters; Shear-Blades; Reamers; Vises; Screwing Stocks, Taps, and Dies; Files; Saws; Cold-Chisels; Tool-Bits; Die-Nuts; Bitstock-Drills; Spanners and Spanner-Wrenches; Pipe-Wrenches; Tube-Expanders; Twist-Drills for Use in Ratchets; Ratchet Braces and Bits and Drills for Use in Ratchet-Braces; Rail-Benders; Hammers.

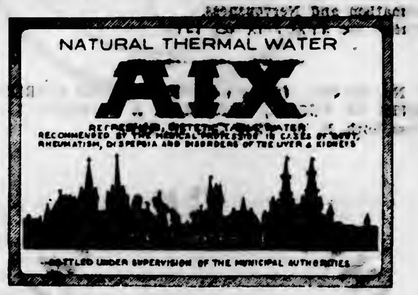
Claims use since July 27, 1917.

Ser. No. 136,468. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARLO O. FAUDA, San Francisco, Calif. Filed Aug. 25, 1920.

The words, "Medicinal Specialties" and "Technical & Pharmaceutical Chemist" are disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Preparations for the Treatment of Coughs; Saline Salts, Consisting of a Saline Concentration in a Crystalline Form for Use as a Laxative; Cod-Liver-Oil Preparations; Liniments for External Use in the Treatment of Burns, Bruises, Cuts, Scalds, and the Like; Iron Tonics; Corn and Wart Remedies; Preparations for the Treatment of Colds, Bronchial and Pulmonary Affections, Worm Remedies, and Intestinal Antiseptics.

Claims use since Apr. 3, 1920.



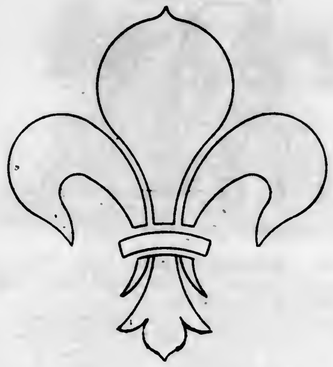
Ser. No. 136,926. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ATLAS MFG. CO., Los Angeles, Calif. Filed Sept. 8, 1920.

ATLAS

Particular description of goods.—Water-Circulating Pumps for Internal-Combustion Engines.

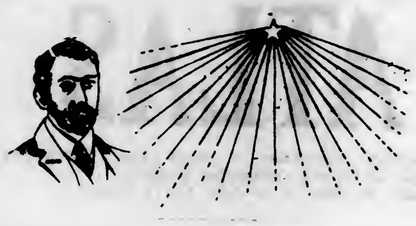
Claims use since on or about July 1, 1916.

Ser. No. 137,060. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) AACHENER THERMALWASSER, KAISERBRUNNEN AKTIENGESELLSCHAFT, Aachen, Germany. Filed Sept. 11, 1920.



The lining in the borders to letters and design being for shading only, no claim being made to the exclusive use of any of the words excepting the word "Aix" apart from the mark shown in the drawing.

Particular description of goods.—Natural Aachener Thermal Water for Table and Hygienic Use.



Claims use since June 5, 1909.

Ser. No. 137,286. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THORVALD G. LAURITSEN, Lynn, Mass. Filed Sept. 17, 1920.

Particular description of goods.—Flavor Used in Browning Any Food, such as Gravy, Soup, or the Like.
Claims use since Aug. 3, 1920.

Ser. No. 137,288. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REUBEN H. MACDONALD, Binghamton, N. Y. Filed Sept. 17, 1920.

The picture being a bust portrait of the applicant.
Particular description of goods.—A Remedy for Stomach, Kidney, Liver, Bladder, and Blood Troubles and Rheumatism and Nervousness.
Claims use since June 30, 1920.

Ser. No. 138,258. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KOELLISCH & FORTMANN, INC., New York, N. Y. Filed Oct. 13, 1920.

WHITE CRYSTAL

Particular description of goods.—Pickled, Dried, Salted, Smoked, and Canned Fish.
Claims use since 1915.

Ser. No. 138,320. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JINSHICHI KATO, Kyoto, Japan. Filed Oct. 15, 1920.

MAGNESIN

Particular description of goods.—Prepared Medicine—vis., Injection, Pills, Liquid Medicines, Powdered Medicines, Tablets, Plasters, and Suppositories for the Treatment of Hemorrhoids and Its Complications—Namely, Prolapsus and Fissures, Angioma, Varix, and Inflammation of the Nose.
Claims use since November, 1919.

Ser. No. 138,480. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) PACIFIC ALUMINUM COMPANY, Fresno, Calif. Filed Oct. 19, 1920.

"LUSTRO"

Particular description of goods.—Aluminum Cooking Utensils Consisting of Teakettles, Saucepans, Rice-Cookers, Covered Kettles, Preserving Kettles, Pie-Plates, Pudding-Pans, Muffin-Pans, Skillets, Griddles.
Claims use since Aug. 1, 1920.

Ser. No. 138,693. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUGAR PRODUCTS CO., New York, N. Y. Filed Oct. 22, 1920.

Oldtyme
OPEN KETTLE
MOLASSES

No claim being made to the exclusive use of the words "Oldtyme Open Kettle Molasses."
Particular description of goods.—Molasses.
Claims use since Oct. 1, 1920.

Ser. No. 138,752. (CLASS 17. TOBACCO PRODUCTS.) HENRY CLAY AND BOCK & CO. LTD., New York, N. Y. Filed Oct. 25, 1920.

LA ESPAÑOLA
FUEYO Y CA
HABANA

No claim is made to the word "Habana" apart from the mark shown in the drawing.
Particular description of goods.—Cigars.
Claims use since 1843.

Ser. No. 139,081. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPHINE CHOCOLATES LIMITED, London, England. Filed Nov. 2, 1920.

JOSEPHINE

Particular description of goods.—Chocolate.
Claims use since May 31, 1918.

Ser. No. 139,286. (CLASS 39. CLOTHING.) KAHN TAILORING COMPANY, Indianapolis, Ind. Filed Nov. 6, 1920.

The Kind of Clothes
KAHN
MADE TO MEASURE
CLOTHES
Gentlemen Wear

Applicant disclaims the exclusive right to the use of the phrase "Made to Measure" and the word "Clothes" apart from the mark shown on the drawing. Applicant also disclaims the exclusive right of the phrase "The Kind of Clothes Gentlemen Wear" under the act of 1905 apart from the mark shown in the drawing without, however, surrendering any right thereto which may be applicant's under the provisions of the act of Mar. 19, 1920.
Particular description of goods.—Men's Clothes Comprising Coats, Vests, and Trousers.
Claims use since Aug. 1, 1916.

Ser. No. 139,777. (CLASS 43. THREAD AND YARN.) ABRAHAM HYMES, New York, N. Y. Filed Nov. 17, 1920.

Y-D-C

Particular description of goods.—Yarns.
Claims use since October, 1920.

Ser. No. 139,973. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) IROKESE TRADING CORPORATION, New York, N. Y. Filed Nov. 22, 1920.

Particular description of goods.—Rubber, Composition, Textile, Celluloid, Wooden, Paper, and Metal Toys—to wit, Horns, Trumpets, Tops, Rattles, Skates, Marbles, Carts, Animals, Boxed Sets of Toy Building-Blocks, Toy Implements for Use in Toy Building Construction, Toy Forms for Use in Toy Building Construction; Toy Building Materials, Such as Small Bags of Cement and the Like, and Boxed Sets of any Combination of Toy Building-Blocks, Toy Implements, Toy Forms, and Toy Materials for Use in Toy Building Construction; Dolls, Sleds, Rubber and Pyroxylin Balls, Floating Figures, Tenpins, Bowling Sets, Bagatelle, Children's Velocipedes, and Toy Coaster-Wagons.
Claims use since Nov. 11, 1920.

Ser. No. 140,218. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A/S Trondhjem Canning and Export Co., Buran, Trondhjem, Norway. Filed Nov. 26, 1920.

No claim is made for the word "Trondhjem" apart from the mark shown.

Particular description of goods.—Canned Fish.

Claims use since July, 1916.

Ser. No. 140,241. (CLASS 47. WINES.) Alsace Lorraine Development and Trading Company Limited, London, England. Filed Nov. 27, 1920.

No claim being made to the exclusive use of the words "French Rhine Wine from Alsace," the picture being fanciful.

Particular description of goods.—Rhine Wine.

Claims use since March, 1920.

Ser. No. 140,381. (CLASS 6. CHEMICALS, MEDICINES AND PHARMACEUTICAL PREPARATIONS.) Henry Bach, Akron, Ohio. Filed Dec. 13, 1920.

Particular description of goods.—Hair-Tonics, Massage-Creams, Shampoos, and Barbers' Medicated Waters.

Claims use since July 15, 1920.

Ser. No. 141,009. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Glasgow Meat Pie Company, Salt Lake City, Utah. Filed Dec. 13, 1920.

The applicant hereby disclaims the words "Meat Pies." Applicant hereby disclaims the use of the word "Glasgow" apart from the other features of the mark.

Particular description of goods.—Meat Pies.

Claims use since Nov. 1, 1920.

Ser. No. 141,046. (CLASS 17. TOBACCO PRODUCTS.) "Turmac" Turkish-Macedonian Tobacco Company, Arnhem, Netherlands. Filed Dec. 13, 1920.

LA QUINTESSENCE DE L'ORIENT

Particular description of goods.—Leaf Tobacco, Smoking and Chewing Tobacco, Plug Tobacco, Tobacco for Snuffing, Cigarettes, Cigars, Cheroots, and Cigar-Binders.

Claims use since July 1, 1920.

Ser. No. 141,117. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Kenyon & Knap Limited, Rochdale, England. Filed Dec. 16, 1920.

THE MEDICO

Particular description of goods.—Flannel, (in the Piece,) Woollen Cloths, (in the Piece,) Hair Cloths and Hair Fabrics, (in the Piece,) and Wool, Worsted, or Hair Cloth, (in the Piece.)

Claims use since Sept. 26, 1911.

Ser. No. 141,128. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) The Pearl Coffee Company, Akron, Ohio. Filed Dec. 15, 1920.

We disclaim the use of the word "Brand," as part of the trade-mark sought to be registered.

Particular description of goods.—Coffee.

Claims use since on or about Jan. 1, 1915.

Ser. No. 141,648. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Orlando Citrus Growers Association, Orlando, Fla. Filed Dec. 29, 1920.

The lining on the drawing merely expressing shading.

Particular description of goods.—Fresh Citrus Fruits—viz., Oranges, Grapefruit, and Tangerines.

Claims use since Nov. 5, 1920.

Ser. No. 141,675. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) W. Jay Ennisson, New York, N. Y. Filed Dec. 30, 1920.

KID-DAD

Particular description of goods.—Parlor Baseball Games.

Claims use since March, 1920.

Ser. No. 141,691. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Riessner, Chocolate Co., San Francisco, Calif. Filed Dec. 30, 1920.

Particular description of goods.—Chocolate Candies.

Claims use since May 24, 1920.

Ser. No. 141,703. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Thomas-Body Company, San Francisco, Calif. Filed Dec. 30, 1920.

Particular description of goods.—Canned Fruits and Vegetables.

Claims use since May 15, 1920.

Ser. No. 141,811. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) The Sky Roll Company, Fort Wayne, Ind. Filed Jan. 3, 1921.

SKY-ROLL

Particular description of goods.—Perforated-Disk-Throwing Games.

Claims use since June, 1920.

Ser. No. 141,847. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Vincennes Candy Co., Inc., Vincennes, Ind. Filed Jan. 4, 1921.

Particular description of goods.—Chocolate Creams.

Claims use since Nov. 8, 1920.

Ser. No. 141,896. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) GEORGE BORGFELDT & Co., New York, N. Y. Filed Jan. 6, 1921.

COM-A-LONG

Particular description of goods.—Dolls.
Claims use since Dec. 22, 1920.

Ladyfaire

Particular description of goods.—Cotton Piece Goods.
Claims use since about June, 1919.

Ser. No. 146,201. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. N. BROWN & SON, Drill, Va. Filed Apr. 15, 1921.

J. N. Brown & Son

Being in the characteristic handwriting of John N. Brown, a member of the firm.
Particular description of goods.—A Medicine Used in the Treatment of Rheumatism, Swollen Joints, Sore Throat, Bruises, Neuralgia.
Claims use since Jan. 1, 1917.

Ser. No. 146,202. (CLASS 39. CLOTHING.) THE COUTER SHOE CO., Lynn, Mass. Filed Apr. 15, 1921.

FORMATIVE

Particular description of goods.—Shoes Made Wholly or in Part of Leather.
Claims use since Mar. 30, 1921.

Ser. No. 146,210. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE G. C. GOODE COMPANY, Cleveland, Ohio. Filed Apr. 15, 1921.

SUPERSPEED

Particular description of goods.—Various Cutting-Tools, Particularly Milling-Cutters, Lathe-Bits, Drills, and Reamers Made of High-Speed Steel.
Claims use since Oct. 1, 1920.

Ser. No. 146,221. (CLASS 39. CLOTHING.) R. H. MACY & CO., INC., New York, N. Y. Filed Apr. 15, 1921.

HAPPY HOUR

Particular description of goods.—Aprons.
Claims use since Mar. 26, 1921.

Ser. No. 146,223. (CLASS 39. CLOTHING.) MAY EVELYN HAT CO., New York, N. Y. Filed Apr. 15, 1921.

MAY EVELYN

Particular description of goods.—Hats for Girls.
Claims use since Feb. 24, 1921.

Ser. No. 146,235. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LINCOLN L. REILLY, Foxboro, Mass. Filed Apr. 15, 1921.

FAM-O

Particular description of goods.—Liquid Compound for Eliminating Carbon and Increasing Power in Gas-Engines.
Claims use since July, 1920.

Ser. No. 146,256. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DYNAMIC CHEMICAL CO., Buffalo, N. Y. Filed Apr. 16, 1921.

SHURFLO

Particular description of goods.—Solvents for Waste and Sewer Pipes.
Claims use since Sept. 20, 1919.

Ser. No. 146,274. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STANDARD OIL COMPANY, New York, N. Y. Filed Apr. 16, 1921.

Fractol

Particular description of goods.—Petroleum Ether.
Claims use since Mar. 30, 1921.

Ser. No. 146,299. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) DIAMOND AUTO PARTS CORPORATION, Brooklyn, N. Y. Filed Apr. 18, 1921.

DIAMOND

Particular description of goods.—Automobile-Jacks.
Claims use since Jan. 1, 1921.

Ser. No. 146,302. (CLASS 39. CLOTHING.) EDMONDS SHOE COMPANY, Milwaukee, Wis. Filed Apr. 18, 1921.

HARRY

Particular description of goods.—Leather Shoes.
Claims use since Jan. 11, 1921.

Ser. No. 146,303. (CLASS 39. CLOTHING.) EDMONDS SHOE COMPANY, Milwaukee, Wis. Filed Apr. 18, 1921.

TOM

Particular description of goods.—Leather Shoes.
Claims use since Jan. 11, 1921.

Ser. No. 146,304. (CLASS 39. CLOTHING.) EDMONDS SHOE COMPANY, Milwaukee, Wis. Filed Apr. 18, 1921.

DICK

Particular description of goods.—Leather Shoes.
Claims use since Jan. 11, 1921.

Ser. No. 146,319. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INTERNATIONAL CONSOLIDATED CHEMICAL CORPORATION, INC., New York, N. Y. Filed Apr. 18, 1921.

Kijja

Particular description of goods.—Face-Lotions.
Claims use since Mar. 2, 1921.

Ser. No. 146,326. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUKE P. MCGUIRE, Baltimore, Md. Filed Apr. 18, 1921.

DESTROYER

Particular description of goods.—Insect-Exterminator.
Claims use since Feb. 2, 1921.

Ser. No. 146,328. (CLASS 39. CLOTHING.) OUTING SHOE COMPANY, Boston, Mass. Filed Apr. 18, 1921.

Meadow-Brook

Particular description of goods.—Cloth Shoes and Slippers.
Claims use since Apr. 8, 1921.

Ser. No. 146,341. (CLASS 39. CLOTHING.) TOWLE & SURRIDGE, Lynn, Mass. Filed Apr. 18, 1921.

THORO-SHOD

Particular description of goods.—Infants' and Children's Boots and Shoes Made Wholly or in Part of Leather and Cloth.
Claims use since Jan. 1, 1921.

Ser. No. 146,344. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ERNEST M. WHITE, Los Angeles, Calif. Filed Apr. 18, 1921.

PERFECTOR

Particular description of goods.—Lubricant-Deflecting Devices for Use in Connection with Internal-Combustion Engines.
Claims use since Apr. 5, 1918.

Ser. No. 146,354. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRIET HUBBARD AYER, New York, N. Y. Filed Apr. 19, 1921.

200

Particular description of goods.—Powder and Rouge Compacts.
Claims use since June 1, 1916.

Ser. No. 146,356. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRIET HUBBARD AYER, New York, N. Y. Filed Apr. 19, 1921.

300

Particular description of goods.—Powder and Rouge Compacts.
Claims use since June 1, 1916.

Ser. No. 146,358. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRIET HUBBARD AYER, New York, N. Y. Filed Apr. 19, 1921.

400

Particular description of goods.—Powder and Rouge Compacts.
Claims use since June 1, 1916.

Ser. No. 146,360. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRIET HUBBARD AYER, New York, N. Y. Filed Apr. 19, 1921.

500

Particular description of goods.—Powder and Rouge Compacts.
Claims use since June 1, 1916.

Ser. No. 146,362. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRIET HUBBARD AYER, New York, N. Y. Filed Apr. 19, 1921.

600

The drawing is lined to indicate shading only.
Particular description of goods.—Powder and Rouge Compacts.
Claims use since June 1, 1916.

Ser. No. 146,421. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) F. R. ARNOLD & CO., New York, N. Y. Filed Apr. 20, 1921.

DORINDOR

Particular description of goods.—Compact Powder and Rouge.
Claims use since Mar. 9, 1921.

Ser. No. 146,429. (CLASS 39. CLOTHING.) GOLDBERG & ROSENBLATT, New York, N. Y. Filed Apr. 20, 1921.

MIGNONETTE

Particular description of goods.—Waists, Overblouses, Sport-Coats, and Skirts.
Claims use since Mar. 15, 1921.

Ser. No. 146,465. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELIZA A. ROBINSON, Fort Wayne, Ind. Filed Apr. 20, 1921.

Mrs. Eliza A. Robinson

Particular description of goods.—Medicine for Coughs.
Claims use since Aug. 19, 1920.

Ser. No. 146,681. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE ACME SHEAR COMPANY, Bridgeport, Conn. Filed Apr. 25, 1921.

"THE LITTLE FAIRY"

Particular description of goods.—Scissors and Shears.
Claims use since on or about Mar. 3, 1921.

Ser. No. 146,771. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) INGERSOLL-RAND COMPANY, Jersey City, N. J., and New York, N. Y. Filed Apr. 26, 1921.

LITTLE DAVID

Particular description of goods.—Pneumatic Hammers, Pneumatic Drills, Pneumatic Saws, Pneumatic Motors, Pneumatic Sand-Rammers, Riveting-Hammers, Chipping-Hammers, Scaling-Hammers, Calking-Hammers, Calking-Machines, Coal-Picks, Core-Breakers, Rivet-Holders-On, Jam-Riveters, Riveting-Hammer Handles, Fluid-Operated Rotary Drills, Fluid-Operated Grinders, Close-Quarter Drills, Fluid-Operated Wood-Boring Machines, Drift-Bolt Drivers, Grease-Guns, Fluid-Operated Motor-Hoists, and Component Parts of and Repair Parts for All of Said Devices.
Claims use since Apr. 7, 1911.

Ser. No. 146,851. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) EMIL SCHWARZ, Chicago, Ill. Filed Apr. 27, 1921.

"ALL-IN-ONE"

Particular description of goods.—Wrenches.
Claims use since Mar. 8, 1921.

Ser. No. 146,858. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AMERICAN PIANO COMPANY, Jersey City, N. J., and New York, N. Y. Filed Apr. 28, 1921.

Chickering

Under section 9, act of March 19, 1920.
Particular description of goods.—Musical Instruments, Particularly Pianos, Player-Pianos, and Parts Thereof.
Claims use since 1823.

Ser. No. 146,859. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AMERICAN PIANO COMPANY, Jersey City, N. J., and New York, N. Y. Filed Apr. 28, 1921.

Knabe

Under section 9 of act of Mar. 19, 1920.
Particular description of goods.—Musical Instruments, Particularly Pianos, Player-Pianos, and Parts Thereof.
Claims use since about 1838.

Ser. No. 146,883. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Transmission-Disks, Grips, Mallets Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,884. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Vehicle-Tires, Reliners, Outside Tire-Sleeves, Repair-Patches, Packing, Rim-Filler Strips, Inner Tubes, Inside Tire-Sleeves, Repair Fabrics, Hose and Tubing, Belts and Belting, Brake-Lining, Valve-Bases, Flaps, All Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,890. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Transmission-Disks, Grips, Mallets Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,891. (CLASS 35. (BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Vehicle-Tires, Reliners, Outside Tire-Sleeves, Repair-Patches, Packing, Rim-Filler Strips, Inner Tubes, Inside Tire-Sleeves, Repair Fabrics, Hose and Tubing, Belts and Belting, Brake-Lining, Valve-Bases, Flaps, All Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,897. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Transmission-Disks, Grips, Mallets Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,898. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE FEDERAL RUBBER COMPANY, Cudahy, Wis. Filed Apr. 28, 1921.

FEDERAL

Particular description of goods.—Vehicle-Tires, Reliners, Outside Tire-Sleeves, Repair-Patches, Packing, Rim-Filler Strips, Inner Tubes, Inside Tire-Sleeves, Repair Fabrics, Hose and Tubing, Belts and Belting, Brake-Lining, Valve-Bases, Flaps, All Made Wholly or Partly of Rubber.
Claims use since Jan. 1, 1910.

Ser. No. 146,961. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) RALEIGH SMOKELESS FUEL COMPANY, Beckley, W. Va. Filed Apr. 29, 1921.

RALECO

Particular description of goods.—Bituminous Coal.
Claims use since Apr. 25, 1921.

Ser. No. 147,083. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GEO. H. ADAMS CO., Waltham, Mass., and Hill, N. H. Filed May 2, 1921.

Consisting in a golden or copper colored area applied to a latch-needle, and the butt of the needle is lined on the drawing to represent such color. The representation of a latch-needle forms no part of the trade-mark.

Ser. No. 147,226. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) YORK MFG. CO., Saco, Me., and Boston, Mass. Filed May 4, 1921.

Yovex

The word "Yovex" is stamped in black, outlined in gold—that is the letters are filled in in black and outlined in gold or in gold and blue.
Particular description of goods.—Gingham in the Piece.
Claims use since Jan. 1, 1921.

Ser. No. 147,242. (CLASS 43. THREAD AND YARN.) HOME WOOLEN MILLS, Eaton Rapids, Mich. Filed May 5, 1921.

"HOMEWOOL"

Particular description of goods.—Yarns.
Claims use since Oct. 14, 1920.

Ser. No. 147,522. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) LIGHTNING SALES CORPORATION, New York, N. Y. Filed May 10, 1921.

LIGHTNING

Particular description of goods.—Demountable Wheel-Rims.
Claims use since on or about May 1, 1919.

Ser. No. 147,612. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Sulphon Azurin

Particular description of goods.—Dyes and Dyestuffs.
Claims use since August, 1889.

Ser. No. 147,613. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Benzo Brown

Particular description of goods.—Dyes and Dyestuffs.
Claims use since January, 1888.

Ser. No. 147,614. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Benzo Black Blue

Particular description of goods.—Dyes and Dyestuffs.
Claims use since July, 1888.

Ser. No. 147,615. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Thiazole Yellow

Particular description of goods.—Dyes and Dyestuffs.
Claims use since November, 1889.

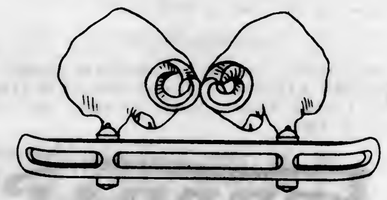
Ser. No. 147,616. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Benzo Grey

Particular description of goods.—Dyes and Dyestuffs.
Claims use since October, 1890.

Ser. No. 147,617. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Benzo Black



Particular description of goods.—Dyes and Dyestuffs.
Claims use since October, 1890.

Ser. No. 147,618. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed May 12, 1921. Under ten-year proviso.

Azofuchsin

Particular description of goods.—Dyes and Dyestuffs.
Claims use since December, 1890.

Ser. No. 147,641. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) RAMSPRING BUMPER CO., Chicago, Ill. Filed May 12, 1921.

The specific representation of the goods and the words "The Coils Absorb the Shock" being disclaimed apart from the trade-mark as shown.
Particular description of goods.—Automobile-Bumpers.
Claims use since Apr. 15, 1921.

Ser. No. 148,473. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. S. YOUNG & COMPANY, Hanover, Pa. Filed May 31, 1921.

RTX

Particular description of goods.—Tanning Extracts.
Claims use since on or about Aug. 10, 1920.

Ser. No. 148,474. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. S. YOUNG & COMPANY, Hanover, Pa. Filed May 31, 1921.

R T

Particular description of goods.—Tanning Extracts.
Claims use since on or about Jan. 8, 1921.

Ser. No. 148,512. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SETH OWEN, Mansfield, Wash. Filed June 1, 1921.

Consisting of my portrait.
Particular description of goods.—A Preparation for Treatment of Colic and Impaction in Horses.
Claims use since Feb. 15, 1921.

Ser. No. 148,675. (CLASS 15. OILS AND GREASES.) STANDARD OIL COMPANY, Bayonne, N. J., and New York, N. Y. Filed June 4, 1921.

Frutol

Particular description of goods.—A White Mineral Oil.
Claims use since May 23, 1921.

Ser. No. 148,936. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) ALFRED C. GAUNT, Methuen, Mass. Filed June 10, 1921.

Travel-Tex

Particular description of goods.—Woolen and Worsted Cloth in Piece Goods for Men's, Women's, and Children's Wear.
Claims use since Sept. 10, 1920.

Ser. No. 149,001. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY'S SONS CO. INC., New York, N. Y. Filed June 11, 1921.

SAMSONET

Particular description of goods.—Hair-Nets.
Claims use since Feb. 15, 1921.

Ser. No. 149,017. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) J. A. MIGEL INC., New York, N. Y. Filed June 11, 1921.

MAID-O-MIST

Particular description of goods.—Silk Goods in the Piece.
Claims use since Mar. 18, 1921.

Ser. No. 149,021. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE NATIONAL STEEL PRODUCTS COMPANY, Dayton, Ohio. Filed June 11, 1921.

SHOCKEZER

Particular description of goods.—Shock-Absorbers for Vehicles.
Claims use since June 1, 1921.

Ser. No. 149,115. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMOSKEAG MANUFACTURING COMPANY, Manchester, N. H. Filed June 14, 1921.

TACUNA

Particular description of goods.—Cotton Piece Goods.
Claims use since Mar. 1, 1917.

Ser. No. 149,405. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LOUIS C. KIEHLE, Baltimore, Md. Filed June 20, 1921.

PUTINGAS

Particular description of goods.—A Combustible Oil for Intensifying Liquid Fuel Used in Internal-Combustion Engines.
Claims use since on or about Apr. 1, 1921.

Ser. No. 149,407. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE KOLYNOS COMPANY, New Haven, Conn. Filed June 20, 1921.

KOLYNOS

Particular description of goods.—Tooth-Pastes, Antiseptic Solution, and Germicidal Disinfectant.
Claims use since Feb. 12, 1908, for tooth-paste; since Nov. 29, 1909, for antiseptic solution and germicidal disinfectant.

Particular description of goods.—A Remedy for La Grippe and Colds.
Claims use since June, 1903.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

LATTIG AND GOODRUM *v.* ANDERSON.

Decided December 24, 1919.

1. PATENTS—INTERFERENCE—REDUCTION TO PRACTICE—EFFECT OF DELAY IN FILING APPLICATION.

Delay in filing an application for patent, other than where there has been such a concealment or suppression as is referred to in *Mason* v. *Hepburn*, (C. D., 1898, 510; 84 O. G., 147; 31 App. D. C., 86,) is material only in determining whether what is alleged to be a reduction to practice is anything more than an inconclusive experiment, and where the delay is satisfactorily explained it raises no unfavorable presumption.

2. SAME—SAME—EVIDENCE OF SUCCESSFUL TEST—OBJECTIONS TO PRACTICABILITY.

Reports of a test of an automatic telephone system stating that the system was more expensive than other systems that might be adopted, that its system of trunking was not adapted to large exchanges, and that there was a certain inherent difficulty about the metering system does not contradict or weaken the testimony of a witness who signed the report and the testimony of other witnesses that the test was successful.

APPEAL from Examiners-in-Chief.

TELEPHONE-EXCHANGE SYSTEM.

Mr. De Witt C. Tanner, *Mr. John G. Roberts*, and *Mr. Charles P. Soper* for Lattig and Goodrum.

Messrs. Bulkley & Swenarton and *Mr. E. D. Fales* for Anderson.

WHITEHEAD, *First Assistant Commissioner:*

Appeal is taken by Anderson from the decision of the Examiners-in-Chief reversing the decision of the Examiner of Interferences as to counts 1 to 4, inclusive, and awarding priority to Lattig and Goodrum.

The invention relates to an automatic telephone system and especially to means whereby a coin must be deposited to enable a conversation to begin and additional coins to be deposited at fixed intervals to enable the conversation to be continued.

The issue originally included six counts, but Lattig and Goodrum took no appeal from the decision adverse to them as to counts 5 and 6, based on the ground that the invention defined thereby was not disclosed in their application.

The counts appealed read as follows:

1. In a telephone system, subscribers' lines, means for establishing a connecting circuit through which a calling and a called subscriber may converse during predetermined time units, charging means individual to the calling line, means controlled by the called subscriber for operating said charging means, and means controlled by the calling subscriber for operating said charging means after the lapse of each time unit.

2. In a telephone system, subscribers' lines, automatic switches for establishing a connecting circuit through which a calling and a called subscriber may converse during time units of predetermined lengths, a coin collector associated with the calling subscriber's line, means controlled by the called and calling subscribers for rendering said connecting circuit effective, an automatic time switch actuated thereupon, means controlled by said time switch for rendering said connecting circuit ineffective after the lapse of a time unit, and means for rendering said connecting circuit again effective if the calling subscriber inserts a coin in said coin collector.

3. In a telephone system, a plurality of subscribers' lines, means including automatic selecting and connecting switches for establishing a talking circuit between two of said lines, means for automatically rendering said talking circuit inoperative at predetermined intervals of time, a measured service device, and means controlled thereby for again rendering said talking circuit operative.

4. In a telephone system, a plurality of subscribers' lines, means including automatic selecting and connecting switches for establishing a talking circuit between two of said lines, a time-controlled mechanism, means controlled by the response of the called subscriber for starting said mechanism in operation, means controlled by said mechanism for rendering said talking circuit inoperative at predetermined intervals of time, and a measured service device on the calling line for again rendering said circuit operative.

Anderson took no testimony and is therefore restricted to his filing date of December 30, 1913. The application of Lattig and Goodrum was filed September 24, 1915. They claim to have conceived the invention in 1904, and to have reduced it to practice in that year and again in 1905.

The record shows clearly that in the summer of 1905 the American Telephone and Telegraph Company built in Boston, under the direction of Goodrum, an apparatus representing a telephone system and embodying the invention here involved. There is no contention on behalf of Anderson that this invention was not embodied in that apparatus, but it is contended that what was done at that time did not constitute a reduction to practice.

Reference is made in the decision of the Examiner of Interferences, which sustained Anderson's contention, to the long delay in filing the application after that test.

Delay in filing an application for patent, other than in cases where there has been such a concealment or suppression of the invention as referred to, in *Mason* v. *Hepburn*, (84 O. G., 147; 31 App. D. C., 86,) is material only in determining whether what is now alleged to be a reduction to practice was anything more than an inconclusive experi-

ment. If, in fact, the invention was actually reduced to practice, the inventor does not lose his rights by delay in filing his application unless some statutory bar has arisen to the grant of a patent.

In his testimony Goodrum fully describes the apparatus which was installed in Boston, and as to this he is corroborated by the witness Toomey and the drawings and prints which are introduced in evidence from which the apparatus was actually built. Thompson also testifies to the character of the test. There is also introduced in evidence two reports made to the officers of the American Telephone and Telegraph Co., one setting out in detail the apparatus, the other being a report as to its commercial value to that company. The first is in evidence as Exhibit 13, and the second as Exhibit 14.

Both Toomey and Thompson testified that the device was successfully operated. Toomey states that the tests which were made were quite complete and corresponded very closely to tests made by the engineering department on other types of telephone equipment. (Q. 50.) He states that the test lasted about a week, that the coin-box mechanism was operated approximately two or three hundred times, (Q. 52,) and that according to his recollection the devices operated successfully in all but one or two cases, which were found to be due to the faulty adjustment of the brushes. (Qs. 55 and 56.) Thompson states (Q. 41) that the device operated successfully every time, so far as he knew, and that it never failed any time that he operated it.

But it is argued that the report, Exhibit 14, which was made at the time, is better evidence as to the non-successfulness of this test than any evidence which can now be introduced. It is correctly pointed out in the brief for Anderson that the burden is not upon Anderson to prove that this test did not establish a reduction to practice, but the burden is upon the junior parties to establish that it did. Certain statements in the report are referred to as showing that the device was unsatisfactory, and it is argued that the last paragraph of the report with respect to the value to the American Telephone and Telegraph Company of the entire system, of which the invention here involved was only a part, shows that Toomey and Warren, who signed the report, regarded the invention as valuable only for the purpose of obtaining patents and obstructing the art.

It is not thought, however, that the report is susceptible of such construction or that it contradicts or weakens the force of the testimony of Toomey, who, it is noted, was not cross-examined at all. The second paragraph of the report states that the work was carried on in the laboratory to such a point as to prove—

> beyond question the operativeness of the system, both in its fundamental principles and in the special devices for particular classes of service.

It is true that certain defects in the system are mentioned, especially that it was more expensive than other systems that might be adopted, that its system of trunking was not adapted to large exchanges, and that there was a certain inherent difficulty about the metering system.

Obviously the objections on the ground of the expense of installing a system such as that of Lattig and Goodrum would not be a ground for holding that the invention had not been reduced to practice. So far as the difficulty of metering was concerned, that related to the fact that the coin would be deposited when the called subscriber removed his receiver from the hook of the telephone, even though a wrong number had been called. It does not appear, however, that this was not a defect which was inherent in all systems at that time, and the apparatus might well have been an improvement over what was then known in the art, even with this defect. Whether that trouble has been cured in automatic systems since that time does not appear in the record, nor is any reference made thereto in the brief.

Considerable stress is laid on the statement on page 14 of the report, following the description of the special classes of service, that the circuits show a considerable amount of ingenuity and—

> we feel confident that with a certain amount of modification and adaptation they could all be made operative.

The report does not further amplify this statement; but it is not seen that that statement, even taken at its face value, would discredit the testimony of Toomey and Thompson that the device, in so far as it is involved in this interference, was operative, especially in view of the statement on the first page of the report that the test had proved beyond question the operativeness of these devices.

Nor is the statement that the value of the system to the American Telephone and Telegraph Company appeared to consist—

> rather in a few special features which for the most part seem to be hardly more than suggestions as to the proper means of accomplishing certain results,

in conflict with the testimony. This must be read in connection with the prior part of the report in which objections had been made to the system on account of the expense of installation, and these features might well have been considered as suggestions to be used in connection with other systems.

It appears clearly from the testimony of both Lattig and Goodrum that negotiations with the American Telephone and Telegraph Company were broken off after this test because of the refusal to comply with the demand made on behalf of Lattig and Goodrum that a large sum of money be at once paid for these inventions. While Lattig and Goodrum cannot establish by their mere joint testimony the dates of their conception and reduction to practice, no reason is seen why their statements on this matter should not be accepted, especially as Lattig appears to be no way interested in the invention or the present owner of it, and this testimony was so easily rebuttable if not true. Their testimony and the stipulated testimony of Staley shows very clearly why there was such a long delay in filing the application after the Boston test. While this delay if unexplained might be significant as to the results of the tests, any unfavorable presumption is rebutted by this explanation. (See *Hathaway* v. *Field, Lanning, and Colman*, 261 O. G., 413; —— App. D. C., ——.)

Having established a reduction to practice of the invention prior to Anderson's filing date to which he is restricted, and there being nothing to bring the case within the doctrine of *Mason* v. *Hepburn*, *supra*, priority was properly awarded to Lattig and Goodrum as to counts 1 to 4, inclusive.

The decision of the Examiners-in-Chief is affirmed.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

ANDERSON *v.* LATTIG AND GOODRUM.

Decided June 6, 1921.

PATENTS—INTERFERENCE—REDUCTION TO PRACTICE—AUTOMATIC TELEPHONE SYSTEM.

An experimental automatic telephone apparatus which was operated by a number of persons, some of whom made several hundred connections, and which failed only in one or two instances, and these were accounted for by a faulty adjustment of a switch, constitutes a reduction to practice.

Mr. C. C. Bulkley for Anderson.

Mr. J. G. Roberts and *Mr. G. W. Rich* for Lattig and Goodrum.

PER CURIAM:

Appeal from a decision of the Commissioner of Patents sustaining a decision of the Board of Examiners-in-Chief and awarding priority of invention to Lattig and Goodrum, the appellees herein.

Appellant has taken no testimony and therefore is restricted to his filing date. The Examiner of Interferences found that, prior to the filing date of appellant, the appellees, through the American Telephone & Telegraph Company in Boston, Massachusetts, installed an experimental apparatus responding to the four counts of this issue, which relate to an automatic telephone system in which a coin is deposited to permit the beginning of a conversation and additional coins deposited at intervals to permit the continuation of the conversation. "This apparatus," according to the finding of the Examiner of Interferences,

> was subjected to a thorough test, being operated by a number of persons some of whom made several hundred connections. It failed to establish the required connection only in one or two instances and these were accounted for by a faulty adjustment of a switch.

Notwithstanding this finding the Examiner expressed a doubt as to whether reduction to practice had been established. The Board and the Commissioner, entertaining no doubt on this point, reversed the Examiner and awarded priority to Lattig and Goodrum.

We have given careful consideration to the brief and argument in behalf of Anderson but are so convinced of the correctness of the conclusion of the Patent Office that we affirm the decision for the reasons stated by the Commissioner and Board.

Affirmed.

Court of Appeals of the District of Columbia.

WAHL *v.* WRIGHT.

Decided June 6, 1921.

PATENTS—INTERFERENCE—RIGHT TO MAKE CLAIMS.

Decision of the Commissioner of Patents holding that the senior party had no right to make the claims and that if they be so liberally construed as to read on the disclosure of the senior party they would also read on an earlier application of the junior party, and consequently awarding priority to the junior party, affirmed, no error therein being clearly apparent.

Mr. J. H. Milans and *Mr. C. T. Milans* for Wahl.

Mr. B. C. Stickney and *Mr. W. L. Morris* for Wright.

ROBB, *J.:*

Appeal from a decision of the Patent Office in an interference proceeding awarding priority of invention to the junior party Wright.

The invention is based upon practically the same structure as was involved in the prior interference, No. 1346, but is narrower in scope. It originally contained four counts. The Examiner of Interferences, being of the view that the question as to Wahls' right to make the claims had been foreclosed by a prior decision of the Examiners-in-Chief, awarded priority to him without considering that question. The Examiners-in-Chief found that this was a misconception of their former decision and, considering the question *de novo*, ruled that Wahl was not entitled to make the claims. They therefore awarded priority to Wright. The Commissioner sustained the Board, except as to count 3, and accordingly awarded priority as to that count to Wahl and priority as to counts 1, 2, and 4 to Wright.

These claims relate to a complicated mechanism and, under our rule, error must clearly appear to warrant a reversal of the Patent Office. The counts call for a follower whose position is positively determined by the level of the cam tracks. Wahl has two followers and the Commissioner points out that if the claims be so liberally construed as to read on his disclosure, a similar liberal construction would read on a prior application of Wright. We cannot say, therefore, that the limitation is an arbitrary one, and, not being clearly convinced that the Patent Office has erred, we affirm the decision.

Affirmed.

The decision of the Commissioner of Patents reads as follows:

NEWTON, *Commissioner:*

This is an appeal from the decision of the Examiners-in-Chief awarding priority to Wright, thus reversing the decision of the Examiner of Interferences, who had awarded priority to Wahl on the four following counts:

"1. The combination with a typewriting mechanism; of computing mechanism operable concomitantly with said typewriting mechanism; a typewriter carriage; a bar moving therewith; and a control for said computing mechanism, said control including a plurality of cam sections mounted on said bar, and a follower coöperating with said cam sections.

"2. The combination with a typewriting mechanism; of computing mechanism operable concomitantly with said typewriting mechanism; a typewriter carriage; a bar moving therewith; and a control for said computing mechanism, said control including a plurality of adjustable cam sections mounted on said bar and a follower coöperating with said adjustable cam sections.

"3. The combination with a typewriting mechanism; of computing mechanism operable concomitantly with said typewriting mechanism; a typewriter carriage; a bar moving therewith; cams having two tracks adjustably mounted on said bar; a follower whose position is positively determined by the level of said cam tracks; and a gear reversing device operated by said follower.

"4. In a calculating machine the combination of: a set of digit keys; a traveling carriage; a computing device; a master wheel adapted to insert numbers *seriatim* in said computing device upon the operation of said digit keys; an escapement for said carriage also operated by said digit keys; a bar on said carriage; a plurality of cams adjustably mounted on said bar; a follower cooperating with said adjustable cams; and a gear shift device for said master wheel controlled by said follower whereby the action of said digit keys on said master wheel during the travel of the carriage may be predetermined."

The invention is a combined typewriter and adder, and the points involved are (1) Wahl's right to make the counts and (2) whether the counts if readable on Wahl also read on Wright's prior application No. 569,502.

The counts were presented by Wahl under the provisions of Rule 109.

As pointed out by the lower tribunals, Wahl's disclosure clearly shows all the elements of count 1 except "a follower cooperating with the cam sections."

Wright's followers 156 or 157 answer this count without question. Wahl has two followers 73, 74, one cooperating with one cam 85[b], the other with another cam 86[a]. One follower shifts the control in one direction, and the other follower in the other direction. Neither of Wahl's so-called "followers" 73 or 74 follows more than one cam-section. Both of Wright's followers 156 or 157 follow a plurality of cam-sections. This count does not read on Wahl therefore, if Wahl's parts 73 or 74 be taken as the "follower" of the count.

I have attempted to read this count on Wahl by supposing the link 66, Figures 8 and 9, to be a "follower." Wright contends, in effect, that a cam "follower" is necessarily a part which follows the surface of the cam, and 66 therefore is not a "follower." If Wahl's link 66 could fairly be called a "follower," count 1 would read on Wahl; but I am inclined to think that it would be straining language beyond the natural or legitimate to denominate Wahl's link 66 a "follower." The link 66 only cooperates with the cam-section indirectly or through the "followers" 73, 74. Furthermore, from an equitable standpoint there appears to be no reason for straining the language of the counts beyond the natural or legitimate to read on Wahl since it is easy enough to frame a count broad enough to read without straining the language on both Wahl and Wright, and still be patentable over the prior art as shown in the Goldberg and other patents of record.

It is unusual that a count drawn by Wahl's attorney should read on Wright and not on Wahl; still under the circumstances of this case it is not strange, since Wahl probably had both devices before him in framing the count, as the count was presented under the provisions of Rule 109, after an interference between Wahl and Wright had been declared.

Counts 2 and 4 are in the same category as count 1.

Count 3 clearly reads on Wahl except for the limitation—

"a • • cams having two tracks adjustably mounted on said bar; a follower whose position is positively determined by the level of said cam tracks."

The position of Wahl's "follower" 73 is positively determined by the level of his cam tracks 85[b], etc. It is true one of the cam tracks acts through the other follower 74 but the language is broad enough to cover this construction.

Hence there was no error by the Examiners-in-Chief in their holding that counts 1, 2, and 4 would not fairly read on Wahl. It is held, however, that count 3 fairly reads on Wahl.

Moreover, if counts 1 and 2 be given a construction sufficiently strained to read on Wahl, they can by the same rules of construction be construed to read on Wright's disclosure in his application No. 569,502, since Figs. 1 and 24 of that disclosure show a plurality of horizontal cams 115, 116, 117 having sections 145, 146 and 147 and followers 121 (Fig. 1), which operate the setting mechanism for the totalizer, and as 121 is held against a cam by a spring 124, Fig. 1, it may fairly be called a "follower." At the hearing, however, Wahl objected to calling Wright's shaft 119 a bar, much less a bar moving with the carriage. But the shaft 119 through a train of mechanism including the shaft 132 moves every time the carriage steps and in that sense moves with the carriage, and it would no more strain the language to call 119 a "bar" than to call Wahl's link 66 a "follower." Hence if counts 1 and 2 be so liberally construed as to read on Wahl, by a similar liberal construction of the meaning of the terms they read on the Wright application 569,502, and, for reasons pointed out by the Examiner of Interferences, if these counts read on application 569,502 Wright should be awarded priority as to those counts.

I have not overlooked the fact that Wright in his brief before the Examiners-in-Chief only contended that count 1 read on application 569,502, but at the hearing before me he contended that all the counts read on 569,502. Count 2 only differs from count 1 by the inclusion in the former of the limitation "adjustable" as applied to the cam sections and surely Wright's (569,502) cam sections are adjustable by means of the handle 150, (Fig. 1.)

Counts 3 or 4 cannot be fairly read on Wright, 569,502, since the cams 115, 116 or 117 are not "adjustably mounted on the bar," (shaft 119.)

The Examiners-in-Chief have correctly pointed out an error of the Examiner of Interferences in his holding that he was bound by a decision of the Examiners-in-Chief that Wahl could make all the counts of the issue. They had never made such a holding.

It follows from the foregoing discussion that the decision of the Examiners-in-Chief awarding priority to Wright as to counts 1, 2, and 4 is affirmed, and as to count 3 it is reversed, and priority as to that count is awarded to Wahl.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 21, 1921.

Ella Virginia Cameron, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Ralph H. Estabrook, of 10 Lincoln street, Fitchburg, Mass., for registration of a trade-mark and trade-mark registered May 9, 1893, No. 22,996, to Ella Virginia Cameron, of 753 Third avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Ella Virginia Cameron at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Ella Virginia Cameron, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Disclaimer.

1,359,259.—*Matthew Lechner*, New York, N. Y. ELECTRIC STORAGE BATTERY. Patent dated November 16, 1920.

Disclaimer filed July 25, 1921, by the patentee.

Enters this disclaimer—

To that part of said Letters Patent which is described in the first and fourth claims thereof, disclaiming any other unit and means for maintaining said unit in position except a unit in which the lateral edges of the battery-plates are at all points out of contact with the inner wall of the container and a support for such unit which consists as to at least one set of the battery-plates of no more than one piece of contact between each plate of said set and one of the bridges.

International Bureau at Habana—Protection of Trade-Marks.

(ORDER NO. 2,685.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 6, 1921.

Under the convention adopted for the establishment of the International Bureau at Habana and regulations of such Bureau (280 O. G., 195) it is provided, to carry into effect the convention for the protection of trade-marks, that the legal representative of the administration of the country of origin shall communicate to the International Bureau (articles 2–1) the claim of the owner of the mark.

Hereafter no official abstract of title need be furnished by the applicant, but a fee of $5 must be paid the U. S. Patent Office, which will make the title search and perform the other work in connection with the certificate to the Habana Bureau.

Hereafter the applicant need not fill in the official form for such certificate, but in addition to paying the fee of $5 must provide the Office with (*a*) an international money order for $50 to the order of "Director of the International Bureau, Habana;" (*b*) an electrotype of the trade-mark, not larger than 10 centimeters in either dimension; (*c*) should the United States registration claim color as a distinctive element of the trade-mark he shall furnish thirty copies of the mark printed on paper, reproduced in color; (*d*) a statement including (1) the name of the owner of the mark; (2) the address of the owner of the mark; (3) the number and date of registration of the mark in the United States Patent Office, and (4) a translation into Spanish of the particular description of goods as stated in the certificate of registration.

THOMAS E. ROBERTSON,
Commissioner.

Fee for Recording Articles of Incorporation.

(ORDER No. 2,688.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 9, 1921.

For the present the Patent Office is recording the articles of incorporation of companies, so that their names may be available for trade-mark searchers. This is done at the request of the attorneys and is not advocated by the Office. As long as this practice continues a charge will be made for such record of $1.00 for 300 words or less; $2.00 if over 300 words and under 1,000 words; $1.00 for each additional 1,000 words or portion thereof.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,316,603.

On July 15, 1921, a decision was rendered that William I. Thompson was not the first inventor of the subject-matter covered by claims 1 and 2 of his Patent No. 1,316,603, subject, "System of distribution," and no appeal having been taken within the time allowed such decision has become final.

TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

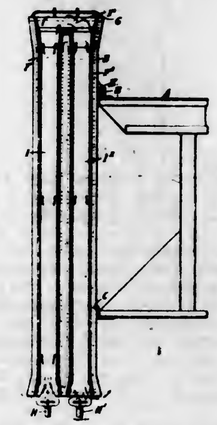
PATENTS

GRANTED AUGUST 9, 1921.

1,386,590. AMUSEMENT DEVICE. DAVID A. ALPERT, Beachmont, Mass. Filed Apr. 2, 1919. Serial No. 286,962. 6 Claims. (Cl. 46—27.)

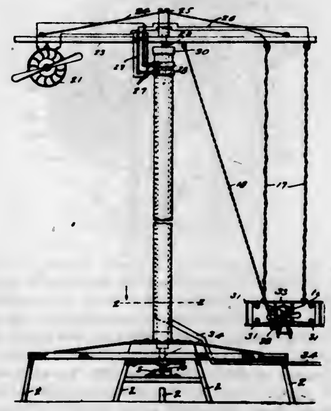
1. In a riding machine, the combination of a revolving support, a standard vertically slidable therein, a passenger carrying car fixed on the top of said standard, said car being provided on its bottom with roller bearings, a fixed undulated track, a suitable bearing mounted in the lower end of said standard and in engagement with said undulated track and means for revolving said support to cause said car to rise and fall in its path of travel.

1,386,591. LINK JEWELRY. ROBERT ANDERSON, New York, N. Y. Filed Aug. 5, 1919. Serial No. 315,428. 6 Claims. (Cl. 59—80.)



1. A bracelet comprising a series of similarly-shaped links having conforming contacting walls, a plurality of apertures provided in one of the walls of each of said links, a plurality of pins each secured at one of its ends within the other wall of said links, and having their other ends passed through the apertures in the wall of the next adjoining link, and curved rearwardly and terminating within said first named link and separately secured thereto, substantially as specified.

1,386,592. GARMENT-FASTENER. MAURICE ANDERSON, Cranston, R. I., assignor to V. E. Black Company, a Corporation of Rhode Island. Filed Feb. 26, 1921. Serial No. 448,006. 1 Claim. (Cl. 24—259.)



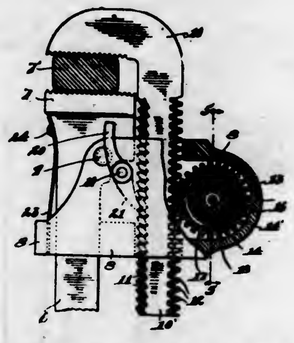
A garment fastener comprising an oblong body having near one end a longitudinally disposed opening with a transverse curved portion between the said opening and the adjacent end of the body with a shoulder raised in the material extending from said opening to the end of the body, and said end formed into a sleeve with a portion of said opening disposed in said sleeve, or pintle in said sleeve, and a tongue mounted on said pintle and resting near its pivot end on said shoulder.

1,386,593. METHOD OF DRYING MOLDS. THOMAS P. ANTHONY, Edgewater Park, N. J., assignor to United States Cast Iron Pipe & Foundry Company, a Corporation of New Jersey. Filed Aug. 26, 1920. Serial No. 406,041. 3 Claims. (Cl. 22—87.)

1. The method of drying pipe molds which consists in connecting the tops of two vertically held molds and passing drying gases through the connected molds from the bottom of one to the bottom of the other.

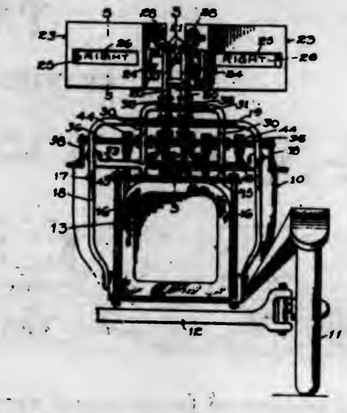
1,386,594. GAME. ERWIN AUFFURTH, Jr., and ERICK HJERPE, Port Arthur, Tex. Filed Sept. 4, 1920. Serial No. 408,245. 2 Claims. (Cl. 46—56.)

1. In a game, separately indicated receptacles, tokens corresponding to the indications on said receptacles to be distributed, a revoluble member provided with an air propeller and provided with a prize to be released by a



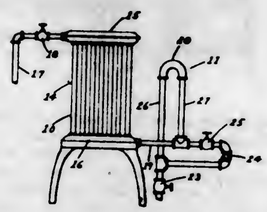
trip and means for electrically operating said propeller and means for operating said trip, said trip operating means including a member controlled by the centrifugal force of said revoluble member.

1,386,595. APRON. LYDIA BROMAN, Minneapolis, Minn. Filed Jan. 12, 1920. Serial No. 350,781. 1 Claim. (Cl. 2—54.)



An apron comprising front and back sections detachably connected at one end, said connected ends being cut out, the cut out portions coöperating to form a neck opening, there being longitudinal plaits within the sections and extending from the connected ends thereof along substantially parallel lines toward the centers of the sections thereby to provide fullness at the bottom of the apron, a fastener for detachably connecting the sections of the apron at one side at the waist line, a belt extending around the apron and having free ends adapted to be tied together, and means for detachably connecting an intermediate portion of the belt to one of the sections adjacent the point of connection between said sections at the waist line.

1,386,596. WRENCH. WILLIAM J. CARPENTER, Chicago, Ill., assignor of one-half to John J. Jordan, Chicago, Ill. Filed Apr. 28, 1919. Serial No. 293,229. 9 Claims. (Cl. 81—130.)



1. A wrench comprising a shank having a stationary jaw on the upper end thereof; a movable jaw having a projecting shank provided with teeth on opposite sides, the teeth on one side being perpendicular to the said shank and the teeth on the opposite side being angularly inclined thereto; a sleeve housing embracing said shanks, and mounted adjacent its upper edge on said stationary jaw; a pinion rotatively mounted in said housing and adapted to mesh with said perpendicular teeth; and resilient means coöperating with said pinion to move said movable jaw toward said stationary jaw when said movable jaw is moved therefrom; and means for locking said jaws in position; substantially as described.

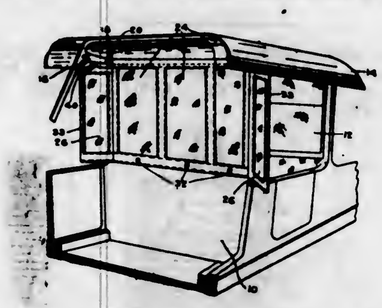
1,386,597. AUTOMOBILE-SIGNAL. ALBERT C. COBB, Houston, Tex. Filed Mar. 25, 1919, Serial No. 285,110. Renewed Jan. 4, 1921. Serial No. 435,010. 3 Claims. (Cl. 116—46.)

1. A signal of the character described comprising, a supporting member adapted to be secured to the radiator of a vehicle, an arched frame secured to said supporting member and extending above said radiator, a horizontal bracing element traversing said arched supporting member, a pair of shafts journaled through said arched supporting member and mounted on said horizontal supporting member, a pair of casings carried by said shafts, and means for operating said shafts whereby the casings are operated.

1,386,598. RADIATOR HEATING SYSTEM. PATRICK JOSEPH COLEMAN, Bristol, Conn. Filed Nov. 24, 1919. Serial No. 340,247. 1 Claim. (Cl. 237—72.)

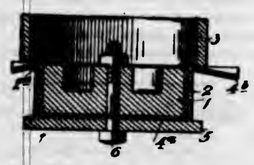
In a radiator heating system, in combination, a radiator having a discharge outlet at the lower end, a siphon structure positioned alongside the said radiator, a direct discharge pipe connected to the said discharge outlet, a shut-off valve positioned intermediate the ends of the said pipe for permitting and preventing flow therethrough, the arms of the said siphon structure being connected to the said pipe, one on each side of the said valve, whereby by closing the said valve the discharge from the radiator will be directed indirectly by way of the said siphon structure, and the said arms being of appreciable length and directed upwardly relatively to the said pipe, so that condensation in the siphon structure will serve as a trap to retain condensation in the radiator.

1,386,599. PNEUMATIC TIRE. JAMES H. COURVOISIER, Joplin, Mo. Filed Sept. 4, 1920. Serial No. 408,406. 1 Claim. (Cl. 152—13.)



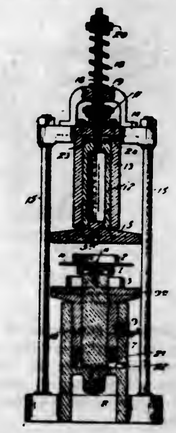
A tire, comprising a plurality of layers of fabric and an outer casing of rubber, the inner layers of fabric being formed in the shape of an inverted arch at the crown of the tire, a filling of rubber arranged between the

inner and outer layers of fabric and disposed in said arch, and a plurality of strands of cords embedded in said filling and arranged circumferentially of the tire, said strands being disposed in rows substantially parallel to each



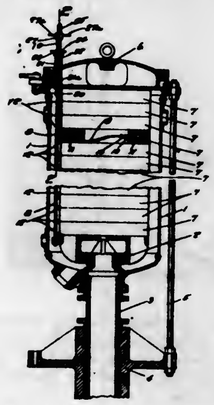
other and to the inner layers of fabric, and a second series of strands of cords embedded in said filling and arranged substantially parallel to the outer layers of fabric.

1,386,600. REAR-SEAT WINDSHIELD. VERNON E. CROSBY, Minneapolis, Minn. Filed May 29, 1920. Serial No. 385,194. 4 Claims. (C. 296—85.)



1. A rear seat wind-shield comprising a curtain containing transparent panels, a rod upon which the top of said curtain is swingingly supported, sockets supported at the sides of one of the canopy bows, the openings in said sockets being horizontally disposed for receiving the ends of said rod, springs in said sockets with which the ends of said rod engage, and means for securing said curtain at its bottom to the back of the front seat, said curtain when unfastened being adapted to be swung upwardly around said rod so as to be close to the canopy.

1,386,601. METHOD OF MAKING U-PACKING. THOMAS CROSSETT, Brooklyn, N. Y. Filed May 29, 1919. Serial No. 300,652. 4 Claims. (Cl. 69—21.)

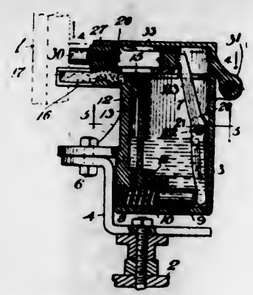


1. The method of making U-packing consisting in folding a piece of suitable material to form a wall extending from the midportion of the material and then folding the protruding portion of said material reversely outside of and spaced from said wall and surrounding the same substantially parallel thereto.

1,386,602. MOLD AND APPARATUS FOR MAKING U-PACKING. THOMAS CROSSETT, New York, N. Y. Original application filed May 29, 1919, Serial No. 300,652. Divided and this application filed Feb. 10, 1920. Serial No. 357,655. 7 Claims. (Cl. 18—35.)

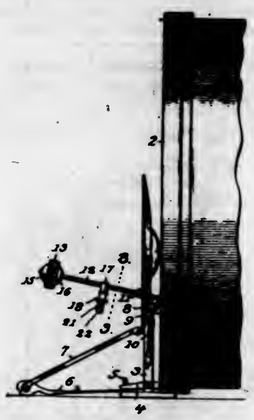
1. A mold for forming U-packing comprising an inner member and two separate concentric rings of different diameter to fit one within another with a space therebetween, both rings being of greater diameter than said member to receive folded material respectively between the member and inner ring and between the two rings, an abutment adapted to oppose said member and the inner ring, and means to detachably apply said abutment to said member with the material therebetween.

1,386,603. VULCANIZING-PRESS. ROBERT H. CRUMLICH, Erie, Pa. Filed Jan. 24, 1921. Serial No. 439,503. 6 Claims. (Cl. 18—17.)



1. In a vulcanizing press, the combination of a vulcanizing chamber; a ram in the chamber; a removable cover on the chamber; a core supplying air pipe carried with the ram; and a supply connection for said pipe extending through the cover comprising a slip joint.

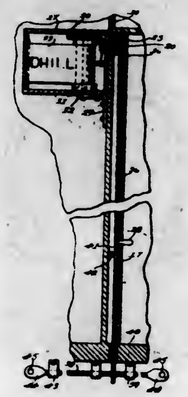
1,386,604. LUBRICATING DEVICE. CHARLES G. CUNNINGHAM, New York, N. Y., assignor to Elevator Supplies Co., Inc., a Corporation of New Jersey. Filed Mar. 29, 1917. Serial No. 158,213. 3 Claims. (Cl. 184—22.)



3. A lubricating device comprising a single hollow casting to contain oil, a pump chamber formed in the wall of

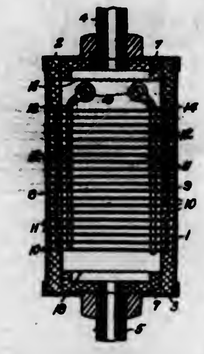
said casting and communicating with the hollow portion of said casting, said casting also being provided with a chamber to receive a distributing pad, a duct formed in the casting to provide a communication between said pad and pump chambers, a plunger located in said pump

chamber, a lever pivotally supported in the hollow portion of the casting and bearing at one end against said plunger, means normally tending to yieldably maintain said plunger in retracted position in said pump chamber, and means slidably mounted on the top of said casting for rocking said lever.



1,386,605. DRUM AND CYMBAL BEATER. ROBERT C. DANLY, Chicago, Ill., assignor to Ludwig & Ludwig, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1919. Serial No. 343,234. 6 Claims. (Cl. 84—422.)

1. In a drum and cymbal beating mechanism, a beater head of fibrous material, a carrying stem, a pair of concavo-convex holding washers engaging opposite sides of said beater head, and means for fixedly attaching said washers to said stem.

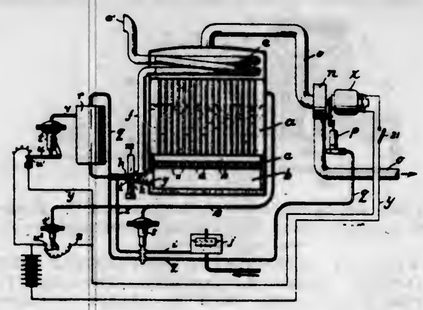


1,386,606. RAILROAD-STATION INDICATOR. TERENTIE DAVIDENIA, Detroit, Mich. Filed July 14, 1920. Serial No. 396,151. 2 Claims. (Cl. 40—106.)

1. Mechanical operating means for the street or station indicators on each car of a train of cars comprising a partition wall in spaced relation to the end wall of a car, and provided with an opening, horizontal shafts journaled in the end wall and the partition wall of the car, sprocket wheels on two of said shafts, a chain guided over said sprocket wheels, a sprocket wheel on the third and central of said shafts, a sprocket wheel on a shaft journaled in a bracket at the car bottom, a chain guided over the last named two sprocket wheels, means for operating said

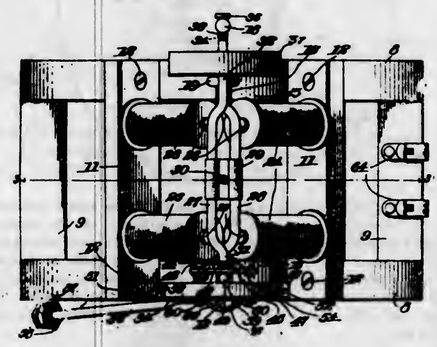
sprocket wheels and chains, and means for coupling the shafts at the bottom of each car with the shaft at the bottom of the next succeeding car.

1,386,607. ELECTRIC WATER-HEATER. ADRIEN FRAPPIER DE RAIGNAU, Montreal, Quebec, Canada. Filed Oct. 4, 1920. Serial No. 414,570. 3 Claims. (Cl. 219—39.)



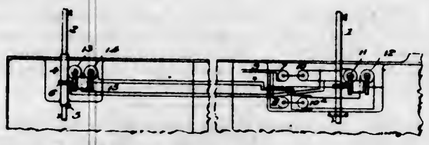
1. An electric water heater comprising a wooden casing covered on its inner side with an impermeable coating; a water inlet and outlet in said casing; a plurality of heating elements, each consisting of a single plate of conductive material disposed in parallel relation to one another and secured in the sides of said casing; a water opening intermediate of each of said plates arranged in staggered arrangement in relation to one another, adjacent one edge thereof; and means to electrically connect said plates in batteries, substantially as described.

1,386,608. SYSTEM FOR STEAM-DRIVEN MOTOR-VEHICLES. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Company, Wilmington, Del., a Corporation of Delaware. Filed June 27, 1919. Serial No. 307,103. 19 Claims. (Cl. 158—29.)



1. In a system for steam driven motor vehicles, the combination with the boiler and the combustion chamber, of means to supply a fuel mixture to the combustion chamber, a pilot light for igniting the mixture, means to start

the supply of the fuel mixture, means governed by the pressure of steam in the boiler to shut off the supply of

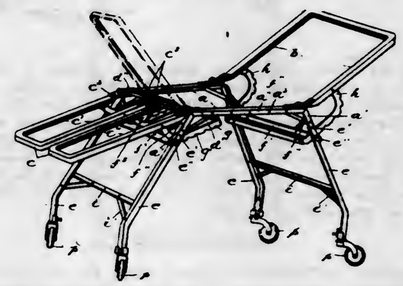


fuel mixture, and means to create a forcible draft through the combustion chamber and flues and cleanse them of gas after the supply of fuel mixture is shut off.

1,386,609. DIRECT-CURRENT ELECTRIC MOTOR. ALF L. ELDEN, Alvarado, Minn. Filed Aug. 24, 1918. Serial No. 251,260. 1 Claim. (Cl. 172—36.)

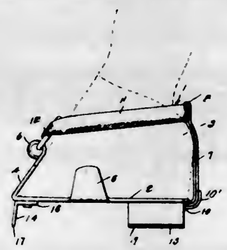
An electric motor having electric circuit means, electromagnets therein, an armature coöperating with the magnets, said armature having a shaft provided with an outwardly extending portion to provide an arm, a separate arm spaced from said arm, a clamp to join said arms, said arms coöperating with the magnets, a commutator on the shaft, and said commutator being in the electric circuit means.

1,386,610. APPARATUS FOR MEASURING DISTANCES. HANSON E. ELY, Jr., U. S. Navy. Filed June 24, 1918. Serial No. 241,485. 6 Claims. (Cl. 33—66.)



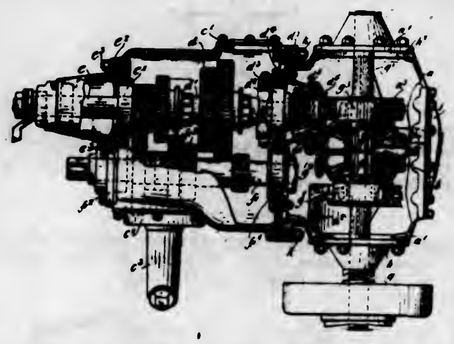
1. In an apparatus for measuring distances, a plurality of pivotally mounted sighting instruments adapted to be directed toward a target, means for connecting said instruments for moving them on their own axes in parallelism and mean for moving one of said instruments out of parallelism with the other.

1,386,611. TELESCOPE. HANSON E. ELY, Jr., U. S. Navy. Filed Apr. 21, 1919. Serial No. 291,431. 1 Claim. (Cl. 88—32.)



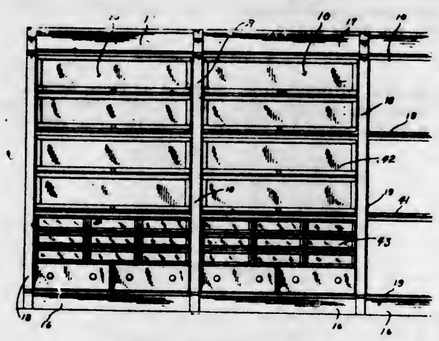
In a sighting instrument, transparent means mounted therein, a plurality of cross hairs thereon, each cross hair having a portion tapering toward the center to invisibility and terminating short of the center thereof in order to provide a clear field of vision.

1,386,612. FOLDING BED AND/OR CHAIR. KALIL FARAH, Brooklyn, N. Y. Filed Sept. 17, 1920. Serial No. 410,839. 3 Claims. (Cl. 155—29.)



1. The hereindescribed device comprising end and middle mattress sections hingedly connected, the middle section comprising rigid side bars having integral rigid downwardly-inclined members at each end thereof, rigid cross braces secured to the extremities of said members and gravity racks pivoted to the end sections engaging with the cross braces.

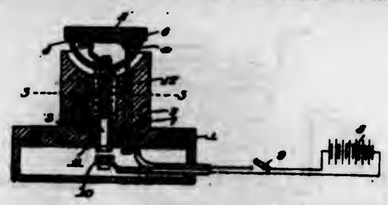
1,386,613. HORSESHOE. HERMAN A. FREY, Savoy, Ill. Filed July 26, 1919, Serial No. 313,487. Renewed Jan. 5, 1921. Serial No. 435,252. 2 Claims. (Cl. 168—18.)



2. A horseshoe comprising a substantially flat plate arranged to engage the lower surface of a horse's hoof, a tongue extending upwardly from the forward portion of the plate and having its upper end portion extended to form an eye, a ring loosely carried by said eye, tongues extending from the side portions of the plate, a strap bent back upon itself to provide a loop and connected with the rear portion of the plate and arranged to engage the rear portion of a horse's hoof, and an adjustable strap carried by said loop and arranged to encircle the upper portion of a horse's hoof with one end portion extending through said ring.

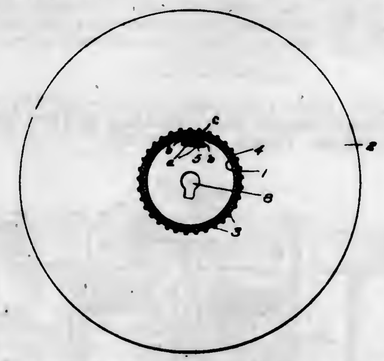
1,386,614. **FINAL DRIVE FOR MOTOR-VEHICLES.** MAXIMILIAN C. PRINS, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 24, 1920. Serial No. 412,322. 5 Claims. (Cl. 74—58.)

1. In motor vehicles, a differential housing, a gear case, a differential gear mounted entirely within its housing, a driven shaft within the gear case having sliding gears thereon and extending through the end wall to receive a driving pinion, means to secure the housing to the gear case and means coöperating with the housing and case to center them with respect to said shaft so that the drive pinion is brought into mesh with the differential gear upon assembling.



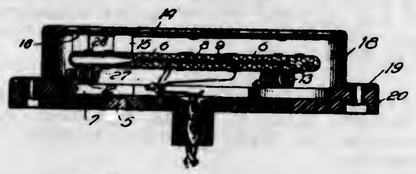
1,386,615. **INTERCHANGEABLE-UNIT STORE FURNITURE.** ALFRED GACH and GEORGE WILCOX, Detroit, Mich., assignor to The Interchangeable Wall Case Company, Detroit, Mich., a Corporation of Michigan. Filed June 14, 1920. Serial No. 388,872. 10 Claims. (Cl. 45—78.)

1. In a store furniture construction, the combustion of a casing, a plurality of guides carried by the casing, a plurality of interchangeable units slidably carried by the guides, and means for detachably engaging said units to hold the same in position against accidental displacement.



1,386,616. **CIGAR AND CIGARETTE LIGHTER.** FELIX GRANDICH, New York, N. Y. Filed Nov. 18, 1919. Serial No. 338,872. 1 Claim. (Cl. 219—32.)

A cigar or cigarette lighter comprising a base, a tubular upright carried thereby, a spring plunger located in the tubular upright, a semi-spherical head of non-conducting material connected with the upper end of the spring plunger, a resistance coil carried by said head, a contact in



the base and located below the lower end of the plunger and an electric circuit including said contact and the coil.

1,386,617. **ATTACHMENT FOR FLEXIBLE REEL-COVERS.** LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Dec. 31, 1920. Serial No. 434,526. 4 Claims. (Cl. 242—74.)

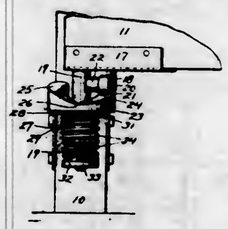
1. The combination with a winding drum and a flexible cover therefor, of a slot in the periphery of the drum, and transverse rearwardly undercut elastic ribs attached to the inner side of the flexible cover at its ends, said ribs being adapted to extend through the slot in the periphery of the drum into the interior thereof, the breadth of the two ribs taken together being greater than that of the slot.

1,386,618. **THERMOSTAT.** WILLIAM G. HARTWIG, Chicago, Ill., assignor to Railway Utility Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1918. Serial No. 244,495. 8 Claims. (Cl. 297—8.)

1. A thermostat comprising a base, a metal cover, secured to the base and forming a substantially closed chamber therewith, a thermostatic element mounted in said chamber and a heat conducting element in contact with the cover and with the thermostat element.

1,386,619. **SEALED METALLIC RECEPTACLE.** HENRY E. HASTINGS, WALTER L. FARLEY, and ALBERT F. SULZER, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 20, 1918. Serial No. 241,062. 6 Claims. (Cl. 220—58.)

1. A closed metallic container with a smooth exterior between one end and the body portion of which is a continuous weakened line along which the end portion may be readily separated from the body portion, there being a strip attached to the end portion and extending length-

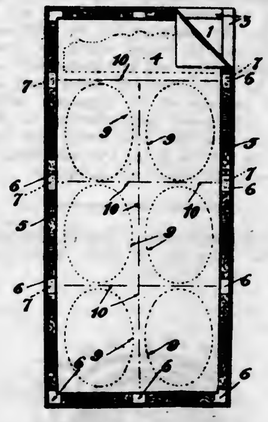


wise of the container, so that when the end portion is separated from the body portion, except for this strip, it may be used as a handle to pull the strip from the body portion and thus open the container longitudinally.

1,386,620. **COMPOSITION FOR SEALING CANS AND THE LIKE THAT CONTAIN PERISHABLE FOODS.** ISABEL HOTSON-TAIT, Sydney, New South Wales, Australia. Filed Nov. 8, 1919. Serial No. 336,715. 1 Claim. (Cl. 106—8.)

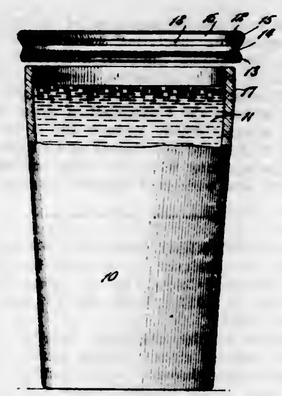
A preparation for sealing tins and the like consisting of a mixture of resin, methylated spirit, carbonate of iron, flour paste, molasses, and nitric acid.

1,386,621. **SELF-CLOSING HINGE.** ARTHUR SHERIDAN HUGHES, Mansfield, Ohio. Filed July 7, 1920. Serial No. 394,437. 17 Claims. (Cl. 16—163.)



2. A hinge structure including a member adapted to be secured upon the lower edge of the door, a roller mounted on and carried by said member, and a block providing a track for the roller, said block being adjustable in various angular positions about its center to adjust the neutral position of the door.

1,386,622. **PROCESS AND A DEVICE FOR SHORTENING THE TIME USED IN REMOVING THE DEBRIS OFF THE TRACK ON DRIVING HEADINGS.** ALBERT HUGUENIN, Zurich, Switzerland. Filed Feb. 24, 1920. Serial No. 360,900. 10 Claims. (Cl. 262—4.)



1. The process, which comprises covering the part of the track immediately behind the working face by cover plates before igniting the charges, and clearing the track by bringing the plates into such an inclination, that the debris piled up on the plates by the explosive charges glide off said plates to the sides of the track, thereby allowing the rock-boring machine to be brought up to the face and to continue work almost immediately after the blasting.

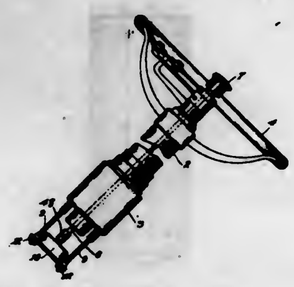
1,386,623. **DISPLAY DEVICE.** ALBERT E. HURST, New York, N. Y., assignor to Textile Publishing Company, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1921. Serial No. 464,561. 1 Claim. (Cl. 211—84.)

An article of the class described comprising a penetrable display board of substantial thickness, a face therefor, fasteners for securing the face to the board and marginal spaces in said face adapted to receive said fasteners.

1,386,624. **CLOSURE FOR JARS, BOTTLES, AND OTHER RECEPTACLES.** ALFRED INGRAM and HARRY INGRAM, Brooklyn, N. Y., assignors to Ingrams Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1917. Serial No. 194,839. 4 Claims. (Cl. 215—81.)

1. A container having substantially vertical smooth exterior rigid side surfaces about its upper end, and a closure therefor and constructed with relation thereto, comprising a cap having a top and a depending annular flange adapted to fit over the container and in one trans-

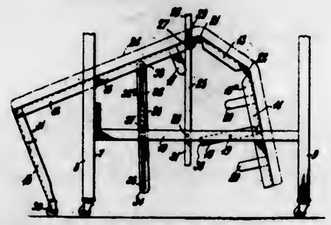
verse section having an inwardly curved resilient portion defining a diameter less than that of the container and adapted to firmly grip the smooth side surfaces thereof, and a ring gasket within the upper outer edges of said cap to engage with sealing effect the upper side surfaces of the container above said gripping portion of said flange, said cap at its upper outer edges beyond the vertical plane of the sides of the container being annularly outwardly and then inwardly curved to form an annular recess to receive said gasket and afford a supporting shoulder therefor at the lower edge thereof, and said gasket in its initial position being supported at an angle on said shoulder and not filling said recess and with one annular portion standing within the vertical plane of the upper outer edges of the container so that when a cap is applied to position on the container its top will seat on the upper edge thereof, the upper end of the container will pass through the gasket and said gasket will be deformed laterally to fill said recess and firmly bind against the exterior side surfaces of the container below the lip thereof, and said gasket then affording an efficient side seal and at the same time coöperating with the inwardly curved gripping portion of the aforesaid flange below the same in securing the cap on the container.



1,386,625. ICE-MACHINE. JAMES B. JOHNSTON, Philadelphia, Pa. Filed May 8, 1918. Serial No. 233,231. 5 Claims. (Cl. 127—24.)

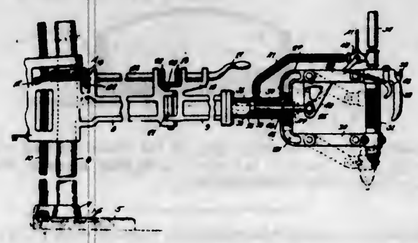
1. An ice machine, having an outer vacuum chamber, a chamber containing insulating material and located inwardly of the vacuum chamber, a freezing chamber located inwardly of the insulating chamber, a tank in said freezing chamber, a closure having a plurality of superimposed chambers, the lower wall of which is apertured to permit communication between the freezing chamber and lower chamber of the closure and vacuum producing means communicating with the upper end of said freezing chamber and with said vacuum chamber.

1,386,626. ELECTRICAL SWITCH. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1917. Serial No. 163,563. 2 Claims. (Cl. 200—59.)



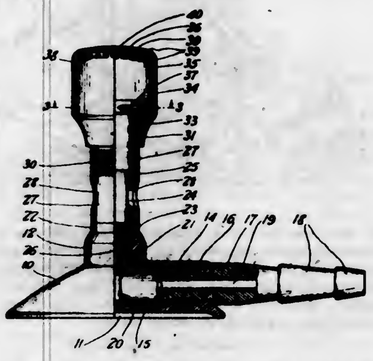
1. A device of the character described including a cylindrical member, circuit closing means, an actuating element extending through said cylindrical member for operating said circuit closing means and provided with a reduced portion, an enlarged cup-shaped portion for the inner end of said actuating element, a contact actuating member located partially within said cup-shaped member but insulated therefrom, an operating button or cap provided with an aperture adapted to receive the reduced portion of said actuating element, and fastening means extending through said cap and said actuating element to secure said cap to said actuating element, said actuating cap having its outer periphery extending around said cylindrical member to prevent foreign matter from entering said cylindrical member.

1,386,627. CONFECTION FOR USE AS A CHEWING-GUM. FRANK Y. KEATOR, Aurora, Ill., assignor of one-half to Haskell C. Davis, Evanston, Ill. Filed Apr. 22, 1918. Serial No. 229,917. 3 Claims. (Cl. 99—11.)



1. A confection for use as a chewing gum, containing chicle, and acid calcium phosphate in combination with an enzym as pepsin.

1,386,628. FOLDING-BED STRUCTURE. THOMAS J. KELLY, Philadelphia, Pa. Filed Nov. 4, 1920. Serial No. 421,631. 2 Claims. (Cl. 5—46.)



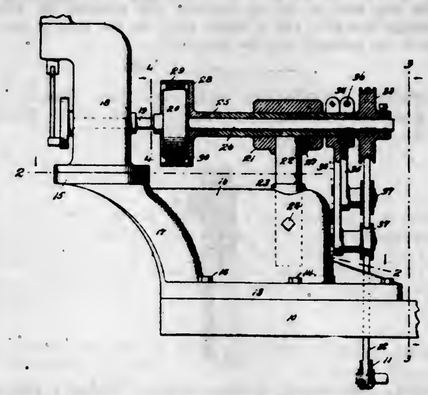
1. A structure of the character described including a main frame; a bed supporting frame having a front section, a rear section and an intermediate section in which the intermediate section is hinged both to the front section and to the rear section, said rear section having portions pivoted to the side of said main frame; means for swinging said rear section on said pivots whereby the sections can be moved into a common plane and can also be swung into a folded position with the rear section under the front section; pins secured to the sides of said main frame; and links pivotally connected to said front section forward of its hinges, said links having undercut slots through which said pins freely extend whereby when the parts are in said folded position the front section can be raised on its hinge connection with the intermediate section as a pivot, said movement serving to bring the undercut portions of the slots over said pins so as to retain said front section in its raised position; substantially as described.

1,386,629. TOOL-SUPPORT. ALBERT L. KRAN, Aurora, Ill. Filed June 12, 1920. Serial No. 388,471. 6 Claims. (Cl. 78—48.)

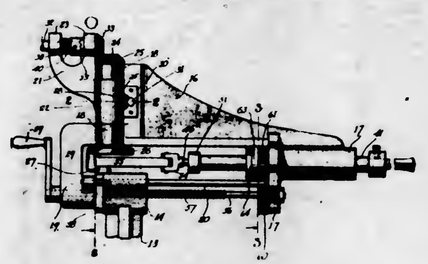
1. A tool support having a post, a bracket supported by and pivotally and longitudinally movable relative to said post, a tool carrier pivotally mounted on said bracket, and an air operated piston for moving said carrier to apply and hold the tool to the work.

1,386,630. BUNSEN BURNER. CHARLES T. KINSMAN, Binghamton, N. Y. Filed June 7, 1920. Serial No. 386,964. 8 Claims. (Cl. 158—111.)

1. In a burner of the type described, the combination with a burner tube, of a mixing chamber having a convex top containing a plurality of perforations adapted to act as outlets, means for detachably engaging said chamber to said tube, said chamber having a sectional area of greater magnitude than the tube, and a plurality of tangentially disposed pins fixed in said chamber adapted to intercept a passing stream of gases to deflect and intimately commingle the same.



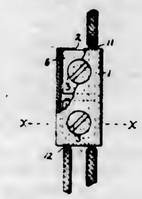
1,386,631. TALKING-BOARD TABLE. ROBERT M. KLIEMANT, Baltimore, Md. Filed June 9, 1920. Serial No. 387,616. 3 Claims. (Cl. 46—41.)



1. A talking board table having an annular bead on the edge thereof, integral cone shaped hollow legs projecting from each end and from the sides thereof.

1,386,632. SEWING-MACHINE DRIVE. JOSEPH KORNAS, Linden, N. J., assignor to Feldman Machine Works, Inc., a Corporation of New York. Filed Sept. 9, 1918. Serial No. 253,130. 14 Claims. (Cl. 74—21.)

2. In a device of the class described, the combination of a standard, a vertically shiftable shaft bearing carried by said standard, means for securing the bearing in shifted position, a drive shaft mounted in said bearing, means for driving said shaft and clutching means actuated by said shaft for engaging and rotating a machine element driven thereby, said clutching means being designed to engage the periphery of different size pulleys.

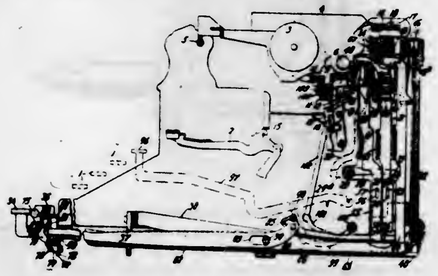


1,386,633. ROCK-DRILLING MACHINE. ROBERT A. W. KRAMPITZ, Valdez, Alaska. Filed Feb. 12, 1920. Serial No. 358,247. 5 Claims. (Cl. 255—37.)

1. A rock drill of the character described comprising a main frame having a longitudinal bearing at its forward end and spaced vertical bearings at its rear end, an auxiliary swinging frame having a vertical bearing alined with and adapted to be disposed between the spaced vertical bearings of said main frame, a crank shaft mounted in the vertical bearings of said frames and constituting the axis of swing of said auxiliary frame, means for imparting motion to said crank shaft, a drill stock mounted for reciprocatory motion in the longitudinal bearing of said main frame, and means connecting said crank shaft and said drill stock.

1,386,634. CONNECTOR FOR ELECTRIC WIRES. EDWARD H. KRUSE, Fort Wayne, Ind. Filed Sept. 19, 1919. Serial No. 324,738. 3 Claims. (Cl. 173—263.)

2. In a device for connecting wires, an open-ended box the bottom thereof having parallel gutters therein and an



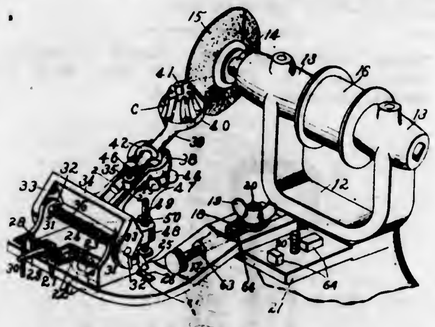
intervening slot, a pair of screws extending through the top of the box and each having a stud adapted to extend into the slot so as to obstruct the removal of wire through the slot, and a clamp plate on the stud of each screw for holding wire in the gutters.

1,386,635. DUSTBRUSH FOR PENCILS. EUGENE C. KUBIK, St. Louis, Mo. Filed July 26, 1919. Serial No. 313,456. 7 Claims. (Cl. 120—38.)

2. In combination, a hollow support having a lateral indentation forming an inner projection, a holder having a shank disposed within the support and receiving the same inner projection, an elastic plug closing the end of the support and retaining the said shank in the required position and brushing elements carried by the holder.

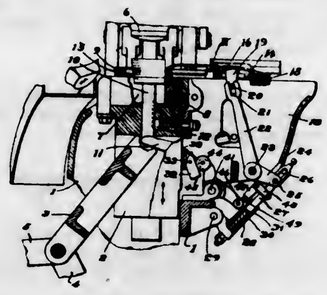
1,386,636. TYPEWRITING-MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 25, 1918. Serial No. 263,975. 45 Claims. (Cl. 197—177.)

1. In a typewriting machine, the combination with a paper-carriage and feeding mechanism therefor, of a rack on said paper-carriage having means whereby column-stops may be adjustably positioned thereon, column-stops of different conformation corresponding to different columns mounted on said rack, a secondary carriage movable transversely of the machine, a rocking frame having pivotally mounted thereon a series of pawls arranged to co-operate with column-stops of suitable conformation, a movable stop member mounted upon said secondary carriage and connected with said rocking frame, so that, upon engagement of one of said pawls by a column-stop and consequent movement of said rocking frame, said movable stop will be moved into position to engage a column-stop on said rack and arrest the paper carriage, means to position the secondary carriage to correspond to the denomination selected, and means to selectively position said pawls.



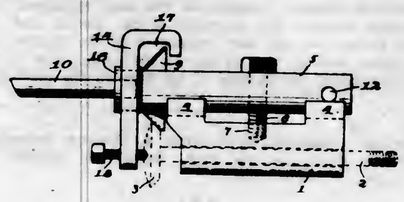
1,386,637. FOOTWEAR. LOUIS TROLLE, Racine, Wis., assignor to Eugene Wright Lawton, Racine, Wis. Filed June 5, 1920. Serial No. 386,895. 3 Claims. (Cl. 36—1.)

1. In an article of footwear, the combination of a sheet metal bottom comprising a sole and an upright flange along the edge thereof, an upper extending down within the flange of the bottom, a reinforcing strip of leather



extending along the inner side of the lower edge of the upper, and clenched fasteners extending through the flange, upper and reinforcing strip.

1,386,638. GRINDING-MACHINE FOR ROTARY CUTTERS. HENRY M. LOOMER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 20, 1919. Serial No. 331,887. 18 Claims. (Cl. 51—225.)

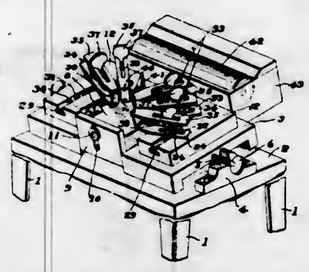


1. In a machine for grinding rotary cutters, an arm, a cutter support angularly and longitudinally adjustable on the arm, means for retaining the cutter support in its position of longitudinal adjustment and means for preventing disturbance of the angular adjustment when altering the longitudinal adjustment.

1,386,639. HEEL-COMPRESSING MACHINE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 26, 1919. Serial No. 306,868. 10 Claims. (Cl. 12—48.)

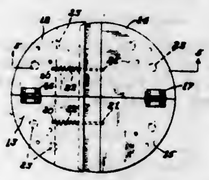
1. In a compressing machine, the combination of opposed compression members movable relatively toward and from each other to compress and release a blank, blank feeding means, and additional means acting through the blank feeding means during the relative separating movement of the compression members to delay the insertion of a blank between said members.

1,386,640. VALVE SEATER AND TRIMMER. JOSIAH W. MCGUIGAN and WESLEY C. ROY, Dearborn, Mich. Filed Apr. 30, 1920. Serial No. 377,998. 4 Claims. (Cl. 82—1.)



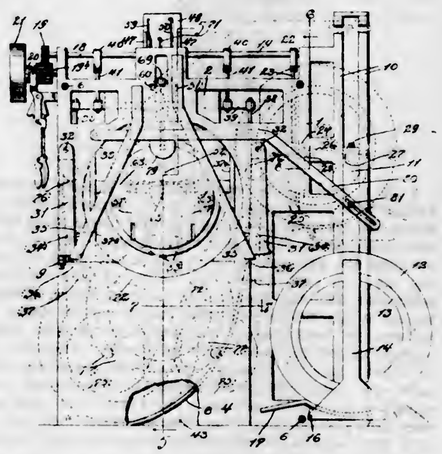
1. A valve seater or trimmer comprising a body member, valve holding or clamping means, means connecting said body member and clamping means, a cutter blade in said body member, and means for adjusting the valve with respect to the cutter when in position within said clamping means.

1,386,641. LOCK. MICHAEL MARINO, New York, N. Y. Filed Sept. 8, 1919. Serial No. 322,278. 1 Claim. (Cl. 70—75.)



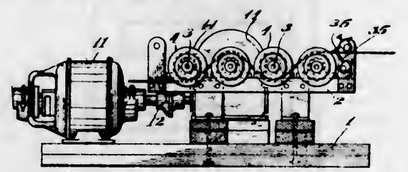
A lock comprising a keeper, a housing, a latch pivotally mounted within the housing and adapted to engage the keeper, a sliding bar for operating the latch, a knob provided with a cam, means for advancing and retracting the bar upon the turning of the knob and means for advancing and retracting the bar by a key, said means including a plurality of alined sweeps on the bar, the cam coöperating with one sweep and the key with another, and a detent provided with a pair of cam surfaces for coöperation respectively with the handle cam and the key.

1,386,642. HEEL-BUILDING MACHINE. RALPH S. MEGATHLIN, Somerville, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1919. Serial No. 314,711. 11 Claims. (Cl. 12—50.)



1. In a heel building machine, the combination of a support for a pile of heel lifts, heel plates arranged about a central forming space and extending in a direction heightwise of a pile of lifts on said support, means for adjusting the inclination of the plates relative to the surface of the support, and means for adjusting the heel plates to different positions about the forming space.

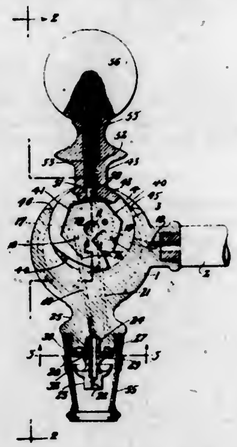
1,386,643. MEAT-ROASTER. NESTOR MIRONCHUK, New York, N. Y. Filed June 24, 1920. Serial No. 391,283. 4 Claims. (Cl. 53—1.)



1. A device of the class described comprising a plate divided into quadrantal sections, the sections on opposite sides of a given diametrical line being hinged to one another, each pair of hinged sections being adjustable as a unit toward and away from the other pair of hinged sections.

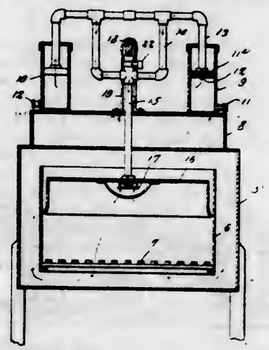
1,386,644. MACHINE FOR REMOVING CORES FROM PNEUMATIC-TIRE CASINGS. NICHOLA YOSIFF MOMITSA, Crestline, Ohio. Filed Nov. 1, 1920. Serial No. 421,057. 20 Claims. (Cl. 18—2.)

1. A machine for removing cores from tire-casings including, in combination, means for holding a core with a casing thereon, means for delivering cores with casings thereupon to the holding means, and means for automatically separating the casing from the core.



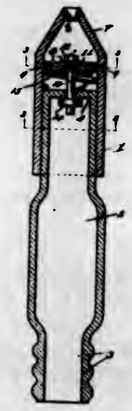
1,386,645. ELECTRICALLY-HEATED STRIP AND WIRE TEMPERING AND ANNEALING DEVICE. WILLIAM E. MOORE, Beaver Falls, Pa., assignor to The Pittsburgh Engineering Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 23, 1919. Serial No. 325,698. 19 Claims. (Cl. 148—10.)

1. An annealing and tempering device comprising a holder for a metal strip, means for drawing the strip from the holder, means for passing an electric current



through a portion of the strip while in transit, whereby said portion is heated, and means for automatically varying the speed of transit in accordance with the heating requirements.

1,386,646. FAUCET. WILLIAM MORLOK, Philadelphia, Pa., assignor to L. A. Prouty Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1920. Serial No. 426,116. 9 Claims. (Cl. 225—25.)



1. In a faucet, the combination of a body member having a circular recess therein, the opposite sides of which are practically flat and the said recess being situated eccentrically of the said body member, and an opening from the adjacent surface of said body member leading into the said recess, the length of said openings being less than the diameter of the said recess, a lever having a practically flat sided head portion which is situated in said recess, the periphery of said head comprising circular and flattened portions whereby the said head may be removed through said opening, the said lever and a portion of the said head projecting outwardly through said opening, a valve supported upon the said head portion, and means for rotatably securing the said valve and the head portion within the said recess.

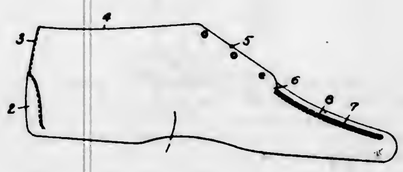
1,386,647. DRY-CLEANING APPARATUS. ALBERT T. NEWMAN, Emporia, Kans. Filed Sept. 17, 1918. Serial No. 254,444. 1 Claim. (Cl. 68—37.)

In a cleaning apparatus, a casing, a holder for fabric, the said holder having a foraminous bottom, a pounder adapted to reciprocate with relation to the holder, a hollow pitman carrying the pounder and communicating with the interior thereof, means for supplying air to the pitman comprising cylinders having air admission valves, apertured pistons operating in the said cylinders, connections between the apertures of the pistons and the said pitman whereby air compressed in the cylinders is delivered through the pitman to the holder, and valves for controlling the passage of air through the pitman.

1,386,648. GREASE-GUN. OTIS S. NEWTON, Columbus, Ohio. Filed Jan. 10, 1919. Serial No. 270,479. 1 Claim. (Cl. 226—128.)

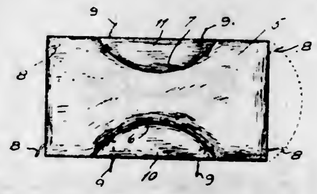
A grease gun comprising a barrel member capable of receiving a flowing lubricant, said member having a restricted valve opening formed in its outlet extremity, a nozzle section slidably carried by the outlet extremity of said barrel member, said section being formed to include an orificed or conical discharge end which is positioned in spaced relationship from the outlet extremity of said barrel member, a spanner element rigidly positioned within said nozzle section and located intermediately of the discharge ends of said barrel member and nozzle section, a valve stem rigidly connected with said spanner element and arranged to project through the outlet opening of said barrel member, a valve formed with said stem and arranged to control the flow of a lubricant through said opening, and a spring acting between said spanner element and the discharge end of said barrel member and normally serving to maintain said valve in such position as to obstruct the flow of lubricant through said opening.

1,386,649. FIRE-ALARM APPARATUS. STEFAN NIKIEL, New York, N. Y. Filed Sept. 18, 1919. Serial No. 324,515. 1 Claim. (Cl. 200—142.)



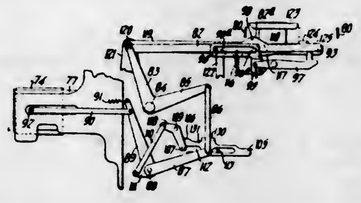
In a circuit closer of the character described, in combination, a metal casing, a central contact button in said casing insulated therefrom, a contact arm, a contact on said arm, a disk of low fusing metal in said casing having a central slot and adapted to be normally engaged by the end of said arm, and a spring adapted to draw both contacts into engagement upon the fusing of said disk, disengaging said arm therefrom for closing a signal circuit.

1,386,650. SEPARATOR FOR STORAGE BATTERIES. PAUL E. NOZAIS, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1920. Serial No. 364,660. 9 Claims. (Cl. 204—29.)



1. A storage battery separator comprising a frame of comparatively rigid material and a sheet of woolen material supported by said frame.

1,386,651. BOOT AND SHOE. FRANCOIS PAGEAU, Montreal, Quebec, Canada. Filed Apr. 24, 1920. Serial No. 376,331. 1 Claim. (Cl. 36—1.)



A one-piece boot or shoe, comprising a sole provided at its forward end with a wedge-shaped tongue, the narrow end of which is integrally connected to the sole; and an upper, also integral with the sole, extending at each side of the sole uninterrupted by transverse seams from toe to heel, the forward portions at opposite sides of the upper having outwardly curved edges between which said tongue is bent backward so as to unite therewith in forming the toe of the shoe; the said curved edges and the adjacent edges of the tongue being stitched directly together and terminating short of the tip of the toe at their forward ends.

1,386,652. PILLOW. JOHN EDWARD PATTON, New York, N. Y. Filed Jan. 20, 1921. Serial No. 438,578. 2 Claims. (Cl. 5—15.)

1. A pillow comprising a main body portion having recesses in its opposite longitudinal sides, cushions adapted to fit the recesses and means for removably securing said cushions in place.

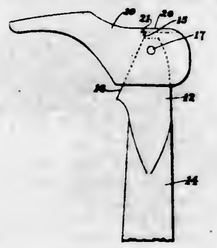
1,386,653. COMBINED TYPEWRITING AND COMPUTING MACHINE. HENRY L. PITMAN, East Orange, N. J., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Jan. 17, 1918. Serial No. 212,213. 71 Claims. (Cl. 235—59.)

1. The combination with a typewriter carriage, of a cross-totalizer, means to cause said cross-totalizer to travel intermittently with said carriage, back-spacing means for said carriage, and means for rendering said back-spacing means effective so that said cross-totalizer may be re-positioned thereby, relatively to said typewriter carriage.

33. The combination with a typewriter carriage, of a cross-totalizer, means to cause the cross-totalizer to travel intermittently with said carriage, back-spacing means for said carriage, means controlled by the typewriter carriage when it is backed, substantially into a computing zone, to render said back-spacing means effective, to reposition said cross-totalizer relatively to said typewriter carriage, numeral keys, and means for rendering said numeral keys ineffective when said carriage is moved, as above stated, without the aid of the back-spacing means.

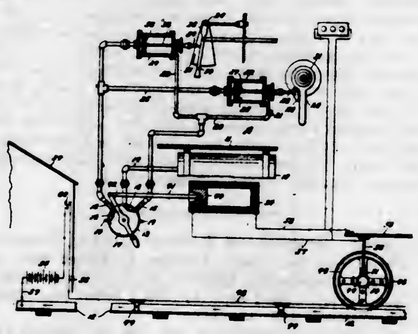
54. The combination with a main carriage, of a sub-carriage, means to cause said sub-carriage to travel intermittently with said main carriage, back-spacing means for said main carriage, numeral keys, locking means for said numeral keys, a normally-ineffective connection from said back-spacing means to reposition said sub-carriage, and means for simultaneously rendering said connection and said locking means effective.

1,386,654. METHOD OF MAKING SHOES. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 8, 1919. Serial No. 322,524. 14 Claims. (Cl. 12—142.)



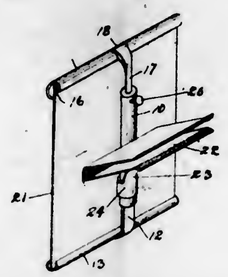
13. That improvement in the art of making shoes which comprises preparing a form having top and bottom parts, the bottom part having substantially the shape of a last and the top part having a shape different from

the top portion of a last, shaping a blank to the bottom portion of the last, binding the blank to the form along lines adjacent to the line of separation of the top and bottom parts, removing the top part, trimming the mar-



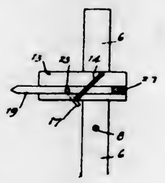
gin of the blank, replacing the top part by a part having a shape to constitute, with the bottom part, the shape of a complete last, assembling on the last shoe parts necessary to complete the shoe, and uniting by a seam said parts to the blank shaped on the bottom part.

1,386,655. **WORK-SUPPORT FOR SHOE-LEVELING MACHINES.** EDWIN N. PREBLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 4, 1919. Serial No. 274,979. 3 Claims. (Cl. 12—123.)



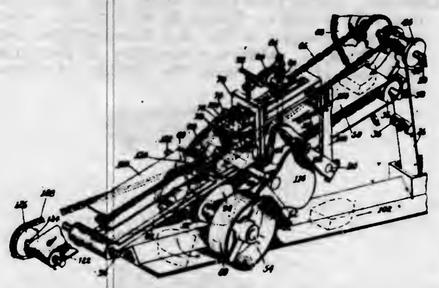
2. A work support for shoe leveling machines comprising a cast metal follower having a parallel sided slot in the heel end and a recess formed in the face of the follower extending about the upper edges of the slot, and a metal plate supported upon the ledge formed by the recess and having an upper surface flush with the face of the follower to afford a smooth bearing for the shoe bottom at the heel seat.

1,386,656. **TRAIN-CONTROLLING MECHANISM.** EDWARD A. REBOUL, Philadelphia, Pa. Filed Oct. 9, 1919. Serial No. 329,467. 1 Claim. (Cl. 246—74.)



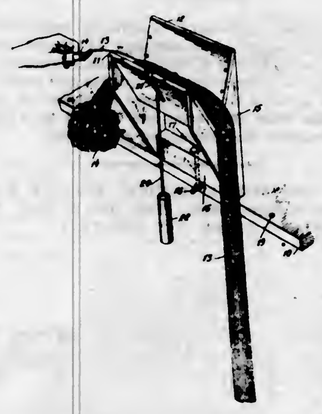
A train control device comprising the combination with the throttle lever and air brake control valve, of a compressed air reservoir, a two-way valve connected with the reservoir, cylinders associated respectively with the throttle lever and brake control valve, pistons within said cylinders connected respectively with the throttle and brake valve, pipes leading from said two-way valve to one end of said cylinders, other pipes leading from said two-way valve to the other ends of said cylinders, a solenoid having a movable core connected with said two-way valve whereby to control the latter, and track carried means for passing a current through the solenoid.

1,386,657. **CARD-HOLDER.** PHILIP H. W. REDFORD, Providence, R. I. Filed May 25, 1920. Serial No. 384,093. 2 Claims. (Cl. 40—16.)



2. A shelf card-holder comprising a pair of channeled cross bars adapted to receive in their channel portions opposite edges of a card, a tubular member extending laterally from one of the bars and a shank extending from the other, said tube and shank being in telescopic engagement and positioned to lie at the rear of the card, means for adjusting the telescoping position of said tube and shank, whereby said cross bars may be adjusted relative to each other, a ring surrounding said tubular member and slidably adjustable thereon, and a resilient clamp secured to said ring for detachably securing said holder to the edge of a shelf.

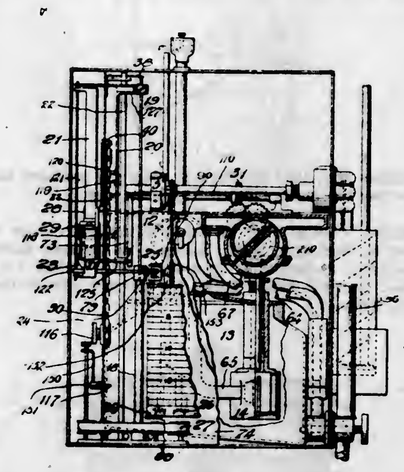
1,386,658. **BAG-HOLDER.** JAMES SINCLAIR, Bredenbury, Saskatchewan, Canada. Filed Oct. 13, 1920. Serial No. 416,610. 2 Claims. (Cl. 83—26.)



1. In a bag holder in combination, a platform, a pair of vertically extending spaced legs extending upwardly from the rear of the platform, a pair of horizontally disposed side arms having their outer faces vertically channeled and slidably receiving the legs, an inclined deflecting plate extending between and permanently connected to the arms in a location between the legs, an adjusting bolt extending between the legs, a pair of catches extending from the undersides of the side arms in a location in advance of the legs and a pair of horizontally disposed fingers slidably mounted in the side arms and connected together rearwardly and adapted to be projected beyond the forward ends of the side arms.

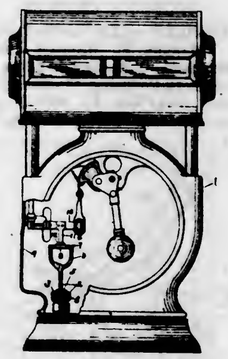
1,386,659. **HEEL-ARRANGING MECHANISM.** CHESTER C. SMALL, deceased, Newton Highlands, Mass., by Jennie M. Small, administratrix, Newton Highlands, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 16, 1918. Serial No. 254,288. 38 Claims. (Cl. 12—42.)

1. A heel arranging mechanism comprising means for separating heels from an indiscriminate mass, and means for disposing them in orderly arrangement.



1,386,660. **TIE-KEEPER.** GEORGE C. SNYDER, New York, N. Y., assignor of one-sixth to Frank K. Hoffman and one-sixth to E. Theo. I. Thygeson, New York, N. Y. Filed July 28, 1917. Serial No. 183,224. 4 Claims. (Cl. 211—36.)

4. In a keeper for fastening devices provided with tying cords, the combination of a holding member having diverging walls one of which is provided with a slot, a cord attached to one of the diverging walls and adapted to pass around the tying cords of the fastening devices and through the slot, and a weight on the end of the cord.

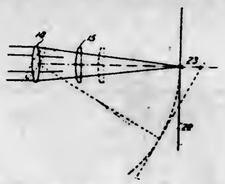


1,386,661. **PRESSURE REGISTERING AND RECORDING DEVICE.** LAURENCE A. STENGER, Denver, Colo. Original application filed Oct. 14, 1918, Serial No. 257,939. Divided and this application filed Apr. 12, 1919. Serial No. 289,601. 5 Claims. (Cl. 234—20.)

1. Pressure recording means comprising an inverted siphon of mercury having one arm open to atmosphere and the other connected to receive the pressure to be recorded, a moving chronologically marked record tablet, a marker arranged to be moved over the record tablet normally out of engagement therewith, electrically operated means operable to cause said marker to momentarily engage the record, electrical contacting means arranged to move in a given ratio to the movement of said marker into contact with the upper surface of the mercury in one of the siphon

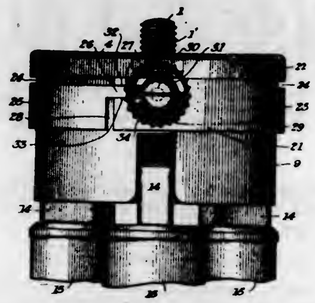
arms, and an energizing circuit for said electrically operated means controlled through the contact between the mercury and said contacting means.

1,386,662. **LOCKING DEVICE FOR WEIGHING-SCALES.** EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 13, 1917. Serial No. 196,515. 14 Claims. (Cl. 265—27.)



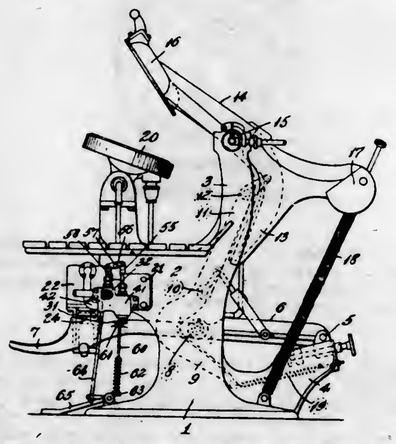
1. The combination with a scale having movable operating parts, of a device arranged adjacent said parts and adapted to engage therewith to restrain said parts against movement when the scale is out of level.

1,386,663. **PROCESS FOR FINISHING AND TESTING LENSES.** FRANK TWYMAN, London, England, assignor to Adam Hilger, Limited, London, England. Filed Feb. 4, 1919. Serial No. 274,843. 9 Claims. (Cl. 88—56.)



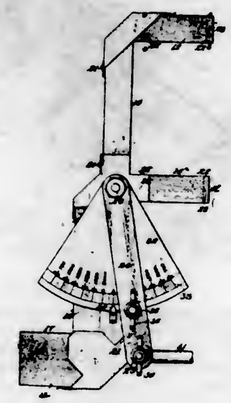
1. The process of testing and finishing lenses which consists in passing axial beams of light through a lens under conditions such that interference rings are produced,

correcting the faults indicated by the interference rings and then passing oblique beams through the lens under



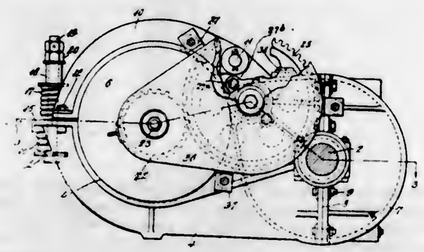
conditions such that interference rings are produced and correcting the faults indicated by these rings.

1,386,664. LOCK FOR TRIPOD-HEADS. WILLIAM C. VAETH, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,047. 12 Claims. (Cl. 248—43.)



1. In a locking device for tripod heads, the combination with a base, of a tripod head mounted to revolve on the base, and a frictional locking band integral with one of these parts.

1,386,665. PRESSURE ATTACHMENT FOR GARMENT-PRESSES. CHARLES E. WAREAM and CHARLES L. BRALEY, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 12, 1917, Serial No. 154,195. Renewed Dec. 28, 1920. Serial No. 433,738. 22 Claims. (Cl. 68—9.)

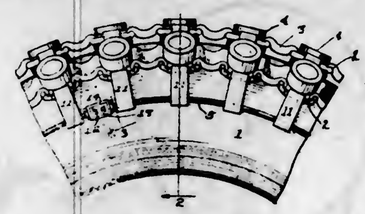


1. In a garment press, a frame, a buck, a press head, means operatable by the operator including a lever for closing the press, and power mechanism ineffective upon said lever during the closing stroke and adapted to cause actuation of said lever to exert a final pressure upon the work after the press is closed.

1,386,666. DIRECTION-INDICATOR AND MEASURING INSTRUMENT. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Dec. 12, 1918. Serial No. 266,389. 8 Claims. (Cl. 88—2.6.)

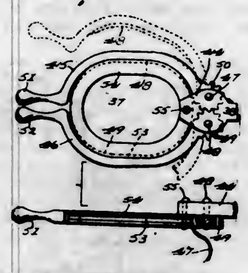
1. An optical instrument comprising complementary objective and sight tubes arranged in spaced parallel relation to each other in a vertical plane, projecting tubes connecting the complementary objective and sight tubes and means operated by the angular movement of the objective tubes when the latter are focused at a distant object to indicate the distance of said object.

1,386,667. DRIVING MECHANISM. SAMSON D. WRIGHT, Cleveland Heights, Ohio. Filed June 9, 1919. Serial No. 302,773. 7 Claims. (Cl. 105—113.)



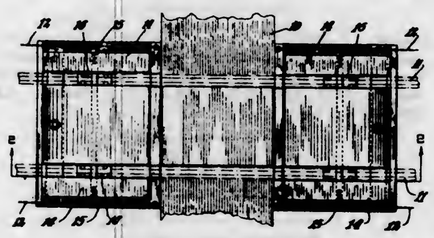
1. In combination, a car having a frame and axle, a hollow casing supported by said frame and axle, a motor in said casing, and driving gears in said casing between said motor and axle, said casing being divided along a vertical plane through the axle for convenient access to the axle gear without disturbing the motor.

1,386,668. NON-SKID TIRE-PROTECTOR. CHARLES E. YOUNG, Akron, Ohio. Filed Feb. 20, 1920. Serial No. 360,249. 7 Claims. (Cl. 152—16.)



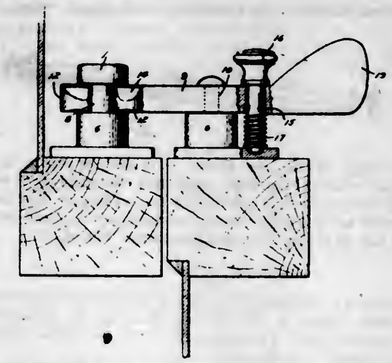
4. In a covering for vehicle tires an annular web made of a plurality of octagonal ring-like members each having alternately disposed long and short sides, each long side of each member being detachably connected to

a long side of a similar member by means of a broad link, each end of said link provided with a laterally extending bore open along the under side to provide a hook



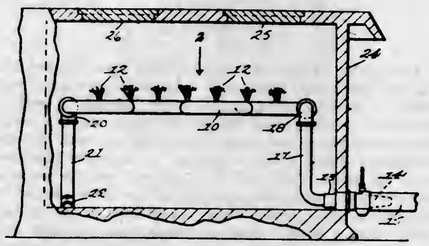
adapted to slide over one of the short sides of said member and engage a long side thereof so that the said long side may be positioned within said bore.

1,386,669. BAG-HOLDER. JOSEPH ZAKARKA, Brooklyn, N. Y. Filed Sept. 15, 1920. Serial No. 410,502. 2 Claims. (Cl. 83—26.)



1. In an apparatus of the character described, a bag holding device comprising a post, a hub rotatably secured to said post, a plurality of arms pivotally secured to said hub superposed plates secured to the outer ends of each of said arms, movable clamp elements pivotally secured at their outer ends between said plates, toothed segments in mesh with each other at the outer ends of said clamp elements, and handles at the opposite ends of said clamping elements for allowing a clamping of the same over the material of a bag to hold the same open while it is in the process of filling.

1,386,670. RAILWAY-CROSSING. LIONTI ZURCAN, Stenen, Saskatchewan, Canada. Filed Oct. 16, 1919. Serial No. 331,044. 1 Claim. (Cl. 256—15.)



In a cattle guard for railway crossings, the combination of two pits adapted to be placed beneath a railway track at either side of a roadway crossing, covers for said pits pivotally mounted, on central axles journaled in bearings, and adapted to be opened by the weight of an animal stepping thereon, the opening being adequate to permit the animal to pass from the track into the pit and a coiled spring for supporting the edges of the pit covers for preventing the obstruction of the track by said covers.

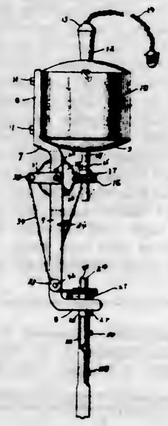
1,386,671. WINDOW-LOCK. WOJCIECH ZYCH, Elizabeth, N. J. Filed Nov. 19, 1919. Serial No. 339,191. 1 Claim. (Cl. 292—207.)

A window lock catch comprising a pair of plates adapted to be secured to the meeting rails of the upper and lower window sash, a stud integrally made on each plate, a reduced neck on one of said studs, a locking catch pivoted on the other shorter stud, one of said plates having a hole in alinement with said shorter stud, a fork formed on one end of the locking catch, said end being provided with a beveled angular face adapted to engage said reduced neck, said locking catch provided with a hole, a locking plunger slidably arranged in the hole of said catch, a head on said plunger, a spring for normally holding said plunger downwardly with its end engaging the hole in one of said plates when the locking catch engages said reduced neck, and allowing the withdrawal of said plunger end from said hole when the locking catch is disengaged from said reduced neck and turned about its pivot.

1,386,672. GAS-HEATER. ISADORE L. ALTSITZER and MITCHELL LISNOV, Yonkers, N. Y. Filed Oct. 12, 1920. Serial No. 416,532. 4 Claims. (Cl. 158—99.)

4. The combination of a serpentine gas burner pipe provided with a plurality of horizontally-disposed convolutions, with a stove for the reception of said gas burner pipe, elbow sleeves rotatably secured to the ends of said pipe, branch pipes secured with their upper ends to the free ends of said elbow sleeves, a foot part attached to the lower end of one of said branch pipes, an inlet pipe attached to the lower end of the other of said branch pipes, a gas control valve in said inlet pipe, and a nipple adapted for the attachment of a gas supply hose, integral with said inlet pipe.

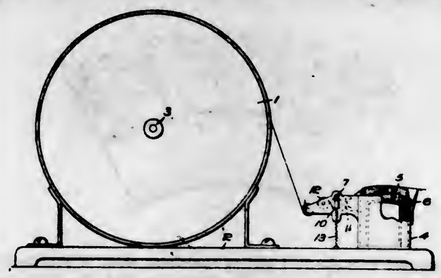
1,386,673. WHIFFLETREE. CHARLES H. ASBURY, Post Falls, Idaho. Filed Sept. 3, 1920. Serial No. 407,828. 3 Claims. (Cl. 278—95.)



1. The combination with a whiffletree having an opening therethrough, of a bracket having a vertical web to

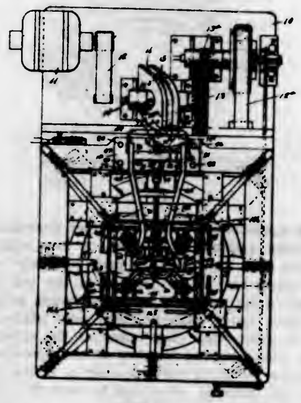
bear closely against one side of the whiffletree and horizontal flanges extending from the edges of said vertical web to snugly engage the top and bottom of the whiffletree and provided with openings to register with the opening through the whiffletree, side plates rising from

the edges of the top flange, a retaining pin to be inserted through the said registering openings and retain a clevis in operative relation to the whiffletree, and means carried by said side plates and engaging the said retaining pin to prevent vertical movement thereof.



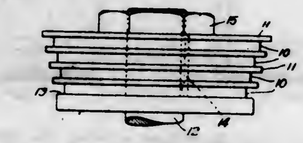
1,386,674. OPERATING DEVICE FOR VALVE-GRINDERS. ARNO B. BAULE and WILLIAM G. KIRCHHOFF, Canton, Ohio. Filed Aug. 29, 1919. Serial No. 320,733. 1 Claim. (Cl. 74—14.)

In a valve grinder, the combination of a bracket having its upper end offset and lower end bent at a right angle, a motor carried by the offset portion, a gear attached to the projecting end of the motor shaft, a second gear mounted by the bracket and meshing with the first mentioned gear, arms extending in opposite directions from the shaft of the second mentioned gear, a revolving grinder shaft vertically mounted in the lower end of the bracket, a drive pulley rigidly attached to the grinder shaft, and a flexible element connecting the said arms with the drive pulley, imparting an oscillating movement to the grinder shaft.



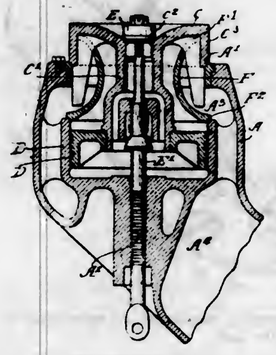
1,386,675. STRIP-SERVING DEVICE. FREDERICK S. ANABLE, Brookline, Mass., assignor to National Binding Machine Company, Boston, Mass., a Corporation of Maine. Original application filed Feb. 1, 1906, Serial No. 413,798. Patent No. 1,168,777. Divided and application filed Jan. 6, 1916, Serial No. 70,554. Divided and this application filed Aug. 23, 1918, Serial No. 251,063. Renewed Jan. 3, 1921. Serial No. 434,863. 5 Claims. (Cl. 91—14.5.)

1. A strip serving device comprising in combination, a strip support, a moistener in operative relation thereto, and means interposed between said support and said moistener to deflect the strip into a bight, and thereby to separate the leading end of the strip from the moistener, said means including a fixed guide constituting a fulcruming member for the strip and positioned adjacent the said moistener, and a movable strip guiding



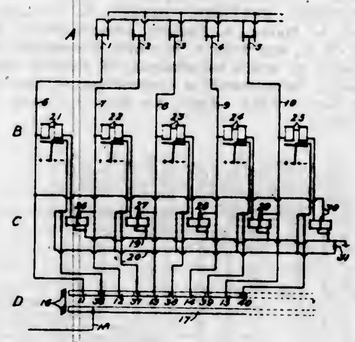
member between said fixed guide and the strip support and in proximity to said fixed guide.

1,386,676. LEATHER-FOLDING MACHINE. JOSEPH W. ANTHONY, Lynn, Mass. Filed July 15, 1918. Serial No. 244,842. 23 Claims. (Cl. 154—41.)



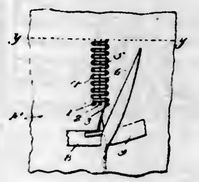
1. A material folding machine including a base having a material receiving portion within its border, a presser arm supported by said base and extended over said receiving portion and means pivotally connecting said arm and said base.

1,386,677. CAPSTAN. BRUNO E. BALDUF, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 9, 1918. Serial No. 261,836. 2 Claims. (Cl. 205—20.)



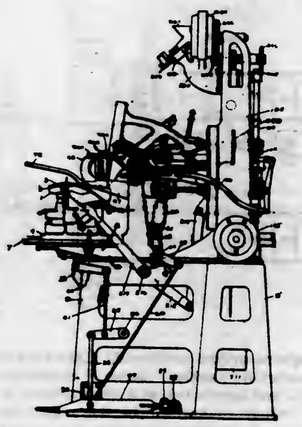
1. In a compound capstan, a plurality of hardened metal wire drawing disks of graduated diameters, and combined spacing and retaining members therefor having straight faces disposed at right angles to the faces of the drawing disks whereby said disks may be reground and interchanged without changing the spacing and retaining members.

1,386,678. BALANCED THROTTLE-VALVE. CHARLES D. BARRETT, JOHN E. MYERS, and ALBERT O. KING, Altoona, Pa. Filed Sept. 16, 1920. Serial No. 410,726. 5 Claims. (Cl. 277—37.)



4. In combination with a throttle valve and a balancing piston attached thereto, an annular steam deflecting plate extending over the piston cylinder to a height which will bring the top edge close to the closed valve, said deflecting plate having its sides curved inwardly from the bottom and outwardly at its top so as to protect the piston from the impingement of the steam jet when the valve is first opened and maintain substantially constant pressure on the top of the piston and the bottom of the valve.

1,386,679. TELEGRAPH SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1917. Serial No. 203,082. 11 Claims. (Cl. 178—63.)

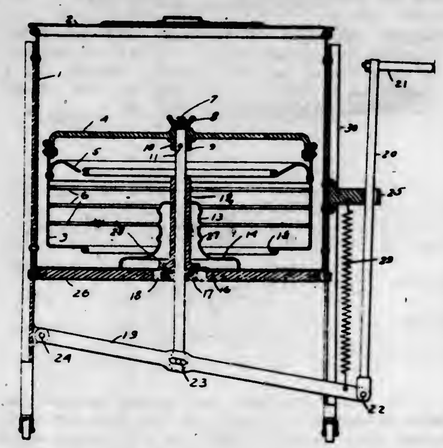


11. A telegraph system comprising a line, a source of current, a transmitter, a plurality of relays operative in various combinations according to the actuation of said transmitter, and a rotary distributer intermediate said line and relays for applying to said line message impulses of positive and negative currents, and coöperating with said relays to connect the transmitting end of said line either to ground or a source of battery following each message impulse depending upon the polarity of the succeeding impulse.

1,386,680. METHOD OF SHAPING AND SEAMING GARMENTS. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1918. Serial No. 242,069. 3 Claims. (Cl. 112—262.)

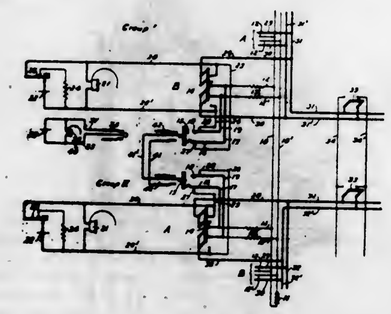
1. The method of shaping and seaming garments consisting in bending a portion of the body fabric out of the normal plane thereof, cutting said bent portion along a desired line to remove a section therefrom for giving the desired shape to the garment, and overlapping the cut edge portions of the body fabric, and joining the same by stitching as the cutting and shaping proceeds.

1,386,681. HEEL-LASTING MACHINE. CHARLES C. BLAKE, Brookline, Mass. Filed Mar. 27, 1916. Serial No. 86,958. 76 Claims. (Cl. 12—14.)



1. A lasting machine, having, in combination, end lasting mechanism and a carrrier therefor connected thereto, the projection of any part of the connnection between the end lasting mechanism and its carrier upon the plane of the shoe bottom lying upon the shoe bottom entirely within the edge thereof throughout the operating stroke of the end lasting mechanism, substantially as described.

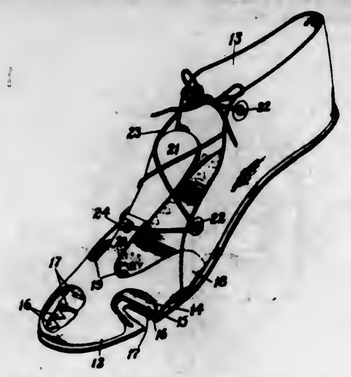
1,386,682. WASHING-MACHINE. WILLIAM F. BLAKE, Toledo, Ohio. Filed Nov. 3, 1919. Serial No. 335,267. 8 Claims. (Cl. 68—15.)



4. In a washing machine, a tub, a vertically movable cylindrical agitator apertured at the bottom to permit

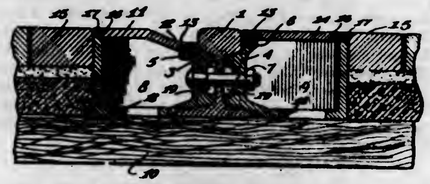
water and clothing to pass into and out of the agitator, and an inwardly and downwardly extending flange at

the upper end of the agitator providing a deflector for the water and clothing passing into the agitator.



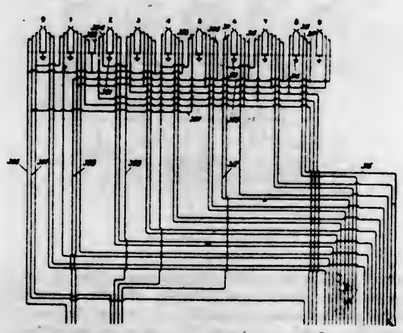
1,386,683. TELEPHONE SYSTEM. WILLIAM T. BOOTH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1918. Serial No. 223,333. 4 Claims. (Cl. 179—1.)

4. A telephone system comprising a plurality of groups of interconnected stations, current regulating means individual to and associated with each station, a common source of current connnected to the regulating means, switching means for interconnecting the groups of stations, means for interconnecting any two selected stations independently of other stations, and means responsive thereto to maintain the connnection of the selected stations with the associated regulating means and the common source thereby insuring substantially the same amount of current supplied thereto.



1,386,684. SHOE. CHARLES M. BRADFORD, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 27, 1919. Serial No. 333,668. 5 Claims. (Cl. 36—1.)

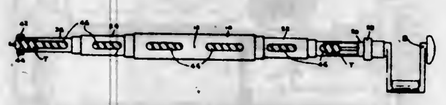
1. A shoe having an upper comprising a vamp and a quarter both of stiff and inflexible material, and a flexible sole, the said vamp having an open instep portion and a tongue located in the opening and the said vamp and quarter having their side portions shaped and ar



ranged for relative movement at substantially the line of flexure of the sole.

1,386,685. RAIL-JOINT BOX. GILMORE W. BRANT, Canton, Ohio. Filed Sept. 7, 1920. Serial No. 408,409. 2 Claims. (Cl. 238—312.)

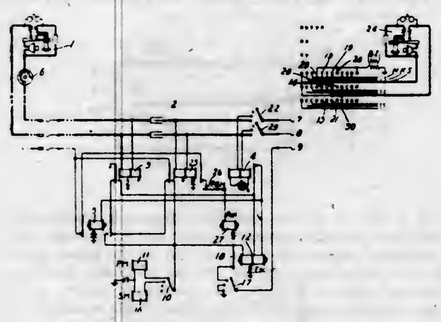
1. In combination with a rail joint surrounded by paving, a box open upon its inner side, hooks upon opposite ends of said open side arranged to be hooked around the ends of a splice-piece of the joint to hold the box in position and a removable cover for the box.



1,386,686. CONTROLLING SYSTEM FOR AUTOMATIC SWITCHING SYSTEMS. ALBERT M. BULLARD, deceased, by Marion R. Bullard, administratrix, Woodstock, N. Y., and John N. Reynolds, Greenwich, Conn., assignors, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 7, 1915. Serial No. 891. 8 Claims. (Cl. 179—27.)

1. In a telephone system, a sender comprising a plurality of controlling devices, a single set of digits keys,

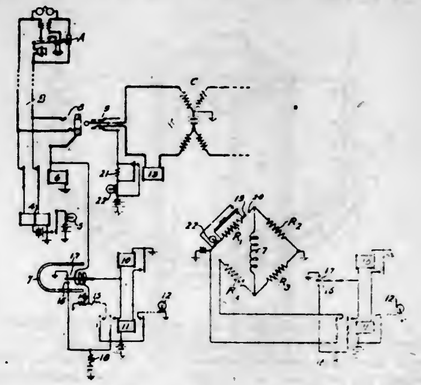
means responsive to the successive operation of keys of said set for causing said controlling devices to assume set positions corresponding to the keys depressed, and a series of mechanical switches governed in their operation by the subsequent movement of said controlling devices, the movement of said controlling devices being caused in turn by the operation of said mechanical switches.



1,386,687. REINFORCING-TUBE FOR BORING-TOOLS. SIDNEY M. CHASE, Minneapolis, Minn. Filed Mar. 7, 1921. Serial No. 450,138. 8 Claims. (Cl. 145—66.)

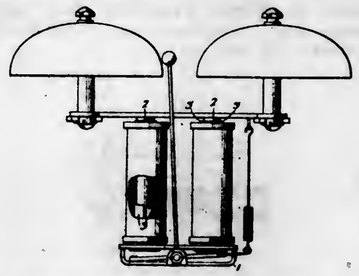
3. A reinforcing tube for boring tools comprising a central section and sections of a size progressively decreasing telescopically arranged at both ends of said central section.

8. A reinforcing tube for boring tools comprising a plurality of telescoping sections, means for limiting the outward movement of said sections, and means for limiting the inward movement of said sections.



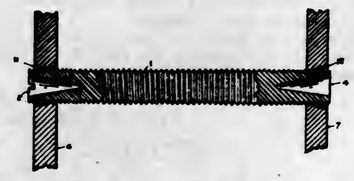
1,386,688. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODRUM, New York, N. Y., assignors to Western Electric Company, New York, N. Y., a Corporation of New York. Filed June 6, 1919. Serial No. 302,031. 3 Claims. (Cl. 179—18.)

1. In a telephone system, line terminals, a group of lines terminating in several groups of terminals in various orders of subordination, a calling line, and means for extending said calling line to any one of said lines in said group and responsive to the busy condition of said line to automatically extend said calling line to the next in turn subordinate line.



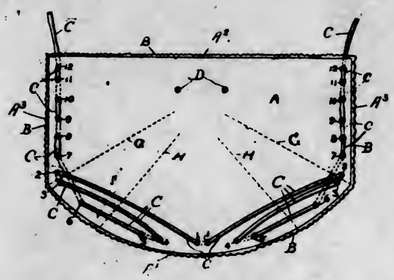
1,386,689. TELEPHONE SYSTEM. ROY D. CONWAY, Chatham, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1918. Serial No. 238,405. 9 Claims. (Cl. 179—73.)

5. A service observing system comprising a telephone line, a cord circuit therefor, a relay energized upon the connection of the cord circuit with the telephone line, a predetermined resistance associated therewith, a service observing signal, means controlled by the energisation of the relay to actuate the signal and to connect said



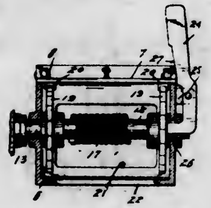
resistance in circuit with the relay to thereby cause the release thereof.

1,386,690. TELEPHONE SYSTEM. GUSTAVUS C. CRAWFORD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1918. Serial No. 259,364. 7 Claims. (Cl. 179—1.)



1. A telephone system comprising a metallic telephone line, a plurality of stations thereon, a plurality of grounded branches connnected to a conductor of the line, electromagnetic devices included in said branches and means for automatically and abnormally increasing the impedance of such devices during conversation over the line between the stations, said means consisting of a supplementary laminated core.

1,386,691. STAYBOLT-FASTENING. ERNEST DUCHESNE, Montreal, Quebec, Canada. Filed Nov. 26, 1919. Serial No. 340,955. 1 Claim. (Cl. 85—1.5.)

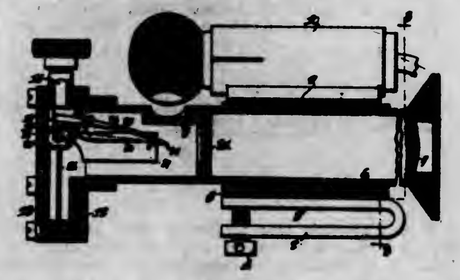


A stay bolt joint in which there is a plate having a threaded hole converging toward the inner end and a bolt threaded into said hole and swaged over to the wall of said hole into mesh with the threads thereof and having a tapered recess projecting beyond the inner surface of said plate.

1,386,692. BONNET. JEAN G. DUPONT, Chicago, Ill. Filed Aug. 21, 1916. Serial No. 115,938. 1 Claim. (Cl. 2—118.)

A bonnet comprising a flat piece of fabric formed to extend continuously around the sides, back and top of a head, having a substantially straight back edge to extend around the neck, and a curved front edge and substantially straight parallel side edges within the prolongation of the curve of the front edge, said piece having marginal holes adjacent the front and side edges, gathering means in said holes whereby the fabric can be drawn to fit around the sides and top of a head, the fabric having holes adjacent the central portion of the margin of the neck portion and gathering means extended through the latter holes.

1,386,693. PORTABLE WINDLASS. EARL ECK, Robbinsdale, Minn. Filed Apr. 1, 1921. Serial No. 457,691. 4 Claims. (Cl. 254—163.)



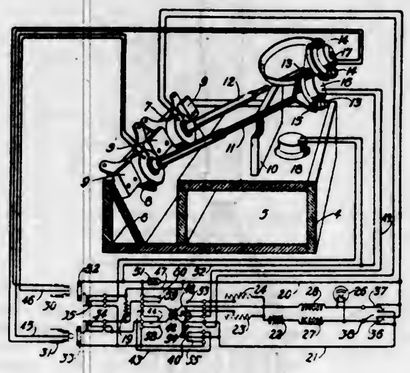
1. A portable device of the kind described comprising a box having means for detachably anchoring it to a suitable support, a windlass drum mounted within said box and having a ratchet wheel, a hinged lid for the box having a holding lug coöperating with said ratchet wheel, a lever for operating said drum from the exterior of the box, a cable attached to said drum, and a friction brake operative to control cable-unwinding movements of the drum.

1,386,694. ELECTRIC SWITCH. ERNEST B. FAHNESTOCK, Plandome, N. Y.; Edith Mary Jordan and Frances Hodgson Burnett, Plandome, N. Y., executors of the will of said Ernest B. Fahnestock, deceased. Filed June 15, 1916. Serial No. 103,737. 7 Claims. (Cl. 200—52.)

1. An electric switch comprising a block of insulating material having recesses for the reception of spring fastening devices for electrical conductors, said block also having apertures for the insertion of conductors to be gripped and held by the fastening devices, spring actuated switching means adapted to be moved to and from the said fastening devices, and flexible contact arms actuated by said switching means for making wiping contacts with the edges of said fastening devices.

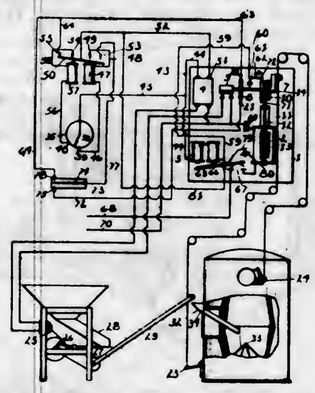
1,386,695. ARTIFICIAL HORIZON. ERNST GEORG FISCHER, Washington, D. C. Filed Jan. 29, 1921. Serial No. 441,001. 13 Claims. (Cl. 33—73.)

1. A device of the character described comprising a support, a pendulum-vane mounted on said support, a "line" carried by said pendulum-vane and a "line" relatively fixed with regard to said support and coöperative with said pendulum carried "line" to constitute an artificial horizon "line," a second pendulum-vane mounted on said support, a "line" carried by said second pendulum-vane and having an end located in close proximity to said aforesaid mentioned "lines" and coöperative with said "lines" to determine the true horizontal and vertical position of the instrument.



1,386,696. URINAL. YATES FISHBACK, Carrollton, Ill. Filed Sept. 29, 1920. Serial No. 413,494. 4 Claims. (Cl. 4—19.)

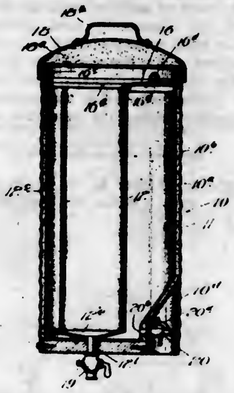
1. A device of the character described comprising a container having a broad bottom and a narrow top, a horizontal tubular extension carried by the upper portion of the container, one end of the container having an opening registering with the tubular extension, a conduit member supported by the sides of the container and substantially registering at one end with the lower portion of said extension and the opening, said conduit member extending longitudinally of the container and having its opposite end disposed in spaced relation to the opposite end of the container and a second conduit member supported by the sides of the container and having one end secured to said last mentioned end of the container and having its opposite end terminating adjacent the intermediate portion of the container in spaced relation to the first mentioned conduit member and the bottom of the container.



1,386,697. TESTING APPARATUS. HARVEY FLETCHER, New York, N. Y., and FRANK J. STRASSNER, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No. 396,115. 5 Claims. (Cl. 179—175.)

1. The method of comparatively testing the quality of a transmitter which consists in connecting such transmitter in a tone producing relation with a receiver of known transmission efficiency, separating such transmitter and receiver by an inclosed air column, and reversing the electrical circuit of such receiver, whereby the

quality of such transmitter may be determined by the comparison of the pitch of the tone so produced with the pitch of the tone produced when a transmitter of known transmission efficiency and quality is subjected to similar conditions.

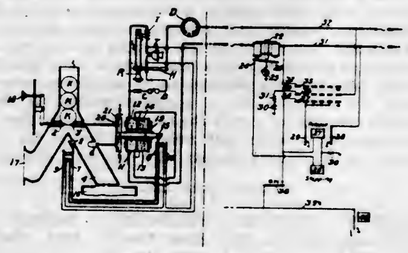


1,386,698. AUTOMATIC FURNACE. LLOYD GARRISON, Salt Lake City, Utah. Filed Mar. 15, 1920. Serial No. 366,078. 4 Claims. (Cl. 236—46.)

1. The combination, with a furnace, of a mechanical fuel feed, means of connecting said fuel feed to the furnace, a control apparatus adapted to open and close the drafts of the furnace and start and stop the fuel feed, a time device adapted to operate said furnace and fuel feed for a definite time periodically irrespective of temperature requirements, and a thermostat adapted to control the operation of said furnace and fuel feed at all other times according to the temperature requirements.

1,386,699. WATER-COOLER. HENRY GIESSEL, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 290,043. 4 Claims. (Cl. 220—16.)

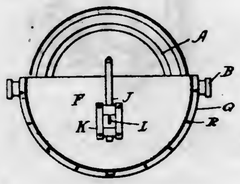
1. A water cooler comprising an external casing, said cooler being provided with an ice compartment and a water compartment, a cover member for both of said compartments, and a removable cover member for said



water compartment, said last-mentioned cover member being provided with an ice-filling aperture.

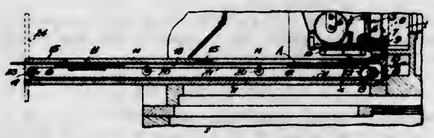
1,386,700. POCKET PENCIL, PEN, AND PAD HOLDER. FRANK N. GILBERT, Binghamton, N. Y., assignor of one-half to Francis R. Gilbert, Philadelphia, Pa. Filed Aug. 15, 1918. Serial No. 250,006. 4 Claims. (Cl. 150—34.)

2. A pocket stationery case including a flat strip folded over on a transverse line to provide sides for the case and having at its fold an inturned reëntrant perforated portion forming guides for a pencil point and sockets for the reception of the pencil.



1,386,701. COIN-COLLECT SYSTEM. CHARLES L. GOODRUM, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1916. Serial No. 114,779. 11 Claims. (Cl. 179—6.5.)

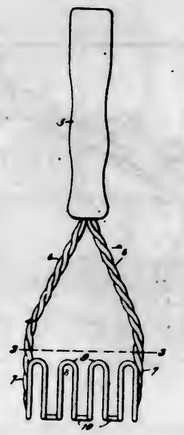
1. In a telephone exchange system, subscribers' two-conductor lines, substations having transmitting appa-



ratus, means including said lines for establishing a connection between said substations, automatic means for periodically collecting toll at the substations, a polarised relay located at each of said substations, said relay being in series with its associated transmitting apparatus, means under the joint control of said toll collecting means and said polarised relay for disabling the transmitting apparatus at the charged substation, and token-controlled means at the calling substation for rendering the conversation continuous during the operation of said charging means.

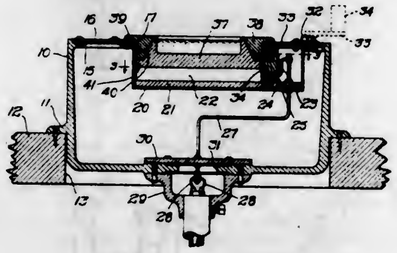
1,386,702. LADLE. JAMES H. GRAY, New York, N. Y. Filed Nov. 15, 1918. Serial No. 262,667. 4 Claims. (Cl. 22—81.)

1. A ladle for molten metal having a nozzle in an upward extension at one side at a point above the usual level of the metal when the ladle is upright and having a cover or wall beyond said nozzle forming a pocket for the metal when the ladle is tilted and a stopper for said nozzle extending transversely across the ladle and supported in vertical position by said cover when the ladle is thus tilted.



1,386,703. PHOTOGRAPHIC CAMERA. JOHN S. GREENE, Rochester, N. Y., assignor to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 19, 1918. Serial No. 267,455. 4 Claims. (Cl. 95—90.)

1. In a camera, the combination with an exposing chamber, means for feeding a continuous strip of film through the chamber and delivering it from the bottom thereof, and a severing device adapted to cut the delivered film into sheets, of a long, narrow dark chamber beneath the exposing chamber in to which the severed sheets are delivered and a conveyer within the dark chamber arranged to receive the sheets and carry them in a substantially straight path toward the end of the dark chamber in continuous contact with the wall thereof.

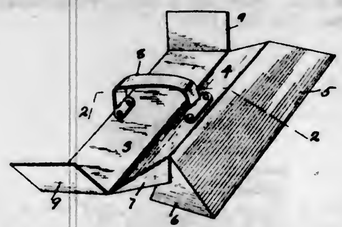


1,386,704. CULINARY IMPLEMENT. HERMAN M. GREENER, Chicago, Ill. Filed June 9, 1921. Serial No. 476,117. 5 Claims. (Cl. 146—15.)

1. A culinary implement comprising a handle, and a dasher at the forward end thereof, said dasher comprising a shank attached to the handle and having a plurality of laterally spaced fingers at its forward end, said

fingers being arranged alternately at right angles to each other.

1,386,705. ELECTRICALLY-HEATED CONTAINER. JAMES T. GRIFFIN, Oak Park, and WILLIAM A. TIMM, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,481. 5 Claims. (Cl. 219—43.)

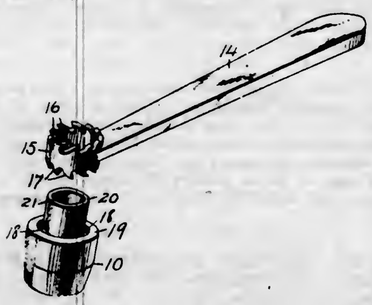


1. In an electrically heated container, a supporting case, a cover therefor provided with an opening and equipped with a support for the entrance and support of a heating unit, a melting pot located above said heating unit, and a cover for a portion of the opening in said main cover and supported therefrom adapted upon being opened to expose the point of connection between external current carrying leads and the heating unit leads, thereby allowing the heating unit to be easily and quickly disconnected and replaced.

1,386,706. PAINT-GUARD. LEROY W. HALL, Minneapolis, Minn. Filed Jan. 15, 1921. Serial No. 437,584. 4 Claims. (Cl. 91—65.)

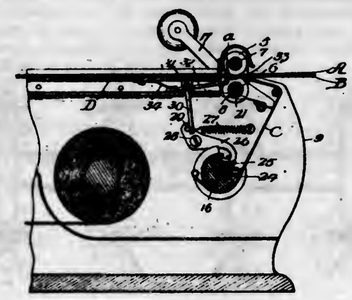
1. A paint guard constructed of sheet metal bent to form a bearing portion, outwardly and inwardly inclined spring portions, and a handle applied to and extended

from said bearing portion to said outwardly inclined portion, pressure on said hand piece serving to insure con-



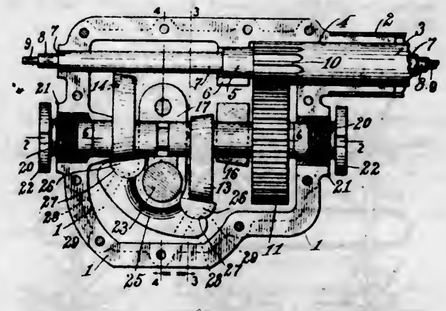
tact of the edge of said inwardly inclined portion with a surface to be protected from paint.

1,386,707. PISTON-RING. STEPHEN D. HARTOG, St. Louis, Mo., assignor, by mesne assignments, to Inland Machine Works, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 24, 1919. Serial No. 272,830. 2 Claims. (Cl. 74—109.)



1. A piston ring, comprising a solid portion which is substantially equal in width to the width of the piston groove in which the ring is to operate, and overlapping ends integral with the solid portion extending a substantial portion of the circumference of the ring and being spaced apart throughout their length, said ends having a combined width equal to the width of the solid portion of the ring and being arranged to press laterally against the side walls of the piston groove; said ring having a groove in the inner side of the solid portion opposite from the overlapping ends, said groove being of less length than the length of the solid portion of the ring.

1,386,708. WRENCH. JOHN C. HURLEY, Newark, N. J. Filed Aug. 22, 1919. Serial No. 319,079. 3 Claims. (Cl. 81—60.)

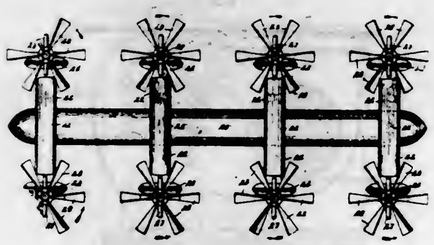


1. A wrench comprising a socket member having a stem thereon, and a handle member having an eye to fit endwise on the stem and removable therefrom, said eye having teeth on its two faces, said teeth all facing in the same direction, said socket member having a projection to be engaged by the teeth, whereby when the eye is removed from the stem, turned over and replaced, the wrench is reversed.

1,386,709. AUTOGRAPHIC REGISTER. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1920. Serial No. 405,254. 14 Claims. (Cl. 282—16.)

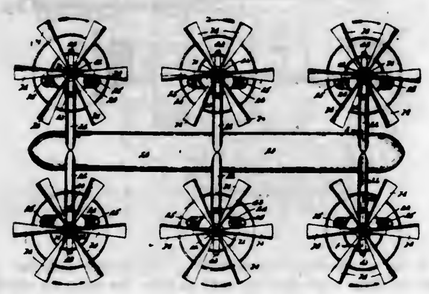
1. In an autographic register from which are withdrawn a plurality of record strips having postholes therein, means for engaging said postholes as said strips are withdrawn, a rewinding roller for the lowermost strip, devices for stopping said roller from revolving, and mechanism actuated by said engaging means for controlling the engagement of said roller by said devices.

1,386,710. STEERING MECHANISM. JOSEPH N. KELLY, Dayton, Ohio. Filed Feb. 5, 1921. Serial No. 442,714. 13 Claims. (Cl. 74—79.)



1. In a steering mechanism, a supporting member, a pair of disks supported by said member for rotation about a common axis and arranged off center relatively to said axis, means for simultaneously rotating both disks, a shaft extending transversely to said axis and adapted to be connected with the wheels to be steered, an arm secured to said rock shaft and having parts on the opposite sides of its axes to engage the respective disks, and means for adjusting said disks relatively to said supporting member to maintain a firm engagement between the same and said parts of said arm.

1,386,711. COMPOSITION FOR IMPREGNATING POROUS MATERIALS. WINTWORTH V. LANDER, Newton, Mass., assignor to General Indurating Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1918. Serial No. 247,663. 12 Claims. (Cl. 134—13.)

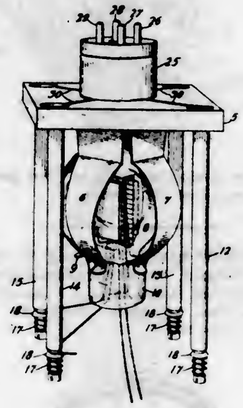


1. A composition for use in the impregnation of porous or bibulous bodies comprising crude petrolatum and a resin.

1,386,712. AIRSHIP. FREDERICK H. LEINWEBER, Chicago, Ill.; Curtis H. Leinweber, William H. Leinweber, and Victor H. Leinweber, executors of said Frederick H. Leinweber, deceased. Filed Mar. 27, 1917, Serial No. 157,622. Renewed Mar. 13, 1920. Serial No. 365,664. 24 Claims. (Cl. 244—25.)

1. The combination with an airship body, of propellers for driving and balancing the same, said propellers being arranged in pairs, the members of each pair being coaxially arranged; means for revolving said propellers about an axis located between them; an engine for operating each propeller; and means for controlling the fuel supply of said engines for balancing the ship, substantially as described.

1,386,713. AIRSHIP. FREDERICK H. LEINWEBER, Chicago, Ill.; Curtis H. Leinweber, William H. Leinweber, and Victor H. Leinweber, executors of said Frederick H. Leinweber, deceased. Filed Nov. 27, 1916, Serial No. 133,754. Renewed Apr. 30, 1920. Serial No. 378,016. 20 Claims. (Cl. 244—25.)



1. An air ship comprising a frame; propellers adjustable on said frame; clutches connected to adjust said propellers; pneumatics for operating said clutches; and altitude operable means for operating said pneumatics, substantially as described.

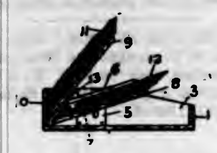
6. An airship comprising a frame; propellers adjustable on said frame; clutches connected to adjust said propellers; pneumatics for operating said clutches; valves controlling said pneumatics; electromagnets controlling said valves; and means for automatically disconnecting said clutches after a predetermined operation, substantially as described.

13. An airship comprising a frame; adjustable propelling means on said frame; altitude operable means for adjusting said propelling means; and automatic means for locking said propelling means in adjusted positions, substantially as described.

1,386,714. VACUUM-TUBE HOLDER. WALTER J. LEVERIDGE, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,911. 7 Claims. (Cl. 175—183.)

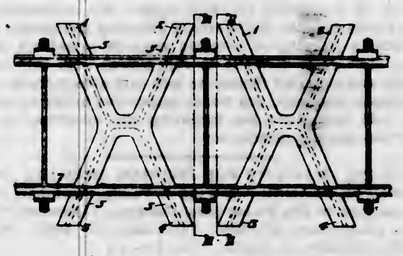
3. A holder for a vaccum tube comprising a block, spring tube-engaging fingers projecting from said block, binding posts projecting from said block in the same direction as said fingers, and terminal connections for said holder on the side of said block opposite said fingers, said terminal connections being electrically connected to said binding posts.

1,386,715. CURTAIN-FIXTURE. MARTHA LEWIN, New York, N. Y. Filed Nov. 14, 1919. Serial No. 337,949. 1 Claim. (Cl. 156—19.)



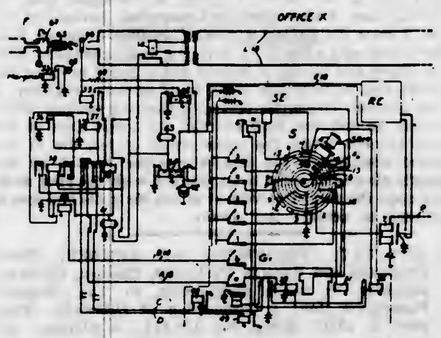
In a curtain fixture, the combination of a pole having a groove extending lengthwise thereof, a series of hooks located at intervals along said pole and projecting outwardly therefrom, a shell pivotally secured to said pole and adjustable to conceal said hooks and to expose same and a pair of blocks slidable lengthwise in said groove whereby said fixture is supported in operative position.

1,386,716. FROTHING AND MINERAL SELECTIVE AGENT AND PROCESS OF USING THE SAME. ROYER LUCKENBACH, Brooklyn, N. Y., assignor to Luckenbach Processes, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Apr. 5, 1918. Serial No. 226,833. 16 Claims. (Cl. 83—85.)



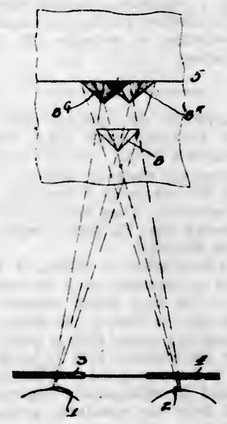
1. A process of concentrating ore, which comprises mixing the ore with water to form a pulp, placing an alkaline solution of rosin, lac and a fatty acid in the pulp, aerating the mass to form bubbles, whereby the bubbles will float upon the surface of the pulp and form a froth, and removing the froth from the pulp.

1,386,717. DESK-TRAY. JAMES STEPHEN LUCKETT and CLYDE CAMERON LIVESAY, Toronto, Ontario, Canada. Filed Oct. 4, 1920. Serial No. 414,685. 3 Claims. (Cl. 45—2.)



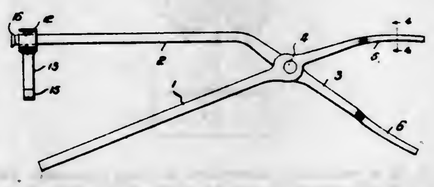
1. In a desk tray, a main tray having a bottom and back wall extending at an angle to each other, a plurality of supplemental trays extending radially from the apex of the angle formed by the bottom and back wall of the main tray, and means for supporting the supplemental trays within the main tray whereby the bottom of the lowermost tray extends at an angle to the bottom of the main tray and the back portions of the supplemental trays together fit the space intervening between the bottom of the lowermost supplemental tray and the back wall of the main tray and arranged in sectoral form.

1,386,718. RAILWAY-TIE. CASSIUS G. MCCOWN, Alliance, Ohio. Filed May 26, 1921. Serial No. 472,653. 2 Claims. (Cl. 238—44.)



1. A metallic tie of cross shape provided with rail engaging lugs near the end portions thereof arranged to engage the inner sides of the bases of the rails, a tie bar connecting the rails and means upon the tie bar for drawing the rails toward each other.

1,386,719. TELEPHONE SYSTEM. HUGH D. MACPHERSON, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1920. Serial No. 397,641. 5 Claims. (Cl. 179—46.)



1. In a telephone system, in combination, a plurality of trunk lines and a signaling path common thereto extending between two stations, means at one station for transmitting over the signaling path code signals individual to the different trunk lines, each code signal comprising a plurality of current impulses, means common to the trunk lines for determining the character of certain of the impulses of each code signal, additional independent means common to the trunk lines for determining the character of other of the impulses of each code signal, and means individual to each trunk line for controlling the operation of said additional means.

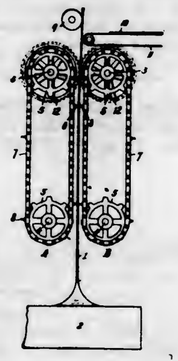
1,386,720. STEREOSCOPIC PICTURE. ALFRED J. MACY, Chicago, Ill., assignor to Macy Art Process Corporation, a Corporation of Illinois. Filed May 29, 1919. Serial No. 300,576. 4 Claims. (Cl. 88—29.)

1. A stereogram having two stereographic components, a portion of the elements of said components being out of register in one direction and other of said elements being out of register in the opposite direction, whereby certain parts of the stereographic image will be in front of the surface of the stereogram and other parts thereof will be behind said surface.

1,386,721. SPRING-MANIPULATING TOOL. JOHN MADDEN and EDWIN J. CANFIELD, Detroit, Mich. Filed Sept. 10, 1919. Serial No. 322,863. 1 Claim. (Cl. 29—86.3.)

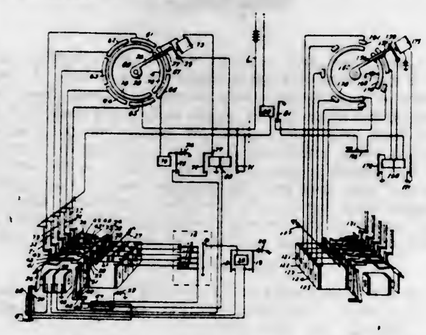
The combination of tongs having pivotally connected handles with one of said handles provided with a head, a sleeve loose on the handle to slide between the head and the pivot of the handle, and an arm carried by said sleeve and having a recess to receive the other handle and prevent a closing movement of said handles.

1,386,722. DIAPHRAGM. GEORGE E. MATHER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,257. 6 Claims. (Cl. 154—2.)



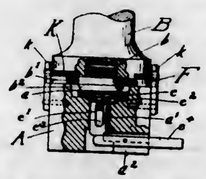
1. The method of constructing a diaphragm which consists in incasing a reinforcing member between two partially vulcanised members, placing the assembled parts in a mold and subjecting to pressure and heat to cause further vulcanization.

1,386,723. METHOD OF PRODUCING NITROGEN COMPOUNDS DURING THE DRY DISTILLATION OF NITROGENOUS FUEL. WALTER OSTWALD, Grossbothen, near Leipsig, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 7, 1916, Serial No. 118,836. Renewed Jan. 27, 1920. Serial No. 354,748. 4 Claims. (Cl. 23—21.)



1. In the dry-distillation or coking of a nitrogenous fuel, the process of obtaining as a by-product the nonfixed nitrogen of the fuel, which consists in mixing a chlorid with the fuel, in heating the mixture in a closed chamber and supplying steam thereto with the exclusion of air, whereby hydrochloric acid is produced and the nitrogen of the fuel is converted into the form of ammonium chlorid, and in subsequently separating the ammonium chlorid from the remaining products, substantially as described.

1,386,724. APPARATUS FOR DRAWING SHEET-GLASS. THOMAS S. OWENS, Toledo, Ohio. Filed Jan. 14, 1919. Serial No. 271,082. 2 Claims. (Cl. 49—17.)

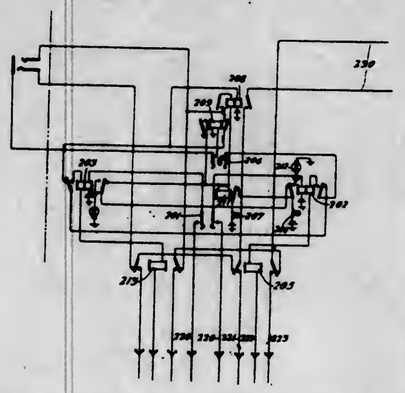


1. In a continuous sheet glass drawing apparatus, two sheet drawing units disposed in opposed relation at opposite sides of a sheet being drawn, each of said units comprising shafts transversely spaced longitudinally of the sheet, sprocket wheels carried by each shaft, a pair of sprocket chains connecting said wheels and spaced longitudinally of the shafts, and sheet engaging bars connecting said chains and spaced longitudinally thereof to provide a considerable space between the points of engagement of a sheet by the bars, the bars of one unit cooperating with those of the other unit to grip and impart drawing movements to the engaged sheet, the bars of the separate units also coöperating to score and weaken the engaged sheet at the points of gripping of the same.

1,386,725. SIGNALING SYSTEM. JOEL C. R. PALMER, New Rochelle, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1918. Serial No. 249,780. 16 Claims. (Cl. 178—17.)

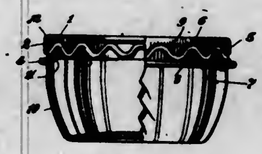
16. In a printing telegraph system the combination of a current impulse distributer, a selecting mechanism comprising a plurality of selecting magnets, armatures therefor, mechanism normally in engagement with said armatures and actuated thereby to lock said armatures in their actuated positions, and means responsive to the actuation of said armatures for initiating the operation of the current impulse distributer.

1,386,726. MACHINE FOR FORGING ARTICLES FROM METAL BLANKS. EDWARD J. PAQUE, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,579. 1 Claim. (Cl. 78—1.)



In a machine of the character described the combination of a female die having a recess in its upper face, an ejector plate seated removably upon the bottom of the die, a male die having a boss of smaller diameter than the recess and adapted to move in axial alinement with the recess and having a tapered end adapted to enter the recess and to form the inner walls of a die chamber, a ring member, means for mounting the ring member reciprocally around the boss so that the lower face of the ring member forms the upper walls of the die in the closed position of the dies, a retainer carried by the female die and adapted to be engaged with the ring member upon the return movement of the male die and means adapted to actuate the ejector.

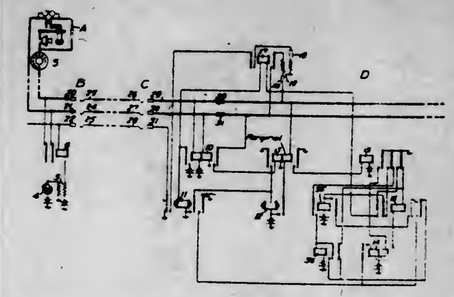
1,386,727. TREATMENT OF LUMBER. FRITZ PFLEUMER and HERMAN PFLEUMER, Dresden, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 5, 1916. Serial No. 118,421. 4 Claims. (Cl. 99—12.)



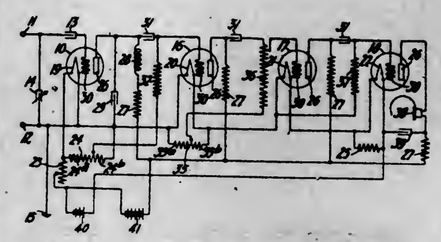
1. The method of treating lumber and the like to increase its density, which consists in subjecting such material, at an elevated temperature, to pressure transmitted through a fluid in contact with said material externally but of such nature as not to penetrate into it materially and impervious to the pressure-generating medium.

1,386,728. MACHINE-SWITCHING TELEPHONE SYSTEM. LIPA POLINKOWSKY, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1918. Serial No. 251,605. 27 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of lines, means including a connecting circuit and a selectively operable switching device for interconnecting two of said lines, an operator's key board; a plurality of register sets each comprising a set of number relays, a set of counting relays and a set of switching relays; means under the control of said key-board for variably operating the number relays of any one of said plurality of register sets, means jointly controlled by said switching device and the operated number relays for variably operating the associated counting relays, means controlled by the counting relays for operating the associated switching relays, and means for restricting the control of said key board to the number relays of one register set at a time.



1,386,729. SINUOUS-BEAD FRICTION-SEAL. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 31, 1920. Serial No. 400,395. 21 Claims. (Cl. 215—82.)



1. A friction closure cap comprising a cover portion, a skirt extending at right-angles to said cover portion and a continuous sinuous sealing bead in said skirt portion.

1,386,730. TELEPHONE-EXCHANGE SYSTEM. ARTHUR RAYNSFORD, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,511. 10 Claims. (Cl. 179—27.)

1. In a telephone system, an office, telephone lines of different classes terminating therein, a second office, trunks interconnecting said offices and having two wires only, an operator's position at said second office wherein said trunks terminate, a cord circuit thereat, automatic switches at said first office adapted to be set under the control of the calling subscriber to seize one of said trunks, and means for immediately automatically indicating the class of the calling line to the operator at the second office as soon as said cord circuit is connected to a seized trunk.

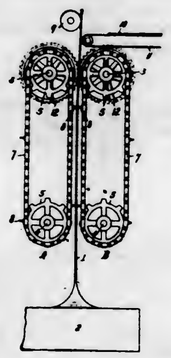
1,386,731. VACUUM-TUBE REPEATER-CIRCUITS. HARRY S. READ, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1919. Serial No. 289,608. 9 Claims. (Cl. 179—171.)

1. In a multi-stage repeater, a plurality of vacuum tubes each having a cathode, an anode and a control electrode, a resistance bridged across one of said cathodes, and a connection from a point on said resistance to the control electrode of another of said tubes.

1,386,732. DETACHABLE CHAIN-LINK. JAMES REID, Watertown, and ALBERT M. LEAHY, Somerville, Mass. Filed Oct. 13, 1920. Serial No. 416,748. 9 Claims. (Cl. 59—85.)

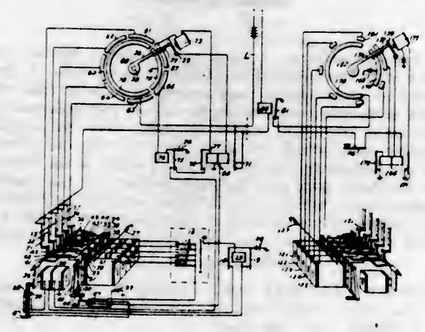
1. A detachable chain or cable link, compriaing a C-shaped member having an open side with cylindrical flanged projections at its ends, a pair of duplicate coupling members for closing the open side of said C-shaped member, each of said coupling members having recesses for the reception of said projections, and plain abutting sides held in contact in the plane of said C-shaped member, and means for uniting said coupling members.

1,386,722. DIAPHRAGM. GEORGE E. MATHER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,857. 6 Claims. (Cl. 154—2.)



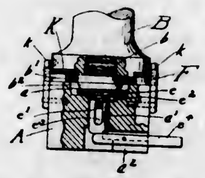
1. The method of constructing a diaphragm which consists in incasing a reinforcing member between two partially vulcanized members, placing the assembled parts in a mold and subjecting to pressure and heat to cause further vulcanization.

1,386,723. METHOD OF PRODUCING NITROGEN COMPOUNDS DURING THE DRY DISTILLATION OF NITROGENOUS FUEL. WALTER OSTWALD, Grossbothen, near Leipzig, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 7, 1916, Serial No. 118,836. Renewed Jan. 27, 1920. Serial No. 354,748. 4 Claims. (Cl. 23—21.)



1. In the dry-distillation or coking of a nitrogenous fuel, the process of obtaining as a by-product the nonfixed nitrogen of the fuel, which consists in mixing a chlorid with the fuel, in heating the mixture in a closed chamber and supplying steam thereto with the exclusion of air, whereby hydrochloric acid is produced and the nitrogen of the fuel is converted into the form of ammonium chlorid, and in subsequently separating the ammonium chlorid from the remaining products, substantially as described.

1,386,724. APPARATUS FOR DRAWING SHEET-GLASS. THOMAS S. OWENS, Toledo, Ohio. Filed Jan. 14, 1919. Serial No. 271,082. 2 Claims. (Cl. 49—17.)

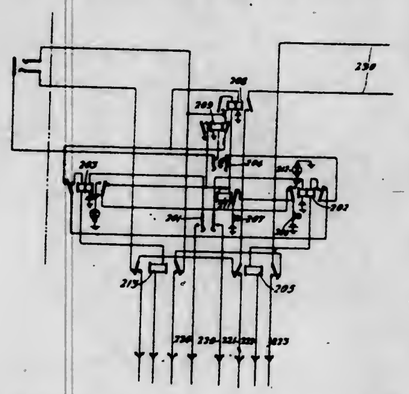


1. In a continuous sheet glass drawing apparatus, two sheet drawing units disposed in opposed relation at opposite sides of a sheet being drawn, each of said units comprising shafts transversely spaced longitudinally of the sheet, sprocket wheels carried by each shaft, a pair of sprocket chains connecting said wheels and spaced longitudinally of the shafts, and sheet engaging bars connecting said chains and spaced longitudinally thereof to provide a considerable space between the points of engagement of a sheet by the bars, the bars of one unit cooperating with those of the other unit to grip and impart drawing movements to the engaged sheet, the bars of the separate units also cooperating to score and weaken the engaged sheet at the points of gripping of the same.

1,386,725. SIGNALING SYSTEM. JOEL C. R. PALMER, New Rochelle, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1918. Serial No. 249,780. 16 Claims. (Cl. 178—17.)

16. In a printing telegraph system the combination of a current impulse distributer, a selecting mechanism comprising a plurality of selecting magnets, armatures therefor, mechanism normally in engagement with said armatures and actuated thereby to lock said armatures in their actuated positions, and means responsive to the actuation of said armatures for initiating the operation of the current impulse distributer.

1,386,726. MACHINE FOR FORGING ARTICLES FROM METAL BLANKS. EDWARD J. PAQUE, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 17, 1919. Serial No. 338,579. 1 Claim. (Cl. 78—1.)



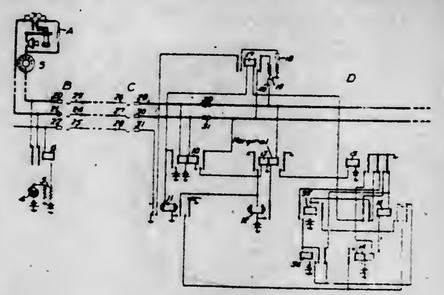
In a machine of the character described the combination of a female die having a recess in its upper face, an ejector plate seated removably upon the bottom of the die, a male die having a boss of smaller diameter than the recess and adapted to move in axial alinement with the recess and having a tapered end adapted to enter the recess and to form the inner walls of a die chamber, a ring member, means for mounting the ring member reciprocally around the boss so that the lower face of the ring member forms the upper walls of the die in the closed position of the dies, a retainer carried by the female die and adapted to be engaged with the ring member upon the return movement of the male die and means adapted to actuate the ejector.

1,386,727. TREATMENT OF LUMBER. FRITZ PFLEUMER and HERMAN PFLEUMER, Dresden, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 5, 1916. Serial No. 118,421. 4 Claims. (Cl. 99—12.)

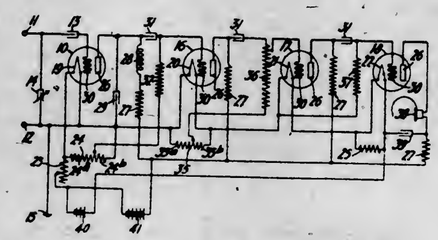
1. The method of treating lumber and the like to increase its density, which consists in subjecting such material, at an elevated temperature, to pressure transmitted through a fluid in contact with said material externally but of such nature as not to penetrate into it materially and impervious to the pressure-generating medium.

1,386,728. MACHINE-SWITCHING TELEPHONE SYSTEM. LIPA POLINKOWSKY, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1918. Serial No. 251,605. 27 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of lines, means including a connecting circuit and a selectively operable switching device for interconnecting two of said lines, an operator's key board; a plurality of register sets each comprising a set of number relays, a set of counting relays and a set of switching relays; means under the control of said key-board for variably operating the number relays of any one of said plurality of register sets, means jointly controlled by said switching device and the operated number relays for variably operating the associated counting relays, means controlled by the counting relays for operating the associated switching relays, and means for restricting the control of said key board to the number relays of one register set at a time.



1,386,729. SINUOUS-BEAD FRICTION-SEAL. GEORGE RAMSEY, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 31, 1920. Serial No. 400,395. 21 Claims. (Cl. 215—82.)

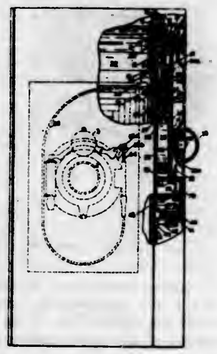


1. A friction closure cap comprising a cover portion, a skirt extending at right-angles to said cover portion and a continuous sinuous sealing bead in said skirt portion.

1,386,730. TELEPHONE-EXCHANGE SYSTEM. ARTHUR RAYNSFORD, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,511. 10 Claims. (Cl. 179—27.)

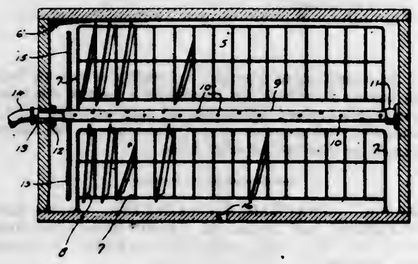
1. In a telephone system, an office, telephone lines of different classes terminating therein, a second office, trunks interconnecting said offices and having two wires only, an operator's position at said second office wherein said trunks terminate, a cord circuit thereat, automatic switches at said first office adapted to be set under the control of the calling subscriber to seize one of said trunks, and means for immediately automatically indicating the class of the calling line to the operator at the second office as soon as said cord circuit is connected to a seized trunk.

1,386,731. VACUUM-TUBE REPEATER-CIRCUITS. HARRY S. READ, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1919. Serial No. 289,608. 9 Claims. (Cl. 179—171.)



1. In a multi-stage repeater, a plurality of vacuum tubes each having a cathode, an anode and a control electrode, a resistance bridged across one of said cathodes, and a connection from a point on said resistance to the control electrode of another of said tubes.

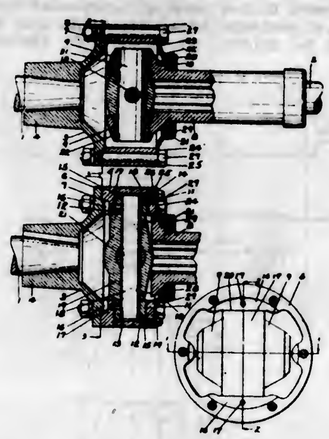
1,386,732. DETACHABLE CHAIN-LINK. JAMES REID, Watertown, and ALBERT M. LEAHY, Somerville, Mass. Filed Oct. 13, 1920. Serial No. 416,748. 9 Claims. (Cl. 59—85.)



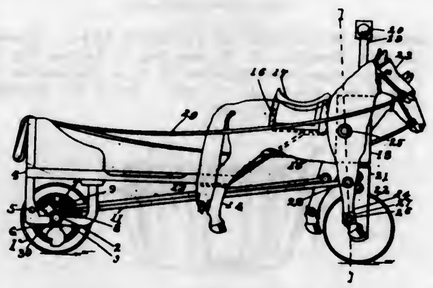
1. A detachable chain or cable link, comprising a C-shaped member having an open side with cylindrical flanged projections at its ends, a pair of duplicate coupling members for closing the open side of said C-shaped member, each of said coupling members having recesses for the reception of said projections, and plain abutting sides held in contact in the plane of said C-shaped member, and means for uniting said coupling members.

1,386,733. FILM-SHIFTING DEVICE FOR CAMERAS. LOUIS W. ROSEN and PINCUS BRAUNER, New York, N. Y., assignors, by direct and mesne assignments, to Adolph E. Brion, New York, N. Y. Filed Feb. 26, 1918, Serial No. 219,256. Renewed May 11, 1920. Serial No. 380,649. 15 Claims. (Cl. 95—31.)

1. In a device of the class described, a camera with a shutter mechanism suitable for a variety of exposures, an automatic film shifting mechanism adapted to co-act with an intervally holed or notched film, controlling means in locking arrangement with said film shifting mechanism for starting said film shifting mechanism when out of engagement with said hole or notch, solid means operatively associated at all times between said shutter mechanism and said controlling means for actuating said controlling means directly from the shutter mechanism after a predetermined exposure has been completed, and means for causing the said film shifting mechanism to stop and be locked regardless of said film when the next hole or notch in said film is brought into engagement with said controlling means.



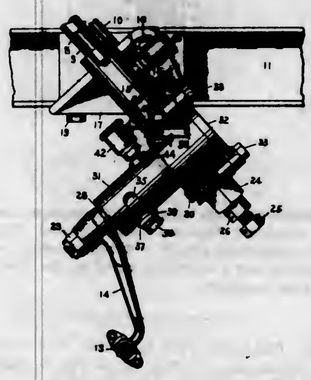
1,386,734. DISH-WASHING APPARATUS. HARRY ROSENBAUM, New York, N. Y. Filed Oct. 23, 1920. Serial No. 418,887. 1 Claim. (Cl. 141—9.)



A washing apparatus comprising a receptacle, a perforated spray pipe extending horizontally and centrally between the opposite end walls of the receptacle and rotatably supported, a water supply connection to the pipe, radially extending discharge tubes carried by the spray pipe adjacent to one end thereof for rotating said pipe by the reaction of the water discharged from the outer ends of said tubes, and dish supporting racks mounted in the receptacle parallel to the spray pipe, and located above and below the same.

1,386,735. UNIVERSAL JOINT. CLEMENS T. SCHAEFER, Anderson, Ind., assignor to Arvac Manufacturing Company, Anderson, Ind. Filed Oct. 9, 1920. Serial No. 415,841. 4 Claims. (Cl. 64—102.)

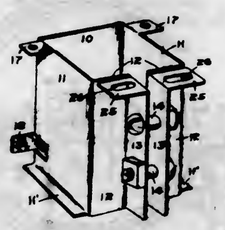
4. In a universal joint, the combination of an outer shaft member constituting a housing member and comprising a shaft receiving section provided with a flange and an annular body section disposed against said flange, an inner forked shaft member having a spherically curved surface, a journal member arranged within the outer shaft member, a journal pin for the inner shaft member carried by said journal member, a second journal pin carried by the outer shaft member disposed through said journal member and journaled in said outer shaft member, an annular closure member embracing said inner shaft member and provided with an outwardly projecting flange disposed against the outer end of said body member, bolts disposed through said outer shaft member sections and said closure member for securing said parts together, a packing ring within said shaft member coacting with the spherical surface of said inner shaft member, and a spring thrust ring for said packing ring having lateral wave-like spring bends therein.



1,386,736. VELOCIPEDE FOR CHILDREN. JOHN R. SCHWARZ, St. Joseph, Mo. Filed Sept. 25, 1920. Serial No. 412,684. 1 Claim. (Cl. 208—42.)

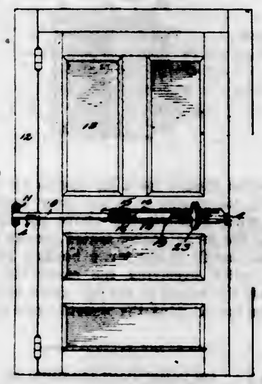
In a velocipede; a transporting wheel; a flange secured on the inner side of said wheel, an axle for said vehicle on the end portion of which axle said wheel is rotatably mounted; a pawl carrier oscillatably mounted on said axle adjacent to said wheel; a pawl oscillatably mounted on said pawl carrier; a shoe secured on the upper end portion of said pawl for being brought into contact with the inner surface of said flange; a connecting rod the rear end of which is crank connected with the lower end portion of said pawl; rod moving means whereby said connecting rod is manually moved forward; a weight formed with said pawl carrier by the gravity of which said carrier and the therewith connected parts are moved for their return movement; and stopping means whereby the forward movement of said connecting rod and the therewith connected parts is limited.

1,386,737. STEERING MECHANISM FOR MOTOR-VEHICLES. LEE C. SHARP, Plattsmouth, Nebr. Filed Feb. 18, 1916. Serial No. 79,193. 1 Claim. (Cl. 74—79.)



In a steering mechanism for motor vehicles, the combination with a steering-post having a tapered lower end-portion, of a worm fitting upon said end-portion, means for removably securing the worm thereon, a worm-gear meshing with worm and having an integral axialy stem, said stem having a tapered end-portion of the same form as the end-portion of the steering-post, a crank having a taper-bored hub adapted to fit upon the tapered end-portion of either of said stem or said steering-post, means for removably securing said crank upon said end-portion of the stem, and a housing having bearings for said steering-post and worm-wheel stem and inclosing said worm and worm-wheel.

1,386,738. CABINET-DOOR. CHARLES A. SONNENBERG, Columbus, Ind. Filed June 23, 1920. Serial No. 391,143. 2 Claims. (Cl. 20—19.)

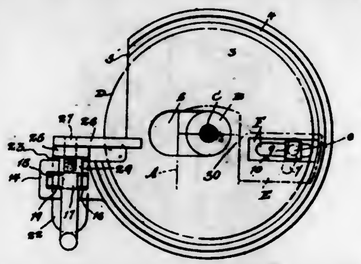


2. As a new cabinet manufacture, a door receiving compartment separate from the body of the cabinet and defined by inclosing members two opposite ones of which are channeled on sides toward each other, a rectangular follower, a door, a pair of metal straps rigidly secured to opposite ends of the follower, hinge-pins seated in the door and passing through said straps and projecting into the adjacent channels, and dowel pins remote from the hinge-pins seated in the follower and entering the channels to aid the hinge-pins in supporting and guiding the follower so it will not bind when slidably moved longitudinally of the channels.

1,386,739. DEVICE FOR ATTACHING TABLE-LEGS. GEORGE W. STOLL and GEORGE H. DESCHAMP, Indianapolis, Ind. Filed Dec. 6, 1920. Serial No. 428,502. 1 Claim. (Cl. 45—48.)

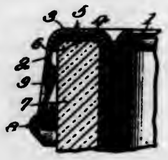
A device for detachably securing table legs comprising a resilient plate bent to inclose the tenon of a table leg, means for wedging fast the tenon of the table leg in the device and for clamping and holding said tenon immovable at the conclusion of the wedging action, and flanges formed by bending the lower edges of the device laterally for increasing the weight supporting surface area of the device.

1,386,740. DOOR AND WINDOW ADJUSTER. ERODE R. SUBROYAR, Mylapore, Madras, India. Filed June 4, 1920. Serial No. 386,584. 4 Claims. (Cl. 292—276.)



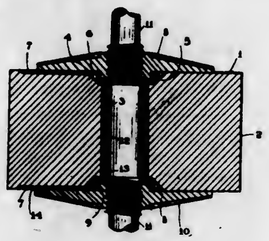
1. In an adjuster for doors and the like, a rod pivotally secured to the framing thereof, a guide secured to the door and provided with an opening, a slotted bar slidably mounted in said guide and pivotally connected with the free end of said rod, a rotatable spindle having a portion extending through the slot in said bar and the opening in said guide and having threaded engagement with said door, and a handle secured to said spindle and provided with a base of greater width than said slot.

1,386,741. COMBINED GRINDING-WHEEL GUARD AND REST. WILLIAM HENRY SUMBLING, Toronto, Ontario, Canada, assignor to Sumbling Machinery Company, Limited, Toronto, Ontario, Canada. Filed June 1, 1920. Serial No. 385,455. 5 Claims. (Cl. 51—268.)



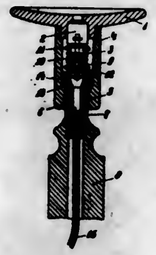
1. In a grinding machine, the combination with a grinding wheel journaled therein, of a guard for said wheel having a plate provided with an opening centrally thereof through which extends the arbor of said wheel; means coupled to the frame of said machine and adapted to co-act with said plate to permit said guard to be moved transversely of said machine and circumferentially of said wheel and designed to firmly support said guard in adjusted position; a slotted bracket carried by said guard at one side and projecting forwardly thereof and disposed sub-

stantially in a vertical plane, and means adjustably carried by said last-mentioned bracket and adapted to be



adjusted to provide a horizontal rest for the work when the adjustment of said guard renders this adjustment necessary.

1,386,742. HERMETIC FRICTION-CLOSURE FOR JARS. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed July 8, 1920. Serial No. 394,632. 2 Claims. (Cl. 215—95.)

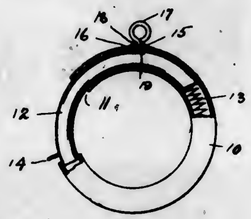


1. A hermatic closure for a jar having an outer smooth vertical wall, comprising a metal cover having a gasket seat in its lower face directly above the upper edge of the mouth of the jar, a gasket seated therein and adapted to engage the mouth of the jar, a holding band having a horizontal portion overlying the cover for forcing the gasket against the mouth of the jar, and a vertical portion having means for gripping the smooth vertical wall of the jar.

1,386,743. GRINDSTONE-MOUNTING. FRANCOIS XAVIER TRUDEL, Shawinigan Falls, Quebec, Canada. Filed Dec. 20, 1920. Serial No. 432,129. 3 Claims. (Cl. 51—168.)

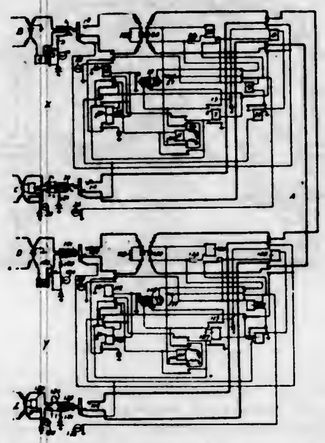
1. In a grindstone mounting, a grindstone having a central shaft orifice terminating at each end in an annular recess communicating with a groove or feed trough in the stone, and extending toward the outer grinding surface, a shaft of lesser diameter than said orifice, closures on said shaft for said orifice, and filling surrounding said shaft and also occupying said recesses.

1,386,744. TELEPHONE AND MICROTELEPHONE. ROBERT ARNOUT BARON VAN LYNDEN, Utrecht, Netherlands, assignor, by mesne assignments, to American Thermophone Company, Boston, Mass., a Corporation of Massachusetts. Filed July 11, 1918. Serial No. 244,342. 4 Claims. (Cl. 179—101.)



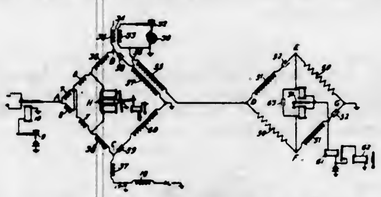
1. A telephone comprising a handle member and another member connected therewith slidably and carrying the telephonic apparatus proper, a spring tending to separate said members, and a switch operated by the relative movement of said members.

1,386,745. BEARING FOR SHAFTS. CARL GUSTAF VON POST, Gottenburg, Sweden. Filed Feb. 9, 1920. Serial No. 357,400. 7 Claims. (Cl. 64—38.)



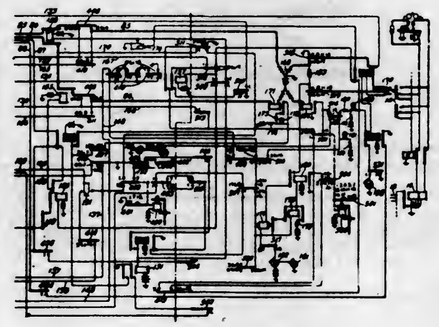
1. A bearing for shafts comprising a movable carrier with a straight upper surface for engagement with the shaft and a lower surface having a longitudinal groove therein, a fixed support having in its upper surface a groove parallel to the first groove, spherical bearing members interposed between the carrier and the fixed support and adapted to roll in said grooves, and means for preventing lateral displacement of the shaft.

1,386,746. SPRING-RING. HARRY WACHENHEIMER, Providence, R. I., assignor to Wachenheimer Bros., Providence, R. I., a Firm. Filed Apr. 7, 1919. Serial No. 287,953. 2 Claims. (Cl. 24—239.)



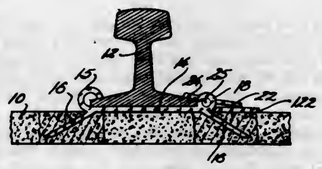
1. A spring ring comprising a tubular ring-shaped body having an opening thereinto, a bolt slidably mounted in said ring, and an attaching eye member pivotally mounted to swivel in the wall of the tubular body member of said ring and located out of the path of movement of said bolt so as not to interfere with the free action of the same.

1,386,747. TELEPHONE-EXCHANGE SYSTEM. CHARLES WHITE, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 11, 1918. Serial No. 244,360. 4 Claims. (Cl. 179—43.)



1. In a telephone exchange system, a plural service trunk circuit for reciprocal operation between two stations, signal control means at each station for each service, said means for different services being responsive to signaling currents of different characteristics, means at each station for selectively impressing currents of different characteristics on the trunk circuit to operate the associated signal control means at the other station, and means operating upon the response of one signal control means to render the other signal control means at the same station unresponsive.

1,386,748. SIGNALING SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 14, 1918. Serial No. 211,869. 3 Claims. (Cl. 179—8.)

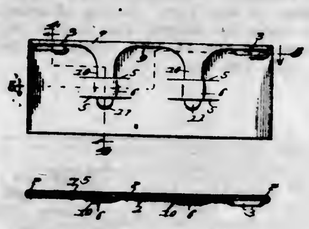


1. A signaling system comprising a pair of line conductors, means for connecting a source of signaling current thereto, signaling apparatus responsive to such current traversing the line conductors in series, means for connecting a source of direct current to one line conductor, a third conductor, a signal receiving device responsive to such direct current traversing the one line and the third conductor in series, a Wheatstone bridge composed of two balanced noninductive arms and two balanced inductive arms resonant to signaling current, a signal receiving device connected across the bridge between the junction points of the inductive and noninductive arms, a repeating coil inductively connecting the bridge with the one line conductor, and means for connecting a source of alternating current with the one line conductor for operating the bridged signal receiving device.

1,386,749. CALL-DISTRIBUTING SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Refiling of abandoned application Serial No. 107,090, filed July 1, 1916. This application filed Apr. 14, 1919. Serial No. 290,065. 6 Claims. (Cl. 179—8.)

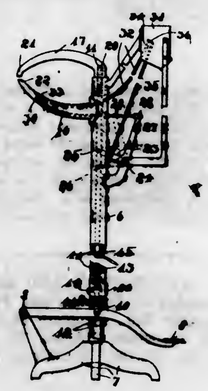
3. In a telephone system, the combination with a connecting circuit, of a calling line and a called line united thereby, service charging apparatus associated with said calling line, a key for operating the same associated with said connecting circuit, means for automatically disconnecting the connecting circuit from the calling line, and means actuated in operating said charging key for preventing the operation of said automatic disconnecting means.

1,386,750. RAILWAY-TIE AND RAIL-SECURING MEANS. CHARLES F. YOUBERG and FRANCES S. YOUBERG, Indianapolis, Ind., assignors of one-half to William Youberg, Hegewisch, Chicago, Ill. Filed June 26, 1920. Serial No. 392,133. 2 Claims. (Cl. 238—265.)



1. In combination, a concrete tie, a base plate thereon having depending members embedded in the tie, and means on the plate to secure a rail thereto, said securing means comprising an overhanging part at one side of the plate, integral ears at the other side, said part being adapted to engage one side of the base of the rail, the base of the rail fitting between said overhanging part and said ears and engaged by both, and a nipper secured to said ears and overhanging and engaging the adjacent side of the rail base.

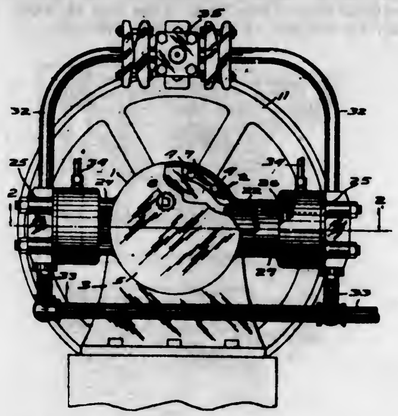
1,386,751. LICENSE-NUMBER-PLATE HOLDER. WILLIAM R. YOUNG, Nashville, Tenn. Filed May 4, 1921. Serial No. 466,717. 2 Claims. (Cl. 40—125.)



1. In a device of the character and for the purpose indicated, a holder plate provided with means on its lower and end edges for the reception of a license number plate,

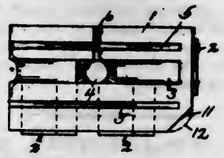
straps struck up from the holder plate, a top straddling the holder and number plates at their upper edges and

having extensions frictionally engaging between the straps and the holder plate to retain the top in position.



1,386,752. SHOE-TACKING MACHINE. CHARLES F. ZIEGLER, Los Angeles, Calif. Filed Feb. 25, 1921. Serial No. 447,074. 2 Claims. (Cl. 1—13.)

2. In a sole tacker, a hollow standard of suitable height to reach from the foot of the operator to a point near his hands, a foot pedal near the lower end of the standard, an operating rod in the standard connected to the foot pedal, spring means in the standard surrounding the rod for holding the foot pedal in inoperative position, one jaw member rigidly provided on the standard near the upper end of the standard, another jaw member telescopically connected with the rod and with the standard normally spaced from the first-named jaw member, a nailing member in operative connection with the rod terminating within the first-named jaw member and adapted to force a tack through the front end of said jaw member, and means operative by said operating rod for transferring a tack from a magazine into a position in front of the nailing member.



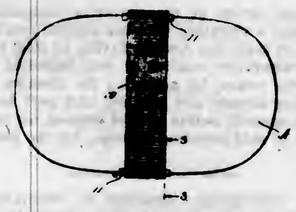
1,386,753. REFRIGERATION APPARATUS. WALTER CHARLES BABR, Toledo, Ohio. Filed Dec. 11, 1919. Serial No. 344,036. 2 Claims. (Cl. 230—6.)

1. In a compressing apparatus, a shell having enlarged portions, a crank and connecting rod located in one of said enlarged portions, a double headed piston located in the shell and connected to the connecting rod, ribs connected to the heads of the piston located on opposite sides of the connecting rod and the crank, removable cylinders located in two of the said enlarged portions and forming, between the cylinders and the shell, water chambers, removable cylinder heads secured to the shell, a closing plate for closing the part of the shell containing

the crank and the connecting rod, and a base for supporting the closing plate whereby the shell and the parts contained therein are supported.

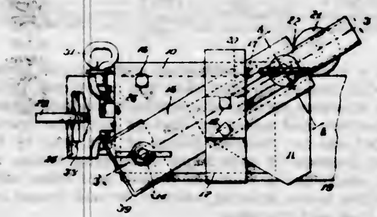
1,386,754. POURED-CONCRETE-CEMENT BLOCK. ALEXANDER L. BAXTER, Masury Station, Ohio. Filed June 26, 1920. Serial No. 391,912. 1 Claim. (Cl. 72—35.)

In a poured concrete cement block, parts, halves or whole bricks molded therein so that the ends of same extend beyond the end or side surface of the block, substantially as described.



1,386,755. CLOTHES-PROTECTING DEVICE. JEAN L. BENSON, Chicago, Ill. Filed Apr. 18, 1913. Serial No. 761,906. Renewed Dec. 20, 1920. Serial No. 432,136. 2 Claims. (Cl. 45—118.)

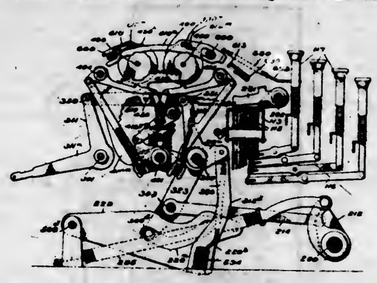
1. A device for protecting clothes comprising a top frame piece, a cross piece extending across the top of said frame piece in the middle thereof, a clothes hanger



support extending across said frame below said cross piece, a hook connected with said clothes hanger support and extending upwardly beyond said cross piece and adapted to be attached to a fixed support, a flexible closed cover surrounding said frame and supported thereon and provided with an opening through which said hook projects.

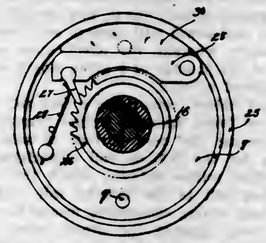
1,386,756. STRAP ATTACHMENT FOR BRUSHES. MATTHEW P. BENSON, Troy, and MILTON M. WIENER, New York, N. Y. Filed Mar. 16, 1921. Serial No. 452,855. 4 Claims. (Cl. 15—29.)

1. The herein described clip for the attachment of a strap to a brush, the same comprising a single piece of sheet material consisting of a vertical side panel to lie close against the edge of the brush back and having a pair of slots formed therein, and a pair of upper and lower flanges extending horizontally from the side panel parallel to each other.



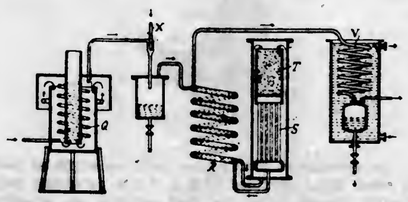
1,386,757. BLADE-HOLDER. FREDERICK BERGMAN, Chicago, Ill., assignor of one-third to Amuel B. Spach, Chicago, Ill. Filed Oct. 4, 1919. Serial No. 328,475. 7 Claims. (Cl. 51—221.)

1. A holder of the class described, comprising a body portion, a blade-holding member arranged on said body portion and adapted to be disposed in a diagonal manner thereon, means whereby said member may be pivotally secured at one end to said body portion adjacent the sides thereof so as to swing diagonally of the body portion, means whereby the angular position of the blade-holding member may be maintained, and means adjustably secured to the body portion adapted to contact with the grinder or stone at a distance removed from the blade-holding end of the holder whereby the forward blade-holding end of the holder will be presented at the desired angle to the grinder or stone.



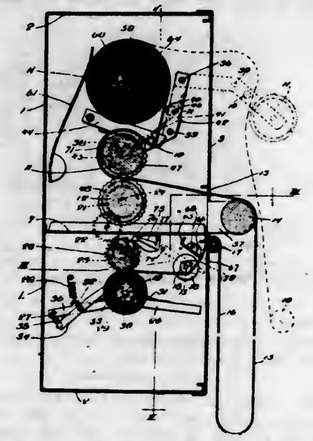
1,386,758. CALCULATING-MACHINE. CHARLES BIRTH, Kingston, Pa., assignor to Wales Adding Machine Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1919. Serial No. 330,371. 15 Claims. (Cl. 235—137.)

1. In a calculating machine, the combination with a counter of lower denomination; a trip member carried thereby; a counter of next higher denomination; a carrying member therefor; means to drive the carrying member in one direction to turn the counter of higher denomination; and means to restore the carrying member to normal position; the counters adapted to shift from and toward the carrying member; of a flexible detent adapted to lock the carrying member in its restored position, and including a latch member journaled to swing into and out of



the path of the carrying member, and a release lug flexibly connected with the latch for relative movement and normally lying in the path of the trip member of the counter of next lower denomination.

1,386,759. VEHICLE SHOCK-ABSORBER. WILLIAM M. BOMNING, Manitowoc, Wis. Filed Oct. 19, 1920. Serial No. 417,888. 3 Claims. (Cl. 188—130.)

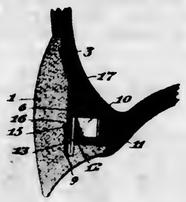


1. In a device of the class described, a relatively stationary shaft, a casing journally mounted on the shaft, friction elements disposed in the casing, certain of said elements being fixed thereto, the other elements being rotatable on the shaft when the casing is moved in one direction, a ratchet connected with the last mentioned elements, a pawl for co-action with the ratchet to lock said last mentioned elements to the shaft, and means for cushioning the movement of the pawl to eliminate noise in the operation thereof.

1,386,760. PROCESS AND MEANS RELATING TO THE PRODUCTION OF AMMONIA. CARL BOSCH, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Sept. 14, 1912. Serial No. 720,412. 27 Claims. (Cl. 23—21.)

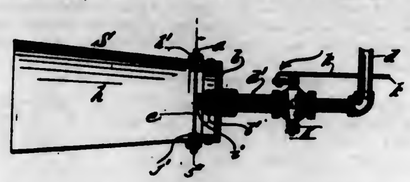
2. The process of producing ammonia which consists in repeatedly catalyzing a mixture of hydrogen and nitrogen and absorbing the ammonia formed by one catalysis and adding fresh mixture before the succeeding catalysis.

1,386,761. TOWEL-HOLDER. WADE W. BOWMAN, New York, N. Y. Filed Feb. 15, 1917. Serial No. 148,714. 31 Claims. (Cl. 45—32.)



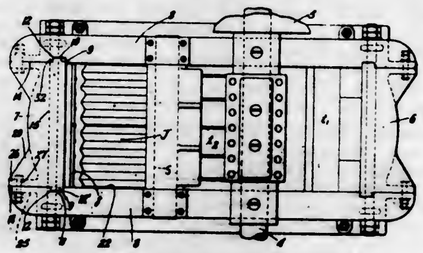
5. In a towel holder, the combination with a strip of towel material, towel take-up mechanism to be operated by the movement of said towel, and means whereby the movement of said towel will operate said take-up mechanism, of means whereby the effect upon said take-up mechanism of the passage of a given length of said towel may be adjusted at will.

16. A towel holder, comprising a feed roll for containing a strip of towel material wound thereon, a take-up roll for receiving the used portion of said towel, and drive means for the take-up roll comprising in part a pair of friction rollers between which the towel moves from the feed roll to the take-up roll, and a support for one of said rollers comprising means for urging said mentioned roller toward the other roller, and means whereby said support may be moved to dispose said mentioned roller entirely out of engagement with the other roller.



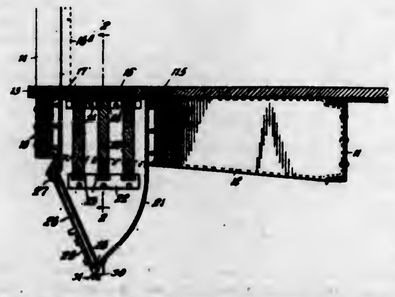
28. In a towel holder, the combination comprising a movable strip of towel material, take-up mechanism to be operated by the movement of said towel, means whereby movement of said towel will operate said take-up mechanism comprising a pair of rollers between which the towel moves, and means providing a series of resilient longitudinally extending ridges and grooves upon said rollers between which the towel moves, for the purpose set forth.

1,386,762. ARTIFICIAL TOOTH. WALTER H. BOWMAN, Philadelphia, Pa. Filed Nov. 1, 1919. Serial No. 335,001. 4 Claims. (Cl. 32—9.)



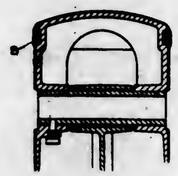
4. In combination with a base plate, an artificial tooth, said tooth being provided with a T-slot extending longitudinally thereof along its shut surface, an attaching anchor extending from said T-slot lingually into the body of the base plate, said anchor being provided at its labial end with an incisively projecting resilient element bent backwardly upon itself.

1,386,763. OPERATING SOUNDERS. JOHN HERMAN BRETTHAUER, Westchester, N. Y. Filed Sept. 20, 1920. Serial No. 411,373. 2 Claims. (Cl. 116—138.)



1. A signal device of the character designated, comprising a horn, a vibratory sounding element located therein, and an air induction conduit having an inlet port positioned in coöperative relation to said sounding element, together with means for adjusting the distance between said sounding element and said air inlet port and means attached to opposite points of said element for regulating the tension of said sounding element, for the purpose described.

1,386,764. CRUSHER. CHARLES G. BUCHANAN, East Orange, N. J. Filed Nov. 11, 1920. Serial No. 423,246. 2 Claims. (Cl. 83—53.)

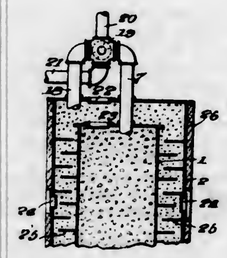


1. In a crusher the combination with a frame having sides with inward directed ends and transverse thrust bearing shoulders thereon, of a separable head set against said shoulders, and means for drawing said sides against said head and for resisting flexure of said sides by the outward pressure of said frame comprising flanges extended longitudinally from the ends of said frame sides and bolting means drawing inwardly on said flanges and spaced from said shoulders.

1,386,765. CONVERTIBLE BOX-CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1920. Serial No. 427,744. 4 Claims. (Cl. 105—289.)

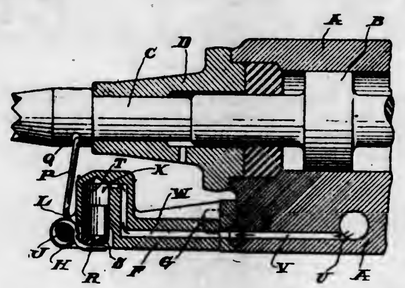
1. In a convertible box car, the combination with the car body having a side door opening, fixed flooring and an underframe; of a floor door located opposite said side door opening and pivotally mounted along its outer edge and adapted to assume either a horizontal position as part of the car floor or a vertical position partially covering the door opening; a discharge hopper located opposite said side door opening and adapted to be covered by said floor door when the latter is in horizontal position; and additional door extension means, positioned within said hopper when said floor door is used as a part of the car flooring, said means being adapted for positioning across said door opening on top of the floor door when the latter is in its vertical position across said door opening.

1,386,766. INTERNAL-COMBUSTION ENGINE. HUGO CENTERVALL, Brooklyn, N. Y. Filed May 22, 1916. Serial No. 99,066. 8 Claims. (Cl. 74—108.)



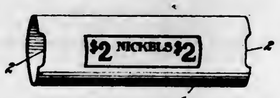
1. An internal combustion engine having a cylinder and its piston composed chiefly of the same metal, one of said members supporting an intervening bearing sleeve of a different metal, said sleeve being connected to said part so as to respond to the expansion and contraction of said part, regardless of its coefficient of heat expansion.

1,386,767. SOAP TABLET. DANIEL L. CHANDLER, Fitchburg, Mass., assignor to Vend-Ads Co. Inc., Worcester, Mass., a Corporation of Massachusetts. Filed May 31, 1919. Serial No. 300,906. 3 Claims. (Cl. 87—23.)



1. A cleansing tablet comprising a core of paste soap and a relatively thin frangible layer of comparatively hard soap consisting of an endless imperforate band entirely surrounding said core except at the opposite ends thereof.

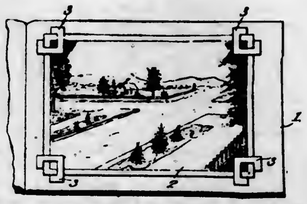
1,386,768. OIL-CRACKING PROCESS AND APPARATUS THEREFOR. DAVID E. DAY, Santa Maria, Calif. Filed Apr. 1, 1920. Serial No. 371,508. 14 Claims. (Cl. 196—25.)



1. The process of producing low boiling hydrocarbons from high boiling hydrocarbons which comprises passing high boiling hydrocarbons into a zone containing spreading material, heating the said zone to a cracking temperature, whereby high boiling hydrocarbons are cracked and produce low boiling hydrocarbons together with carbon in the said zone, leading off vapors of low boiling hydrocarbons and condensing the said vapors, terminating the passage of high boiling hydrocarbons to the said zone, burning away the said carbon produced in the said zone, passing high boiling hydrocarbons into a second zone containing spreading material in heat transferring relation to the first zone, whereby low boiling hydrocarbons are produced, and passing the said low boiling hydrocarbons to a condenser.

1,386,760. DOLLY-RETURN DEVICE. JESSE DITSON, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 22, 1920. Serial No. 412,048. 5 Claims. (Cl. 121—32.)

1. An automatic return device for a fluid actuated dolly, comprising a resilient member, pivoted adjacent the dolly and engaging the dolly, and fluid actuated means coöperating with said member for retracting the dolly.



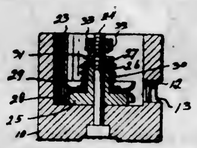
1,386,770. COIN-TUBE. CLEMENT L. DOWNEY, Cincinnati, Ohio. Filed July 18, 1919. Serial No. 311,844. 3 Claims. (Cl. 133—10.)

1. A coin tube comprising a tubular structure of paper or the like, of a diameter to receive the desired size of coin, and a shallow notch in the end of the tube of a shape and width to receive the edge of a coin presented thereto in a slanting direction, for the purpose described.

2. A blank for use as a step in forming coin tubes which comprises a strip of paper of the desired width, printed into sections and intermediate each section pierced with a sufficient cut, which upon severing the sections will leave a finger notch at each side of the cut, and hence for each end of each section or coin tube.

1,386,771. PICTURE-MOUNTING DEVICE. ALBERT W. ENGEL, Chicago, Ill. Filed May 14, 1920. Serial No. 381,248. 2 Claims. (Cl. 40—156.)

1. A picture mounting device consisting of a corner fitting gummed upon one side, adapted to be secured

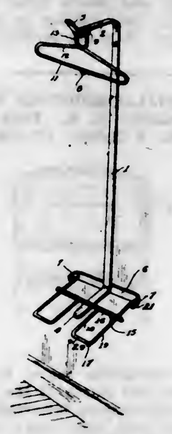


partly to the picture and partly to the mount therefor, and for that purpose having two slits at an angle to each other with open communication at their proximate ends.

1,386,772. BUTTON. REINHOLD ENGELBRECHT, Essen-Ruhr, Germany. Filed July 24, 1920. Serial No. 398,799. 2 Claims. (Cl. 24—101.)

1. A button comprising a head, a base, and a stay connecting said head and base, the said head and base forming woolders arranged at right angles to each other.

1,386,773. YARN-TENSIONING DEVICE FOR LOOM-SHUTTLES. DAVID HERBERT FOGLE, New Brookland, S. C. Filed Dec. 15, 1920. Serial No. 431,057. 5 Claims. (Cl. 139—46.)



4. In a loom shuttle having a yarn eye at one end, a yarn guide within the shuttle, a tensioning device for the yarn comprising a centrally disposed member, two disks disposed within the shuttle and rotatable upon said member, and between which disks the yarn passes to the eye, a spring bearing against one of said disks and urging it toward the other disk, and nuts engaging said member and bearing against the spring whereby the tension of the spring and the pressure exerted against the disks may be adjusted.

1,386,774. SASH-PULLEY. JAMES H. FOOTE, Cincinnati, Ohio. Filed Feb. 21, 1921. Serial No. 446,836. 5 Claims. (Cl. 16—17.)

3. A sash pulley adapted to seat in an opening in a window frame member, comprising a sheave bearing housing having a supporting element adapted to fit into the opening in the frame member and provided with means to engage the front face of the frame member to limit the movement of said element in one direction into said opening, and with means to sustain the thrust of said element against the end of said opening, a hood element, to which the sheave is journaled, adapted to fit into the opening in the frame member and provided with means to sustain the thrust of said hood element against the end of said opening, connnected to and held in relatively movable engagement by said supporting element and adapted to releasably engage the rear face of the frame member and lock the suppporting element to the frame member irrespective of a considerable range in thickness of said frame member, and means to maintain said supporting and hood elements in locked relation with said frame member.

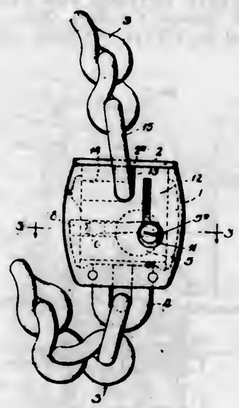
1,386,775. GARMENT-HANGER. MARCUS F. FULFORD, Fort Worth, Tex. Filed Aug. 18, 1920. Serial No. 404,333. 4 Claims. (Cl. 45—13.)

1. In a device of the class described, an upright having its upper portion directed forwardly to provide a supporting arm and having the terminal of its arm directed upwardly and forwardly to provide a hat hook, and a garment hanger pivotally suspended from the said arm, the said garment hanger comprising a transverse supporting bar and side portions inclined upwardly and crossing each other and having terminals pivotally engaging the said arm.

1,386,776. FRICTION SHOCK-ABSORBING MECHANISM. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Aug. 27, 1920. Serial No. 406,288. 8 Claims. (Cl. 213—64.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having a plurality of longitudinally extending flat friction surfaces, the planes of some of said friction surfaces being parallel with each other and the planes of the remaining friction surfaces being arranged at an angle to said parallel friction surfaces; of two sets of friction shoes, one set coöperating with said parallel friction surfaces and the other set with the other friction surfaces; spreading means interposed between the friction shoes of the two sets and adapted to press the latter against their respective coöperating shell friction surfaces; and a spring resistance.

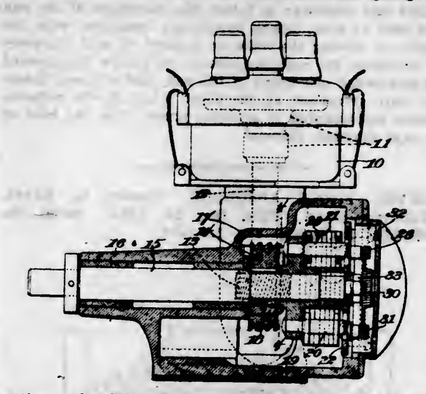
1,386,777. CATAMENIAL APRON. MAUDE SINCLAIR GROSZE, St. Louis, Mo. Filed Sept. 18, 1919. Serial No. 324,330. 3 Claims. (Cl. 128—287.)



1. An apron of the kind described comprising a sheet of impervious material, a section of net-like material

secured to the upper edge of the impervious sheet, a pair of cover sheets of textile, arranged on opposite sides of the impervious sheet, interengaging fastening elements on

the upper edge portion of said cover sheets and adapted to penetrate through the net section when in engagement, whereby the cover sections are detachably maintained in position.

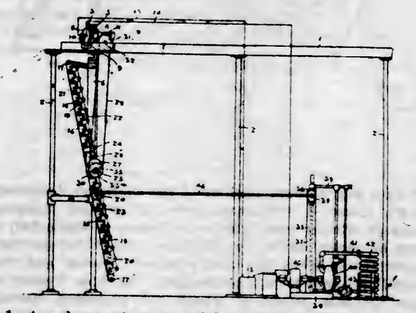


1,386,778. LOCKING DEVICE. RAYMOND K. GRAY, Chicago, Ill., assignor to The Graynic Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,844. 8 Claims. (Cl. 70—17.)

7. A locking device comprising a lock casing, a block insertible in said casing, locking mechanism for locking said block in said casing, a slot formed in one edge of said block and open at its outer end when said block is in partially withdrawn position, and a transverse slot in said casing registering with the inner end of the slot in said block, and closing the open end thereof when said block is in locking position.

1,386,779. IGNITION APPARATUS. EDWARD A. HALDLEIB and THOMAS L. LEE, Rochester, N. Y., assignors to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 7, 1917. Serial No. 153,077. 8 Claims. (Cl. 264—16.)

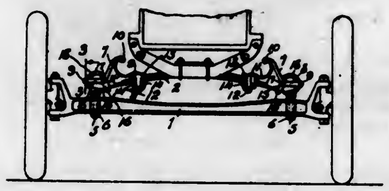
1. In ignition apparatus, an automatic timing-device comprising a driving-member and a driven member arranged to rotate together but relatively movable; a centrifugal weight movably mounted on one of said members; a cam-connection, between the weight and the second of said members, for causing relative movement of the members when the weight moves outwardly; and spring-con-



nections, also between the weight and said second member, arranged to resist the relative movement of the weight and said member.

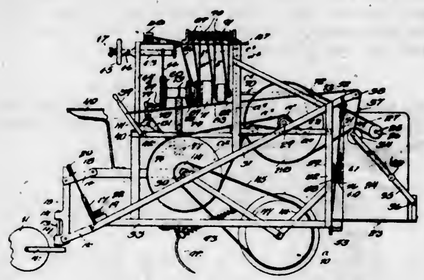
1,386,780. HAMMER. JAMES DEWITT HARDY, Salt Lake City, Utah. Filed Nov. 25, 1919. Serial No. 340,519. 2 Claims. (Cl. 254—26.)

1. The combination with a hammer, of a yoke, means whereby the bifurcated ends of the yoke may be secured upon each side of the hammer head and a leverage base formed at the opposite end of said yoke, said base being cross sectionally shaped to fit the head of the hammmer when the yoke is folded against said head.



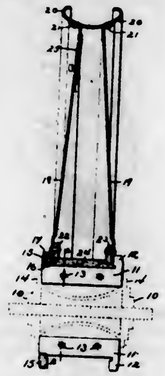
1,386,781. SOLAR MOTOR. WALTER JAMES HARVEY, Toronto, Ontario, Canada. Filed Sept. 7, 1918. Serial No. 253,023. 7 Claims. (Cl. 126—271.)

1. A solar motor comprising, a circular trackway, a reflector member suspended from said trackway and



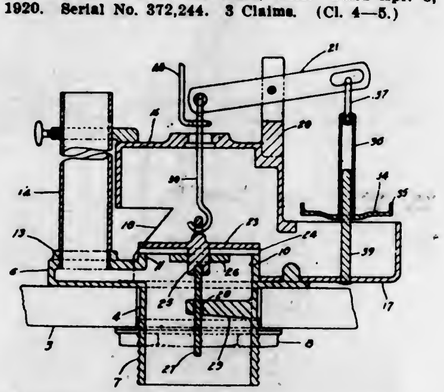
adapted to focus the sun's rays to a common focal point, means for causing said reflector member to be moved around said trackway to follow the movement of the sun from east to west, means operatively connected with the means for moving the reflector member on said trackway for operating the reflector member to folllow the upward and downward movement of the sun, and a power generator unit arrranged at the focal point of the reflector member and adapted to generate power from the heat of the rays focussed thereon.

1,386,782. SHOCK-ABSORBER. GEORGE H. HAYES, Hazelton, Kans. Filed Dec. 24, 1917. Serial No. 208,651. 2 Claims. (Cl. 267—17.)



1. In a shock absorber, a lever, a support therefor arranged to form a rigid stop for limiting the upward movement of the lever, a load carrying leaf spring, an S shaped spring having its ends respectively pivoted to the lever and to the leaf spring, and a link supporting the adjacent end of the leaf spring and pivoted to the lever intermediate of the fulcrum of the lattter and the S shaped spring, substantially as set forth.

1,386,783. POWER-DRIVEN FARMING IMPLEMENT. JAMES T. HICKMAN, Jr., Springport, Ind. Filed Mar. 1, 1920. Serial No. 362,487. 10 Claims. (Cl. 97—72.)

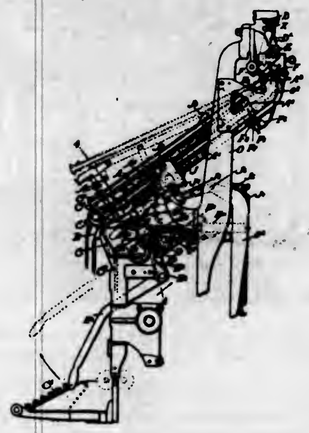


2. In a soil working machine of the character described, a main frame, a transverse series of ground engaging rollers or wheels upon which the frame is supported, a source of power carried by the frame, power transmitting connections between the said source of power and the said rollers, or wheels, and vertically movable frames in which the said rollers or wheels are journaled, having pivotal connections in the main frame to permit the rollers or wheels to independently yield in vertical directions.

1,386,784. WHEEL. JOHN ODELL JOHNSTON, Newark, N. J. Filed June 18, 1920. Serial No. 389,835. 5 Claims. (Cl. 301—63.)

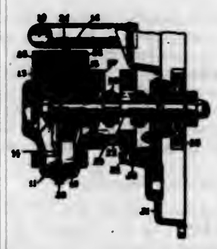
1. A wheel comprising a hub member which includes an annular flanged clamp, a disk member including a pair of disks, a pair of rings to which the disks are secured, and a sleeve recessed at each end to receive a ring, said rings and sleeve being held in the clamp.

1,386,785. WASTE CONTROL FOR FLUSH-TANKS. RAYMOND H. KEEVAN, Cleveland, Ohio. Filed Apr. 8, 1920. Serial No. 372,244. 3 Claims. (Cl. 4—5.)



1. In a waste control for a flush tank, the combination with a flush tank having a waste outlet of a hollow valve casing provided with an opening in the side thereof and an outlet opening corresponding to the outlet opening in the tank, a disk valve arranged to rest on and close said outlet opening in said casing, a lever pivotally supported adjacent to said casing, a link connecting one end of said lever to said valve, a retarding device hung from the opposite end of said lever adjacent to the opening in the side of said casing and means for operating said lever, the arrangement being such that the water before passing through the opening in said valve casing during the flushing operation will pass over said retarding device.

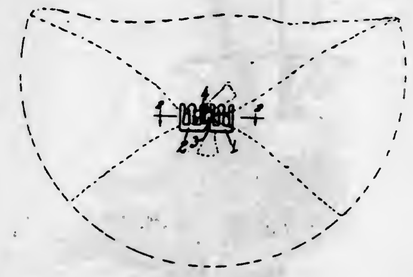
1,386,786. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Oct. 29, 1919. Serial No. 334,259. 34 Claims. (Cl. 199—16.)



5. In a typographical machine, the combination of a plurality of distributers, a corresponding plurality of

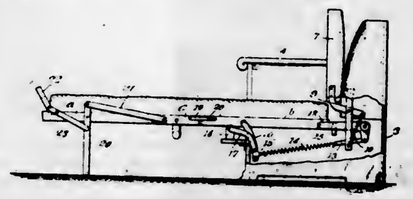
magasines, intermediate magazine entrances to carry the matrices from the former to the latter, separate base frames carrying the magasines and their respective entrances and each provided with a pair of rearwardly

extending arms, and supporting brackets wherein said arms are pivoted at their upper ends, the arms at one side having their uppermost portions lying in the same vertical plane as the supporting bracket to which they are pivoted.



1,386,787. PUMP. CHARLES B. KIRKHAM, Nassau Boulevard, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Original application filed Sept. 27, 1916, Serial No. 122,439. Divided and this application filed Sept. 5, 1918. Serial No. 252,716. 6 Claims. (Cl. 253—191.)

1. A duplex pump including a body, a central inwardly extending flange partially separating the body into chambers, an impeller rotatably alined with the flange to complete separation of said chambers, vanes carried by said impeller to project into each chamber, and an inlet and a circuit outlet separably communicating with each of said chambers.

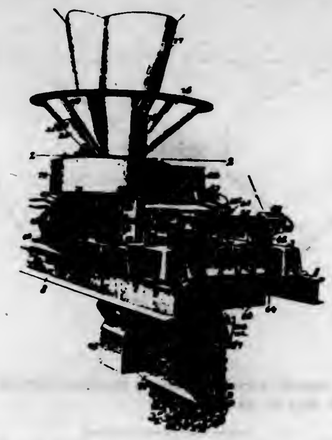


1,386,788. VEIL-FASTENING DEVICE. PHILIP M. LEVIT, Chicago, Ill. Filed Oct. 11, 1920. Serial No. 416,082. 4 Claims. (Cl. 24—83.)

3. In a veil fastening device, a three-pronged member, the center prong about which the veil may be wound being provided with a head, teeth on the said center prong preventing slippage of the veil when in position, the outer prongs being provided with beveled inner faces at the end providing in combination with the center prong a guide for positioning the veil on the center prong, a hook on the said member, and a second member similar to

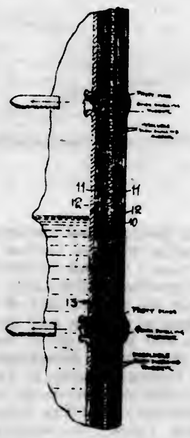
the first named member having an aperture through which the hook may be passed.

1,386,789. CONVERTIBLE DAVENPORT-BED. JOSEPH LUPPINO, New York, N. Y. Filed Aug. 4, 1917. Serial No. 184,464. 14 Claims. (Cl. 5—51.)



1. A convertible davenport bed comprising a framework, a plurality of spring mattress sections hinged together and openable to form a bed and including a rear section, and means for supporting said sectional mattress on the framework through the medium only of the rear section and including a pair of hangers, each pivotally connected at one end to the rear section and at its opposite end to the framework, said pivotal connections with the rear section and the framework being in substantially horizontal alinement when the sections are opened to form a bed and in substantially vertical alinement when the sections are folded, whereby the sections are hung from the framework at the rear thereof when in folded position.

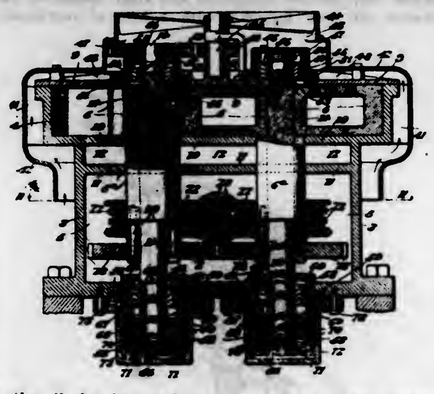
1,386,790. AUTOMATIC SCALE. ANGUS MCLEOD and ALEXANDER T. MCLEOD, Chicago, Ill. Filed Apr. 25, 1919. Serial No. 292,599. 30 Claims. (Cl. 249—42.)



1. A coal scales, comprising a revolving member arranged to discharge coal by the act of revolving, driving mechanism for said member, a shiftable clutch included in said mechanism and having means for holding it in the driving position to secure the revolution of said member, a clutch bar extending from said clutch, a hopper arranged to catch the coal as it is discharged from the revolving member, a rockable scale beam supporting the hopper, movable means including a shifting arm caused to act at the limit of the upward rocking of the scale beam to depress the clutch bar, shift the clutch into the inop-

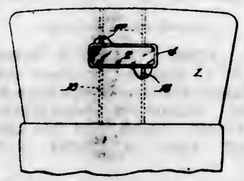
erative position and stop said revolving member; and means including a trip bar arranged to hold the shifting

arm inactive until the trip bar is engaged and displaced by the scale beam.



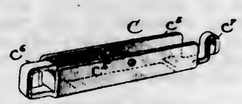
1,386,791. SELF-PUNCTURE-SEALING COVERING FOR FUEL-CONTAINERS. GEORGE J. MURDOCK, Newark, N. J. Filed Jan. 16, 1918. Serial No. 212,053. 24 Claims. (Cl. 154—46.)

1. The combination with the wall of a liquid fuel container, of a covering therefor including a layer of rubber vulcanized to an extent whereby it is rendered insoluble in the liquid contained in the container, but swelling relatively rapidly when moistened therewith.



1,386,792. ROTARY BLOWER. JOHN T. NEEDHAM, Bayonne, N. J. Filed Aug. 14, 1919. Serial No. 317,506. 10 Claims. (Cl. 230—30.)

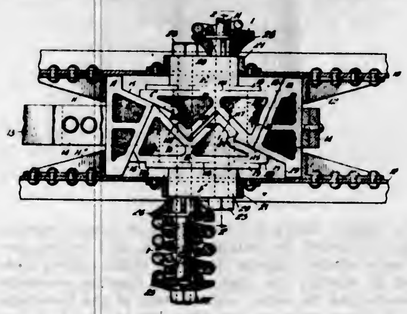
1. A blower comprising a casing having a rotor chamber provided with a removable top wall and an oil chamber below the rotor chamber, a pair of rotor shafts extending through said chambers, a pair of rotors in the rotor chamber fixed on the rotor shafts and provided with integral hubs depending into the oil chamber, a horizontal drive shaft extending into the oil chamber between the rotor shafts, a worm held to said drive shaft, and a pair of worm gears loosely mounted on the rotor shafts with-



in the oil chamber meshing with said worm and detachably held to the hubs of the rotors to rotate with said hubs.

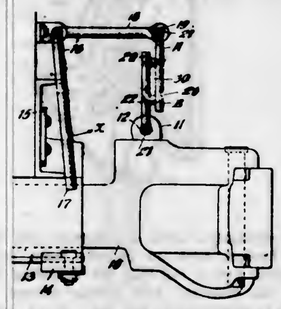
1,386,793. AUTOMOBILE-CURTAIN WINDOW. LAWRENCE C. NELSON, Detroit, Mich., and JOSEPH C. POLAN, Berwyn, Ill., assignors to McAvoy Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1920. Serial No. 418,921. 4 Claims. (Cl. 296—145.)

1. An automobile curtain window comprising a glass and a two-part frame, one of the frame parts having a groove angular in cross section opposite the marginal portion of the glass, and a gasket lodged therein conformed in cross-section to the groove at the side seated therein, and at the opposite side presenting surfaces converging to a line of seating on the glass, and means for drawing the two frame parts together with the glass interposed.



1,386,794. TYPOGRAPHICAL MACHINE. SIGURD C. NIELSEN, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 7, 1918. Serial No. 238,748. 1 Claim. (Cl. 199—25.)

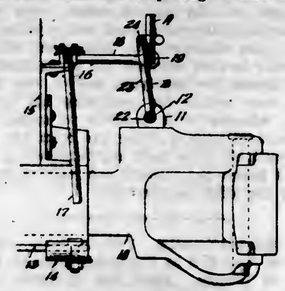
As an article of manufacture, a skeletonized cam-yoke for key-board mechanisms comprising spaced side-walls arranged in parallelism; an open-sided guiding and reed-engaging finger integral therewith and outstanding beyond the ends of the side-walls and having spaced-apart upper and lower comb-engaging portions occupying planes between the side-walls and connected by a vertical portion; an integral hook-shaped tongue projecting beyond the ends of the side-walls; two flat connecting portions



disposed between the side-walls and to which the finger and tongue are, respectively, connected and being spaced by a longitudinal slot located between the side-walls; and a cam-member disposed between and sustained by the side-walls and movable in the slot, the periphery of the cam-member extending below the plane of the connecting portions.

1,386,795. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 25, 1920. Serial No. 368,671. 20 Claims. (Cl. 213—64.)

16. In a railway draft rigging, the combination with the draft sills and stop-acting means; of end wedges, said wedges being of like construction but oppositely and unsymmetrically arranged with respect to the center line of draft; friction shoes each having friction faces cooperable with a friction face of each wedge; and means for yieldingly resisting relative separation of said shoes in a direction transverse to the line of draft upon relative approach of said end wedges.

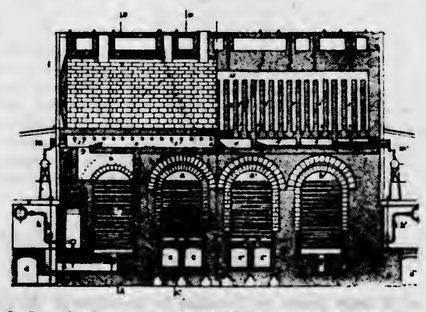


1,386,796. COUPLING-RELEASE MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,660. 3 Claims. (Cl. 213—59.)

1. In a coupler release mechanism having a manually operable member provided with an opening and a locking pin provided also with an opening; a connector comprising two elements each of substantially W form, one element being adapted to be centrally suspended from the opening of said member and the other element adapted to be centrally supported in a substantially upright position from the opening of the locking pin, the respective side arms of said elements being hooked over each other.

1,386,797. COUPLING-RELEASE MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,661. 3 Claims. (Cl. 213—59.)

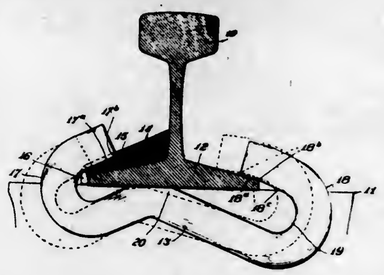
1. In a coupler release mechanism having a manually operable member provided with an opening therein and a locking pin provided also with an opening therein; a connector comprising two elements each of generally U form, one element being adapted to be centrally supported in upright position within the opening of said member and



the other element being adapted to be centrally supported in an upright position within the opening of the locking pin, one of said elements having the ends of its arms hook-shaped and extended around the arms of the other element.

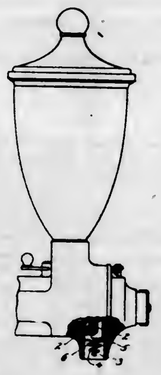
1,386,798. ARTIFICIAL TOOTH. RUSSELL J. PARK, St. Louis, Mo. Filed Jan. 10, 1921. Serial No. 436,342. 3 Claims. (Cl. 39—9.)

3. An artificial tooth, the posterior side of the cervical end of which is formed with a shoulder at substantial right angles to the line of bite, the anterior portion of the tooth being extended up above said shoulder, the posterior side of said cervical end being also formed with a projection following the contour of said side and being undercut to provide a groove into which the material of the plate runs when in plastic state, said material abutting against the front side of the groove whereby the tooth is securely held in position when said material hardens.



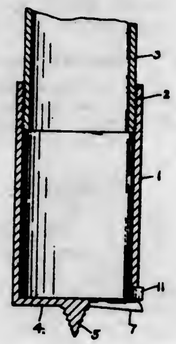
1,386,799. HORIZONTAL COKING-OVEN. OLIVIER PIETTE, Paris, France, assignor to Société Anonyme des Fours à Coke Semet-Solvay & Piette, a Corporation of Belgium. Filed Nov. 6, 1918. Serial No. 261,423. 2 Claims. (Cl. 202—9.)

2. In a horizontal coking oven, in combination, a series of coking chambers, a series of combustion chambers, a



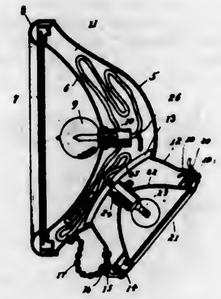
pair of regenerators disposed perpendicularly to said chambers, a series of sole flues extending parallel to said chambers, alternate sole flues being connected with the same regenerator, a series of gas chambers, means for supplying gas to said gas chambers, each combustion chamber having connections with two adjacent sole flues and with a gas chamber, the connection with the gas chamber being located between the connections with the sole flues, means for supplying gas to one of said regenerators and means for supplying air to both regenerators, whereby it is possible to supply the combustion chambers with a richer gas from the gas chambers, and with air from both regenerators, or to supply them with a poorer gas through one regenerator and with air through the other regenerator.

1,386,800. RAIL-ANCHOR. FRED A. POOR, Chicago, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1920. Serial No. 349,689. 33 Claims. (Cl. 238—324.)



1. A device for preventing the longitudinal creep of railroad rails, comprising in combination a member which extends under the rail with its ends projecting over the upper surfaces of the base flanges at opposite sides of the rail, and means associated with one of said base flanges providing a surface for one end of said member to bear upon which surface is of greater angularity than that of the base flange with which it is associated.

1,386,801. FINGER-GUARD. THOMAS F. RATAICZAK, Troy, Ohio, assignor to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Nov. 29, 1920. Serial No. 427,146. 8 Claims. (Cl. 83—8.)

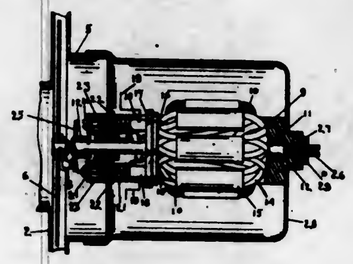


1. A finger guard for conduits in machines of the general character noted, comprising a tapered helix set into said conduit.

1,386,802. SAMPLE-TAKING DRILL. WILLIAM E. REMBERT, Gilliam, La. Filed July 3, 1920. Serial No. 393,886. 3 Claims. (Cl. 255—67.)

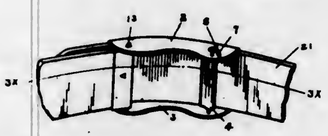
1. A sample taking bit comprising a tubular member having an integral flat bottom thereon, said bottom having a sector-shaped opening therein, a radial cutting blade formed by bending one edge of said opening outwardly and sharpening the same, a short blade at the lower side adjacent the bottom to cut the side of the hole and means to close said sector-shaped opening for the purpose described.

1,386,803. TRACTOR-LAMP. CHARLES D. RYDER, Covington, Ky., assignor to The Corcoran-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 16, 1918. Serial No. 258,381. 3 Claims. (Cl. 240—7.)



1. In combination with a standard and lamp casing mounted thereon, with an electric lamp bulb mounted in the casing, and a reflector for throwing light in one direction, the reflector and casing shaped to provide ample space intermediate the two, of an auxiliary casing, with electric lamp bulb and reflector therefor, with the light conducting wires of considerable length and stored between the main casing and main reflector, and means for detaching the auxiliary lamp for use separately.

1,386,804. HORN. HERMAN R. SAXON, Toledo, Ohio, and CARL J. SCHWARZE, Adrian, Mich., assignors, by direct and mesne assignments, of one-half to The Schwarze Electric Company, Adrian, Mich., a Corporation of Michigan, and one-half to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 17, 1916. Serial No. 91,755. 8 Claims. (Cl. 177—7.)

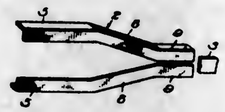


1. In a device of the class described, a casing, a diaphragm carried thereby, an electric motor in said

casing, a shaft for said motor having means at one end for engaging and vibrating said diaphragm, a thrust bearing for the opposite end of said shaft and means

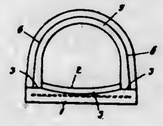
for making electrical connection with the rotary element of said motor and for pressing the same away from said diaphragm and against said thrust bearing.

1,386,805. BELT-BUCKLE. GEORGE F. SCHEER, Rochester, N. Y., assignor to Scheer Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed June 25, 1920. Serial No. 391,754. 1 Claim. (Cl. 24—191.)



A belt buckle having a plate with flanges thereon, a grip mounted to swing between the flanges and against said plate, said grip having a gripping surface toward the plate having the shape of an involute, said grip having zones of serrated teeth on each side thereof, and a depression in the middle.

1,386,806. TOILET-CASE. JOSEPH JOEL SCHMERLER, New York, N. Y. Filed Apr. 30, 1919. Serial No. 293,732. 1 Claim. (Cl. 132—84.)

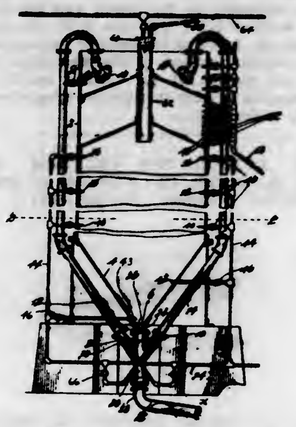


In combination with a brush and a handle therefor substantially alined with a brush, a case comprising an elongated tubular member having one end open, an annular member arranged within said open end portion of the member and through which the handle is loosely directed the outer extremity of the handle and the bore of the annular member being provided with coacting means for holding the brush at the limit of its movement away from the tubular member, a removable plug closing the opposite end portion of the tubular member, and an article engaging member in swiveled connection with the inner face of the plug.

1,386,807. BUMPER FOR VEHICLES. IRVING A. SIBLEY, Jr., Chicago, Ill. Filed May 16, 1921. Serial No. 469,754. 6 Claims. (Cl. 293—55.)

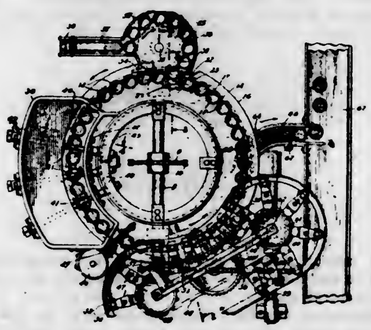
5. A vehicle bumper comprising an impact member consisting of a central section, and end sections adapted for attachment to the vehicle, said central section being formed of angle bars spaced apart vertically intermediate their ends, and meeting in edgewise abutting contact throughout their ends, the abutting edges of said end portions being welded together to form channel shaped end portions adapted to receive said end sections.

1,386,808. CONSTRUCTION OF CONDUITS FOR DRAINAGE AND SIMILAR PURPOSES. WILLIAM HENRY STEVENS, Hamilton, New Zealand. Filed Sept. 17, 1920. Serial No. 410,886. 1 Claim. (Cl. 72—51.)



A conduit comprising a series of flat blocks arranged end to end and provided with substantially flat bottoms, the central portion of the upper side of each of said blocks being depressed longitudinally and the side edges of the upper face of said blocks being longitudinally recessed, the abutting ends of said blocks having adjacent recesses forming grooves designed to receive sealing material, a series of one piece arc-shaped members of no greater width than the blocks arranged end to end and placed on the blocks with the lower edges of said members engaging the recesses in the side edges of the upper faces of the blocks, the abutting edges of the members being arranged intermediate the abutting edges of the blocks, and the abutting edges of the members being provided with adjacent under cut recesses forming substantially dove tailed grooves, and sealing material arranged in the last named grooves for sealing the joints at the ends of the members.

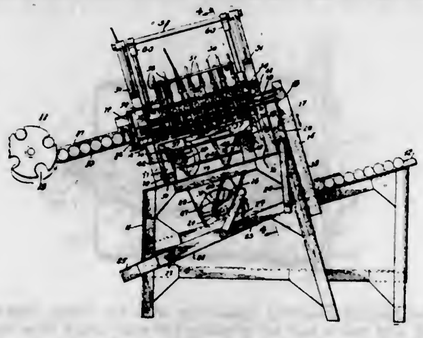
1,386,809. AGITATOR. THEODORE F. TAYLOR, Philadelphia, Pa. Filed Nov. 27, 1918. Serial No. 264,285. 11 Claims. (Cl. 23—31.)



1. In leaching apparatus, the combination with a liquid holding tank, of a conductor arranged to conduct liquid from the lower part of said tank and to discharge

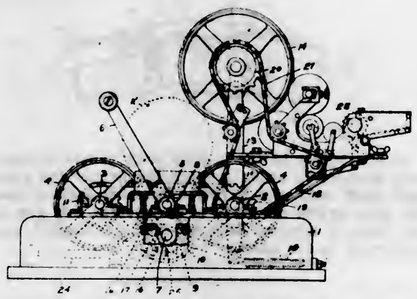
it upon the surface of the liquid in said tank, means for effecting such movement of the liquid, and means for

causing said discharged liquid to be sprayed through the air above the surface of the liquid in the tank.



1,386,810. MACHINE FOR FILLING AND PACKING CONTAINERS. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 26, 1921. Serial No. 439,973. 20 Claims. (Cl. 226—71.)

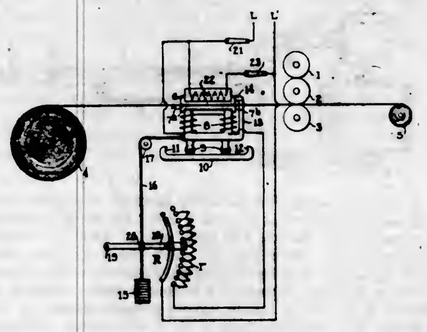
1. In a machine for filling containers with a charge, a conveyer for carrying a plurality of containers from a container feeding station through a charge filling station and to a delivery station, said conveyer including a movable support for the containers, provisions movable with the conveyer and having elements adapted for alinement with the filling openings of the containers to provide enlarged filling channels for the containers, the said support for the containers being axially movable relative to the said elements to provide the enlarged filling channels.



1,386,811. METHOD AND APPARATUS FOR MARKING ARTICLES. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,284. 35 Claims. (Cl. 101—11.)

1. The method of marking articles handled in row formations which consists in first selecting one article of the row while maintaining the row formation and marking such article, and then successively selecting and marking the remaining articles in the row; the

articles presenting the same row formation before, during and after the marking operations.



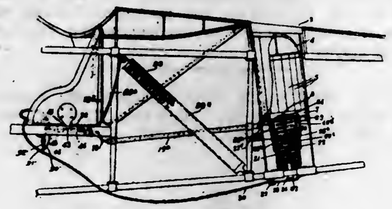
1,386,812. MACHINE FOR MARKING CYLINDRICAL ARTICLES. GEORGE S. THOMPSON, Pittsburgh, Pa., assignor to James H. Matthews & Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 2, 1921. Serial No. 441,787. 2 Claims. (Cl. 101—38.)

1. In a machine for marking cylindrical articles, the combination of a set of drums rotatable in stationary bearings and adapted to support an article resting upon them and by rotation to effect rotation of such article, a printing drum rotatable in bearings which are reciprocable relatively to the stationary bearings named, said printing drum, by virtue of such reciprocability of its bearings, being movable to and from a position of tangency with an article of given size resting upon said stationary bearings, the said printing drum being of greater circumference than the article with which it is adapted to make contact as aforesaid, means for rotating all of said drums continuously and in uniform direction and at equal surface speeds, and for reciprocating said printing drum at predetermined intervals as rotation progresses, the reciprocating feature of the means last named effecting reciprocation of the printing drum from and return to such position of tangency with an article under treatment, during so much of a rotation of the printing drum as the interval by which its circumference exceeds the circumference of the article under treatment.

1,386,813. TENSIONING MECHANISM. FRANK P. TOWNSEND, Milwaukee, Wis. Filed Mar. 29, 1917. Serial No. 158,303. 8 Claims. (Cl. 273.)

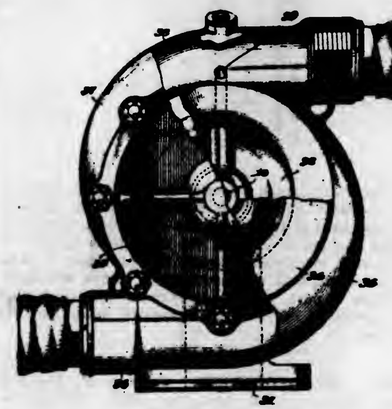
1. In a tensioning mechanism for material being fed to a receiving machine, in combination, a movable frictional member to bear upon the material with a tendency to move therewith and means to oppose movement of said member and to vary the pressure thereof upon the

material in response to said member to thereby maintain its frictional effect upon the material substantially constant under varying conditions for a corresponding substantially constant tension on the latter.



1,386,814. TOWEL-DISPENSING DEVICE. SALLY VAN DER WYK, Milwaukee, Wis. Filed May 7, 1917. Serial No. 166,825. Renewed Dec. 30, 1920. Serial No. 434,111. 8 Claims. (Cl. 45—32.)

1. A towel dispensing cabinet having a rack mounted therein, towels having bushings in one corner thereof slidably mounted on the rack, spring means intermediate the innermost towel and the inner end of said rack, a spring dog fixed in the outer end of the rack to prevent unauthorized dislodgment of the towels, and means for depressing the dog to selectively supply said towels.



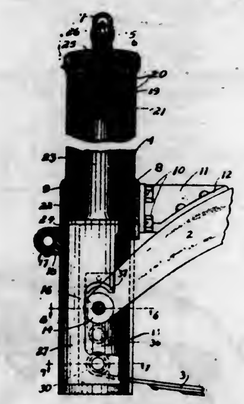
1,386,815. SAFETY DEVICE FOR AERONAUTICAL MACHINES. SOLOMON L. VAN METER, Jr., Lexington, Ky. Filed June 28, 1919. Serial No. 307,362. 18 Claims. (Cl. 244—21.)

1. In an aeronautical machine, the combination, a parachute carried by said machine, and ejector mechanism cooperating with the parachute, means for securing an aviator in said machine, connections between the aviator and the parachute and means connecting the ejector mechanism to the securing means, whereby when said ejector mechanism is actuated the parachute will be cast

off and said mechanism will act to release said securing means and to free the aviator from said machine.

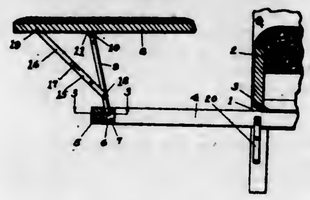
1,386,816. PUMP FOR MOTOR-VEHICLES. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 11, 1919. Serial No. 270,660. 2 Claims. (Cl. 253—200.)

1. A centrifugal pump adapted for the cooling system of a V-type motor having a single inlet pipe and having a central chamber to which the water is delivered axially from said inlet pipe, a single impeller element in said pump and two diametrically opposite delivery pipes leading from the chamber of said impeller element.



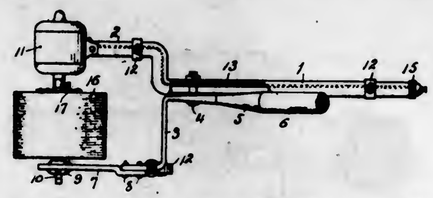
1,386,817. FOUNTAIN OR RESERVOIR PEN. ALICE EDNA WADE, Rock Ferry, England. Filed Apr. 5, 1920. Serial No. 371,417. 1 Claim. (Cl. 120—49.)

A reservoir pen comprising a nipple having a longitudinal guide slot formed in the inner wall thereof; a screwthreaded portion formed on the exterior of said nipple; an ink barrel screwed on said nipple; a rear



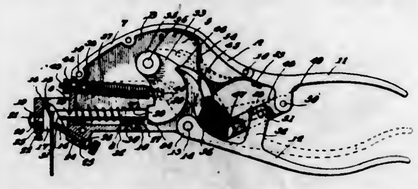
section screwed on said nipple against said ink barrel; a revoluble head-piece; a sleeve connected with said head-piece and housed in said nipple and having a helical slot formed therein; a nib-carrying rod, and a lateral pin on said nib-carrying rod projecting through said sleeve slot and engaging in the longitudinal guide slot of said nipple.

1,386,818. PNEUMATIC SHOCK-ABSORBER. CHARLES T. WALTER, Chicago, Ill. Filed July 17, 1919. Serial No. 311,664. 4 Claims. (Cl. 267—32.)



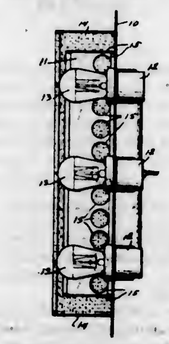
2. A pneumatic shock absorber comprising a casing, a plunger slidable therein, a circumferentially grooved resilient mechanism in said casing above said plunger, a wire band engaged in each of the mechanism grooves to reinforce said mechanism, means for providing a compressed air cushion in said mechanism, and a core member forming a part of said mechanism and projecting axially therein to serve as an equalizing means for the air cushion.

1,386,819. CHAIR-FOOTREST. JERROLD F. WALTON, Sturgis, Mich. Filed Jan. 19, 1920. Serial No. 352,493. 2 Claims. (Cl. 155—170.)



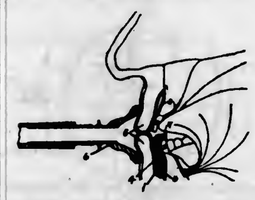
1. The combination with a chair having opposed ways below its seat, of foot rest slide bars disposed in said ways, a cross bar connecting the front ends of the slide bars, angled corner irons disposed in the angles of said cross and slide bars and secured thereto, said corner irons having pivot openings in their arms secured to the slide bars, a foot rest, a bail-like support for said foot rest pivotally mounted and journaled in said corner iron pivot openings and adapted to rest against their arms secured to said cross bar when erected and to collapse between the slide bars, and a collapsible brace consisting of links pivotally connected to each other and to said foot rest and foot rest support.

1,386,820. PORTABLE GRINDING AND POLISHING MACHINE. THOMAS W. WATKINS, Kansas City, Mo. Filed Apr. 5, 1920. Serial No. 371,414. 4 Claims. (Cl. 51—176.)



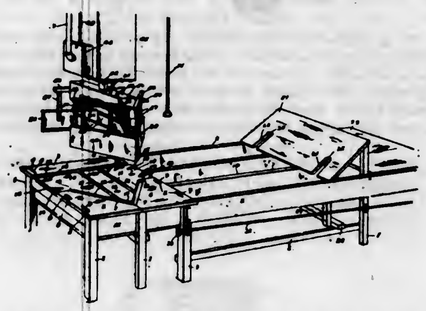
2. In a grinding and polishing machine, a support having casters adapted to rest on a floor, the support having a tubular body having two arms one of which is tubular and interiorly communicating with the body, the other arm having a detachable portion provided with a shaft bearing, the last named arm having a socket adapted to receive a handle, a motor having a body carried by the tubular arm and provided with a horizontal armature shaft, said shaft bearing portion being arranged to detachably support said shaft, the shaft being arranged to have attached thereto intermediate of said body and said shaft bearing portion a polishing or abrading device, and electrical connecting means connected with said motor and located in said tubular arm and tubular body, substantially as set forth.

1,386,821. SAW-SET. RAYMOND L. WEBB, Atchison, Kans. Filed Mar. 1, 1920. Serial No. 362,232. 7 Claims. (Cl. 76—67.)



1. A saw set comprising a saw guide, a sliding plunger arranged to move into the saw guide, a spring pressed hammer for forcibly moving the plunger into the saw guide, a rigid handle, a movable handle, and means operated by the movable and rigid handles for operating the hammer.

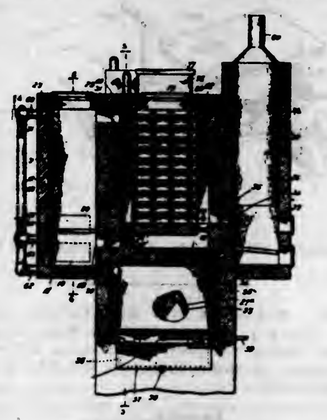
1,386,822. ELECTRIC SIGN. WILLIAM C. WEBB, Atlantic City, N. J. Filed May 7, 1921. Serial No. 467,596. 3 Claims. (Cl. 40—130.)



1. An illuminated figure for electric signs comprising an inner, approximately trough-shaped body, an outer trough-shaped body surrounding the first named trough-shaped body and extending slightly beyond the latter, and illuminating means disposed within the inner trough-shaped body, there being perforations through the wall of the inner trough-shaped body adjacent the bottom thereof whereby the light of said lamps may be discharged into the space between the outer and inner bodies to thereby illuminate the walls of said space.

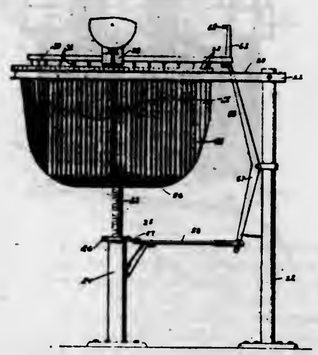
1,386,823. DEVICE FOR PROTECTING THE LIPS OF PLAYERS OF WIND MUSICAL INSTRUMENTS. HARRY W. WETMORE, San Jose, Calif. Filed Dec. 26, 1919. Serial No. 347,325. 3 Claims. (Cl. 84—465.)

1. A device of the character described consisting of a piece of hard rubber that may be cast into shape, one side of which is adapted to fit against the labial surface of the teeth and gums and the other side resting against the inside of the lips of a person's mouth, said piece of hard rubber having a plurality of ridges on one side fitting between the teeth adapted to serve as anchors for holding the device in place and presenting on the other side a smooth surface for the lip to rest against.



1,386,824. BUTCHERING-MACHINE. JOSEPH WHITE, St. Louis, Mo. Filed Nov. 20, 1920. Serial No. 425,504. 6 Claims. (Cl. 17—30.)

1. In an apparatus for the purpose set forth, the combination of a plurality of supporting plates having their edges in spaced relation, a hot water vat disposed below said plates, means for feeding a carcass onto said plates, a plurality of knives disposed above the plates, and means for driving said knives through the carcass and through the spaces between said plates into the vat.

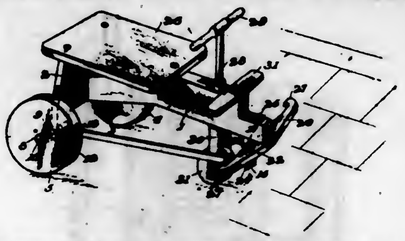


1,386,825. APPARATUS FOR MAKING GAS. WILLIAM D. WILCOX, Chicago, Ill. Filed Feb. 23, 1918. Serial No. 218,799. 19 Claims. (Cl. 48—73.)

1. A gas making apparatus comprising a generator, a secondary combustion chamber communicating with the upper portion of said generator, a separate coking chamber adjacent to said secondary combustion chamber and adapted to be heated therefrom, means for admitting steam into said secondary combustion chamber, a duct connecting the lower portion of said generator with said coking chamber, and controlling devices for controlling the flow of gases through the apparatus, whereby blast gases from the generator may be caused to flow through said secondary combustion chamber, and gases formed in

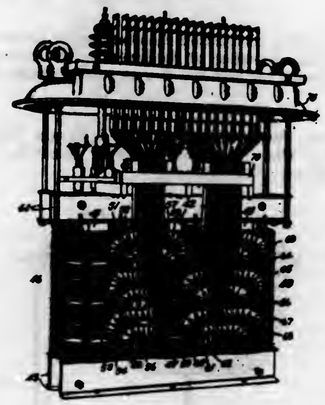
said secondary combustion chamber may be caused to flow into the upper portion of the generator and thence downward through the material therein to said coking chamber.

1,386,826. WEAVING-MACHINE. ALFRED WILD, Milwaukee, Wis. Filed Nov. 19, 1919. Serial No. 339,147. 10 Claims. (Cl. 139—2.)



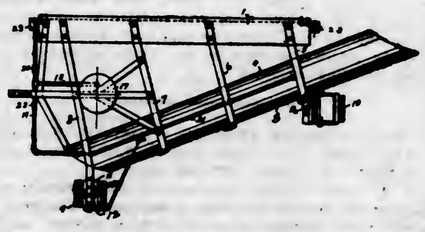
1. A machine of the class described, comprising a supporting frame, a plurality of warp carrying members carried thereby, spring means yieldably holding said members in a mid position, a weft carrying member mounted to travel along the frame, means for moving the weft carrying member along the frame, and means carried by the weft carrying member for moving said warp carrying members transversely from mid position to stagger the same whereby weft carried by said weft carrying member may be interwoven between the warps carried by the warp carrying members.

1,386,827. CHILD'S VEHICLE. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Nov. 5, 1919. Serial No. 335,905. 3 Claims. (Cl. 208—33.)



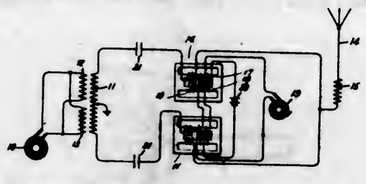
1. A child's vehicle comprising a body, wheels supporting the rear of the body, a seat upon the body, a steering post mounted upon the body in advance of the seat, a ground wheel carried by the steering post, one of the rear wheels having a spindle provided with a crank, a transverse oscillatory foot member mounted upon the

body in advance of the steering post, a pin rotatably fitted through the said foot member, and a pitman pivot-



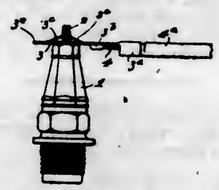
ally connected with the pin and connected with the said crank.

1,386,828. WINDINGS FOR ELECTRICAL APPARATUS. EARLE G. WINSTON, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 16, 1920. Serial No. 410,735. 4 Claims. (Cl. 175—362.)



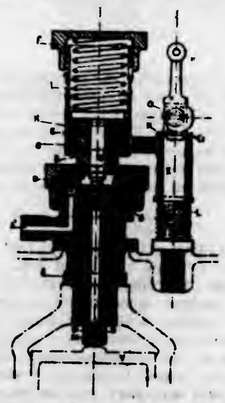
1. An electrical apparatus comprising in combination, a core provided with a plurality of legs, and windings on each of said legs having portions provided with leads adapted for interlaced connection, a portion on one leg being wound in a direction opposite that of another portion thereon, the leads of said portions being arranged in different groups whereby a sequence of alternate polarities among the leads is accomplished without cross-over connections.

1,386,829. DITCH-FILLING MACHINE. WILLIAM C. WITT, Alvin, Tex. Filed Oct. 14, 1919. Serial No. 330,647. 4 Claims. (Cl. 37—5.)



1. A machine of the character described including a land slide, a scraper blade spaced therefrom and converging rearwardly, relative thereto, cross braces for fixing said land slide and scraper blade in position relative to each other, and supporting rollers for supporting said scraper blade in position relative to ground surface, said supporting rollers being adjustable vertically relative to the scraper blade.

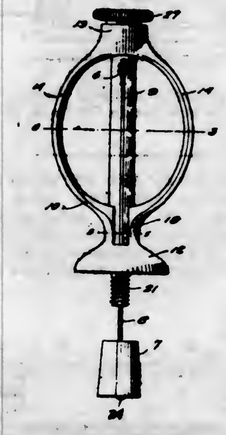
1,386,830. METHOD OF AND APPARATUS FOR PRODUCING AND DISTRIBUTING ELECTRIC-CURRENT WAVES OF RADIOFREQUENCY. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 5, 1915. Serial No. 43,725. 36 Claims. (Cl. 250—17.)



36. The method of preventing the radiation of the unmodulated component of a signaling wave which consists in opposing said component by an equal wave.

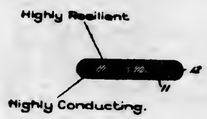
1,386,831. ELECTRIC-TERMINAL CONNECTOR. ALBERT L. AUSTIN, Cleveland, Ohio. Filed Jan. 31, 1920. Serial No. 355,464. 4 Claims. (Cl. 173—269.)

1. A connector, comprising a clip provided with oppositely arranged terminal binding tongues having their free ends extending toward and into proximity with each other to engage a threaded member with a toggle-like action when forced over and turned thereon and to be spread apart and detached therefrom when said clip is bent.



1,386,832. FUEL-INJECTOR FOR TWO-STROKE HIGH-COMPRESSION MOTORS. LOUIS BAILLY, Columbus, Ohio, assignor to The Columbus Oil Engine Company, Columbus, Ohio. Filed Feb. 28, 1920. Serial No. 362,109. 4 Claims. (Cl. 123—32.)

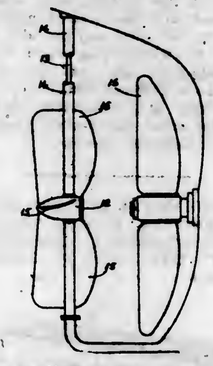
1. The combination in a fuel injector having an inlet and controlling valve, of a pair of axially alined tele-



scoping pump pistons, one of which is formed as a nozzle injector and the other as a needle valve controlling said nozzle, said pistons being movable jointly, and means for normally holding said needle valve to its seat in the nozzle injector.

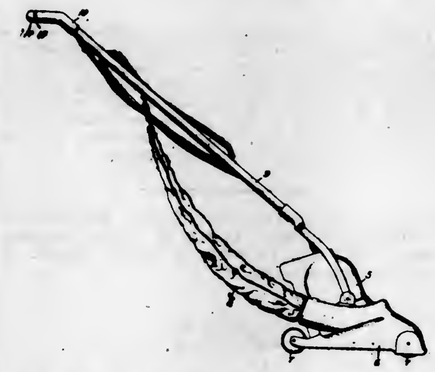
1,386,833. LIQUID-LEVEL GAGE FOR AUTOMOBILE-RADIATORS. CLARENCE A. BEARDMORE, Annapolis, Md., assignor of one-half to Winson G. Gott, Annapolis, Md. Filed Jan. 28, 1920. Serial No. 354,543. 6 Claims. (Cl. 73—82.)

1. In combination with a radiator head having a liquid inlet opening into its wall, of a gage including an indicator, a buoyant body in said radiator movable in the current of liquid delivered through said inlet to be disturbed laterally and vertically thereby and movable above said inlet, and a device operatively connecting said buoyant body and indicator to actuate the latter by movement and disturbance of the former, said indicator arranged to indicate high liquid level in the radiator when said buoyant body is above said inlet.



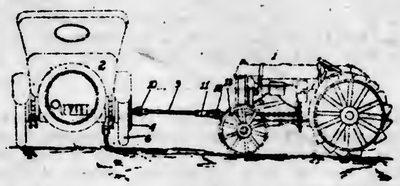
1,386,834. TORSION-SPRING. ALBERT R. BECKERT, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 21, 1919. Serial No. 332,171. 2 Claims. (Cl. 171—95.)

1. A torsion spring adapted to serve both as a torque producing means and as an electrical conductor, comprising a comparatively thin casing of highly resilient material, and an inner core of highly conducting material.



1,386,835. REGENERATIVE COUNTER-PROPELLER FOR MARINE VESSELS. RALPH WHITEHEAD BIRKETT, Sutton, England. Filed Jan. 24, 1920. Serial No. 353,851. 3 Claims. (Cl. 115—42.)

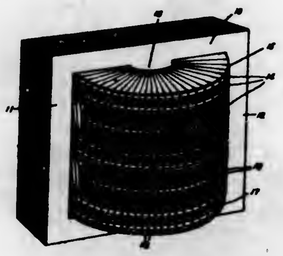
1. In a device of the class described, in combination with a screw propeller, a central hub supported from the structure of a vessel and arranged centrally behind the said screw propeller, a plurality of stationary detachable blades radiating from said central hub, and disposed with their forward edges facing approximately in the direction of travel and secured to said hub and to the structure,



with means for readjusting the angular disposition of their plane surfaces to any desired angle in relation to the axial line of the shaft of the said screw propeller.

1,386,836. SWITCH FOR ELECTRIC VACUUM-CLEANERS. OTTO BAINTZENHOFF, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Filed June 10, 1920. Serial No. 388,011. 3 Claims. (Cl. 200—157.)

1. In an apparatus of the character described, the combination with a handle having a switch at the outer end thereof, of a switch cap for the switch comprising an inner part of hard material and an outer part of a yieldable, non-breakable material.



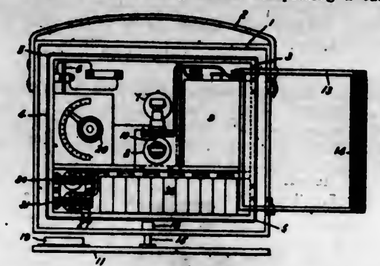
1,386,837. CRANKING DEVICE FOR TRACTORS. LEE BROWN, Modesto, Calif. Filed Aug. 28, 1920. Serial No. 406,719. 1 Claim. (Cl. 74—106.)

In combination with a tractor having a shaft projecting therefrom and connected to the crank shaft of the motor

thereof, a power-driven vehicle positioned ahead of and substantially at right angles to the tractor, one of the driven wheels of the vehicle being substantially concentrically alined with the tractor-shaft, a bracket removably fitted to the wheel and provided with an orifice axially thereof, the wheel being raised from the ground, a shaft removably fitted into said orifice to turn with the bracket and wheel, a sleeve slidable on said shaft but turnable therewith and connected with the tractor-shaft to turn the same, and flexible joints interposed in the first named shaft and sleeve.

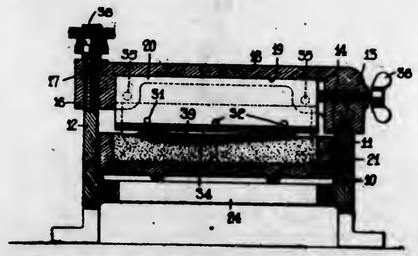
1,386,838. WINDING FOR ELECTRICAL APPARATUS. LOCKE H. BURNHAM, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 17, 1918. Serial No. 245,330. 4 Claims. (Cl. 175—356.)

1. In an electrical apparatus, the combination with a core of magnetic material, of electrical windings assembled thereon comprising coils disposed in spaced relation and arranged in groups, and insulating material arranged in layers about a group of said coils; said insulating material having a window formed in its cylindrical sides thereby exposing the edges of said coils to a cooling and ventilating medium.



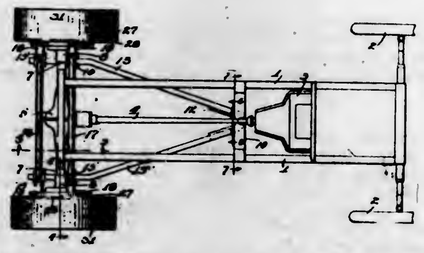
1,386,839. RELEASING DEVICE FOR MOTION-PICTURE-FILM REELS. ELIJAH M. CHASE, Cheyenne, Wyo. Filed Jan. 11, 1921. Serial No. 436,493. 2 Claims. (Cl. 242—74.)

1. A device of the class described including a spring member secured at its central portion to the periphery of a moving picture reel hub, said spring having upwardly bent portions adjacent its center whereby the ends of the spring will normally engage the periphery of the hub, a rod extending through the hub, curved arms carried by the rod and extending from opposite directions, and means for rotating said rod whereby the ends of said arms will be projected through openings in the hub to engage the ends of the spring and remove them from engagement with the periphery of the hub.



1,386,840. RADIOSIGNALING SYSTEM. REGINALD CHARLES CLINKER, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Nov. 29, 1919. Serial No. 341,453. 4 Claims. (Cl. 250—14.)

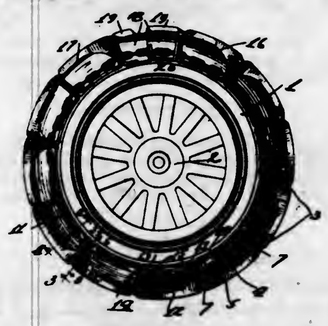
1. A receiving apparatus for radio signals comprising a casing, a receiving antenna wound upon a frame within said casing, a receiving circuit associated with said receiving coil, said receiving circuit comprising a tuning



condenser and a detector and said tuning condenser and detector being mounted within the frame upon which the receiving coil is wound.

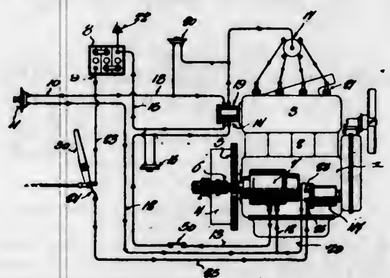
1,386,841. METHOD OF AND APPARATUS FOR MAKING AEROFOILS AND THE LIKE. JOSEPH G. COFFIN, Garden City, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 14, 1919. Serial No. 282,682. 23 Claims. (Cl. 18—48.)

1. The method of forming and producing aerofoils or the like which consists in first providing a bed of paraffin or the like, next scraping the bed until one surface thereof approximates one surface of the finished aerofoil, next coating the scraped surface of the bed with a substance in turn susceptible of being scraped, next scraping the coating substance until the surface thereof remote from the bed approximates the other surface of the finished aerofoil, and finally removing the scraped coating substance from the bed in the form given it by the bed in conjunction with the scraping.



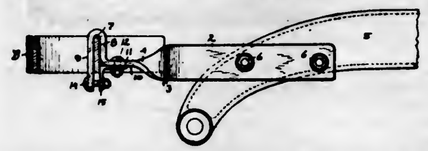
1,386,842. AUTOMOBILE TRACTOR ATTACHMENT. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,100. 4 Claims. (Cl. 180—16.)

1. An automobile tractor attachment embracing supporting means, a plurality of transverse brace members



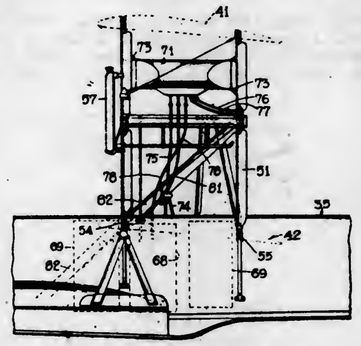
secured thereto, gear casings secured to said brace members, speed reduction gear mechanisms in said gear casings, and wheel members rotatably mounted on said gear casings and connected with said speed reduction gear mechanisms to be driven thereby at a rate of speed different from that received by said speed reduction gear mechanisms.

1,386,843. TRACTOR-TREAD FOR PNEUMATIC-TIRE WHEELS. ALBERT EUGENE COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed May 14, 1920. Serial No. 381,347. 2 Claims. (Cl. 152—16.)



2. In a device of the class described, a plurality of hingedly connected main tread members, apertured flanges formed thereon, end tread members connected with the end main tread members, an apertured lug formed on each of said end tread members, webs formed on said main tread members and on said end tread members, chains on opposite sides of said device engaged through the apertures in said flanges and lugs, thread bolts secured on the ends of said chains, and means engaged on said thread bolts adapted to be adjusted to tension said chains to secure the tread members in position.

1,386,844. AUTOMATIC OPERATING MEANS FOR INTERNAL-COMBUSTION ENGINES. HENRY K. COWEN, Milwaukee, Wis. Filed Mar. 1, 1920. Serial No. 362,622. 4 Claims. (Cl. 290—41.)

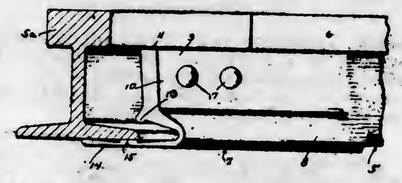


1. In an apparatus of the class described, the combination with an internal combustion engine and a vehicle operated thereby, of means for automatically and successively starting the operation of the engine when the same attains a certain predetermined temperature, and stopping the operation thereof when a second predetermined temperature is reached, comprising an electric starting motor, an ignition circuit, a starting motor circuit, a source of current for said circuit, a thermostatically controlled switch for each of said circuits, for automatically closing the circuits when the engine is at a predetermined temperature, and automatically opening the circuits when the latter attains a second predetermined temperature, means for automatically opening the starting circuit when the engine reaches a predetermined speed, and means for preventing operation of the first mentioned means when the vehicle is moving.

1,386,845. BRACKET FOR AUTOMOBILE-BUMPERS. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed May 20, 1921. Serial No. 471,164. 5 Claims. (Cl. 293—55.)

5. A bracket for automobile bumpers, comprising a flat bar having one end portion twisted at right angles to the plane side of its opposite end and bent upwardly and downwardly at the front end of its twisted portion to provide a relatively long tongue and a recess at the base of said tongue, a right-angled clamping member affixed to said twisted portion of the bracket and extending downwardly parallel into the free end of said tongue, and a clamping bolt uniting said tongue and member.

1,386,846. FUEL-SUPPLY SYSTEM FOR AIRCRAFT AND SIMILAR APPARATUS. GLENN H. CURTISS, Garden City, and HENRY KLECKLER, Hammondsport, N. Y., assignors to Curtiss Aeroplane and Motor Corporation, Garden City, N. Y., a Corporation of New York. Original application filed Dec. 23, 1916, Serial No. 138,633. Divided and this application filed July 17, 1920. Serial No. 397,092. 3 Claims. (Cl. 158—36.)

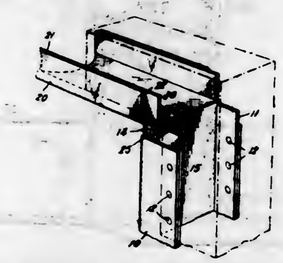


1. In an apparatus of the type set forth, the combination of a framework, a motor, a motive fuel service tank carried by the framework, supply tanks likewise carried by the framework, the base end of each supply tank being elevated above the corresponding end of the service tank, a gravity feed line connecting the supply tanks with the service tank, a gravity tank elevated above the motor, and a connection between the service tank and the gravity tank for continuously elevating fuel to the gravity tank during operation of the motor.

1,386,847. RAIL-JOINT. GUY ANTONIO DELISSIO, Delmont, Pa. Filed May 18, 1921. Serial No. 470,716. 1 Claim. (Cl. 238—231.)

A rail joint of the character described embodying a rail having a socket member formed on one end thereof,

said socket member being open at one end and its top, the inner walls of said socket member being substantially concave, the top and inner edges of said walls being adapted to engage the rail, ridges projecting from the walls of said socket at the junction of the web of the



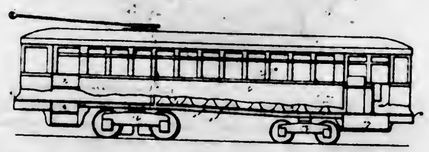
rail with the base of the rail, a ridge projecting from the intermediate portion of the bottom of the socket for engagement with the base of the rail, and means for urging said ridges, the top and inner edges of the walls into binding engagement with the rail end within the socket.

1,386,848. HAND-CASE FOR LADIES. OSCAR DINGFELD, Brooklyn, N. Y. Filed Jan. 22, 1921. Serial No. 439,228. 3 Claims. (Cl. 220—1.)

1. In a hand case the combination of a basil or frame and a cover plate of dissimilar materials, connected to each other by means of a mechanical joint, said basil being of material strong enough to stand the repeated strain of opening and closing the case, and the material of the cover plate being adapted to permit delicate ornamentation thereon.

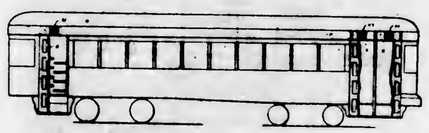
1,386,849. ELECTRICAL APPARATUS. WILLIAM O. DWYER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1920. Serial No. 424,779. 3 Claims. (Cl. 175—361.)

1. In an electrical apparatus the combination with a winding and a part to be insulated therefrom, of an insulating barrier disposed between said winding and part comprising spaced members provided with sides partially enveloping said part and having lateral openings therein to afford circulation of a cooling and ventilating medium.



1,386,850. ART OF MAKING LOW-CUT SHOES. SEXTUS A. EDDINS, Brockton, and WILLIAM H. BAYNARD, Boston, Mass. Original application filed Aug. 29, 1919, Serial No. 320,686. Divided and this application filed Nov. 28, 1919. Serial No. 341,086. 3 Claims. (Cl. 12—145.)

1. The improved process of making low cut shoes which consists in assembling the upper materials on the last, pulling over the toe portion, and clamping the topmost portion of the upper tightly along the sides of the

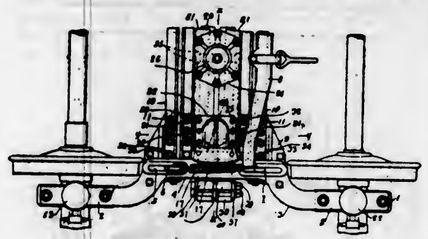


last for a substantial length between the throat of the vamp and the heel to hold the edge of the upper in alinement during the lasting operation.

1,386,851. RAILWAY-CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,028. 2 Claims. (Cl. 105—329.)

1. In a passenger car, the combination, with a ramped floor extending from and over one truck to and over the other, the lower end joining and contiguous with the forward platform floor and the higher end joining and contiguous with the rear platform floor, of a motor-truck located essentially rearward of the higher end of the ramped portion and another truck located essentially forward of the lower end of the ramped portion.

1,386,852. RAILWAY-CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,029. 15 Claims. (Cl. 105—341.)

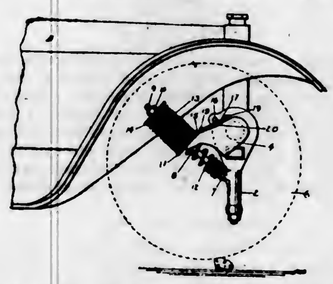


1. A one-way one-man car having front and rear doorways, and sign mechanism adapted to exhibit an entrance legend at the front doorway and an exit legend at the rear doorway, or vice versa, so that such car may be used as a pay as you enter car when the entrance legend is exhibited at the front door and the exit at the rear or as a pay as you leave car when the entrance legend is at the rear and the exit legend at the front.

1,386,853. RAILWAY-CAR TRUCK. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,032. 14 Claims. (Cl. 105—190.)

1. In a car truck, the combination, with side beams having an inner portion located in a plane inward of

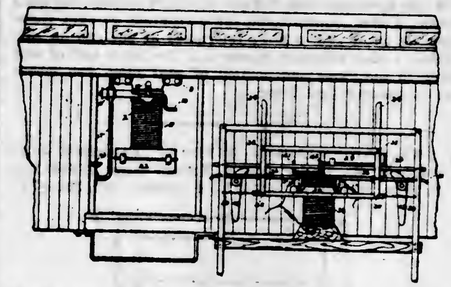
that of the outer portions, of a bolster adapted to sustain a car body, a transverse leaf spring support secured to



the bolster near the middle portion and having its ends secured to the side beams.

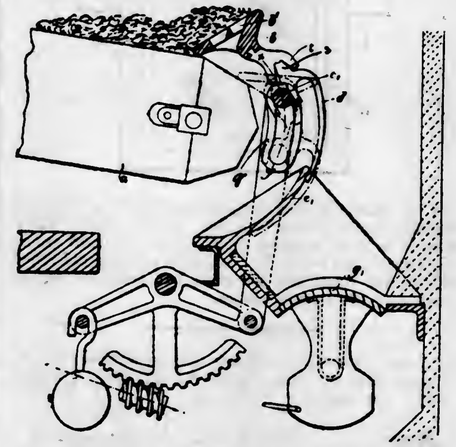
1,386,854. BOND-WIRE SUPPORT. EDWARD A. EVERETT, New York, N. Y. Filed July 30, 1919. Serial No. 314,383. 3 Claims. (Cl. 173—262.)

3. In combination, a rail joint, bond wires for said joint, a support for said bond wires consisting of a comparatively rigid strip of half-round section, the flat side of said strip placed adjacent said rail joint and conforming to the contour thereof, a partially closed eye on the upper end of said strip, said eye inclosing said bond wires and capable of being closed when said bond wires are in place.



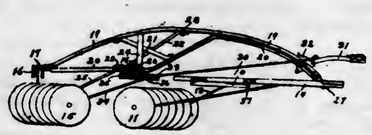
1,386,855. SPRING-CONTROLLED LINK FOR VEHICLES. HUGH EWING, Columbus, Ohio. Filed Dec. 4, 1919. Serial No. 342,350. 2 Claims. (Cl. 301—133.)

1. In a vehicle wheel structure, the combination of a rearwardly and upwardly swinging wheel axle, a stop for limiting the rearward and upward movement of such axle, and an interposed spring which is free at either of its ends for lengthening or shortening.



1,386,856. APPARATUS FOR TRANSFERRING MAIL. JOHN FORSLUND, Seattle, Wash. Filed July 24, 1920. Serial No. 398,659. 4 Claims. (Cl. 258—4.)

1. In combination with a moving railway car and a container having affinity for a magnet extending therefrom, a rack located adjacent the car, said rack carrying a buffer made of material attractive to a magnet and controlled by a magnet, against which said container is adapted to impinge and whereby the longitudinal movement of the container is limited after being deposited on

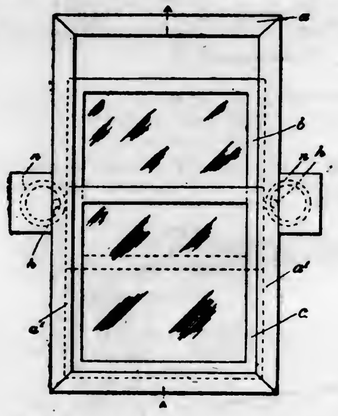


the rack from the car, and means on the rack for limiting the lateral movement of the container and said buffer.

1,386,857. CHAIN GRATE. ALFRED GEORGE FOX, New Cross, England. Filed Apr. 26, 1917. Serial No. 164,706. 5 Claims. (Cl. 110—40.)

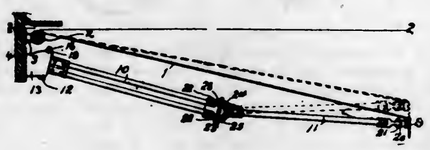
1. In combination with a furnace having a traveling grate, dumper bars forming an air seal with the grate, supporting means for said bars comprising a shaft and bar-supporting members between said shaft and said bars, said supporting means being adapted to be adjusted to position the dumper bars either above or below the grate surface, a fixed member, and interplay devices adapted to form an air seal with the fixed member.

1,386,858. TANDEM DISK HARROW. FRANK H. FRENCH, Preston, Iowa. Filed July 9, 1920. Serial No. 394,975. 5 Claims. (Cl. 55—83.)



2. In a tandem disk harrow, a draft link composed of two superposed members, said members being in contact and rigidly secured together at their ends, portions of said members being arched, portions of said members

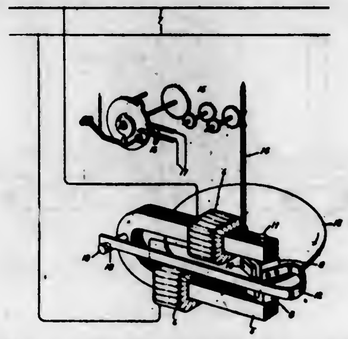
being spaced materially apart, and truss braces within and secured rigidly to the spaced portions of said members.



4. In a tandem disk harrow, a trailer harrow having a frame, a disk gang pivoted for oscillation on said frame near its outer end, a lever fulcrumed at one end on said frame, a link pivotally connecting the inner end of said lever to the inner end portion of said gang, and means for oscillating said lever.

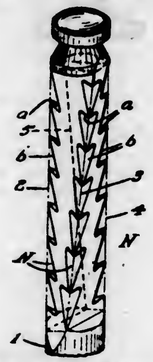
1,386,859. SLIDING WINDOW. FREDERICK JOHN GARNIER, St. Helier, Jersey, British Isles. Filed May 6, 1920. Serial No. 379,311. 4 Claims. (Cl. 292—73.)

1. In sliding windows, sashes adapted to slide in the window frame, recesses in the window frame, rollers located in these recesses, annular rings arranged around the rollers, and means for resiliently pressing the rollers against the rings, and the rings into frictional engagement with the slidable sashes.



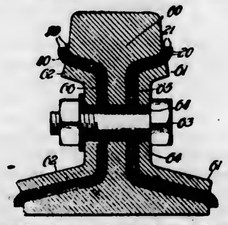
1,386,860. AWNING. LE ROY GOUDIE, Kansas City, Mo. Filed Aug. 28, 1918. Serial No. 251,799. 7 Claims. (Cl. 156—42.)

2. An awning arm comprising an inner member and an outer member having a pivotal connection between them by which the outer member can swing vertically and laterally relative to the inner member, one of the members having a cam face engaging the other member by which when the outer member is swung vertically in one direction, it will be swung laterally relatively to the inner member.



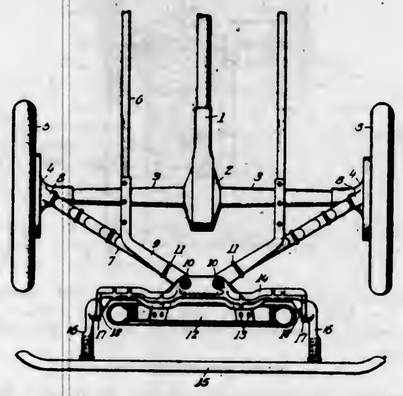
1,386,861. CONSTANT-SPEED MOTOR. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Jan. 28, 1920. Serial No. 354,532. 5 Claims. (Cl. 172—278.)

1. In a constant speed motor adapted to be connected to a source of variable frequency, a rotatable member, means for creating a torque in one direction therein that is a function of the frequency of the current supplied thereto and adjustable means for creating a torque in the opposite direction that is a dissimilar function of the frequency, said latter means being so adjusted that the torque created thereby has substantially constant relation



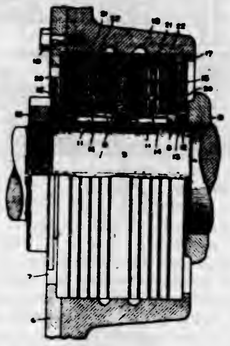
to the first mentioned torque for a relatively large frequency variation.

1,386,862. CLEANING-ROD FOR FIREARMS. ROSWELL G. HALL, Dorchester, and AXEL BIRKHOLM, Boston, Mass. Filed Dec. 15, 1919. Serial No. 345,011. 2 Claims. (Cl. 42—91.)



2. A cleaning rod of the class described having an end portion of rectangular cross section defined on two sides by a pair of opposite faces disposed in planes converging in one direction and having oppositely disposed notches cut in the longitudinal edges thereof, and on two other sides by a pair of opposite faces disposed in planes converging in the opposite direction and having oppositely disposed notches cut in the longitudinal edges thereof.

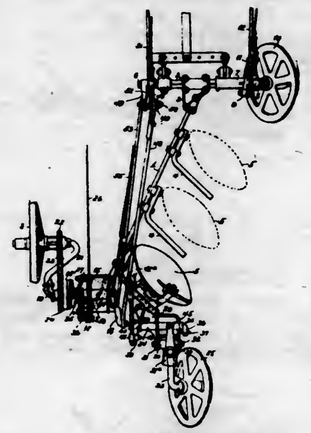
1,386,863. ELECTRICAL INSULATOR. CLINTON O. HARRINGTON, Chicago, Ill. Filed Apr. 8, 1920. Serial No. 372,345. 14 Claims. (Cl. 238—152.)



5. A laminated electrical insulator device comprising insulating material and a smoothly surfaced sheet on which the insulating material may slide.

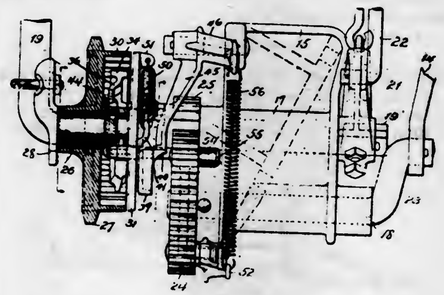
1,386,864. AUTOMOBILE-BUMPER. CHARLES H. HATHAWAY, West Allis, and WILLIAM A. STARCK and LEO F. McEVOY, Milwaukee, Wis., assignors to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed July 16, 1920. Serial No. 396,750. 8 Claims. (Cl. 293—55.)

6. In a bumper adapted for use on an automobile whose frame is resiliently supported by a divided spring having the inner ends thereof terminate in a transverse plane separated from the transverse plane of the outer ends, the combination of a bumper bar, rearwardly extending arms connected to the bar intermediate the ends thereof, and means connecting said arms and providing a central support on the resiliently supported frame.



1,386,865. PACKING. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,938. 7 Claims. (Cl. 286—10.)

1. A packing element comprising a disk having concentric annular projections on a side thereof, and a plurality of packing rings of thin material fastened to the edges of said projections, said packing rings being spaced by means of collars arranged between them.

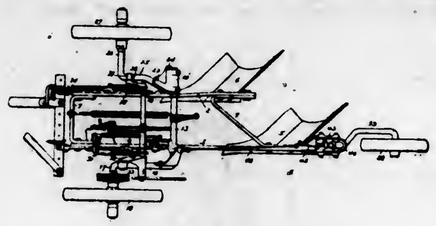


1,386,866. PLOW. EDWARD M. HEYLMAN, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Mar. 29, 1918. Serial No. 225,517. 11 Claims. (Cl. 97—55.)

1. In a plow structure, the combination with a wheeled frame and a plow, of lifting means including a crank shaft and an actuated bar connected therewith and normally bearing dead-center relations to each other, a gear on said crank shaft, power operated means for imparting half-rotations to said gear, and means co-

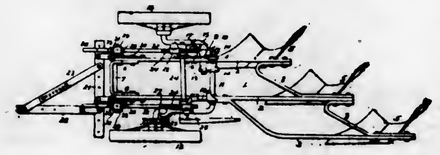
operating with said gear to hold the same at the end of each half rotation when the actuating bar bears a dead center relation to the crank shaft, whereby the plow will be held either in a raised position or a working position.

1,386,867. POWER LIFT MECHANISM FOR PLOWS. EDWARD M. HEYLMAN, LEON V. KINGSBURY, and LLOYD W. STICKLEY, South Bend, Ind., assignors to Oliver Chilled Plow Works, South Bend, Ind. Filed Apr. 9, 1918. Serial No. 227,534. 6 Claims. (Cl. 192—62.)



1. In mechanism of the class described, the combination of a ratchet wheel, means for rotating the same, a clutch disk, gearing driven from said clutch disk, clutch devices for connecting the clutch disk with the ratchet wheel, means for controlling said clutch devices, and means coöperable with said gearing to lock the same in definite positions.

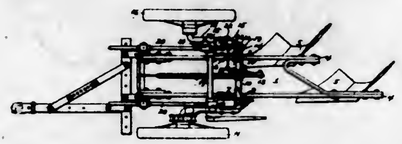
1,386,868. PLOW. EDWARD M. HEYLMAN, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Feb. 7, 1919. Serial No. 275,583. 10 Claims. (Cl. 97—36.)



1. In a plow structure, the combination with a plow frame and carrying wheels at respective sides thereof, of crank axle members connecting said frame with the wheels, and adjusting levers mounted on the frame and

having parts disposed over and coöperable directly with the cranked portions of the respective crank axle mem-

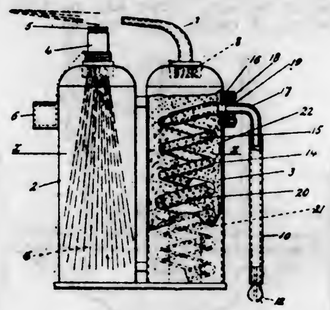
bers and free from the same, whereby the plow structure may be adjusted for depth of plowing.



1,386,869. PLOW. EDWARD M. HEILMAN, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Oct. 17, 1919. Serial No. 331,288. 4 Claims. (Cl. 97—36.)

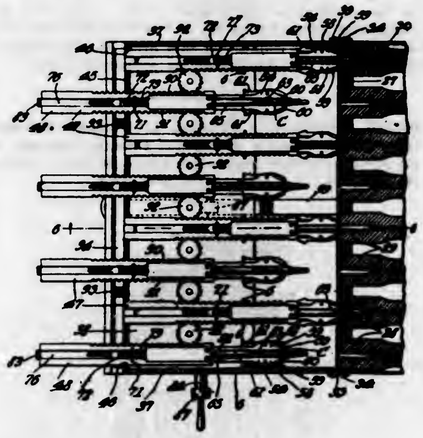
1. In a plow, the combination with a plow frame, a plow base carried thereby, a crank axle, and wheels, of a lever pivotally mounted on the plow frame and having its lower end disposed over the crank arm of the axle without direct connection thereto, an approximately horizontal manually operable shaft having threaded and pivotal connection with said lever, and a support on the plow frame for said shaft

---



1,386,870. PLOW. EDWARD M. HEILMAN and ARTHUR D. GALLAGHER, South Bend, Ind., assignors to Oliver Chilled Plow Works, South Bend, Ind. Filed Oct. 17, 1919. Serial No. 331,290. 3 Claims. (Cl. 97—36.)

1. In a plow, the combination with a plow frame, two independently movable crank axles, one of which is freely movable relatively to the other when the plow is in raised position, and wheels, of a stop arm carried by the axle which is so movable and coöperable with the frame to prevent the wheel on said axle from kicking back sufficiently to cause the crank of said axle to become disposed at an angle reverse to that of the crank of the other axle.



1,386,871. BLOWTORCH. CHARLES H. HOWELL, Columbus, Ohio. Filed May 21, 1920. Serial No. 383,232. 3 Claims. (Cl. 158—35.)

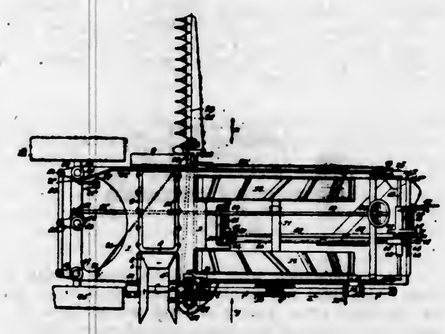
1. A blow-torch comprising two receptacles secured together, one of the said receptacles being provided with a lamp-wick, a blow-pipe nozzle secured to the other receptacle and provided with two converging tubes arranged to deliver the blast crosswise of the lamp-wick,

absorbent material for holding volatile fuel arranged in the said receptacles, and means for forcing air through the absorbent material in the blow-pipe receptacle.

1,386,872. MACHINE-GUN. ROBERT F. HUDSON, Richmond, Va. Filed Mar. 20, 1919, Serial No. 283,807. Renewed Jan. 3, 1921. Serial No. 434,840. 14 Claims. (Cl. 89—11.)

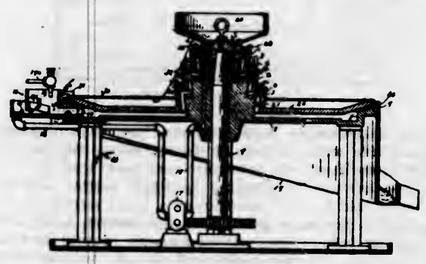
1. In a machine gun, the combination of a supporting frame, a barrel attached thereto and having the breech adjacent to the frame, a sliding breech block mounted in the frame for straight line movement to and from the breech of the barrel, a firing pin and a sear carried by the breech block, mechanical means for imparting reciprocation to the block, and coöperating cartridge inserting and ejecting means carried by the block and in the path thereof, whereby the cartridge is firmly grasped during insertion, held during firing, and released upon retraction before the engagement of a new cartridge.

1,386,873. PISTON-RING. WILLIAM H. JAHNS, Los Angeles, Calif. Filed May 10, 1915. Serial No. 27,253. 2 Claims. (Cl. 74—109.)



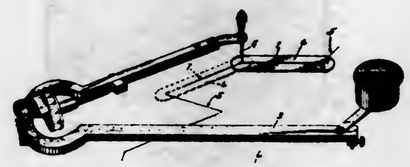
1. In combination with a piston having a groove, a continuous spring expander ring of comparatively stiff metal mounted in said groove and of a width to fill the

opening of the groove, said ring having outer inclined faces, outer triangular metallic packing rings each hav-



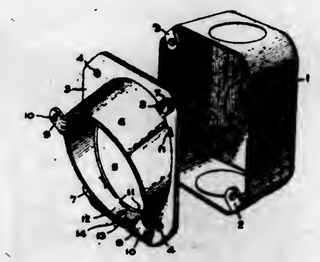
ing an inclined face fitting a face of the expander ring, each of said outer rings being of thin cross section and less in thickness than the expander ring.

1,386,874. FARM-TRACTOR. FRED JUDSON, Fullerton, Nebr. Filed Nov. 29, 1919. Serial No. 341,355. 6 Claims. (Cl. 180—70.)



1. In a farm tractor, a bed frame, a motor thereon, a motor driven shaft with which the said wheels rotate, power transmission connecting the motor and the traction wheel shaft, the said mechanism including a lengthwise shiftable shaft mounted on the bed frame, gears adapted for engagement with the motor shaft for causing the driving action of the motor upon the shiftable shaft to be either forward or backward, and thrust lever devices connecting the frame and the longitudinally movable shaft for shifting the gear connections that join the said shiftable shaft and the motor shaft.

1,386,875. CASCADE-AMALGAMATOR. LEWIS M. KELLOGG, South Pasadena, Calif. Filed July 6, 1920. Serial No. 394,357. 6 Claims. (Cl. 83—67.)

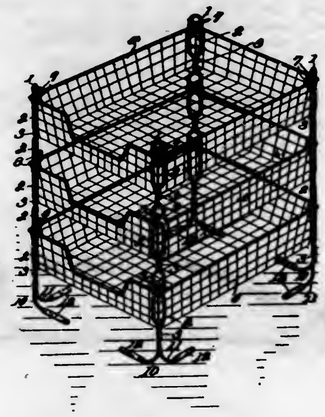


1. In a mercury amalgamator in combination, a cascade comprising a series of annular terraces, a shallow mercury basin extending outwardly from the base of the cascade and having an annular retaining wall, a mercury discharge port formed through the wall of the basin and extending above and below the normal mercury level, a rotatably mounted cover for the cascade and the basin adapted to rotate closely thereto and thereover, means for feeding mercury to the head of the cascade and means for passing ore pulp over the cascade with the overflowing mercury.

1,386,876. PLANIMETER-GUIDE. JOHN J. KERR, Rochester, Minn. Filed Mar. 4, 1920. Serial No. 363,304. 1 Claim. (Cl. 33—122.)

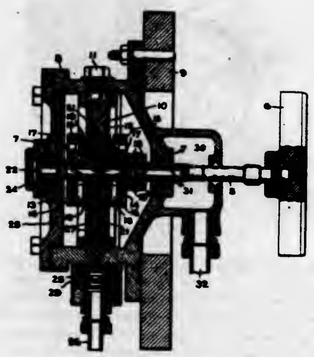
The combination with a planimeter having a tracing needle, of an elongated transparent plate having a longitudinally extended slot of such width as to hold said needle against lateral movement, said needle also acting as a pivot on which said plate may be pivotally moved.

1,386,877. CONDUIT-BODY ANGLE-ADAPTER. HOMER G. KNODERER, Englewood, N. J., assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1920. Serial No. 417,642. 2 Claims. (Cl. 247—20.)



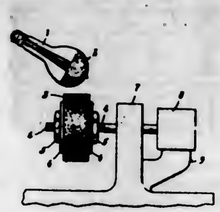
1. An angle adapter for outlet boxes comprising a cover plate having an opening therein for providing access to the outlet box and having means for securing the same to the outlet box, a hollow cylindrical member having its bases in planes making an acute angle with each other and provided with means for securing one of said bases to said cover plate with the opening in the cylindrical member coincident with the opening in the cover plate, and means on the other base of said cylindrical member adapted to secure a cover plate thereto.

1,386,878. WIRE-BASKET SUPPORT. GEORGE A. LAMP, Rock Island, Ill. Filed Aug. 2, 1920. Serial No. 400,818. 3 Claims. (Cl. 211—14.)



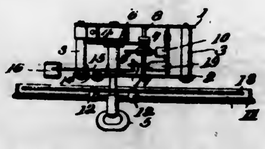
1. A support for paper containing baskets and the like, comprising a strand of wire doubled to provide a

closed fold at one end and supporting feet at the other, the strands of said wire being spaced and substantially



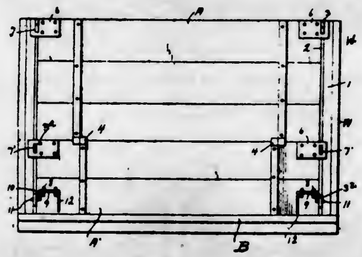
parallel, said strands having a suitable number of bent portions to form basket attaching hooks, and intermediate portions twisted to provide strengthening portions.

1,386,879. DASHPOT. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungstroms Angturbin, Skärsätra, Sweden. Filed Oct. 14, 1920. Serial No. 416,944. 5 Claims. (Cl. 188—96.)



1. In an apparatus of the character described, the combination of a cylinder, a shaft journaled in walls of the cylinder, an axially movable non-rotatable piston in the cylinder, members carried by the shaft and engaging the piston on opposite sides, means for supplying liquid to the cylinder, and means carried by said members for separating air from such liquid.

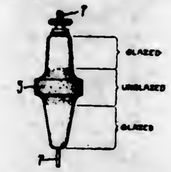
1,386,880. FROSTED GLASS AND PROCESS FOR MAKING THE SAME. CHARLES F. LORENS, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Jan. 28, 1920. Serial No. 354,526. 3 Claims. (Cl. 41—39.)



1. The process of finishing a glass surface which consists in sand-blasting the glass surface and afterward rubbing said surface with an abrasive.

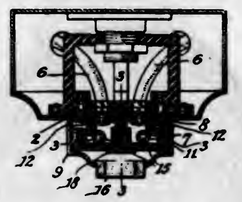
1,386,881. ALARM-CLOCK. PAUL LUX, Waterbury, Conn., assignor to The Lux Clock Manufacturing Company, Inc., Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 19, 1921. Serial No. 462,551. 6 Claims. (Cl. 58—16.)

1. The combination with an alarm clock having an alarm main wheel and an alarm crown wheel for acutating the alarm verge, a gong disposed between said clock work and the back of the case, a hammer wire carrying a hammer, said hammer wire having an angled tail and a hammer tail lever carried by said alarm verge having an opening to receive the angled hammer tail for causing the hammer to be oscillated.



1,386,882. END-GATE. JOHN J. MCCULLOCH, Pomeroy, Iowa. Filed Mar. 20, 1920. Serial No. 367,573. 1 Claim. (Cl. 296—56.)

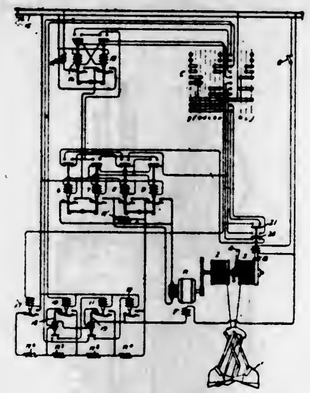
The combination with a wagon box, plates carried by the side walls thereof, at the tail of the box, an end gate comprising two pivotally connected sections, one of said sections constituting an upper section and the other of said sections constituting a lower section, plates secured to the upper portion of each section, said plates extending beyond the vertical margins of said sections and having a vertically disposed slot in the protruding portions, said slots being in vertical alinement, hook members extending outwardly from the plates and coacting with the slots, a third hook member on each plate and



in vertical alinement with the aforementioned hook member, the lower hook members having a greater distance between the hook portion and the plate than the upper hook members, and holding means carried by the lower portion of the lower section and coacting with the lower members, said means comprising rods each of which is provided with rock arms to engage the outer portion of the hook members, the opposite end portion being provided with an operating lever, said lever swinging downwardly to arrange the rock arm in working engagement with the coacting hook member and being limited in its downward movement by the gate.

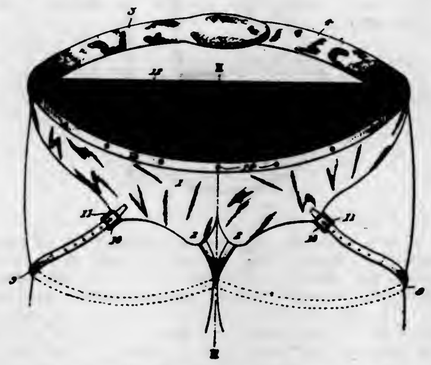
1,386,883. SPARK-PLUG. TAINE G. MCDOUGAL, Flint, Mich., assignor to Champion Ignition Company, Flint, Mich., a Corporation of Michigan. Filed Nov. 22, 1919. Serial No. 339,830. 5 Claims. (Cl. 123—169.)

1. A spark plug including a shell structure, a glazed porcelain, retaining means carried by said shell structure for engaging the porcelain, an electrode passing through the porcelain and projecting at each end thereof, there being an unglazed portion between the retaining means and each end of said porcelain to more completely break electrical connection between the shell and both ends of the electrode.



1,386,884. ELECTRICAL-FITTINGS CONNECTION. JOHN ANDREW MCKAY, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1919. Serial No. 333,385. 6 Claims. (Cl. 173—330.)

6. An electrical fixture connection comprising: a permanent fitting having a socket member with electrical contacts, a removable fitting, complementary guides on said fittings independent of the contacts and slidingly engaged to support the removable from the permanent fitting, a pivotally mounted terminal member carried by the removable fitting and engageable with the socket member, and means for locking said fittings together.

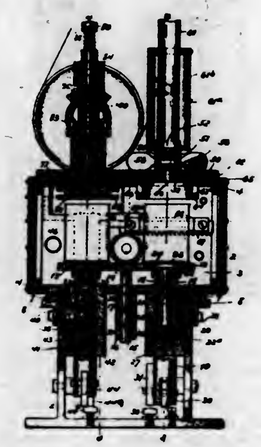


1,386,885. MOTOR CONTROL FOR HOISTS. ROBERT H. MCLAIN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 7, 1919. Serial No. 295,411. 4 Claims. (Cl. 172—152.)

3. The combination in a grab bucket hoist of a holding drum, a lacing drum, a series wound electric motor for operating the drums, means for connecting the motor to a source of supply as a series motor for operating the lacing drum to unwind the lacing cable, a brake for the holding drum, and means whereby the said connnection can only be established when the brake is applied to the holding drum.

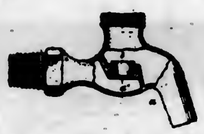
4. The combination in a grab bucket hoist of a holding drum, a lacing drum, a series wound electric motor for operating the drums, a controller having means for connecting the motor to a source of supply to hoist the bucket, connecting the motor in a local dynamic brake circuit to lower the bucket, and reversing the motor and connecting a shunt around the motor armature for operating the lacing drum to unwind the lacing drum cable, a brake for the holding drum and means for interlocking the brake and the controller to prevent reversing the motor unless the brake is applied to the holding drum.

1,386,886. TRUSS. NICK MAGGIO, Brooklyn, N. Y. Filed Oct. 9, 1920. Serial No. 415,940. 2 Claims. (Cl. 128—96.)



1. In combination with a truss, a detachable elastic abdomen supporting band secured to the upper edge thereof, the lower edge of said band being cut upon a relatively straight line and curved coincident to the upper edge of said truss, the upper edge of said band tapering toward its edges from its center point of greatest height.

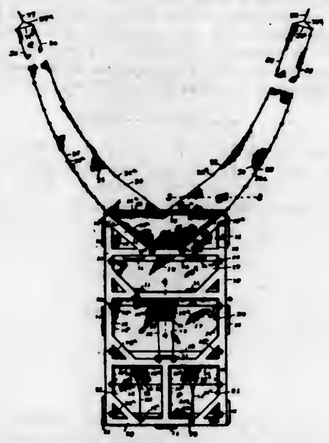
1,386,887. ART OF CANNING. ADOLPH K. MALMQUIST, South Bellingham, Wash., assignor to Deming & Gould Company, South Bellingham, Wash. Filed Nov. 13, 1919. Serial No. 337,737. 4 Claims. (Cl. 99—8.)



1. The herein described method, consisting in inclosing within a chamber, an open container having

solid food therein, creating a vacuous condition within said chamber and within the pores of the food in said container, discharging liquid into said container and filling the pores of said solid food, permanently closing

and sealing said container, and maintaining a vacuous condition in the chamber in which the container is located during the steps of filling with liquid and parmanently closing and sealing the container.



1,386,888. RENEWING MEANS FOR VALVE STRUCTURES. FRED MASTERS, Ithaca, N. Y. Filed Nov. 20, 1919. Serial No. 339,305. 5 Claims. (Cl. 251—36.)

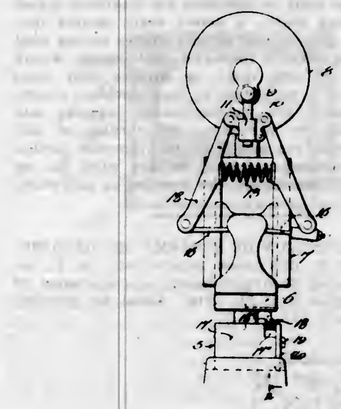
2. As a means for renewing the serviceability of valve structures, wherein the partition of the valve body carries the passageway through the valve in axial alinement with the valve member, portable means insertible into the valve body for producing a taper of definite value to the passageway throughout its length and in the direction of its axis, the operation of said means serving to vary the diameter of the valve body passageway as compared to the diameter prior to the means operation, and an annular valve seat having an external configuration to tightly fit said tapered passageway and project beyond the partition in the direction of approach of the valve, whereby positioning of the valve seat may be preceded by such means operating to produce a smooth metallic surface for the reception of the seat.

1,386,889. SEINE. ANDREW MATTSON, Bellingham, Wash. Filed Jan. 15, 1920. Serial No. 351,660. 3 Claims. (Cl. 43—104.)

3. In a seine in combination, a floatable frame, a web fish pound fastened beneath said frame having an opening in its bow end and a plurality of pockets with communicating openings, a pair of web wings removably fastened to the bow end of said pound, a pair of vertical spreaders removably fastened to the sides of each of said openings, sinker lines with sinkers fastened to the bot-

tom of said pound and said wings, float lines with floats fastened to the top of said pound and said wings, and a plurality of rope slings outside of and beneath said pound the ends of which are removably fastened to said frame.

1,386,890. CAP. WILLIAM A. MATYK, Cedar Rapids, Iowa. Filed Nov. 12, 1920. Serial No. 423,601. 3 Claims (Cl. 2—106.)



1. As a new article of manufacture, a paper cap comprising an oval shaped body gathered longitudinally and transversely to form a substantially hemispherical crown, one end of said body being provided with a hem, a band secured to the other end of said body and extending upwardly therefrom and a strap arranged under said band having an elastic cord extending through the hem of said body and connected to the free ends of said strap.

1,386,891. HAMMER. LOUIS MAYER, Kaukauna, Wis. Filed Mar. 6, 1920. Serial No. 363,902. 3 Claims. (Cl. 78—44.)

3. An anvil comprising a body member provided with a recess, a rectangular die positioned within said recess

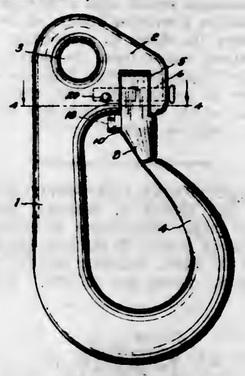
and having a plurality of cutting edges, a retaining plate, means carried by the retaining plate and body member

for holding the die in said recess, and a tool supporting surface provided in the body member, said surface being adjacent and flush with one of the die faces

---

1,386,892. PHONOGRAPH. EDWARD P. MOFFITT, Minneapolis, Minn. Filed Mar. 15, 1920. Serial No. 365,908. 6 Claims. (Cl. 274—9.)

1. In combination in a phonograph having a tone arm adapted to swing in an arc over a disk record, a sound box having a stylus adapted to engage the record, said sound box being secured on a vertical pivot joint to said tone arm, and an actuating mechanism operatively connecting said sound box to a stationary part of the phonograph, said mechanism being adapted to change the direction of the sound box relative to the tone arm so that the direction of the stylus will be perpendicular to a line through it and the record center at all times while the stylus engages the record.



1,386,893. DANGER-SIGNAL. PARKE G. MYERS, Cairo, Ohio, assignor to The Automatic Signal & Sign Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 26, 1920. Serial No. 376,673. 6 Claims. (Cl. 248—41.)

1. A signaling device comprising a post, a collar radially adjustable upon the upper end thereof, an upwardly extending web upon said collar provided with horizontally disposed apertures in its lower portion, a frame provided with rearwardly disposed bolts in its lower portion extending through the apertures in the web, nuts upon the rear ends of said bolts, a slotted rearwardly extending plate carried upon the rear side of

said frame and a screw located through said slotted plate and into the upper end of the web.

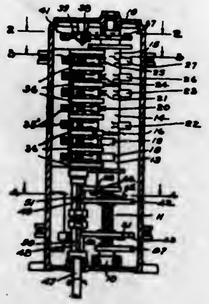
1,386,894. CHOKER-HOOK. OLE MYRMO, Hobart, Wash. Filed July 27, 1920. Serial No. 399,319. 1 Claim. (Cl. 24—241.)

A hook of the character described comprising a head portion, an integral shank portion formed into a hook with its end spaced slightly below and from the head socket to form a relatively narrow mouth to the hook, said head having an eyelet therein and a transverse socket opening downwardly toward the hook end having a notch in the inner wall thereof, a tongue having one end extended into said head socket, a pin projected through that end of the tongue to pivotally mount the same in the head to swing transversely to the plane of the hook, said tongue having a socket in one side thereof in registration with said head socket wall notch, a block slidable in said tongue socket, a spring yieldingly urging said block outwardly to engage said notch to lock the tongue in closing position and a button extended from the block whereby the block may be depressed and released from said notch to permit the tongue to be swung to open position.

1,386,895. STORAGE-BATTERY. CHARLES OLSSON, Milwaukee, Wis. Filed Apr. 3, 1919. Serial No. 287,200. 5 Claims. (Cl. 204—29.)

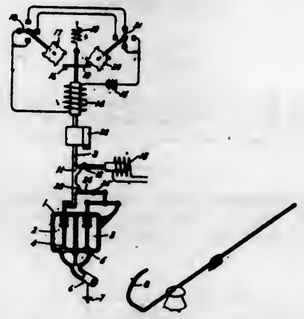
1. In a battery, the combination with the electrode plates and separator plates, of a set of protecting strips

interposed between the lower corner portions of the separator plates and the corresponding portions of the



electrode plates, and unconnected with each other at the bottom, whereby waste material is not retained by said protecting strips.

1,386,896. PROCESS AND APPARATUS FOR THE MANUFACTURE OF SHEETS BY AGGREGATION OF FLAKE MATERIALS. CHARLES F. PETERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 20, 1917. Serial No. 192,387. 22 Claims. (Cl. 154—1.)

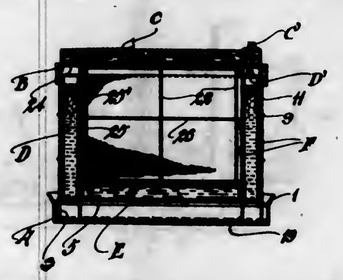


2. The process of assembling flake material in sheet form which consists in creating a partial vacuum at one side of a foraminous screen with a confined space at its other side; causing a swirling stream of air, of sufficient velocity to carry the flakes in suspension, to be sucked into said confined space from the surrounding atmosphere; and uniformly supplying flake material to said confined space to be carried along dispersed in said swirling stream of air and automatically distributed over the screen in a uniform layer.

1,386,897. ELECTRICAL LIMIT-SWITCH. ROBERT L. ROCKWELL and HENRY R. STEVENS, Seattle, Wash., assignors, by mesne assignments, to Royal A. McClure, Jesse N. Bialock, Albert E. Holland, David O. McClay, and Ernest G. Howe, trustees, Seattle, Wash. Filed June 12, 1918. Serial No. 239,674. 4 Claims. (Cl. 200—47.)

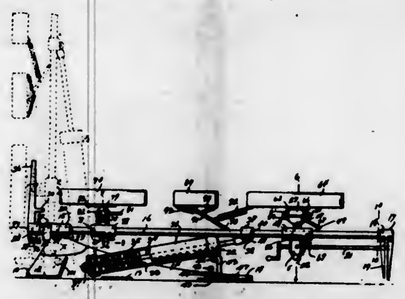
1. A limit switch of the class described comprising a casing, a plurality of contact fingers mounted therein and insulated from each other, a shaft extending lengthwise of said casing said shaft being threaded at one end, contact shoes arranged in pairs on said shaft the two shoes of each pair being electrically connected with each other and said pairs of contact shoes being insulated from each other, two disk like members adapted to screw onto the threaded portion of said shaft, each of said disks having a plurality of radial slots extending from the periphery inward and a plurality of concave peripheral recesses between said slots, lugs rigidly secured to said shaft, lugs rigid with said disks and adapted to engage with said fixed lugs on said shaft as said disks are rotatively moved lengthwise of said shafts, a driven shaft, sleeves frictionally secured thereon each of said sleeves having fixed outstanding pins parallel therewith that engage within successive slots in said disks to advance said disks through a part of a revolution at each complete revolution of said sleeves and yielding means engaging said first named shaft for preventing the turning of said shaft as said disks are moved on the threaded portion thereof and permitting said shaft to turn when the lug on either of said disks engages the fixed lug on said shaft.

1,386,898. PROTECTION OF SYSTEMS OF DISTRIBUTION. DAVID B. RUSHMORE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 21, 1918. Serial No. 223,682. 11 Claims. (Cl. 175—294.)



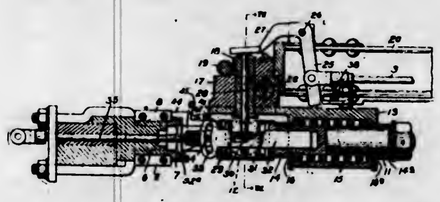
7. The combination in an apparatus of the class described of means for closing an electric circuit comprising means for producing a stream of liquid and means for gradually varying the conductivity of said stream.

1,386,899. MEASURING INSTRUMENT. HERMAN SAMUEL, Stockholm, Sweden. Filed Dec. 4, 1919. Serial No. 342,572. 17 Claims. (Cl. 33—172.)



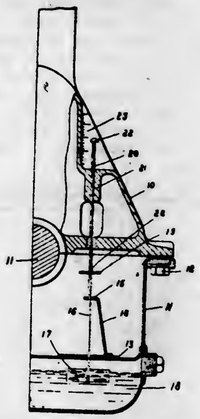
1. In a measuring instrument, the combination, with an operating element, an indicator for registering measurements in terms of one unit, and a gear train leading from said operating element to said indicator; of an indicator for registering the measurements in terms of a different unit; a gear train leading to the second indicator; and a movable coupling for alternatively connecting the second train to, or disconnecting it from, the first train.

1,386,900. COOLER. HENRY S. SCHOFF, Spokane, Wash. Filed Dec. 9, 1920. Serial No. 429,374. 4 Claims. (Cl. 45—182.)



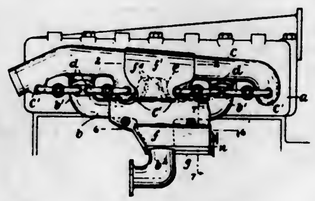
1. The combination with an open base pan and containers as described, of a supporting frame comprising inner and outer sections and each section formed with a bottom portion for the purpose described, said sections having foldable sides and ends, means for locking the sections of the frame, and means for locking the sides and ends of the outer section.

1,386,901. CHIROPRACTIC TABLE. CHARLES H. SCHREINER, Rock Island, Ill. Filed Oct. 23, 1920. Serial No. 418,917. 18 Claims. (Cl. 128—73.)



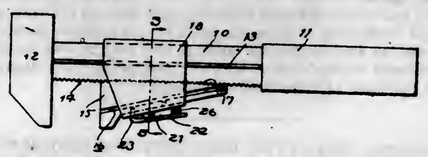
1. A chiropractic apparatus comprising a base, a table pivoted to the base for movement from an upright position to a lowered position or vice versa, a spring urging the table to its upright position, and means on the table operable by the weight of a patient to automatically increase the tension of the spring in accordance with the weight of the patient.

1,386,902. COUPLING AND BRAKE CONNECTION FOR VEHICLES. ORLANDO D. SHONNARD, Upper Montclair, N. J., assignor of one-third to Harold W. Shonnard, Upper Montclair, N. J. Filed Oct. 24, 1918. Serial No. 259,476. 8 Claims. (Cl. 188—3.)



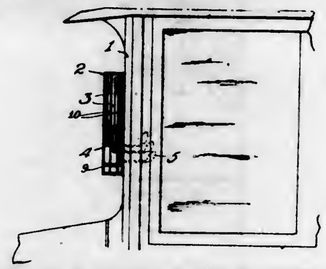
7. The combination of a tractor and a trainer, the tractor being provided with a brake lever and the trailer provided with a brake-shoe, of an intermediate coupling member expansible in a direction longitudinally of tractor and trailer and affording pivotal motion between tractor and trailer on a longitudinal axis, and brake-operating mechanism through which the brake-operating lever on the tractor is connected with the brake shoe on the trailer, said mechanism including a bar with an inclined surface borne by said connecting member and reciprocable longitudinally thereof and a member movable at right angles in response to reciprocation thereof.

1,386,903. OIL-LEVEL INDICATOR FOR MOTOR-VEHICLES. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed Apr. 6, 1917. Serial No. 160,127. 6 Claims. (Cl. 73—82.)



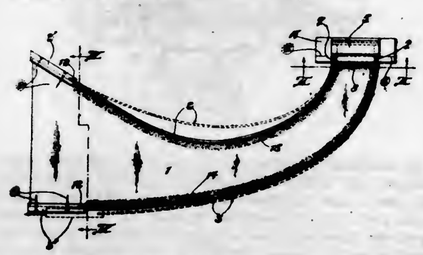
1. In combination with a container having two parts detachably secured together, a gage device comprising a float operated member located within one part of said container and permanently associated therewith, and an indicating member carried by the other part of said container and abutting against but unconnected with said first mentioned member.

1,386,904. DEVICE FOR HEATING THE INTAKE MANIFOLDS OF INTERNAL-COMBUSTION ENGINES. HENRY LUND SMITH, Paterson, N. J. Filed Feb. 5, 1920. Serial No. 356,549. 1 Claim. (Cl. 257—241.)



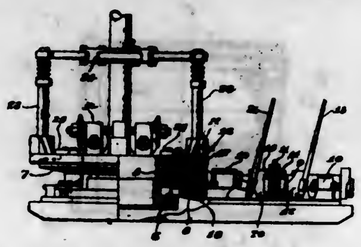
In combination, with the engine side and with engine exhaust and intake manifolds arranged the former over the latter and forming together and with said side a pocket, the intake manifold having its inlet delivering upwardly thereinto and beneath said pocket, a heat-conducting jacket member jacketing the exhaust manifold and having a heat-radiating projection extending into said pocket and tapering from a broad base to its free end.

1,386,905. WRENCH. JOHN C. SMITH, Jersey Shore, Pa. Filed Mar. 9, 1921. Serial No. 450,890. 5 Claims. (Cl. 81—154.)



2. In a wrench, a shank embodying a fixed jaw, a yoke slidably mounted on the shank and held against transverse shifting with relation thereto, a movable jaw longitudinally shiftably mounted in the yoke, said shank and movable jaw being provided with coacting roughened faces, and a connection between the yoke and movable jaw whereby said movable jaw is shifted transversely upon relative shifting movement of the yoke and movable jaw to move the roughened face thereof into or out of engagement with the roughened face of said shank.

1,386,906. VEHICLE SIGNAL DEVICE. DANIEL B. SPATZ, Reading, Pa. Filed Dec. 30, 1920. Serial No. 434,128. 1 Claim. (Cl. 116—53.)



In a device of the character described, the combination of a vehicle upright member, with a vertical, open-sided signal arm casing secured thereto, said casing being provided with a plurality of vertical partitions, forming separate compartments within the casing; a plurality of signal arms normally held in vertical position each in one of the said compartments and mounted for arcuate movement, rods attached to the arms and shafts to which the arms are attached; an operating handle on each shaft and a stop member adapted for contact by said rods, whereby the movement of the signal arms is stopped when they attain a horiozntal position relatively to the vertical housing, all substantially as and for the purpose set forth.

1,386,907. PHONOGRAPH-HORN. JOSEPH J. STEFFAN, St. Louis, Mo. Filed Aug. 11, 1919. Serial No. 316,620. 8 Claims. (Cl. 181—21.)

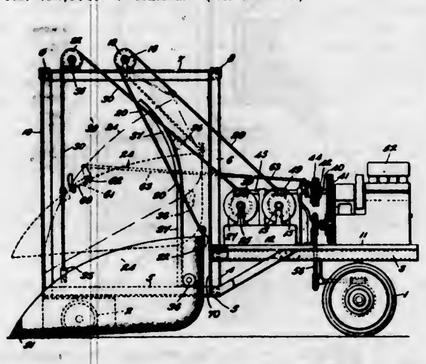
2. A phonograph horn having oppositely disposed elongated tensioned walls, and means for anchoring the end margins of said tensioned walls.

1,386,908. ROTARY WELL-DRILLING MACHINE. WILLIAM HENRY TAYLOR, Hull, Tex. Filed Mar. 12, 1920. Serial No. 365,204. 4 Claims. (Cl. 255—23.)

1. In a rotary well drilling machine, a main turntable, work-gripping means thereon, a secondary table rotatably mounted on said main table, work-gripping means on the secondary table and means for independently driving both of said tables.

1,386,909. RETOUCHING-MACHINE. OSCAR S. TEALE, Bloomfield, N. J., assignor to George H. Wiley, New York, N. Y. Filed Nov. 26, 1919. Serial No. 340,764. 5 Claims. (Cl. 95—101.)

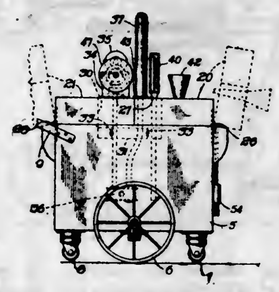
1. A retouching instrument, comprising a casing, a drive shaft extending from and having bearings at one end of the casing, a pencil or stylus carrying shaft extending from the other end of the casing and provided with a universal journal, a bearing for said journal fixedly held in the casing coaxially with the drive shaft bearings, a radially adjustable connection between the adjacent ends of the shafts, a sleeve slidable on the casing near its stylus carrying end, and bars extending lengthwise the casing and connecting said sleeve with the inner bearing of the drive shaft.



1,386,910. RETOUCHING-MACHINE. OSCAR S. TEALE, Bloomfield, N. J., assignor to George H. Wiley, New York, N. Y. Filed Jan. 30, 1919. Serial No. 274,131. 5 Claims. (Cl. 95—101.)

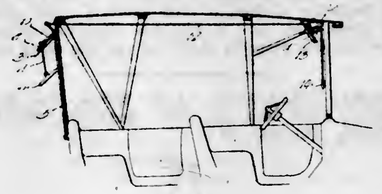
1. In a retouching instrument, a drive shaft, a pencil carrying shaft and a universal bearing therefor in line co-axial with the drive shaft in combination with an adjustable connection positively joined to the adjacent ends of the two shafts and means for setting the connection, whereby the end of the pencil carrying shaft may be set in different radial positions relatively to the axis

of the drive shaft and revolved around said axis in unison with the rotation of the drive shaft.



1,386,911. SHOVEL-OPERATING MACHINE. THOMAS W. THOMAS, Baltimore, Md. Filed May 24, 1920. Serial No. 383,873. 7 Claims. (Cl. 37—33.)

1. In a shovel operating machine the combination of a truck frame provided with front and rear wheels, and with a pair of forwardly projecting members forming an open ended space between the front wheels; a shovel supported by said frame in said space with its center of gravity when loaded located between said front and rear wheels and with its open end pointing forward; power means carried by the frame for forcing said shovel into a pile of material to fill said shovel; power means for raising the front end of said shovel; and power means for raising the rear end of said shovel, substantially as described.



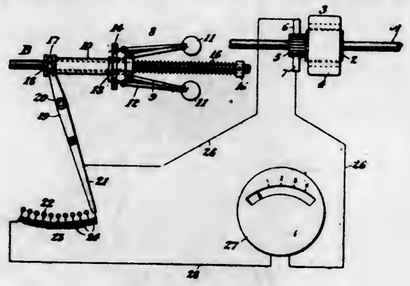
1,386,912. CONTAINER FOR INSULATING OR IMPREGNATING COMPOUNDS. WILLIAM A. TIMM, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 8, 1918. Serial No. 243,933. 3 Claims. (Cl. 219—38.)

1. A portable container for impregnating compound, comprising a heating chamber, an adjustable discharge pipe connected with said chamber, a pump for forcing compound through said pipe, and an opening into said

chamber through which the compound may be discharged from said pipe in one position thereof to mix or stir said compound.

1,386,913. AUTOMOBILE ATTACHMENT. WILLIAM TRABUE, Louisville, Ky., assignor of one-half to D. C. Brenner, Louisville, Ky. Filed Nov. 1, 1920. Serial No. 421,137. 3 Claims. (Cl. 88—67.)

1. In a motor vehicle, the combination of a stationary elongated mirror attached to the car's roof in front of the driver's seat, a second stationary mirror supported at the rear of the vehicle in a position to reflect images through the usual rear window onto said first mirror, and a third adjustably mounted mirror disposed beneath the second mirror for reflecting objects onto the latter.



1,386,914. DRY CEMENT PROCESS AND PRODUCT. JOHN L. TUFTS, Winchester, Mass. Filed Feb. 2, 1914. Serial No. 816,120. 2 Claims. (Cl. 106—29.)

1. A process for making a dry cement product, consisting in agitating calcined magnesite in a closed vessel, and introducing therein during said agitation amounts of hydrochloric acid gas and water vapor sufficient to produce a product containing the proportion of five molecules of magnesium oxid, one molecule of magnesium chlorid and five molecules of water.

1,386,915. INDICATING MECHANISM. CHARLES R. UNDERHILL, New Haven, Conn. Filed Jan. 13, 1917. Serial No. 142,193. 12 Claims. (Cl. 175—183.)

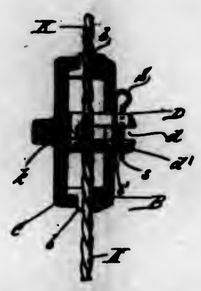
1. Indicating mechanism embodying the combination with two rotary members, and means acted upon by certain referred to agencies adapted to coöperate with each other connected therewith, of a centrifugal device associated with one of said rotary members, and re-

sponsive thereto, for variably controlling one of said co-operating means, the coöperative movements of said

means being effective for denoting the ratio which the speeds of said rotary members bear to each other.

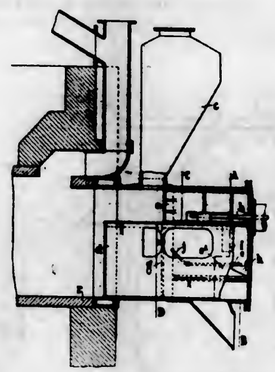
1,386,916. FLYING-MACHINE. HARRY VASS, Summit, N. J. Filed Mar. 12, 1920. Serial No. 365,141. 5 Claims. (Cl. 244—25)

1. In a flying machine, a propeller, a shaft on which said propeller is fixed, a drive shaft, a crank arm on said drive shaft, and a universal joint connection between the said propeller shaft and the said crank arm.



1,386,917. CONTAINER. CARL WEEKS, Des Moines, Iowa. Filed Mar. 25, 1919. Serial No. 285,014. 2 Claims. (Cl. 220—71.)

1. In a device of the class described, a thin, flat receptacle, having formed in its sides, near its upper end, a pair of rib members forming inwardly opening channel portions, a resilient brace device having the form of a broken ring of suitable outline, received in said channel portions with its free ends normally spaced from each other and adapted when moved together to brace and limit the amount of inward movement of the sides of the receptacle, as and for the purposes stated.

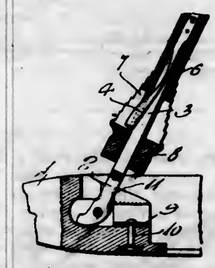


1,386,918. ADJUSTABLE SLACK-HOLDER FOR CORDS, &c. OLIVER FRANK WESTRUP and ERIC WESTRUP, New Brighton, England. Filed June 14, 1920. Serial No. 388,809. 3 Claims. (Cl. 242—99.)

2. An adjustable cord bight holder of the character designated, comprising a casing formed in two sections, one rotatable on the other, one section being formed with a slotted and bifurcated cord bight drum the end of which is protuberant axially through the other section, and a

spring cotter pin straddling the outer end of said cord bight drum and formed with a central shank portion extending through holes formed for the purpose in said bight drum.

1,386,919. CHARGER FOR RETORTS. WILLIAM WILD, Blackpool, England, assignor of one-half to West's Gas Improvement Company Limited, Manchester, Lancaster, England. Filed Mar. 26, 1919. Serial No. 285,171. 2 Claims. (Cl. 214—24.)

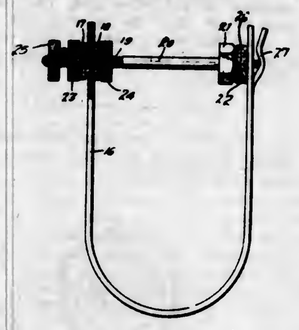


1. In charging devices for retorts, the combination with a main charging ram, of an auxiliary charging ram riding upon the main ram, a chute delivering coal in advance of the auxiliary ram and upon the top of the main ram, means traversing the said auxiliary ram, and means for traversing the main ram from the auxiliary ram, the latter in its movement closing the exit from the chute, transferring the coal to the end face of the main ram and then carrying the latter forward with it to charge the retort, as set forth.

1,386,920. METHOD FOR PRODUCING HYDROXIDS OF METALS BY PRECIPITATING METALLIC SALTS WITH AMMONIA. MAX BUCHNER, Hanover, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Dec. 24, 1917. Serial No. 208,705. 1 Claim. (Cl. 23—13.)

A method of producing hydroxids of metals which are substantially insoluble in ammonia, which comprises allowing ammonia in an amount which is several times the chemical equivalent of the metal present to act upon a metallic salt in the presence of water.

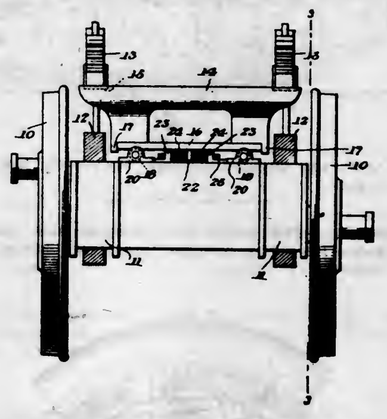
1,386,921. BOBBIN-HOLDER. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed July 26, 1920. Serial No. 398,888. 2 Claims. (Cl. 139—27.)



1. In combination, a spindle, a bobbin on said spindle adapted to be forced inwardly beyond its normal operative position and then turned, and a latch for positively holding said bobbin on said spindle, said bobbin acting to release the latch when forced inwardly beyond its normal operative position and further acting to hold said latch released when turned, permitting the bobbin to be removed.

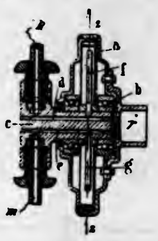
1,386,922. COMPOSITION OF MATTER AND PROCESS OF PRODUCING THE SAME. PRIMO CALOVI, New York, N. Y., assignor, by mesne assignments, to Holdzem Company, Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1920. Serial No. 379,307. 5 Claims. (Cl. 167—6.)

2. The process of producing a gum like mass suitable for catching vermin which consists in heating raw linseed oil until it does not adhere to wood; mixing more than 5 per cent. of water with said mass; mixing less than 20 per cent. of rosin with said mass at a temperature too low to burn the hand; and stirring the material until a tenacious, resilient and adhering substance results, substantially as described.



5. The herein described new composition of matter suitable for catching rats comprising a mass of cooked linseed oil admixed with substantially ten per cent. of water and 15 per cent. of rosin, the whole constituting a tenacious, sticky, resilient, gum-like mass of a strength sufficient to hold rats of the largest size, substantially as described.

1,386,923. AUTOMATIC FIRE-ALARM DEVICE. EDWARD C. CAPPER, Prosper, Minn. Filed Jan. 2, 1920. Serial No. 349,048. 2 Claims. (Cl. 200—142.)

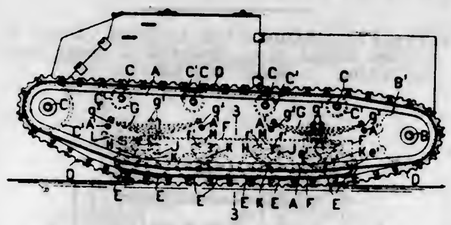


1. In a device of the class described, a substantially U-shaped spring; a bolt mounted in one arm thereof and insulated therefrom; a block of material having a relatively low melting point arranged between said bolt and the other arm of said spring, said spring being arranged to normally engage said bolt when said block is removed, one arm of said spring having a resilient tongue cut therefrom, whereby a wire may be gripped between said tongue and the body of said resilient spring.

1,386,924. SADDLE FOR ENGINES. LONNIE N. CLIFTON, Raleigh, N. C. Filed Feb. 10, 1919. Serial No. 276,102. 2 Claims. (Cl. 105—44.)

1. The combination with a locomotive journal box, of a spring saddle positioned above the same, anti-friction devices interposed between the journal box and saddle, a lug positioned intermediate the ends of the saddle and springs carried by the journal box and engaging opposite sides of the lug to yieldingly maintain the journal box and saddle in proper relative position.

1,386,925. MEANS FOR ACTUATING SPEED-INDICATING DEVICES, GOVERNORS, AND OTHER DEVICES FROM ROTATING SHAFTS. GEORGE CONSTANTINESCO, Weybridge, England. Filed Sept. 16, 1919. Serial No. 324,123. 2 Claims. (Cl. 264—19.)

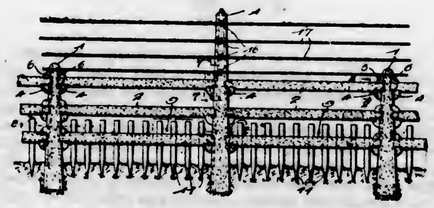


1. In apparatus of the type indicated, comprising a rotor, liquid in said rotor, and a tube within said rotor having its end continuously immersed in the liquid above a certain speed of said rotor, a second tube shorter than the first having its end lipping the liquid at said certain speed of the rotor, a device to be actuated by liquid pressure, a reservoir of liquid, a connection between said first tube and said device to be actuated, and a connection between said second tube and said reservoir of liquid, as set forth.

1,386,926. ENDLESS-TRACK ARRANGEMENT FOR VEHICLES. GEORG HAGELLOCH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,097. 2 Claims. (Cl. 305—9.)

1. In an endless track vehicle, having guide rollers engaging that part of the endless track which is in

contact with the ground, a carrier for said rollers, levers pivoted in pairs to said carrier and carrying said rollers

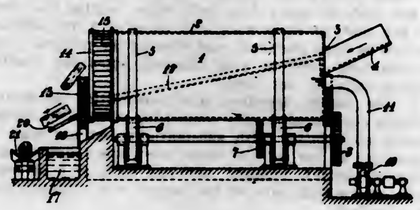


in pairs, and springs interposed between the levers of each pair.

1,386,927. SPRING-WHEEL. HARRY HAYMAN, Detroit, Mich. Filed May 5, 1920. Serial No. 378,961. 6 Claims. (Cl. 152—32.)

3. A wheel provided with spokes divided between the hub and the felly, a sectional ring comprising a plurality of sections each made up of a pair of half spring seats, and spoke clamps connected by a web, one of the spring seats being provided with an under-engaging lip, the said sections being bolted together and in staggered relation and to the outer wheel spoke portions, an inner sectional ring similarly made up and secured to the spoke portions of the inner wheel section, and spiral springs engaging between the two sectional rings and held in the spring seats by the under-engaging lip of the spring seats engaging under the end coils to hold the spring from separation.

1,386,928. CONCRETE FENCE. JOHN C. HAMILTON, Joliet, Ill. Filed Apr. 29, 1920. Serial No. 377,681. 5 Claims. (Cl. 256—19.)



1. In combination, a fence post and a horizontal rail detachably connected thereto, said rail being provided at one of its ends and in its upper side with a shallow recess extending transversely thereof, the post adjacent the recessed end of the rail being also provided with a recess communicating with the first named recess, and a retaining block fitted in said recesses, serving to hold the rails in place.

1,386,929. BOX-HANDLING DEVICE. JOHN G. HARTMAN, Yakima, Wash. Filed May 31, 1919. Serial No. 300,872. 1 Claim. (Cl. 294—62.)

In a device of the character described a pair of members each having divergent arms at their ends which terminate in downwardly directed portions, each downwardly directed portion having an inturned sharply pointed prong at its extremity adapted to penetrate the wood of wooden receptacles, the inner portions of said members being enlarged and one of said members having a short upturned ear at its inner end which enters and is pivoted in a recess formed in the other of said members at a point spaced from the inner end of the latter whereby the latter member is caused to overlap the upper face of the inner portions of the other of said members, the upper and lower faces of said overlapping portions of the respective members being rounded to complementally form a hand grasp and lying so closely together as to permit of their being grasped within the hand, the divergent arms of the respective members lying upon opposite sides of the longitudinal center of the device whereby the said prongs are caused to resist any tendency of the load to tip.

1,386,930. WET-BARKING MACHINE. HANS THEOBALD HOLM, Karlstad, Sweden. Filed Feb. 17, 1919. Serial No. 277,414. 3 Claims. (Cl. 144—208.)

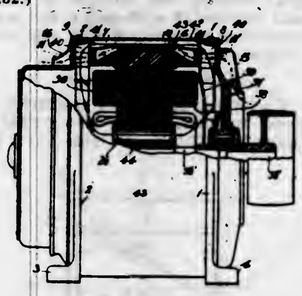
1. In a wet-barking machine, a single rotary drum consisting of a solid horizontal shell provided with an inlet opening at one end for the logs and with a delivery opening at the other end, the said inlet end being more closed than the delivery end, for the purpose of preventing water admitted into the drum from escaping at the inlet end and for causing it to flow off at the delivery end.

1,386,931. OIL-RING. HEINRICH HOMBERGER, Mill Valley, Calif. Filed Aug. 26, 1918. Serial No. 251,356. 7 Claims. (Cl. 64—31.)

1. An oil ring comprising two ring segments of unequal length connected by radially seating, mortise and tenon joints.

1,386,932. METHOD OF MAKING PAVING MATERIAL FROM TARRY MATTER. CHIKAKIYO HONDA, Tokyo, Japan. Filed Oct. 30, 1919. Serial No. 334,447. 2 Claims. (Cl. 106—31.)

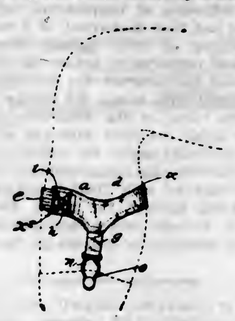
1. The method of manufacturing a paving material which consists in mixing tarry matter together with table salt (NaCl), rosin saponified with slaked lime ($Ca(OH)_2$), and rosin which is sulfureted with sulfur powder.



1,386,933. TOBACCO-PIPE. JAMES W. IVORY, Philadelphia, Pa. Filed Apr. 10, 1920. Serial No. 372,754. 5 Claims. (Cl. 131—12.)

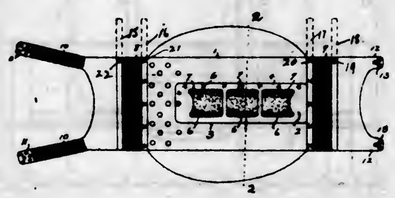
1. A tobacco pipe having in the lower portion of its stem and the base portion of its bowl communicating passages which are open respectively to the tobacco chamber of the bowl and the exterior surface of the stem, and a tapering pin which is adapted to occupy said passages and form a closure for the latter from the exterior of the stem, the portion of the passage adjacent to the bowl forming around the adjacent portion of the pin a vent by which smoke may be drawn from the bowl into the stem.

5. A tobacco pipe having in its stem and bowl a passage leading from the exterior of the stem to the chamber of the bowl, and a tapering pin which is adapted to occupy said passage and provided in its periphery with a vent for the purpose set forth.



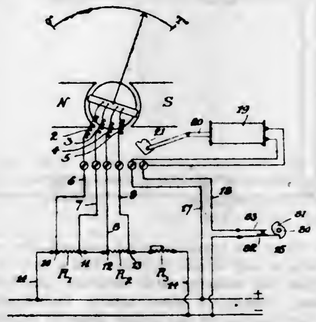
1,386,934. DYNAMO-ELECTRIC MACHINE. HENRY CHARLES EDWARD JACOBY, London, England. Filed Apr. 19, 1918. Serial No. 229,498. 6 Claims. (Cl. 171—252.)

1. An inclosed dynamo electric machine having a casing comprising a yoke, a plurality of sheet metal rings surrounding said yoke, said rings being spaced from said yoke and from each other to form separate series of annular channels for cooling fluid and for the internal hot air of the machine, means for circulating the hot internal air through one series of channels and means for passing cooling fluid through the other series of channels, substantially as and for the purpose hereinbefore set forth.



1,386,935. GARTER. WILLIAM H. JOHNSON, Arlington, N. J. Filed Sept. 1, 1920. Serial No. 407,430. 4 Claims. (Cl. 241—6.)

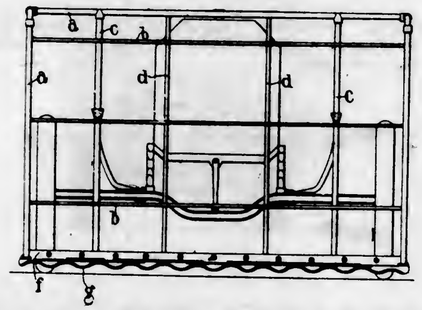
1. In a garter, a main strap member consisting of two connected parts, one of which is composed of elastic material and the other of which is upwardly curved in the plane of the strap member, said strap member being also



provided with means whereby it may be secured around the leg and with means whereby it may be secured to a stocking.

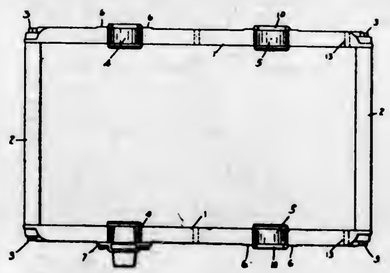
1,386,936. BANDAGE. LEAH M. KIRWAN, Houston, Tex. Filed Aug. 9, 1920. Serial No. 402,311. 1 Claim. (Cl. 128—290.)

A bandage formed of an elastic body, a flap fastened permanently at one edge to said body and forming a pocket, and provided with an opening, absorbent material fitted between said flap and body, cross straps holding said material in place, means whereby the other edge of the flap is detachably secured to said body to retain said material in place, securing straps carried by each end of the bandage and means carried by the respective ends of the straps whereby they may be secured around the body of the wearer.



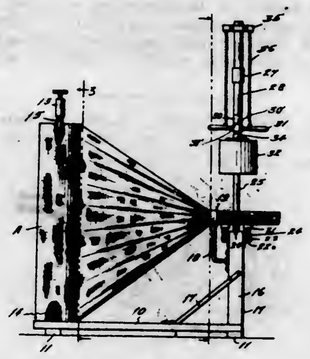
1,386,937. INTEGRATING HEAT-QUANTITY METER. BIRGER KOCK, Stockholm, Sweden. Filed Mar. 22, 1919. Serial No. 284,336. 2 Claims. (Cl. 73—184.)

1. In an integrating heat quantity meter for hot water plants and the like, the combination with a tem-



perature measuring device comprising thermoresponsive means exposed to the flowing hot water to continually indicate the difference of temperature between the hot water supplied and that discharged, of a meter for measuring the quantity of water passing through the pipe system, the said temperature measuring device being an electrical distant thermometer, the indicating member of which is combined with means for adding intermittently the momentary value of the deflections, and the said adding means being combined with the water meter by means of an electrical device for transmission of motion so as to be mechanically independent of the water meter, in order that at each time a certain quantity of water has passed through the meter, the said adding means may be brought into action and the integrated end value may constitute a measure of the heat quantity used.

1,386,938. LIFE-SAVING GUARD FOR STEAM AND MOTOR ROAD-VEHICLES. GEORGE LEONARD LAVINGTON, East Ham, England, assignor of one-half to Arthur Willis, Winchmore Hill, England. Filed June 25, 1920. Serial No. 391,742. 4 Claims. (Cl. 293—54.)

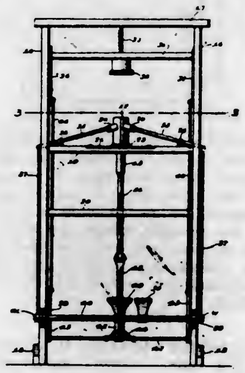


1. A life saving guard for steam and motor road vehicles comprising in combination; a frame-work, means for attaching said frame-work to the front of the vehicle, and means projecting in the forward direction and having recesses along its edge, as and for the purpose described.

1,386,939. FRAME CONSTRUCTION. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Mar. 18, 1920. Serial No. 366,749. 4 Claims. (Cl. 64—8.)

1. A frame for variable speed transmission mechanism comprising a pair of side members and a pair of end members, bolts for securing said members together at their ends and forming a substantially rectangular shaped frame, depressions in the upper edges of said side members for the reception of shafts, and extensions integral with and extending downwardly from the lower edges of said side members and forming supports for the frame.

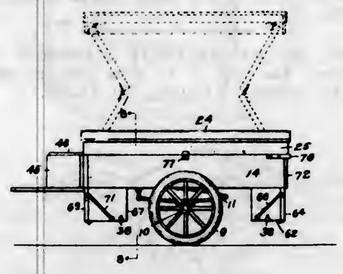
1,386,940. BAGGING-CUTTER. LOUIS P. LIVELY, Bonham, Tex. Filed Oct. 30, 1920. Serial No. 420,649. 6 Claims. (Cl. 164—58.)



1. In a bagging cutter, a base support, means for supporting a roll of bagging on the base, a guide element for forming the bagging into a strip, a knife over which the strip of bagging is disposed, and a reciprocating cutter member supported above the knife and arranged to sever the strip of bagging when forced rearwardly onto the same.

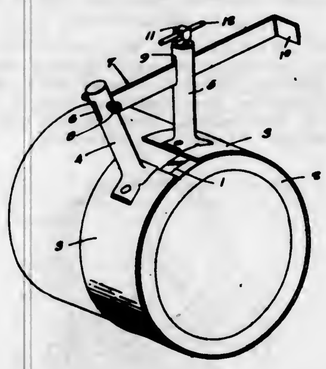
1,386,941. METHOD OF PRODUCING NITROGEN-CONTAINING COMPOUNDS. KARL PRINZ ZU LÖWENSTEIN, Neckargemünd, and FRITZ HAUFF, Stuttgart, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Aug. 18, 1916. Serial No. 115,733. 1 Claim. (Cl. 23—13.)

A process comprising dissociating the hydrogen and pure carbon of a gas of the methane series; mixing said pure carbon with an alkaline salt; burning said hydrogen in atmospheric air, thus producing a mixture of steam and nitrogen; bringing said nitrogen in contact with the aforesaid mixture of pure carbon and an alkaline salt, and combining the nitrogen with said carbon and said salt to form cyanids or cyanamids.



1,386,942. CAN-STRAIGHTENING MACHINE. FRANKLIN EARNEST MEDCOFF, Coloma, Mich. Filed Apr. 14, 1920. Serial No. 373,913. 3 Claims. (Cl. 153—80.)

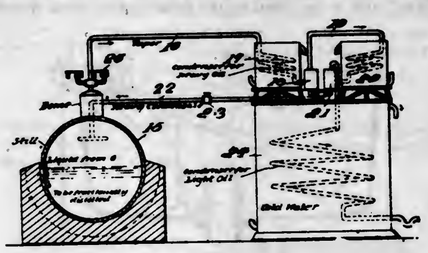
1. A can straightening machine comprising an expanding die member composed of a series of segmental blocks



arranged to form a hollow cylinder, a mandrel insertible into the cylinder for expanding the same, a can rim shaping flange at the bottom of the die member, and a pair of pivoted segmental members engageable with the can rim for forcing the same against the aforesaid flange.

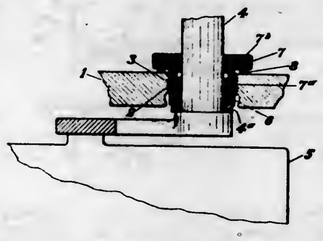
1,386,943. AUTOMOBILE CAMP-TRAILER. NINIAN R. MOORE, Dubois, Pa. Filed Mar. 28, 1919. Serial No. 285,802. 13 Claims. (Cl. 296—23.)

1. In an automobile trailer, a shallow body having solid sides and a solid cover resting on said sides, frames within said body and hinged to same and to each other and means for supporting said cover spaced from said body, said frames being adapted to be swung out of said body into horizontal, vertical and sloping positions so as to form floor, wall and roof portions of a habitable compartment.



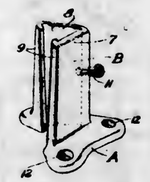
1,386,944. PISTON-RING CLAMP. ALBERT E. NEWBERRY, Quincy, Ill. Filed May 24, 1920. Serial No. 383,882. 2 Claims. (Cl. 29—86.4.)

1. A piston ring clamp comprising a piston encircling body, handles extending from the body, a locking strip pivotally connected with the free end portion of one handle and extending through a path formed in the second handle, and means carried by the second handle for engaging the locking strip to releasably retain the clamp in a clamping position about a piston.



1,386,945. UTILIZATION OF PETROLEUM-PITCH. KONOSUKE NOMI, Kitatoshima-gun, Japan. Filed Jan. 22, 1918. Serial No. 213,124. 2 Claims. (Cl. 196—25.)

2. Process of producing coke, volatile oil and gas containing hydrogen, which comprises charging a suitable retort with petroleum pitch, then heating it up to about 500° to 600° C., and collecting the products, fractionally distilling the volatile oil obtained, and mixing the heavier

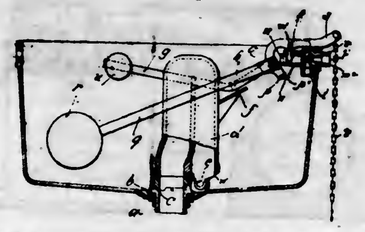


fraction thereof with an additional quantity of the petroleum pitch, and heating said mixture to about 500° to 600° C., and collecting the products.

1,386,946. TERMINAL STRUCTURE FOR ELECTRIC BATTERIES. PAUL E. NORRIS, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1920. Serial No. 359,532. 9 Claims. (Cl. 204—29.)

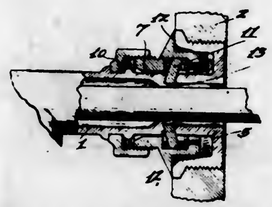
1. In an electric battery, a cell cover having a hole, a terminal post projecting through said hole, a gasket sleeved on said post and having a conical outer surface, and a nut adapted to screw into said hole and having a conical inner surface coöperating with the conical surface of said gasket.

1,386,947. FLOOR-SOCKET. JOSEPH J. QUINN, Philadelphia, Pa., assignor to Consolidated Expanded Metal Companies, Braddock, Pa., a Corporation of Pennsylvania. Filed May 27, 1919. Serial No. 300,103. 2 Claims. (Cl. 248—38.)



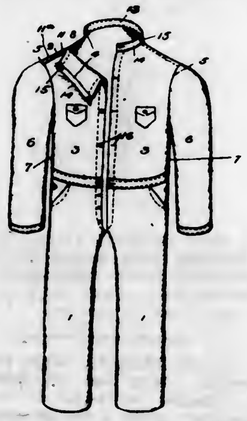
1. A floor socket comprising a supporting base, a substantially V-shaped socket portion, the sides of which have an inturned lip portion, and clamping means carried by the socket adapted to thrust the member inserted in the socket against said lip portions.

1,386,948. FLUSH-CISTERN. GEORG RENNER, Dusseldorf, Germany. Filed Sept. 10, 1919. Serial No. 323,042. 2 Claims. (Cl. 4—5.)



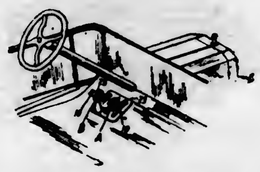
1. A flush-cistern, which is free of water when not in use, consisting of a cistern tank, a supply valve, means for opening said valve by hand, a weighted lever adapted

to close said valve, a discharbe valve, adapted to be opened by said weighted lever on the supply valve being closed, and to be closed on the supply valve being opened,



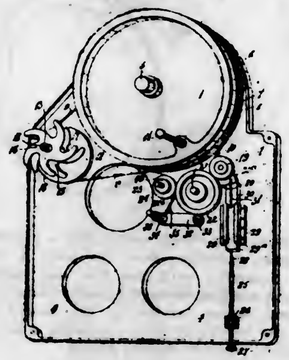
means for supporting the weighted lever when in raised position and the supply valve is open, a float within said tank, adapted to discharge the said support of the weighted lever when the water level in the tank is high.

1,386,949. TAP-ATTACHING DEVICE. FRANK EDWARD RICE, Detroit, Mich., assignor to American Tap Bush Co., Detroit, Mich., a Corporation of Michigan. Filed Nov. 13, 1919. Serial No. 337,715. 4 Claims. (Cl. 217—107.)



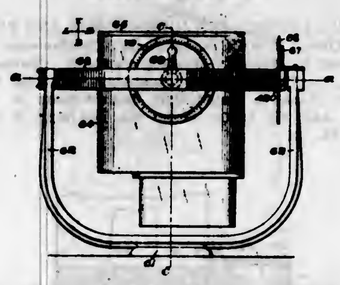
1. A device of the type set forth comprising a bunghole plug, a nipple in the plug having a spherically formed convex end, a thimble having a bayonet connection with said nipple, a tap having a concave spherically formed end adapted to rotatably enter said thimble, a packing ring between the end of the nipple and the end of the tap and means for producing relative movement between the tap and the thimble to produce compression of the packing ring between the parts engaging such ring.

1,386,950. UNION-GARMENT. JACOB RIFKIN, Wilkes-Barre, Pa. Filed May 6, 1920. Serial No. 379,281. 4 Claims. (Cl. 2—144.)



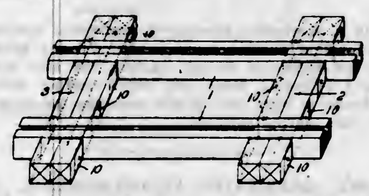
1. The combination in a blouse or shirt comprising a back piece and front pieces and having armholes and a neck opening; of reinforcing strips connected to the rear edges of the respective front pieces between the neck opening and the armholes to form extensions of the front pieces and overlap the corresponding front edges of the back piece; stitching to connect the overlapping portions of the reinforcing strips to the adjacent front edge of the back piece, from the armholes to points partway toward the neck opening to form shoulder vents; a sectional collar or collar band, one section of which is connected to the back piece at the neck opening, and the remaining sections being secured to the respective front pieces at the neck opening; and means to releasably close the vents.

1,386,951. ADJUSTABLE PEDAL EXTENSION. GEORGE H. RIVES, New York, N. Y. Filed June 12, 1920. Serial No. 388,552. 4 Claims. (Cl. 74—81.)



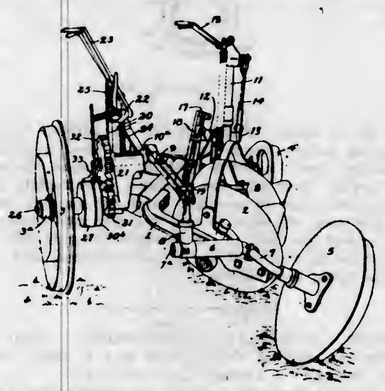
1. An adjustable pedal extension, comprising a plate having on one of its ends a hook member adapted to removably engage one edge of a foot pedal so that the plate will rest upon top of the pedal and said plate being of a length so that its second end part protrudes beyond the second side edge of the pedal, spaced stops depending downwardly from said second end part of plate, teeth on the underside of the plate between the stops, a clip slidably movable on the plate between the stops toward and from the hook member for detachably engaging the second side edge of the pedal when the clip is accordingly adjusted, and means for releasably locking the plate and clip when adjusted in engagement with the pedal.

1,386,952. MAIL-MARKING MACHINE. DONALD ROBERTSON and RICHARD MIDDLETON SIMPSON, Wellington, New Zealand, assignor to Imperial Postmarkers Limited, Wellington, New Zealand, an Incorporated Company of New Zealand. Filed Jan. 23, 1920. Serial No. 353,641. 6 Claims. (Cl. 101—240.)



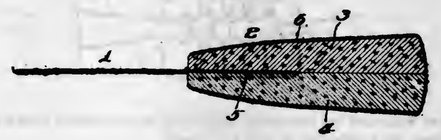
1. A revoluble platen element, a marking wheel mounted for rotation and for movement toward and from the platen element, an endless band connecting said platen element and said marking wheel, a tightener for said band, and means to simultaneously shift the marking wheel and tightener, to cause the latter to increase the tension of the endless band as the marking wheel is moved toward the platen element.

1,386,953. SPEEDOMETER. JOHN D. ROBERTSON, Taunton, Mass., assignor to Charles J. Robertson, Taunton, Mass. Filed Jan. 12, 1918. Serial No. 211,500. 20 Claims. (Cl. 73—157.)



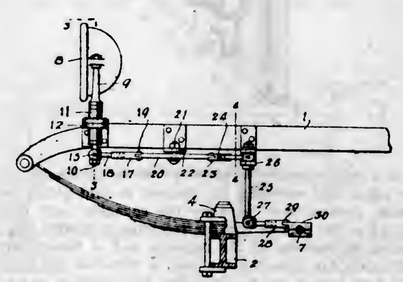
1. In an instrument for ascertaining characteristics of motion of a moving body which carries the instrument, the combination of means responsive to acceleration and retardation of said body to give the acceleration or retardation, and means for integrating with respect to time the acceleration or retardation so found.

1,386,954. RAILWAY-SLEEPER. FRANÇOIS P. A. ROUSSEAU and LÉON A. PITOT, Paris, France. Filed Nov. 13, 1919. Serial No. 337,771. 3 Claims. (Cl. 238—42.)



1. A railway track support or cross-tie construction, comprising spaced tubular metallic members and spaced transverse cross-members inserted through and interlocking with said tubular metallic members.

1,386,955. POWER-LIFT FOR PLOWS. NEWELL SANDERS, Chattanooga, Tenn. Filed Apr. 5, 1921. Serial No. 458,800. 6 Claims. (Cl. 97—54.)

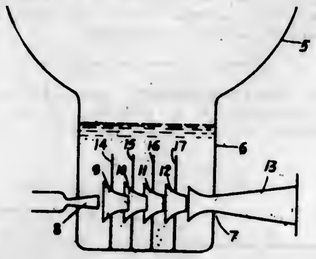


1. A power lift for a wheel plow, comprising in combination a land wheel, a fixed axle therefor, a clutch, one member of which is connected with the land wheel, and the other member of which is connected with a gear wheel turnable loose on the axle, a second gear meshing with the first gear, and attached to a crank shaft, and connections from the crank shaft to the raising and lowering means of the two furrow wheels.

1,386,956. FLOATING KNIFE. RALPH LINCOLN SANDERS, Pleasantville, N. J. Filed Oct. 29, 1920. Serial No. 420,356. 2 Claims. (Cl. 30—9.)

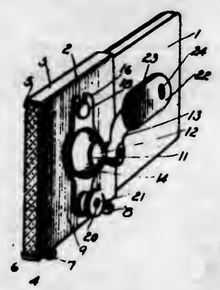
1. A knife composed of a blade and a handle, the latter being formed of pieces of cork, the tang of said blade being between said pieces, a wrapping of cord of fibrous material on the exterior of said pieces connecting the latter and a coating of waterproof material on said wrapping, said handle having a degree of flotation greater than the weight of said blade and coated wrapping whereby the knife as a unit is floatable.

1,386,957. DIRIGIBLE AUTOMATIC HEADLIGHT. LEON T. SCHALLER, Irvington, N. J. Filed Jan. 12, 1920. Serial No. 350,746. 3 Claims. (Cl. 240—62.)



1. In headlight mechanism for vehicles the combination with a chassis, axle, wheels mounted on steering knuckles upon said axle, and a tie rod connecting said steering knuckles, of a lamp bracket rotatably mounted upon said chassis, a lever pivotally mounted between its ends on said chassis, a member pivotally mounted on said chassis and having oppositely extending arms one of which is pivotally connected to one end of said lever and the other of which is pivotally connected to said tie rod, and an arm on said lamp bracket pivotally connected to the other end of said lever.

1,386,958. FLUID-TRANSLATING DEVICE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Sept. 12, 1919. Serial No. 323,307. 16 Claims. (Cl. 162—1.)

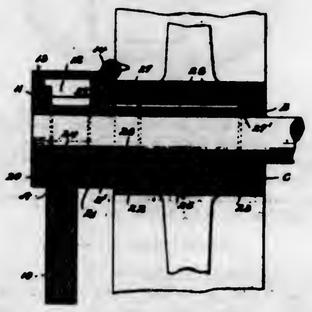


1. In combination with a condenser and its hot well, an ejector comprising a motive fluid delivery nozzle, a combining cone, the inlet of which is in open communi-

cation with the hot well and a diffuser alined with said cone and having its inlet in open communication with the

hot well and its discharge subjected to a pressure greater than that existing in the condenser.

1,386,959. MIRROR-HOLDER. HORACE W. SEVERANCE and GEORGE F. HEMPHILL, Kansas City, Mo., assignors, by mesne assignments, to Elliott-Nichols Manufacturing Company, Kansas City, Mo., a Copartnership. Filed Mar. 15, 1920. Serial No. 365,704. 1 Claim. (Cl. 45—97.)



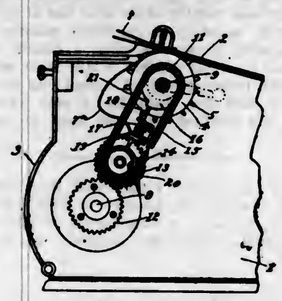
In a mirror holder, a plate, a bracket, a tension device for adjustably securing the bracket to said plate, having means intermediate its ends for engaging said bracket, having a slot at one end for receiving a headed pin, and having an opening at the opposite end, a headed pin on said plate for engaging the slot, a threaded pin adjacent said first named pin for engaging the opening, and a jam nut on the end of the last named pin for adjusting the tension of the clamping device.

1,386,960. LUBRICATED-BUSHING UNIT. JOHN CESSNA SHARP, Chattanooga, Tenn., assignor to Moccasin Bushing Company, Chattanooga, Tenn., a Copartnership consisting of John Cessna Sharp, John S. Poindexter, and William F. Ward. Filed Aug. 19, 1920. Serial No. 404,661. 5 Claims. (Cl. 64—27.)

1. A bearing unit comprising a spool-shaped sleeve member, a bushing member having an outer bearing surface mounted upon said sleeve member and forming therewith an annular oil chamber, means for supplying oil to said chamber, and means for feeding said oil from said chamber to the bearing surface of said bushing.

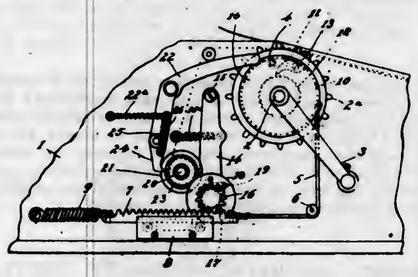
1,386,961. LUBRICATED JOURNAL-BOX AND PULLEY BEARING. JOHN CESSNA SHARP, Chattanooga, Tenn., assignor to Moccasin Bushing Company, Chattanooga, Tenn., a Copartnership consisting of John Cessna Sharp, John S. Poindexter, and William F. Ward. Filed Aug. 19, 1920. Serial No. 404,662. 9 Claims. (Cl. 64—24.)

1. In a lubricated bearing, a supporting casting, a pair of hollow bushing members mounted one upon the other and supported in said casting, the said bushing members providing inner and outer bearing surfaces, and means in said casting and bushings for supplying oil to said bearing surfaces.



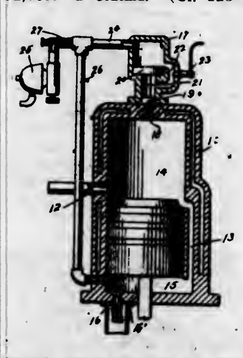
1,386,962. LUBRICATED PULLEY-BUSHING. JOHN CESSNA SHARP, Chattanooga, Tenn., assignor to Moccasin Bushing Company, Chattanooga, Tenn., a Copartnership consisting of John Cessna Sharp, John S. Poindexter, and William F. Ward. Filed Aug. 19, 1920. Serial No. 404,663. 7 Claims. (Cl. 64—26.)

1. As an article of manufacture, a bushing unit for mounting pulleys upon shafting comprising a plurality of hollow sleeve members mounted one upon the other and having their adjacent surfaces intermediate their ends spaced apart to provide a lubricant chamber, means for supplying lubricant to said chamber, and means for feeding said lubricant to the bearing surface of said unit comprising apertures in one of said members and fixed inserts filling said apertures.



1,386,963. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed May 7, 1919. Serial No. 295,447. 4 Claims. (Cl. 281—14.)

1. In an autographic register, the combination with a feeding device for a plurality of paper strips including a record strip, of a storage roll for the record strip, and means for connecting said storage roll and the sprocket feeding device, comprising in part, an extendible belt,

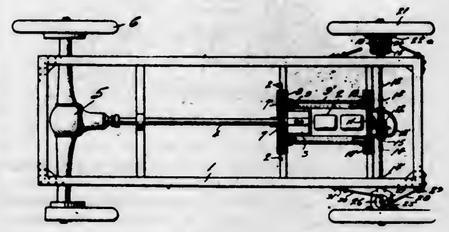


together with a stop for the storage roll for inhibiting its continuous movement with the sprocket feeding device.

1,386,964. AUTOGRAPHIC REGISTER. JOHN Q. SHERMAN, Dayton, Ohio. Filed Nov. 12, 1919. Serial No. 337,471. 10 Claims. (Cl. 281—8.)

1. In an autographic register, the combination with a friction wheel and a storage roll for a record driven thereby, of another friction wheel resiliently pressed against said first friction wheel, a spring actuator for the second friction wheel, a feeding means for duplicate strips of paper including a duplicate record strip, and means during the operation of the feeding means to set said spring actuator, and at the close of said feeding operation to release the same.

1,386,965. INTERNAL-COMBUSTION ENGINE. JOSEPH RYAN SIMPSON, Lone Oak, Tex. Filed June 7, 1915. Serial No. 32,669. 2 Claims. (Cl. 123—74.)

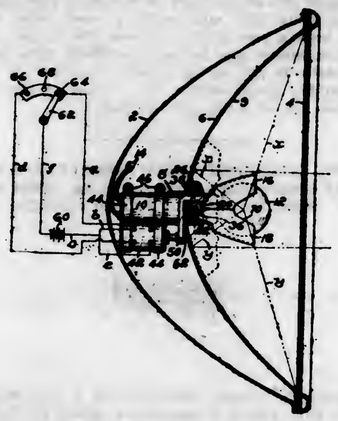


1. In an internal combustion engine, the combination with a cylinder having a valved fuel intake at its lower end, an exhaust at its midlength, and a by pass between the intake and exhaust, and a reciprocating piston; of a casing communicating with the cylinder through a port in its upper end, an auxiliary carbureter, a pipe therefrom communicating with said casing, a check valve in this pipe, a branch pipe from the lower end of the cylinder to said carbureter pipe between the check valve and casing, pistons in the casing rigidly connected by a rod, and sparking means within the by pass of this casing, the whole for operation as described.

1,386,966. ATTACHMENT FOR TOOTH-PASTE TUBES. HARRY STREET SLADE, McKeesport, Pa. Filed Jan. 29, 1920. Serial No. 355,009. 1 Claim. (Cl. 221—60.)

A device for feeding material from a tube comprising parallel bars having perpendicular offsets at their ends, the juxtaposed offsets at one end being hinged together, a latch holding the bars separably united at their ends opposite the hinge, parallel milled rollers journaled in the offsets, a knurled head connected with one of the rollers at the hinged end, and intermeshed gears carried by the rollers at the latch end adapted to be separated when the bars are unlatched.

1,386,967. FOUR-WHEEL DRIVE MECHANISM. GEORGE W. SMITH, Dallas, Tex. Filed Aug. 30, 1919. Serial No. 320,766. 3 Claims. (Cl. 180—44.)

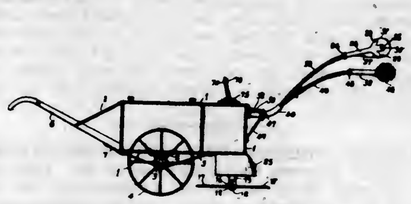


1. In a four wheel drive mechanism, the combination with a motor vehicle frame, a motor mounted on the frame, a transmission driven by the motor, and a propeller shaft driven by the transmission, of a train of gears driven by the propeller shaft, parallel forwardly directed shafts driven by said train of gears, a plurality of front gears driven by the parallel shafts, a front differential driven by the front gears, laterally extending drive shafts connected with the front differential, a bevel wheel drive on each side of the front of the frame and connected with one drive shaft, an axle under the drive shafts, and front wheels pivoted to the axle and driven by the bevel wheel drives.

1,386,968. DIMMING APPARATUS FOR HEADLIGHTS. HENRY MONFORD SMITH, Lyndonville, Vt. Filed Nov. 17, 1919. Serial No. 338,555. 5 Claims. (Cl. 240—45.)

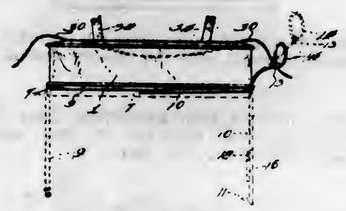
1. In a headlight or other lamp in combination, an electric bulb as a source of light; a reflector; opposed dimming shades movable to and from dimming position; and operating means to move said shades in substantially vertical direction to and from dimming position, said

shades being oppositely curved transversely of said bulb and cut away laterally thereof so as to leave said bulb



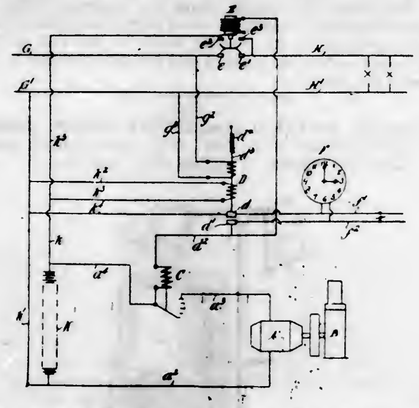
uncovered in front and at a portion of the sides thereof, while covering said bulb at top and bottom, when said shades are in dimming position.

1,386,969. TYPEWRITING-MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 1, 1919. Serial No. 314,640. 26 Claims. (Cl. 197—134.)



1. In a front-strike typewriting machine, the combination with a platen and a work-sheet-feeding device above the platen, of a line-space device for driving said feeding device, a web roll, a carbon strip roll, and a winding roll for the web, connected to be driven by the line-space device.

1,386,970. APPARATUS FOR CUTTING VEGETABLES. RAFAEL A. SOLER and JULIO G. NEGRETE, Habana, Cuba. Filed Mar. 10, 1919. Serial No. 281,685. 2 Claims. (Cl. 56—17.)

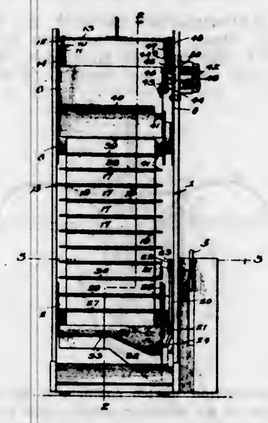


1. In a harvester of the class described, a wheeled frame, a longitudinally arranged driving shaft in said frame, a vertical shaft depending from said frame and provided at its lower end with a cutter, said vertical shaft being geared to said driving shaft, a counter shaft geared to the driving shaft and provided with a gear, means to put said counter shaft in or out of gear, a manually operable member, a revoluble member mounted in said manually operable member, a flexible shaft connected to said revoluble member, a stub shaft mounted for rotation in the frame, means to connect said flexible shaft detachably to said stub shaft, and a gear wheel on said stub shaft and engaged with the gear on the counter shaft.

1,386,971. PARACHUTE PACK AND HARNESS. OTTO SUMMERS, Chicago, Ill., assignor to Floyd Smith Aerial Equipment Company, a Corporation of Illinois. Filed Mar. 14, 1921. Serial No. 451,957. 9 Claims. (Cl. 214—21.)

1. A container for a parachute having a detachable cover and a flexible wall opposite said cover, and a plurality of leaf springs arranged in and extending across said flexible wall, said springs being so shaped and so disposed that they constantly tend to press the middle portion of said wall inwardly into the container, thus causing said wall to push the contents of the container out of the latter when the cover is removed.

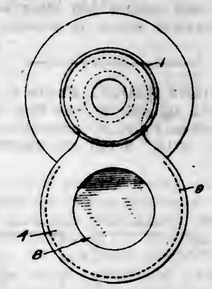
1,386,972. AUTOMATIC CONTROL OF ELECTRIC GENERATING SETS. LEO SUNDERLAND and GILBERT CECIL PILLINGER, Westminster, London, England. Filed Feb. 18, 1918. Serial No. 217,874. 2 Claims. (Cl. 290—30.)



1. In an automatic electric generating system, the combination with the main line and secondary source of electrical energy, of a motor-generator, a prime mover therefor, an auxiliary circuit connected with the main line, and automatic means whereby the failure of voltage in the main line will cause the operation of the motor generator to furnish current thereto through the auxiliary circuit.

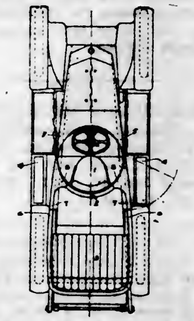
1,386,973. SHIPPING-TAG. ARTHUR H. SWEET, Chicago, Ill., assignor to American Tag Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,692. 5 Claims. (Cl. 46—27.)

1. Shipping tag comprising male portion or tag proper, abbreviated identification piece, and a fastener with which attaching wire or string engages and which connects together the tag proper and identification piece leaving the latter otherwise relatively free so that it remains intact with attaching wire or string and the fastener when the tag proper is torn away from the latter.



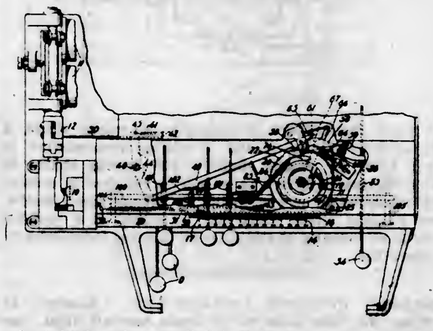
1,386,974. VENDING-MACHINE. WILLIAM G. TEMPLETON, Colorado Springs, Colo. Filed Nov. 30, 1917. Serial No. 204,570. 5 Claims. (Cl. 211—8.)

1. In a vending machine, a casing, a conveyer drum rotatably mounted in fixed position in said casing, a pair of plates, a second conveyer drum directly above said first mentioned drum and rotatably mounted in said plates, an endless conveyer carried by said drums and provided with flights for carrying articles to be vended and spring means for supporting the upper drum, the conveyer and the plates, and for independently adjusting the tension on the two sides of the endless conveyer by altering the relative position of each of the plates with respect to the casing.



1,386,975. DISINFECTING DEVICE FOR TELEPHONE AND OTHER USES. NORTHEY V. SMITH, Boston, Mass., assignor to George A. Goulston, Boston, Mass. Filed Oct. 23, 1920. Serial No. 418,990. (Cl. 179—185.)

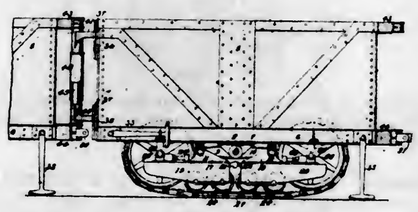
A disinfecting device for telephones embracing front and back members stitched together around their lower edges and having upwardly extending perforated suspension tabs capable of being separated to admit a pad, the front member perforated to allow the escape of fumes into the



mouth piece, and a disinfecting pad inserted between the two members opposite the perforation in the front member, substantially as described.

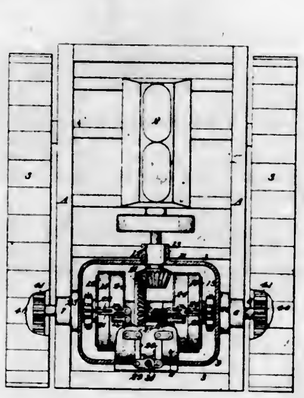
1,386,976. ENTRANCE DEVICE FOR AUTOMOBILE-CAR BODIES. MASANORI WATANABE, Tokyo, Japan, assignor to Kyokuto Jidoshia Kogyo Co., Ltd., Tokyo, Japan. Filed July 30, 1920. Serial No. 400,094. 4 Claims. (Cl. 296—64.)

2. In a vehicle, a body provided with an entrance opening, a partition arranged in the body and terminating inwardly of the entrance opening, a door for said opening, and a projection on said door forming a continuation of the partition, when the door is closed.



1,386,977. INDICATING MECHANISM. EDWARD F. WATSON, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 17, 1920. Serial No. 404,210. 4 Claims. (Cl. 164—112.)

1. A keyboard controlled indicator comprising a scale, a pointer adapted to move along said scale, mechanism for



advancing the pointer step by step, actuating means for said mechanism, key levers controlling said actuating means to move said pointer and other key levers controlling said actuating means to prevent movement of said pointer.

1,386,978. TRAILER-WAGON. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 13, 1918. Serial No. 249,612. 7 Claims. (Cl. 280—33.)

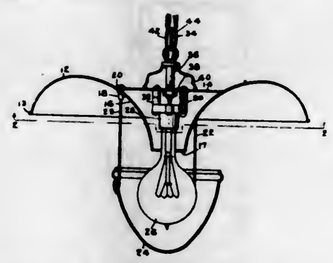
1. A coupling for trailer wagons comprising a vertical post, vertically spaced draw bars carried pivotally thereby, and connnecting means for the draw bars with the trailer whereby the latter may incline laterally with respect to the draft vehicle.

1,386,979. TRANSMISSION MECHANISM. ELMER E. WICKERSHAM, Oakland, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Aug. 16, 1915. Serial No. 45,638. Renewed Jan. 12, 1921. Serial No. 436,825. 19 Claims. (Cl. 180—9.2.)

1. In a transmission mechanism, an engine shaft, a pair of drive shafts, means permitting transmission of power from the engine shaft to the driving shafts so that both may be driven in unison or run free in unison, said transmission means including change speed mechanism whereby either shaft may be driven at a variable speed independently of the other or run free independently of the other.

1,386,980. CURRENT-DISTRIBUTER. SAMUEL D. WORK, Jr., New York, N. Y. Filed Nov. 19, 1920. Serial No. 425,055. 8 Claims. (Cl. 200—26.)

1. A device of the character described, comprising a rotating contact member, and a stationary plicated spring contact member adapted to be engaged and wiped by the

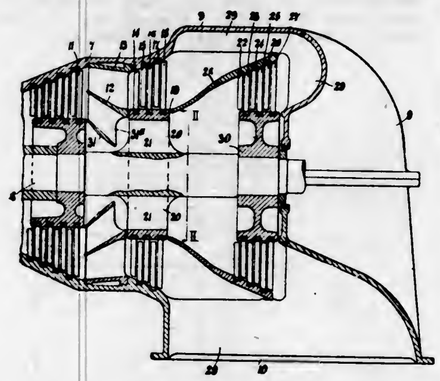


rotating member, said spring member being arranged radially relatively to the rotating member.

1,386,981. PRODUCTION OF METALLIC ALLOYS. WILLIAM BOWMAN BALLANTINE, London, England, assignor to The Empire (Alloy) Steel Corporation, Limited, London, England, a British Corporation. Filed Aug. 19, 1920. Serial No. 404,550. 6 Claims. (Cl. 75—45.)

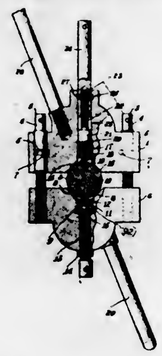
1. The herein described process for the manufacture of a ferrochrome alloy of low carbon content, which comprises submitting a molten ferro-chrome alloy of high carbon content to the action of an oxidizing blast.

1,386,982. ILLUMINATION DEVICE. RAY D. BARNARD, Minneapolis, Minn., assignor, by direct and mesne assignments, to Ray C. Plant, Minneapolis, Minn. Filed Sept. 2, 1919. Serial No. 320,983. 4 Claims. (Cl. 240—92.)



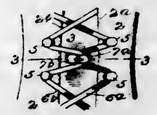
1. An illumination device comprising an upper member consisting of an annular portion and a central portion, said annular portion being concaved on its lower surface to form a reflector, and said central portion bridging the space within the inner circular margin of said annular portion, means attached to said central portion and depending therefrom for supporting a lamp, a hollow inwardly concaved reflecting member whose outer surface is adapted to form a continuation of the lower surface of said annular portion, a light diffusing bowl within which a lamp is adapted to be supported, and means for supporting said hollow member and said bowl from said central portion.

1,386,983. AXIAL-FLOW STEAM-TURBINE. KARL BAUMANN, Urmston, England, assignor to The British Westinghouse Electric and Manufacturing Company Limited, a Company of Great Britain. Filed July 15, 1919. Serial No. 310,995. 7 Claims. (Cl. 253—69.)



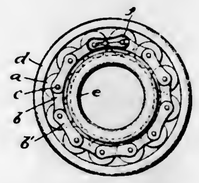
1. A steam turbine of the axial flow type in which the steam leaving the moving blades of an intermediate stage

is divided, one portion thereof flowing through a section of blading comprising one or more rows of stationary and moving blades and thence to the exhaust and another portion flowing through passages contrived in the rotor on which the rows of moving blades of the aforesaid section of blading are mounted and thence through one or more further sections of blading each comprising one or more



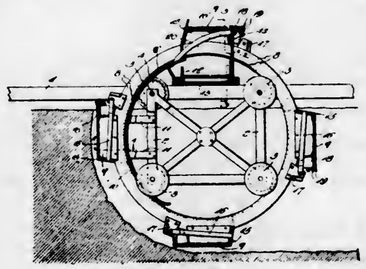
rows of stationary and moving blades to the exhaust, said further section or sections of blading being located farther along the rotor in the direction of the flow of steam through the turbine than said first mentioned section of blading so that the several portions of steam leaving said intermediate stage will flow in parallel in the same axial direction through all of said sections of blading.

1,386,984. TOOL FOR TURNING CRANK-PINS, &c. FREDERICK P. BOLLINGER, Newark, N. J., assignor of one-half to Wilfred J. Peck, Newark, N. J. Filed June 5, 1919. Serial No. 301,861. 5 Claims. (Cl. 82—4.)



1. In a tool of the character described, the combination of opposite body parts one having a pair of substantially flat bearing surfaces adapted to tangentially engage an approximately cylindrical piece of work, the body part with such bearing surfaces having also a guiding slot between said bearing surfaces symmetrically disposed upon opposite sides of a plane bisecting the angle between the bearing surfaces and said bearing surfaces extending from said slot to the face of the body part, whereby the tool will take work of a maximum range of diameters, an adjustable cutter mounted in said slot to engage the work between said bearing surfaces, means for clamping the body parts on the work, and a bearing surface on the other of said body parts to engage the work.

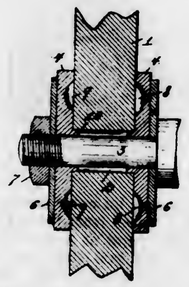
1,386,985. MEANS FOR SECURING SHOE-TONGUES AND THE LIKE. GEORGE LUTHER BOWERS, Newark, Ohio. Filed Nov. 30, 1920. Serial No. 427,279. 5 Claims. (Cl. 24—117.)



1. Shoe tongue securing means attached to the tongue of a shoe and comprising oppositely facing hook portions extending from the longitudinal center of the tongue laterally thereof toward the opposite sides of the tongue, respectively, the said hook portions adapted to be engaged by the opposite lengths of a shoe lace whereby the tongue is confined against longitudinal and lateral movement in laced position.

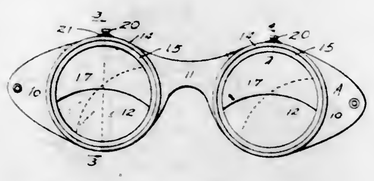
1,386,986. ROLLER-BEARING. FRANK BRIERLEY, Manchester, England, assignor to Chain Roller Bearing Company Limited, Stockport, England. Filed June 3, 1919. Serial No. 302,022. 2 Claims. (Cl. 64—62.)

1. In roller bearings, an outer annular ring, a coaxial inner annular ring spaced from the outer ring to provide an annular opening, a row of rollers arranged in the annular opening between said rings and prevented by the rings from axial movement, a bush through each roller, links at opposite sides of the roller rigidly connecting the bushes together in pairs, spindles rotatable in the bushes, links at opposite sides of said rollers rigidly connecting said spindles together in pairs alternating with the first mentioned links, and means for detaching at least one link from the opposite sides of the rollers, as set forth.



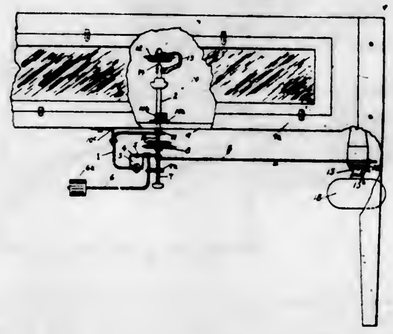
1,386,987. EXCAVATING-WHEEL. HOWARD S. BROWN, Oasis, Utah, assignor to Pawling and Harnischfeger Company, West Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1920. Serial No. 404,505. 7 Claims. (Cl. 37—17.)

1. A trench digging wheel having spaced side rings, a support for rotatably mounting the wheel including roll-



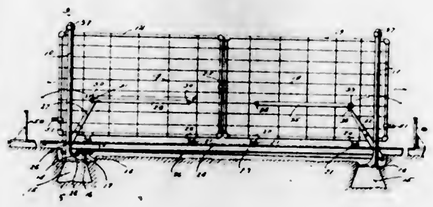
ers engaging said rings, an arcuate strip carried by the support and positioned to one side of the wheel adjacent the inner peripheries of the rings and extending from a point adjacent the lower end of the support to a point above the upper end thereof, a conveyer extending transversely of the wheel above the support and within the wheel, open-ended buckets carried by the wheel and connected with the rings and spanning the space between the same, cutting blades carried by the rings in advance of the open-ended buckets, bottoms for the buckets, arms extending from the bottoms and connected with the cutting blades to mount the bottoms for swinging movement into and out of an operative position, strips carried by the arms between the buckets and cutting blades and having cutting teeth, a scraping blade extending above the conveyer for passing through the bucket as the wheel rotates, and a strip connected with the arcuate strip and extending above the conveyer and connected with the upper end portion of the scaping blade and constituting a cam for engaging the bottoms of the buckets and swinging the same upwardly out of engagement with the scraping blade as the wheel rotates.

1,386,988. ELASTIC COLLAR FOR POLISHING AND GRINDING WHEELS. Gilderoy O. Burlew, Newark, N. J. Filed Apr. 30, 1920. Serial No. 377,839. 4 Claims. (Cl. 51—168.)



1. In a grinding and polishing wheel, the combination of a pair of apertured rubber clamping collars upon opposite sides thereof, the inner face of each collar being provided with a tubular projection, and further provided with a plurality of gripping means located between said tubular projection and the periphery of said collar.

1,386,989. GOGGLES. Edward C. Cappen, Prosper, Minn. Filed Aug. 10, 1920. Serial No. 402,580. 6 Claims. (Cl. 2—149.)

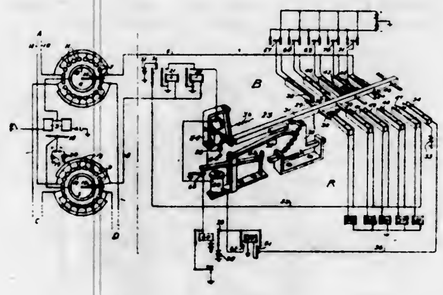


4. In combination with a pair of goggles having transparent eye glass members therein, a pair of shade members adapted to cover a portion of said eyeglass members, said shade members being mounted so as to permit some rotary movement of the shade members around the eye glass members and on an axis at right angles to the face of the eye glass members for the purpose of their adjustment to cover various portions of said eye glass members.

1,386,990. TEMPERATURE-REGULATING DEVICE FOR INCUBATORS AND BROODERS. Ernest D. Charters, Santa Cruz, Calif., assignor to Charters Manufacturing Co., Santa Cruz, Calif. Filed Jan. 27, 1919, Serial No. 273,304. Renewed Aug. 24, 1920. Serial No. 405,735. 9 Claims. (Cl. 236—4.)

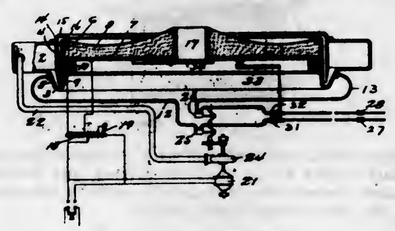
1. In a device of the character disclosed, a standard, a pair of brackets on said standard, a lever mounted upon one of said brackets, a thermostat mounted upon said lever, a thermostat mounted upon the other bracket, and a rod extending through said standard and engaging both of said thermostats.

1,386,991. GATE OPENER AND CLOSER. Absalom T. Clark, Winchester, Ind. Filed Jan. 14, 1920. Serial No. 351,428. 1 Claim. (Cl. 39—66.)



The combination with spaced pairs of spaced posts, the posts of each pair having a common base, of a track extending between and beyond the pairs of posts and between the posts of each pair, a gate disposed between the posts of each pair and adapted to run throughout the corresponding portion of the track, a pair of outwardly extending and longitudinally alined pins secured to each gate, a longitudinal bar secured to the outer ends of the pins of each gate and being spaced from the gate thereby, a pivoted lever between the posts of each pair and having one end disposed between a bar and corresponding gate, said lever end having divergent terminal hooks for alternate engagement with said pins of a gate, and means for simultaneously rocking the levers.

1,386,992. CLOTHES-STICK. William Wesley Crockes, Junction City, Kans. Filed Sept. 15, 1920. Serial No. 410,388. 1 Claim. (Cl. 68—6.)

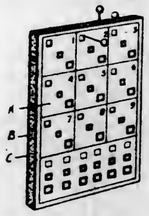


In a clothes stick, a head, said head being approximately spherical in general outline, and provided with spirally disposed ribs, a socket member integral with the head, and a handle having one end fixed in said socket member.

1,386,993. TELEGRAPH SYSTEM. Amos F. Dixon, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1918. Serial No. 237,070. 2 Claims. (Cl. 178—52.)

1. A telegraph system comprising a main distributer station, independent transmitting and receiving rotary distributers at said station, a plurality of outlying stations, current impulse distributers at each of said outlying stations driven by character signaling impulses sent from the main distributer station, and a circuit extending from each of said main station distributers to each of said outlying stations, one of said circuits being connected directly to alternate segments of said transmitting distributer and the other of said circuits being connected directly to alternate segments of said receiving distributer.

1,386,994. LIQUID-FUEL BURNER. William A. Doble, William A. Doble, Jr., and John A. Doble, San Francisco, Calif., assignors to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed Apr. 3, 1917. Serial No. 159,448. 4 Claims. (Cl. 158—28.)

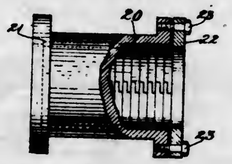


1. In a liquid fuel burner, a nozzle formed of two parts electrically insulated from each other and forming the nozzle opening, and means for causing an electric spark to bridge the nozzle opening.

1,386,995. MANUFACTURE OF GELATINOUS COMPOSITIONS FOR USE IN THE REPRODUCTION OF LINE DOCUMENTS. Félix Dorel, Paris, France. Filed Dec. 2, 1918. Serial No. 265,033. 6 Claims. (Cl. 106—5.5.)

2. A gelatinous composition for use in the reproduction of line documents, said composition consisting of gelatin, ferrous sulfate and a white substance which exerts no chemical action on the gelatin, for the purpose described.

1,386,996. GAME-SCORING DEVICE. William Henry Edwards, Annandale, near Sydney, New South Wales, Australia. Filed Aug. 30, 1916. Serial No. 117,604. Renewed Sept. 16, 1920. Serial No. 410,742. 3 Claims. (Cl. 235—90.)

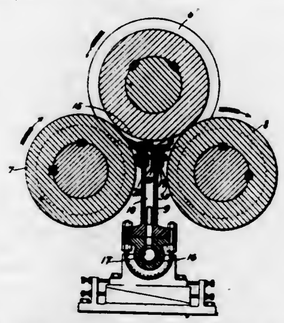


1. A game scoring device comprising a face plate of rigid material provided with a plurality of differently arranged perforations extending entirely through the plate, a pad of pervious renitent material secured to the rear face of said plate, and a pointed score indicating device freely insertible into and withdrawable from the body of said renitent material through the perforations in said face plate.

1,386,997. ART OR PROCESS OF MANUFACTURING PISTON-RINGS. Richard P. Elliott, Lexington, Mass. Filed Feb. 21, 1918. Serial No. 218,598. 10 Claims. (Cl. 29—156.6.)

1. The method of making piston rings, which consists in slotting a closed ring on its opposite sides to split the same and form ends capable of overlapping, applying pressure to the outer circumference of the split ring to close the same, applying pressure to the sides of the ring thus closed to retain it in its closed position, removing the circumferential pressure, treating the outer circumference to render it a true circle while held in its closed position by said side pressure, placing the ring thus

treated within a holder whose inner circumference is concentric with the circumference of the ring, allowing the ring to expand into contact with said holder, securing



the ring within said holder in fixed relation thereto by pressure applied to the sides of the ring, and treating the inner circumference of the ring to render it concentric with the outer circumference thereof.

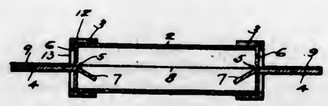
1,386,998. PISTON-RING. RICHARD P. ELLIOTT, Lexington, Mass. Filed Mar. 19, 1919. Serial No. 283,571. 3 Claims. (Cl. 74—109.)

1. An inherently resilient piston ring of uniform radial thickness having its end portions curved on radii substantially the radius of the cylinder in which they are intended for use and the intermediate portion of gradually increasing curvature to a point substantially opposite the slot when the ring is open.

1,386,999. TURNING-PLATE. GODFREY ENGEL, Sr., Brooklyn, N. Y. Filed Nov. 3, 1919. Serial No. 335,302. 15 Claims. (Cl. 100—47.)

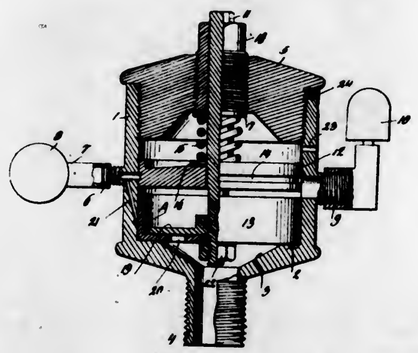
1. A hollow turning plate for cane mills having a juice collecting chamber provided with a juice receiving opening in the top thereof and with an outlet at the bottom thereof for the extraction of the collected juice.

10. A hollow turning plate provided with an inlet in the top thereof and mounted on tubular bearings open to the interior of the plate to enable a rocking adjustment of the plate with respect to the rolls of a cane mill and the extraction of juice through said tubular bearings irrespective of such adjustment.



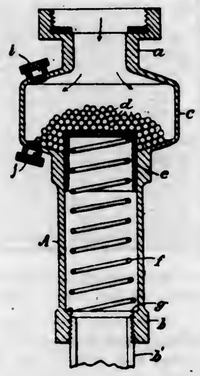
14. In a cane mill, a hollow turning plate provided with juice extracting openings in the top thereof and with reagent supplying openings also in said top, means for supplying a reagent through said latter openings, means for conducting off the juice from the juice extracting openings and means for blowing clear certain of the openings in the turning plate.

1,387,000. RENEWABLE CARTRIDGE-FUSE. FREDERICK J. FISHER, San Francisco, Calif. Filed July 12, 1919. Serial No. 310,394. 3 Claims. (Cl. 200—132.)



1. A renewable fuse comprising a casing, a backing plate at each end of the casing partly closing the ends of the casing, a fusible metal strip disposed within the casing and having its ends lying adjacent the backing plates, metallic ferrules closing the ends of the casing, spring-pressed contact plates arranged within the ferrules and in pressing engagement with the ends of the strip, and means for retaining the contact plates in the ferrules and for interlocking with the casing.

1,387,001. RENEWABLE FUSE. FREDERICK J. FISHER, San Francisco, Calif. Filed July 12, 1919. Serial No. 310,395. 6 Claims. (Cl. 200—132.)



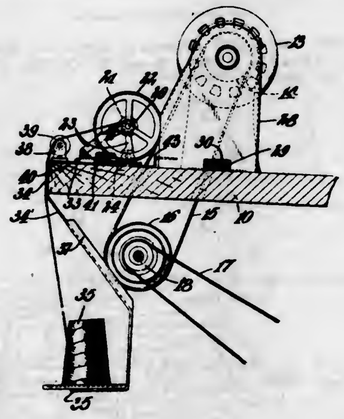
3. A renewable fuse comprising a casing, terminals arranged at the ends of the casing, a fusible element extending through the casing and overlying said terminals and frictional socket clamps pressing the fusible element against the terminals.

1,387,002. ALARM FOR AIR-BRAKE SYSTEMS. ROLAND L. FLINN, Alberton, Mont. Filed Feb. 3, 1921. Serial No. 442,121. 3 Claims. (Cl. 116—55.)

1. An alarm for air brake systems including a casing engageable with the air line and equipped with means movable under air of predetermined pressure to permit the exhaust of a certain volume of the air from said casing, a container in communication with said casing to receive the air exhausted from the latter, and alarm mechanism in communication with said casing and said container to permit passage of air from said container into said mechanism for sounding the alarm when the air pressure into the casing in insufficient to operate said means.

1,387,003. ANTIFOULING MUFFLER FOR FLUSH-PIPES. EDWARD G. HEDGES, Newark, N. J. Filed Feb. 14, 1920. Serial No. 358,740. 6 Claims. (Cl. 137—75.)

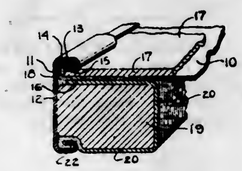
1. An anti-fouling device having a casing and a perforated support movable in the casing with muffling material carried upon such support, and means to sustain the support yieldingly and to restore it to its initial position after yielding.



1,387,004. PROCESS FOR MAKING PAPER AND PAPER-LIKE MATERIALS WATERPROOF AND IMPERMEABLE TO AIR, AT THE SAME TIME MAINTAINING THEIR SUPPLENESS, AND ARTICLES MADE FROM SUCH MATERIALS. LUDWIG HEILBRONNER, Stuttgart, Germany. Filed May 3, 1920. Serial No. 378,711. 8 Claims. (Cl. 91—68.)

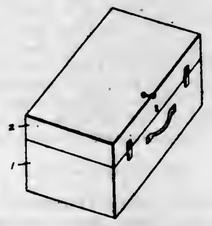
1. The process of producing supple water-proof material impermeable to air, which comprises treating a fabric with a solution mixture of a gelatin and a starch containing substance, and after drying treating the product with an oil.

7. A fabric comprising a base of fibrous material having an impregnation of gelatin rendered insoluble in water, and agar-agar, maintained flexible by a hygroscopic material and oiled.



1,387,005. SAFETY AND BOBBIN-WINDER ATTACHMENT FOR SEWING-MACHINES. JACOB HOCHMAN, New York, N. Y. Filed Feb. 9, 1921. Serial No. 443,536. 5 Claims. (Cl. 242—20.)

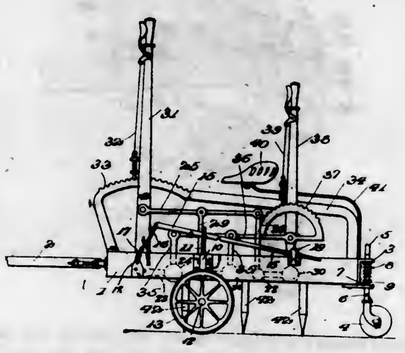
5. In a sewing machine, in combination, a bobbin winding device, a bench supporting said device, a drive belt by which said device is adapted to be operated, a pair of pulleys located one above and one below said bench and over which said belt is looped, a guard hinged to said bench and adapted to cover the upper pulley, said guard having an angularly projecting base flange, a spring normally urging said guard to inoperative position, a bracket hinged to said bobbin winding device and extending downward under the bench and having an outturned foot at its lower end adapted to support a reel of thread, a pair of ears projecting from said bracket and forming a guard for the lower pulley, and a bar movably secured upon the said bench and having at one end a finger engaging said first guard to retain the same in operative position, said bar having a lateral offset at its opposite end adapted to support said bracket with the said ears removed from



guard forming position when the said bar has been moved to disengage the said finger from the said first guard.

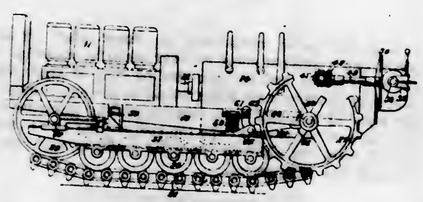
1,387,006. WASHTUB-COVER. JACOB KANSTEIN, Newark, N. J. Filed Oct. 6, 1920. Serial No. 415,063. 2 Claims. (Cl. 220—73.)

1. A tub cover comprising an upper plate of sheet metal and a surface sheet of wear resisting material over the sheet metal, and an edge binding strip of sheet metal, said edge binding strip being bound to the sheet metal upper plate by a double seam joint extending inwardly from the edges of the cover at the top side thereof and in which double seam the edges of the wear resisting material are received and compressed.



1,387,007. PRINTING-CASE. LEO A. KELLY, Houston, Tex. Filed Sept. 25, 1920. Serial No. 412,645. 5 Claims. (Cl. 217—8.)

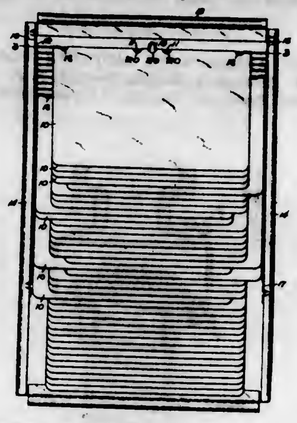
1. A case of the character described, including a box-like section having a transverse partition, a cabinet hinged to the case and arranged to fit into the compartment one side of the partition, said cabinet being movable in



vertical position, a cover for said cabinet hinged thereto and arranged to be opened and closed, and when in open position, resting on said partition and forming a table.

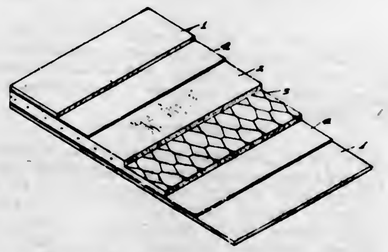
1,387,008. HARROW. WILLIAM MCCONAL, San Saba, Tex. Filed Jan. 9, 1920. Serial No. 350,326. 5 Claims. (Cl. 55—90.)

1. An agricultural implement comprising a main frame, a plurality of harrow bars mounted in the main frame, means for simultaneously adjusting all said bars rotatively, and means for simultaneously raising or lowering said bars.



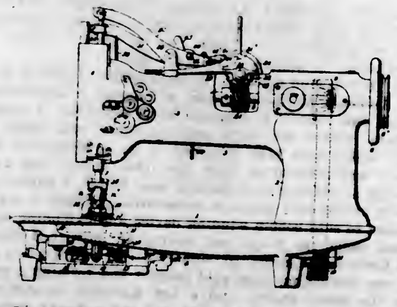
1,387,009. TRANSMISSION MECHANISM FOR TRACTORS. EMIL F. NORELIUS, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Nov. 8, 1918. Serial No. 261,631. 7 Claims. (Cl. 180—9.2.)

1. A power transmission mechanism comprising a casing, a driving shaft carried thereby, an axle driven by the shaft, sprockets freely mounted to rotate on the opposite ends of the axle, brake drums contained within the case and fixed to rotate with the sprockets, gear means inclosed within the brake drums and adapted to be positively driven by the axle and power operated means adapted to affect the gears within the brake drums to cause acceleration in the speed of one sprocket and reduction in the speed of the other as compared with the speed of the driving axle.



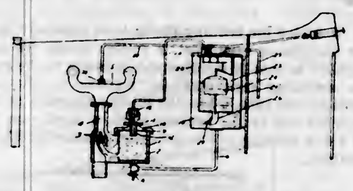
1,387,010. FILING AND INDEXING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1918. Serial No. 260,848. 15 Claims. (Cl. 129—16.)

1. In an equipment of the class described, the combination of a sheet and a sheet-holder extending through said sheet, said sheet and sheet-holder having cooperating interengaging means providing for securing them in any



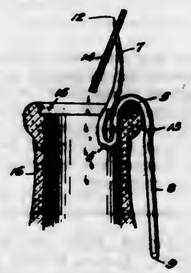
one of a plurality of predetermined relative positions with respect to the length of said sheet-holder.

1,387,011. COMPOSITION BOARD. ARTHUR RATCLIFF, Chicago, Ill. Filed May 7, 1920. Serial No. 379,500. 4 Claims. (Cl. 154—45.9.)



1. A composition board comprising outer layers of veneer, intermediate layers of metallic reinforced composition material, and waterproof material interposed between said other layers and said intermediate layers.

1,387,012. STRIP-SEVERING DEVICE FOR SEWING-MACHINES. JOHN C. RINGE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Jan. 4, 1918. Serial No. 210,350. 15 Claims. (Cl. 112—130.)



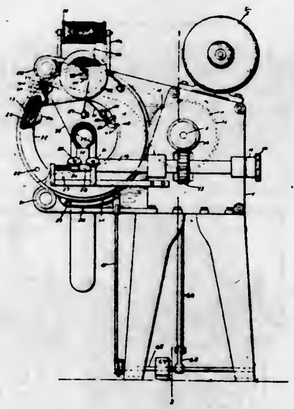
1. In a sewing machine, the combination with a stitch-forming mechanism and actuating mechanism therefor including a main-shaft, a guide for guiding a stay-tape and a feeding mechanism for presenting said tape and a body-fabric to the action of said stitch-forming mechanism, a prime member carried by said main-shaft, a cutter blade and a detector-head, of means for operatively connecting said cutter-blade and detector-head with said prime member to first actuate said detector-head, followed by the prime member acting on said cutter-actuating mechanism to cause said cutter-blade to sever said stay-tape at the completion of each taping operation.

1,387,013. CARBURETER. JESSE T. ROBINSON, Birmingham, Ala. Filed Jan. 28, 1919, Serial No. 273,666. Renewed Jan. 8, 1921. Serial No. 435,990. 2 Claims. (Cl. 158—36.)

1. In combination, a carbureter, an oil supply tank disposed above the carbureter and having an oil feed pipe connected to the carbureter below the oil level therein, an air vent pipe leading from the tank above the oil level therein and opening into the carbureter at the oil level to be maintained therein, normally closed means for the admission of oil into said tank, and means to adjust the level of the open end of said vent pipe in said carbureter, substantially as described.

1,387,014. MILK-BOTTLE-STOPPER REMOVER. TOM W. SAUL, Seattle, Wash. Filed May 11, 1921. Serial No. 468,789. 3 Claims. (Cl. 65—47.)

1. A device of the character described comprising a piece of wire formed to provide a pointed prong at one end, a shank at the other end and with two reverse bends at about its midlength, one of said bends affording a recess which is engageable with the mouth of a bottle to maintain the device in a substantially vertical position with the prong end thereof uppermost.

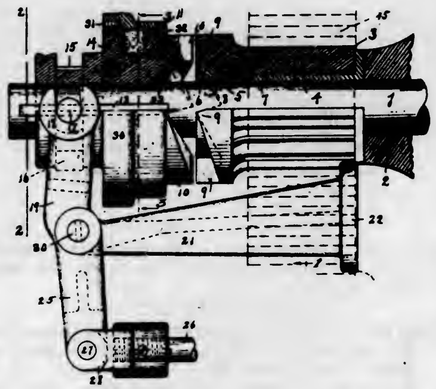


1,387,015. HAT-CROWN-CREASE-RETAINING DEVICE. FRANK J. SCHALOW, East New York, N. Y., assignor of one-half to August H. Schalow, East New York, N. Y. Filed July 17, 1920. Serial No. 396,900. 2 Claims. (Cl. 2—108.)

1. A hat crown crease retaining device composed of spring sheet metal and comprising a cylindrical portion in one side of which is a narrow longitudinal slot, the side walls of which are provided with projecting flanges or

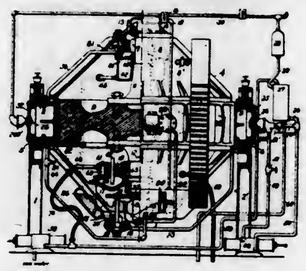
plates, the cylindrical portion being also provided opposite the slot therein with a longitudinal thumb and finger recess.

1,387,016. WRAPPING-MACHINE. JOHN SCHERNER and EDWARD HUTCHENS, Milwaukee, Wis., assignors to Pierce Wrapping Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1916. Serial No. 88,563. 17 Claims. (Cl. 242—6.)



17. In a wrapping machine an annular shuttle having its center clear to permit the rotation of a tire-casing therethrough, means to support and rotate a tire casing through the plane of said shuttle, a source of wrapping material mounted on said shuttle; said shuttle being adapted to wind said material about said casing spirally, and a device mounted on said shuttle adapted to produce a moistened adhesive condition of said wrapping material whereby the successive spiral convolutions of the wrapping material will be adhesively joined to one another.

1,387,017. RESILIENT CLUTCH. HENRY COLLIER SMITH, St. Marys, Ohio. Filed Nov. 3, 1919. Serial No. 335,291. 1 Claim. (Cl. 192—55.)

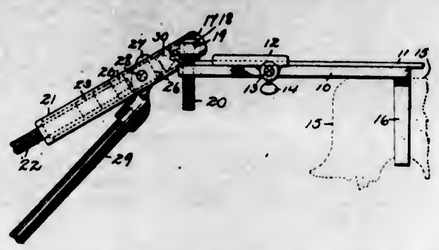


A clutch comprising a pair of members one of which is formed with clutch jaws and the other of which comprises an outer and inner part, the outer part being formed with an annular groove and a circular recess, a pair of shock absorbing pads in said recess, one of said pads being formed by groups of layers of leather positioned transversely of the recess and blocks of metal

between the groups, the inner part being positioned in said annular groove and having clutch jaws adapted to

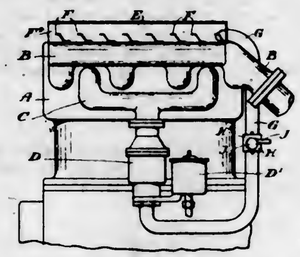
engage with the clutch jaws of the first named member and also having a jaw extending between said resilient pads.

1,387,018. LUBRICATING AND COOLING SYSTEM FOR GYROSCOPES. ELMER A. SPERRY and EDWARD G. SPERRY, Brooklyn, N. Y., assignors to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 16, 1918. Serial No. 254,342. 12 Claims. (Cl. 184—6.)



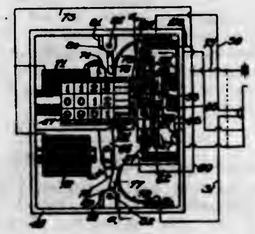
3. The combination with a gyroscope having a rotor shaft, journal bearings therefor and other bearings for supporting the gyroscope for oscillations about an axis, of an oil circulatory system for said bearings comprising a reservoir adjacent the axis of said other bearings, direct and return conduits leading from said reservoir to said journal bearings, a pump mounted on and driven by the gyroscope for circulating the oil, and an extraneous pump for circulating the oil while the gyroscope is starting up.

1,387,019. CANDY-MAKING. JOEL STARRELS, Niagara Falls, N. Y. Filed Oct. 30, 1919. Serial No. 334,585. 2 Claims. (Cl. 99—11.)



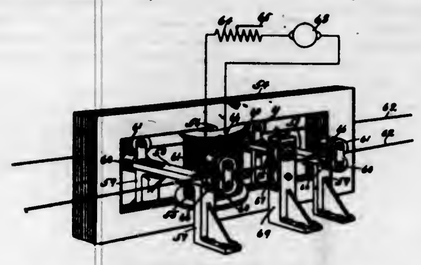
1. A composition of matter including chocolate and hardened cocoa butter of which the amount of said cocoa butter and the degree of hardness thereof are such as to give the mixture a relatively high melting point with reference to chocolate.

1,387,020. DEVICE FOR FORMING EYES IN METAL STRIPS. WILLIAM M. STIDWORTHY, Hackettstown, N. J. Filed June 8, 1920. Serial No. 387,418. 5 Claims. (Cl. 153—40.)



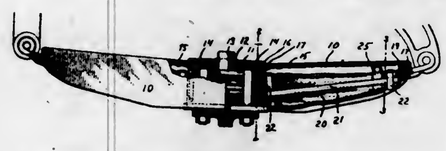
1. A device for bending the ends of metal strips to form eyes comprising a support, a roller, means for mounting the roller so that it is adjustable relative to the support, a yoke swinging concentrically relative to the roller, a handle on the yoke, a bearing block adjustable in the yoke, a cam pivoted in the bearing block, a handle on the cam, and a dog slidable in the yoke and against which the cam operates.

1,387,021. TREATMENT OF AIR FOR INTERNAL-COMBUSTION-ENGINE CARBURETERS. FENTON F. STRATTON, East Croydon, England. Filed May 23, 1916. Serial No. 99,352. 7 Claims. (Cl. 83—29.)



1. In a device of the character described, in combination with a conduit for the passage of a heating element, of a chamber disposed thereabout for the admission of air to be heated by the element, said chamber being open at one end and having a connection at its opposite end with a carbureter, and a plurality of inclined baffles arranged within the chamber for screening the air prior to its admission to the carbureter.

1,387,022. APPARATUS FOR REGISTERING THE FLOW OF LIQUID. ADOLPH STUBER, Rochester, N. Y. Filed Nov. 8, 1916. Serial No. 130,154. 4 Claims. (Cl. 235—94.)



2. An apparatus for registering the flow of liquid, comprising an electric switch, a registering member, an armature operatively connected with said registering member, spaced contacts adjacent said armature arranged to be alternately engaged by the latter, electromagnets having windings one end of each of which is connected with said armature, conductors connecting the last mentioned contacts and the other ends of said windings with said switch, the latter being arranged to alternately close the circuit through each of said magnets and said armature for the purpose of effecting movement of the armature in opposite directions whereby said registering member is moved to indicate the units of liquid discharged from the container.

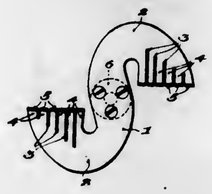
1,387,023. METHOD OF AND APPARATUS FOR TREATING METAL. HERBERT D. SWIFT, New York, N. Y., assignor to International Automatic Appliance Corporation, a Corporation of New York. Filed Mar. 27, 1920. Serial No. 369,361. 12 Claims. (Cl. 219—11.)

1. The method of annealing metal which method consists in inducing in the metal to be annealed an electric current of sufficient amperage and maintained for sufficient length of time to generate an annealing heat in said metal.

1,387,024. SPRING COVER AND LUBRICATOR. GEORGE H. TABER, Binghamton, N. Y. Filed Jan. 24, 1921. Serial No. 439,352. 9 Claims. (Cl. 267—37.)

9. A cover and lubricating device for a leaf spring comprising a wrapping adapted to maintain lubricant and supply the same to the spring, and a cover member protecting said wrapping and secured to the spring, said cover member having means to space the same from the wrapping whereby wear of the latter is avoided.

1,387,025. CONCRETE PIPE. WILLIAM M. WALKER, Seattle, Wash. Filed July 6, 1920. Serial No. 394,018. 6 Claims. (Cl. 72—51.)

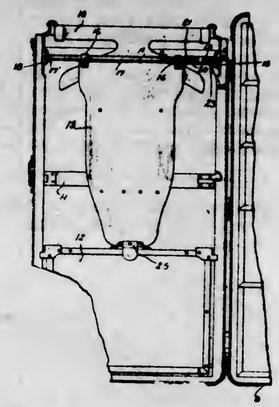


1. A concrete pipe composed of tubular sections arranged in end to end abutting relation and having longitudinal reinforcing elements embedded therein, said elements being provided with looped extremities, said tubular sections being provided with substantially radial pockets extending through the loops of the reinforcing elements, said tubular sections being further provided in their peripheries with a plurality of relatively shallow recesses extending from said pockets to the adjacent end edges of the respective sections, and substantially U-shaped coupling elements having the arms thereof positioned in adjacent pockets of the adjoining pipe sections with the intermediate portions of the coupling elements seated in the adjacent recesses of said sections.

1,387,026. GRIPPER-ARM. LEROY J. WARNER, Fostoria, Ohio. Filed Jan. 24, 1920. Serial No. 353,895. 1 Claim. (Cl. 101—413.)

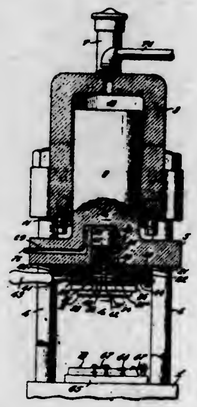
A gripper arm of the class described, comprising a bar having its back face longitudinally grooved near its inner and outer ends and a spring metal facing strip fixedly mounted at one end in one groove and having its other end slidingly mounted in the other groove, the facing strip forming a plurality of undulations lengthwise thereof with the connecting portions of the undulations bearing against the bar in sliding contact therewith and with the outwardly bowed portions thereof projecting laterally of the bar.

1,387,027. SCRAPER FOR CLEANING IRREGULAR SURFACES. ISAAC A. WATROUS, Bridgeport, Conn. Filed Apr. 9, 1921. Serial No. 460,071. 4 Claims. (Cl. 144—115.)



1. A rotary disk action cutter comprising spring arms carrying independently acting teeth extending from the outer circle of the path of the arms toward the center of said circle.

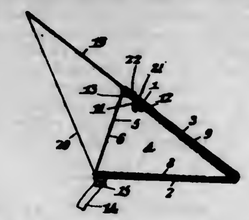
1,387,028. TRUNK IRONING-BOARD. GEORGE HENRY WHEARY, Racine, Wis. Filed July 9, 1920. Serial No. 395,113. 7 Claims. (Cl. 190—13.)



1. The combination with a trunk section having a shoe box, of an ironing board therefor, comprising brackets mounted on the opposite side portions of the trunk section, a board member having a transverse rod at its

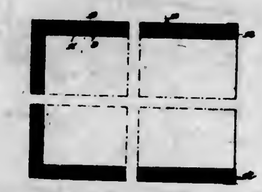
inner end portion which removably engages the brackets, a socket member mounted on the shoe box, and a support-

ing leg member connected to the other end portion of the board and removably engaging the socket member of the shoe box.



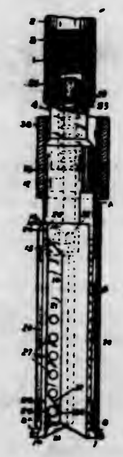
1,387,029. EMPLACING APPARATUS. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Nov. 11, 1920. Serial No. 423,470. 14 Claims. (Cl. 18—1.)

1. In a machine of the character set forth, the combination of two press members, one of which is movable toward and from the other, hydraulic means for actuating the movable member, a movable control member for governing the hydraulic means, electro-magnetic means for locking the control member in inoperative position, an electric circuit including an electro-magnetic means, and means rendered effective by the placement of work between the press members for closing the circuit thereby to energise the electro-magnetic means and unlock the aforesaid control member.



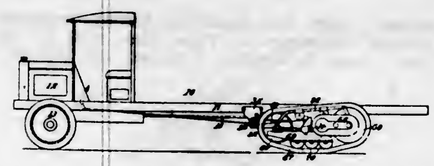
1,387,030. INHALATION DEVICE. JOSIAH H. WILLIAMS, Baltimore, Md. Filed Aug. 6, 1919. Serial No. 315,678. 10 Claims. (Cl. 128—187.)

3. An inhalation device comprising a flexible receptacle having an outlet, and a frame composed of spring-pressed top and bottom members fitted in said receptacle for holding the top and bottom walls thereof spread, the



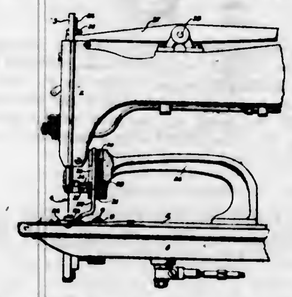
bottom member of said frame being composed of perforate material.

1,387,031. TALKING-MACHINE HORN. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Corporation, a Corporation of New York. Filed Apr. 28, 1915, Serial No. 24,450. Renewed Jan. 3, 1921. Serial No. 434,782. 13 Claims. (Cl. 181—27.)



1. A talking machine horn, having a wall of a single thickness of material, and an independent wall of laminated material.

1,387,032. UNDERREAMER. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 20, 1920. Serial No. 375,272. 9 Claims. (Cl. 255—75.)

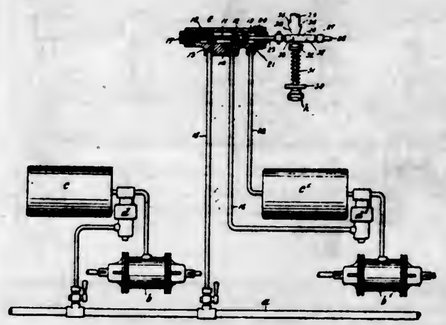


1. In an underreamer, a body, a fixed underreaming bit carried thereby at its lower end, a complementary underreaming bit movable longitudinally and laterally from its working position to its collapsed position, and yieldable means tending to move the movable bit toward its working position when displaced therefrom.

1,387,033. AUTO-TRACTOR. CHARLES F. BALL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 11, 1918. Serial No. 253,644. 9 Claims. (Cl. 305—3.)

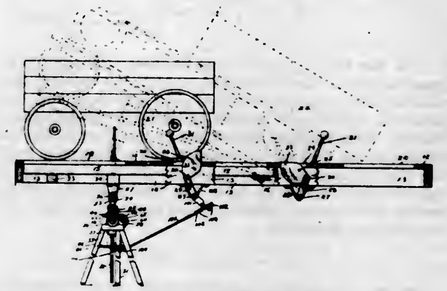
1. In combination with a motor vehicle having a floating rear axle, the housing of which is provided near its ends with flanges normally serving to connect brake-bands in place, a sleeve arranged to fit over the end of the axle housing when the wheel is removed and to connect with said flange, a self-laying track mechanism having a hub portion to fit over said sleeve, means carried by the sleeve and hub to interlock when the parts are turned angularly and means to prevent angular movement of the hub on the sleeve when the parts are assembled.

1,387,034. WORK-HOLDER FOR SEWING-MACHINES. WILLIAM L. BARRON and ALBERT F. FIFIELD, Newark, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 23, 1919. Serial No. 312,803. 14 Claims. (Cl. 112—114.)



4. In a work-clamp, upper and lower relatively movable work-clamping members, one of said members having a countersunk aperture adapted to retain an article to be attached to the work, and the other member comprising means complementary to the countersink for holding the work against the article.

12. In a work-clamp, a patch-carrying part, means whereby said part may be slid from operative position for reception of a patch, and means coacting with the patch-carrying part for firmly holding the periphery of the patch in engagement with a superposed work-piece.

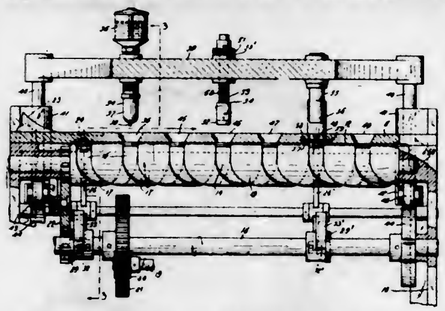


1,387,035. CONTINUOUS AUTOMATIC FLUID-PRESSURE BRAKE FOR RAILWAY AND LIKE VEHICLES. ARTHUR MORTON BELL, Bombay, India, assignor to Taite & Carlton, Westminster, London, England, a Firm consisting of John Charles Taite, Frederick Jocelyn Davis, and Geoffrey Charles Brindley Taite. Filed June 28, 1919. Serial No. 307,290. 4 Claims. (Cl. 303—23.)

1. In an automatic fluid-pressure brake apparatus, the combination of a train-pipe, a supplementary fluid-pressure reservoir, a supplementary brake-cylinder, a triple valve connected with said reservoir and said cylinder, a connection between the triple valve and the train-pipe, a control-valve in said connection, a spring under the action of which said valve constantly tends to assume a closed position in which said connection is closed, a manually-operable cam for moving said valve to an open position in which said connection is open, a spring for restoring said cam to its inoperative position and means whereby, when pressure exists in the supplementary fluid-pressure reservoir, although the control-valve still remains open, said cam becomes potentially freed to the action of said spring in such a manner that, on the brakes being

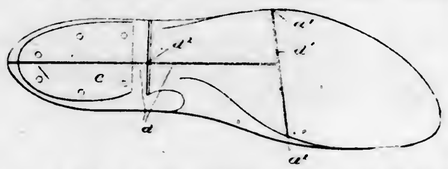
completely released or allowed to leak off, the cam will be automatically restored to inoperative position, thus permitting the automatic return of the control-valve itself to the closed position, substantially as and for the purpose set forth.

1,387,036. VEHICLE-DUMP. EDWARD R. BENSON, Minneapolis, Minn., and MILTON S. CRANDALL, Sioux City, Iowa. Filed Nov. 15, 1919. Serial No. 338,407. 5 Claims. (Cl. 214—49.)



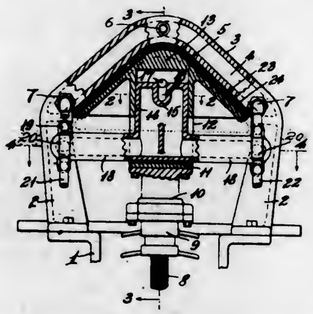
1. A vehicle-dump embodying vehicle-supporting means movable to and between normal and two other positions to accordingly move a vehicle to and between its normal and two different inclined positions, actuating mechanism for said means, mechananism for preselecting the one of said positions to which said means is to be moved, and means governed by the preselecting mechanism for de-energizing the actuating mechanism when said first means has reached the preselected position.

1,387,037. MACHINE FOR THE MANUFACTURE OF BOTTLE-CLOSURES. JOHN BINDER, New York, N. Y., assignor to International Cork Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,514. 1 Claim. (Cl. 113—114.)



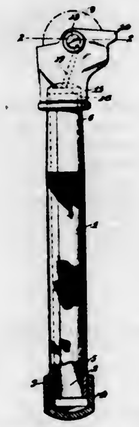
In a machine for the manufacture of bottle closures of the cap variety, the combination with a machine frame having a horizontal table portion provided with a straight groove in its underface, of a continuously rotating carrier comprising a cylinder having a helical groove accommodating a portion of each cap, another portion of each cap being seated in said straight groove, each turn of said helical groove consisting of a section running in a plane at right angles to the longitudinal axis of said cylinder and a curved section connecting said first-mentioned section with the similar section in the next turn in the

series, said table portion being provided with a line of apertures extending therethrough to the groove therein, said apertures being spaced apart corresponding to the



pitch of said helical groove, whereby the caps advanced by said carrier along said straight groove are simultaneously stopped when in alinement with said apertures.

1,387,038. ORTHOPEDIC LAST. ELMER J. BLISS, Boston, Mass. Filed Oct. 20, 1919. Serial No. 332,001. 7 Claims. (Cl. 33—3.)



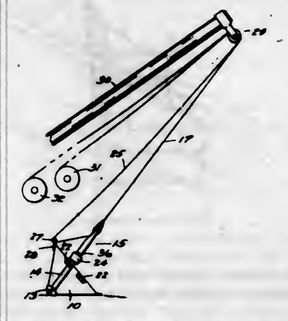
1. A last for the manufacture of shoes embracing in its construction a last block and a ball determining gage member affixed to the bottom of said last block and comprising a longitudinal member extending a pre-determined distance from the rear or heel end of the block to the ball portion of the fore-part of the last, and a transverse member united to said longitudinal member and having its opposite ends located to define the correct location of the outside ball and the inside ball portions of the last, substantially as described.

1,387,039. HEATING MECHANISM FOR PRESSES. CHARLES L. BRALEY and GEORGE N. LINK, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed July 18, 1917. Serial No. 181,411. 11 Claims. (Cl. 68—9.)

1. Ironing apparatus, comprising coöperating ironing members between which the work is ironed, one of said members being movable toward and from the other to produce the ironing effect, a stationary heating member for heating the movable ironing member, and means for supplying heating medium to the heating member.

1,387,040. TOOL FOR DRESSING EMERY-WHEELS. FRANCIS C. BRANDENBURG, Piqua, Ohio. Filed Apr. 10, 1919. Serial No. 288,934. 2 Claims. (Cl. 125—37.)

1. In a dressing tool, a hollow handle forming a lubricant chamber, a head carried thereby including a bearing with ducts leading from the handle to the bearing, said bearing being below the center line of the lubricant chamber whereby the ducts are inclined downwardly toward the bearing when the handle is in a horizontal position to provide gravity feed for the lubricant.

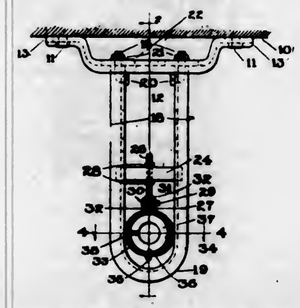


1,387,041. FRICTIONLESS SPRING. EARL D. BROWN, Bakersfield, Calif. Filed Jan. 29, 1921. Serial No. 440,928. 1 Claim. (Cl. 267—49.)

In a spring of the class described, the combination of a top and a bottom leaf, intermediate leaves interposed between the top and bottom leaf, each intermediate leaf provided in its under face and near its end with a recess open at both ends, said recess provided with an outer, vertical wall and an inner, comparatively long, beveled wall, a roller in each recess being prevented from moving too far outwardly by the vertical wall and being permitted to move inwardly over the beveled wall to cause the contiguous leaves to be spread apart, and said rollers provided with flattened ends bearing against the side edges of the leaves, substantially as shown and described.

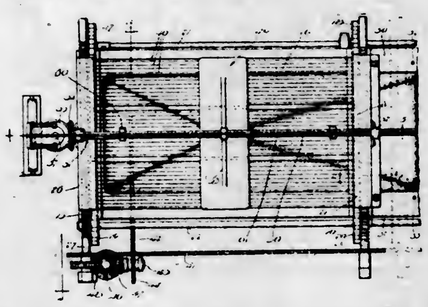
1,387,042. EXCAVATING AND HOISTING APPARATUS. THEODORE CARLSON, Stillwater, Wash. Filed June 29, 1920. Serial No. 392,760. 2 Claims. (Cl. 37—54.)

1. In apparatus of the character described, the combination of a scraper pan, a ball pivotally connected thereto adjacent to the pan bottom, a collar sleeved on each of the legs of said bail, means engageable with the respective collars provided on the sides of the pan and adjacent to its top, a sheave attached to the ear end of the pan, sheaves depending from the bail above the pan, a tilting rope extending about the first named sheave and



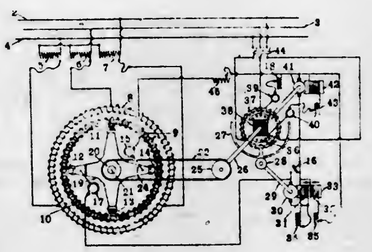
having branches extending about the respective second named sheaves and secured to said collars for disengaging the latter from said means, means provided upon the legs of said bail to serve as stops for the respective collars, and a pan-hoisting rope secured to the bail.

1,387,043. UNIVERSAL JOINT-COUPLING. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed June 14, 1917, Serial No. 174,647. Divided and this application filed June 22, 1918. Serial No. 241,370. 6 Claims. (Cl. 64—91.)



1. In a universal joint for line shafts made up of a plurality of sections, coupling members on the abutting ends of adjacent shaft-sections, one of said coupling members having substantially flat walls defining a diametrically arranged slot therein with a central recess at the bottom of the slot and the other of said coupling members having a tongue-like projection with convex cylindrical faces the elements of which faces are disposed in parallelism to the walls defining the slot in the first-mentioned coupling member, said projection extending into said recess to thereby keep said faces and walls in coöperative engagement but permitting a limited relative angular rotation of the walls and faces about an axis at right angles to said walls defining the slot.

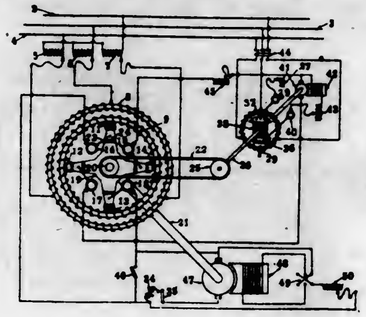
1,387,044. SHAFT-HANGER. JEREMIAH C. FITZGERALD, Kilbourn, Wis. Filed July 21, 1920. Serial No. 397,998. 5 Claims. (Cl. 64—14.)



5. In a shaft hanger, the combination with a supporting base, of a substantially U-shaped frame mounted at its ends on said base and having in its inner walls a series of longitudinally disposed and spaced openings, of a transversely disposed supporting member detachably located at its ends in a pair of said openings, an expansible keeper pivotally connected to said member, said keeper being cross-sectionally outwardly bellied, and a flexible split bearing member for a shaft located within said keeper.

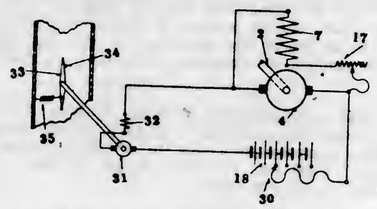
1,387,045. CORD-POLISHING MACHINE AND THE LIKE. EDWARD I. FRIEDMAN, Chicago, Ill. Filed Mar. 21, 1919. Serial No. 284,152. 10 Claims. (Cl. 51—57.)

1. In a machine of the class described, the combination with a main frame, of a pair of chain carriers mounted for carrying movement transversely thereof, a worm screw adjacent to each of said chain carriers, means for driving the worm screws in unison, a polishing shoe adapted for reciprocating motion back and forth between the chain carriers, abrasive material on the lower surface of said shoe, a longitudinally extending worm screw, an operative connection between said screw and shoe aforesaid, a reversal clutch mechanism in conjunction with said screw, means in conjunction with said shoe for reversing said clutch mechanism at each end of the travel of the shoe, and a plurality of supplemental cord frames adapted to be supported by and moved with the chain carriers, each of said supplemental frames having in its end portions rotatable cord hooks, and a worm on each cord hook for engagement with the adjacent transverse worm screw, for the purpose of causing rotation of the cord hooks during the movement of the supplemental frames through the machine, substantially as described.



1,387,046. POLYPHASE MOTOR. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 14, 1917. Serial No. 148,511. 16 Claims. (Cl. 172—280.)

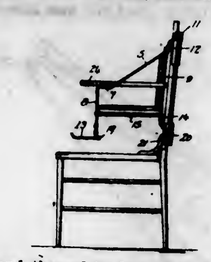
9. In an alternating current motor the combination of an inducing member provided with a polyphase winding, an induced member provided with a permanently short-circuited winding and a commuted winding, brushes co-



operating with said commuted winding to close the same along one axis per pole pair, and automatic means for maintaining the axis of said brushes in the axis of the revolving field produced by the inducing member.

1,387,047. POLYPHASE MOTOR. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 14, 1917. Serial No. 148,512. 15 Claims. (Cl. 172—280.)

1. In an alternating current motor, the combination of an inducing member provided with a polyphase winding, an induced member provided with a commuted winding and two sets of brushes per pole pair coöperating therewith, means for supplying a direct current phase compensating E. M. F. to one set of brushes, means closing the circuit of the other set of brushes, and means for revolving all of the brushes at such speed as to cause the relative speed of the brushes and the inducing member to equal the synchronous speed.

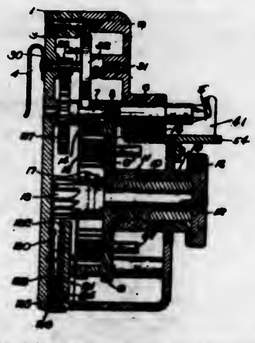


1,387,048. SPEED-REGULATING APPARATUS. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 5, 1919. Serial No. 308,865. 4 Claims. (Cl. 290—40.)

1. The combination with a prime mover of a speed controlling device therefor, and means for actuating said controlling device, said means comprising a dynamo electric machine driven by the prime mover and an independent source of E. M. F. in circuit therewith, and means for varying the magnitude of said independent E. M. F.

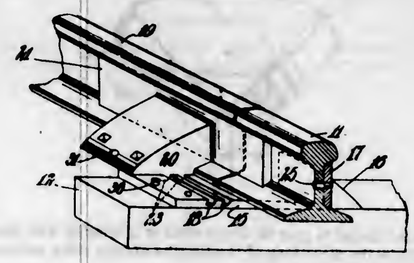
1,387,049. CHILD'S CHAIR. BENJAMIN O. GUNDERSON, Chicago, Ill. Filed Oct. 23, 1919. Serial No. 332,692. 1 Claim. (Cl. 155—79.)

A chair comprising two like side frames, each frame having a front member forming a front leg extending vertically from its lowermost end to a seat support and thereabove to form a short horizontal arm and from thence in a rearward upward direction to a point near the top of the chair, where it joins the rear frame member; a rear frame member forming a rear leg extending to the point of juncture with the upper end of the front member, the rear member extending rearwardly from the seat support to increase the dimensions of the chair base and extending rearwardly from said point of juncture, at its upper end, into substantially the same vertical plane



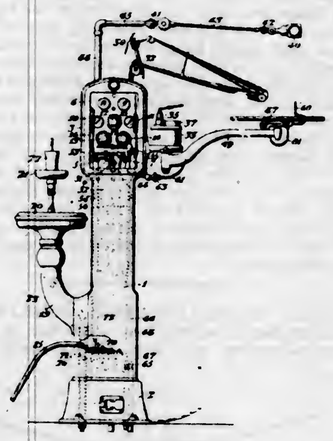
as the lower end thereof to form a hook; a seat support connecting the front and rear members; means connecting the side frames together and a perforated seat resting on the connecting members and between the frame members.

1,387,050. THERMAL CIRCUIT-CLOSER. ANTON HASLINGER, Philadelphia, Pa. Filed Mar. 15, 1919. Serial No. 282,870. 2 Claims. (Cl. 200—137.)



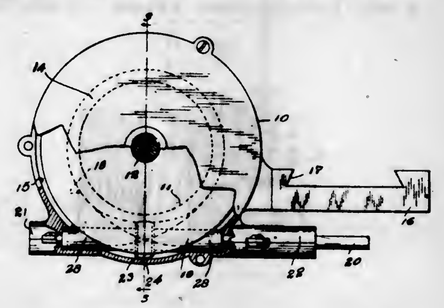
2. In a device of the character described, the combination with a frame and a thermostatic element mounted on the frame and movable to close an electric circuit, a contact member adapted to be engaged by said thermostatic element and a gravitationally movable cam-like member mounted to swing on the frame and movable to engage the thermostatic element and normally hold it out of contact with said contact member.

1,387,051. KNOT-TYING IMPLEMENT. EDGAR F. HATHAWAY, Boston, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed June 15, 1915. Serial No. 34,289. 46 Claims. (Cl. 289—5.)



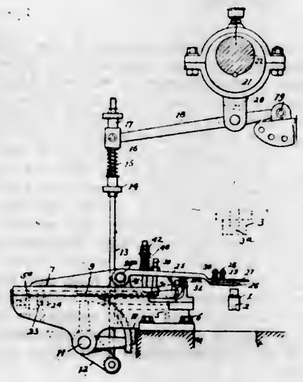
1. A thread knotting implement having knotting means, motor means therefor, and trigger means for the motor, said trigger means being adapted to be operated by manual presentation thereto of the threads to be knotted.

1,387,052. RAIL-FASTENER. FRANK HASNER and LEOPOLD GASIOREK, Newark, N. J. Filed May 4, 1921. Serial No. 466,855. 1 Claim. (Cl. 238—198.)



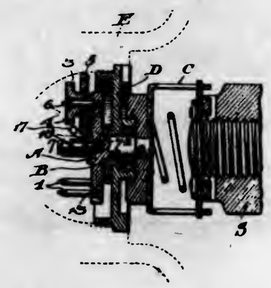
A rail fastening device comprising a chair-plate having an integral projection on one side adapted to engage over the base flange of the rail, a fish-plate formed on and projecting at its ends beyond said extensions, a bracket adapted to rest on the other side of the chair-plate and engage over the base flange of the rail, said bracket having longitudinal tongues thereon engaging in complementary grooves in the said chair-plate, a fish-plate element formed on and projecting at its ends beyond said bracket, a tie on which the chair-plate rests, said tie having a recess formed in its upper face, said chair-plate having a socket formed therein in registry with said recess and said bracket having an aperture therein which registers with the said socket, a stud located in said socket adapted to engage in said aperture, a spring in said socket normally urging said stud upwardly, a stem formed on said stud and extending downward into the recess, and a collar on said stem located in said recess and adapted to bear against the bottom of said chair-plate to limit upward movement of said stud.

1,387,053. DENTAL-EQUIPMENT STAND. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 14, 1919. Serial No. 282,587. 3 Claims. (Cl. 32—5.)



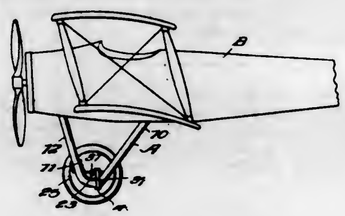
1. A dental equipment stand comprising a pedestal terminating in an accessory head disposed substantially coaxial therewith and embodying a switchboard, and a plurality of instruments operatively connected with said switchboard.

1,387,054. INTERMITTENT MECHANISM. WASYL HUCAL, Chicago, Ill. Filed June 17, 1919. Serial No. 304,819. 1 Claim. (Cl. 74—41.)



A device of the character described comprising a circular case having a back body portion and integral cylindrical wall, an oil-tight cover plate thereon, a shaft concentrically revoluble in the case, a cam thereon having a peripheral groove with partly spiral form in parts, a second member engaged in the groove for intermittent rotation thereby under rotation of the cam, said second member being revoluble on an axis at right angles to that of the cam, and having a shaft extended in each direction on its axis, and enlarged at its inner parts, said case having an opening in the wall, for lateral movement of the second member into and out of engagement with the cam, a cap member to close the opening having bearing parts to engage the enlarged parts of the last named shaft, the case and cap having parts to form an oil-tight closure around the shaft.

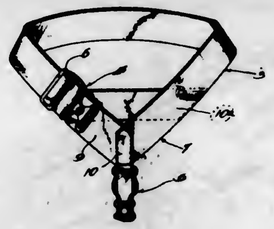
1,387,055. MECHANISM FOR FEEDING BLANKS TO METAL-WORKING MACHINES. JOHN KAASE, Cleveland, Ohio, assignor to The Upson Nut Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 6, 1919. Serial No. 336,086. 22 Claims. (Cl. 10—166.)



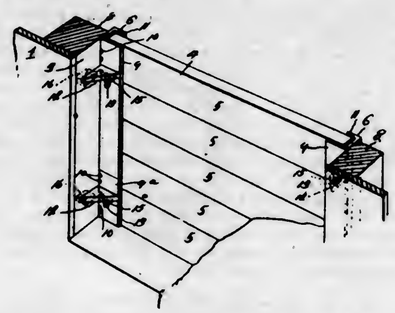
1. The combination with a hollow die member adapted to receive a blank to be operated upon, of a reciprocating lever, means for reciprocating the lever, means for moving the lever in a vertical direction during its reciprocation and means for feeding blanks into the path of movement of said lever and intermediate the limits of the path of reciprocation of said lever, whereby the lever engages the blank and moves it to said die.

1,387,056. COUNTER-OPERATING MECHANISM FOR HUB-ODOMETERS. RUDOLF R. KANICH, Woodhaven, N. Y., assignor to The American Taximeter Company, New York, N. Y., a Corporation of New York. Filed May 8, 1919. Serial No. 295,803. 5 Claims. (Cl. 235—95.)

1. A counter operating mechanism for hub odometers including a rotatable driving plate, a stationary counter support, a driving gear unit mounted on the counter support to rotate in a plane parallel to the plane of rotation of the driving plate, and means for actuating the driving unit also operating in a plane parallel to the plane of operation of the driving plate and operatively connected therewith.



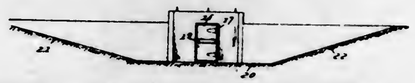
1,387,057. LANDING-GEAR FOR AEROPLANES. HAROLD M. KUDO, Honolulu, Hawaii. Filed Dec. 1, 1919. Serial No. 341,563. 7 Claims. (Cl. 244—2.)



5. In a landing gear for aeroplanes, the combination with an airplane fuselage, substantially V-shaped depending struts carried thereby, of members hingedly connected to said struts comprising a plate detachably connected to a leg of each of said depending struts, a hinged section connected to each of said plates, and comprising a flat plate and an arcuate plate integrally formed, said arcuate plate being concaved to be disposed within the apex of said V-shaped struts, a block insert for each of said hinged sections having an opening therein, an axial structure comprising a main body, and spindle ends detachably carried by said main body and adapted for insertion within said block insert, wheels carried by said spindles, ears upwardly projecting from said hinged section and upon the free end thereof, a resilient band connecting the free end of said hinged member to said strut, and means carried by said strut for maintaining said resilient band in a predetermined position to support the axle structure.

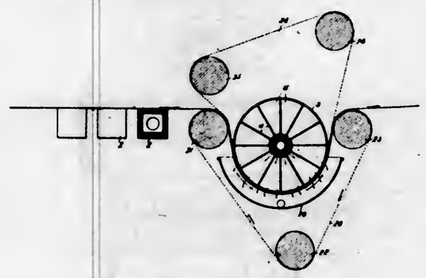
1,387,058. GARTER. GUSTAV H. LUNEBURG, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,631. 3 Claims. (Cl. 241—6.)

3. As a new article of manufacture a garter comprising a strip of material adapted to pass around the leg of the wearer, in conjunction with a triangular shaped pad of elastic material, a catch fixedly secured to the lower corner of said pad, means for detachably securing the other end of the strip to a fixed point at the upper corner of the pad, the pad comprising a continuous strip of elastic material folded to provide three sides of a triangle and yieldable in the directions of the lengths of said sides, substantially as described.



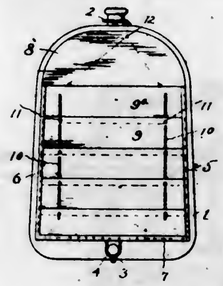
1,387,059. GRAIN-CAR DOOR. GEORGE L. MCALLISTER, Omaha, Nebr. Filed Aug. 27, 1919. Serial No. 320,162. 1 Claim. (Cl. 20—30.)

An auxiliary door for grain cars comprising vertically disposed channels having their body portions secured to the vertical sides of the door opening, a series of superimposed boards of less width than the space between the channel iron flanges, each of said channels having its outer flange pivoted to the outer edge of the body portion thereof, a U-shaped member carried by each of said outer flanges, right angled flange holding members horizontally disposed in the corners between the outer flanges and the vertical posts of the door opening, a depending lug carried by each of said right angle flange holding members and adapted to engage the U-shaped member of the adjacent outer flange to hold said outer flange in parallel relation to its mating inner flange and apertures in the faces of the vertical post for receiving the U-shaped members of the flanges when the right angled holding members are removed, thereby allowing the hinged flanges to be placed in the same vertical plane as the body portions of the channels, and the superimposed boards to be easily removed from the channels.



1,387,060. CHARCOAL-BURNING APPARATUS. WILLIAM H. MCGEE, Austin, Tex. Filed Aug. 13, 1920. Serial No. 403,228. 2 Claims. (Cl. 202—10.)

1. In a charcoal burning apparatus, a pit, a furnace wall therein spaced from the wall of the pit, the said walls having openings through their sides and vertically disposed channels merging with the openings, dampers in



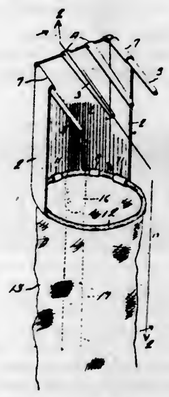
the said vertically disposed channels adapted to enter the openings, damper rods connected to the dampers and slidable in the channels, doors adapted to close the top of the said furnace, and a door in the front of the said furnace.

1,387,061. PAPER-MAKING MACHINE. LESTER ERNEST MILKEY, Sandusky, Ohio. Filed Aug. 6, 1920. Serial No. 401,725. 11 Claims. (Cl. 92—38.)

1. A paper making machine, comprising a blower having a perforated cover about which the paper to be dried is trained, a pair of perforated supports between which the paper is carried past the perforations of the blower, and means directing dry air radially from said blower through said paper and perforated supports.

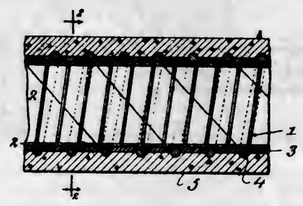
1,387,062. AIR-CIRCULATION-CONTROLLING DEVICE FOR AUTOMOBILE-RADIATORS. GEORGE G. MARSHALL, Cleveland Heights, Ohio. Original application filed Dec. 26, 1918, Serial No. 268,378. Divided and this application filed Nov. 21, 1919. Serial No. 339,594. 2 Claims. (Cl. 257—132.)

2. An air controlling device adapted for mounting upon an automobile radiator, comprising a frame, having side members, which are channel shaped in cross-section, a plurality of shutters extending transversely of the frame, the ends of the shutters extending within the walls of the channels of the side members whereby the shutters are guided, each of the shutters being provided with a slot and a projection, the projection upon each shutter coöperating with a slot formed in an adjacent shutter and means for raising the shutters.



1,387,063. BRUSH. SHINICH MATSUGAKI, Tokyo, Japan. Filed Dec. 21, 1920. Serial No. 432,277. 2 Claims. (Cl. 15—30.)

1. A pocket brush comprising a case open at its ends, a member slidable in said case and having bristles which may be projected beyond one end of the case, and a cap having a portion adapted to fit in the case, and detachably connected to said slidable member, said cap also having a



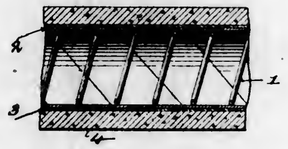
portion adapted to fit over the case, when said cap is detached from said slidable member and to close the first named end of the case and protect the bristles.

1,387,064. FRUIT-PICKER. FRED J. MILLER, Silver City, Iowa. Filed Oct. 11, 1920. Serial No. 416,088. 3 Claims. (Cl. 56—340.)

1. A fruit picker formed from sheet metal and comprising a vertically disposed body portion having side flanges, inwardly extending sheet metal fingers integrally joined to the upper end of the body member, sleeves carried by the upper end of the side flanges and encircling the outer fingers, integral sleeves carried by the lower ends of the body member and the side flanges for receiving a canvas chute ring, and an integral downwardly extending handle receiving collar carried by the lower end of the body member.

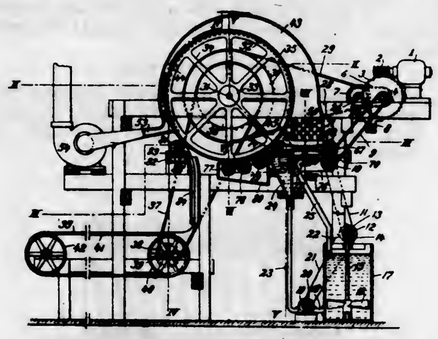
1,387,065. METHOD OF MAKING REINFORCED MOLDED CONDUITS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Jan. 6, 1921. Serial No. 435,406. 2 Claims. (Cl. 25—154.)

1. The method of making a reinforced molded conduit, which consists in, first, applying to a tubular lining con-



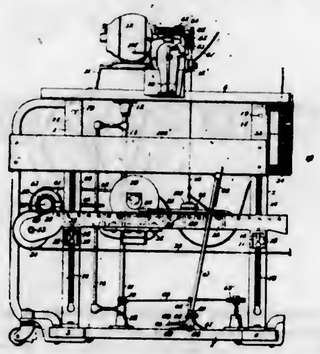
structed to fit within said conduit, a coating of adhesive material; second, inclosing said coated lining in a spiral strip of metal; third, coating said lining with plastic material to form the conduit body.

1,387,066. MEANS FOR WITHDRAWING A LINING OF FLEXIBLE MATERIAL FROM THE BORE OF A CONDUIT. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Jan. 6, 1921. Serial No. 435,407. 2 Claims. (Cl. 25—128.)



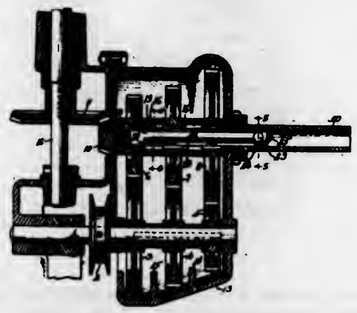
1. A conduit molding device, comprising a flexible tubular core, and a spiral wire inclosing and engaging said core for withdrawing the same longitudinally from the molded conduit.

1,387,067. METHOD OF MAKING A MOLDED CONDUIT. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Jan. 6, 1921. Serial No. 435,408. 1 Claim. (Cl. 25—155.)



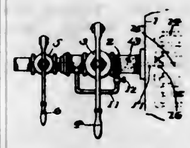
The method of making a molded conduit, which consists in, first, producing a spiral metal core; second, covering said core with flexible material; third, applying to said cover a coating of adhesive material; fourth, forming upon said coated core the conduit body of plastic material and allowing the same to harden, and fifth, withdrawing said spiral core.

1,387,068. PROCESS OF AND APPARATUS FOR THE MANUFACTURE AND HANDLING OF METALLIC-LEAF FILMS. CARL P. OLSON, Irvington, N. J. Filed Aug. 6, 1920. Serial No. 401,642. 11 Claims. (Cl. 18—57.)



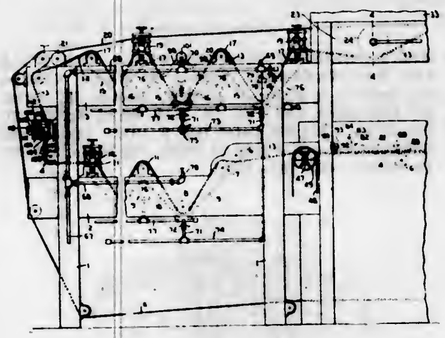
1. The process of forming imitation metallic leaf as a continuous film, consisting in agitating a film-forming suspension of bronze-powder to such degree that the powder does not appreciably settle in the suspending medium; dipping said suspension while in an agitated condition, applying same as a coating to a revolving surface on a line lower than the axis of rotation of said surface, subjecting the coating so formed to a current of preheated air, and removing the resultant film while the surface is revolving.

1,387,069. FILLED-SACK-SEWING APPARATUS. FREELAND W. OSTROM, Newark, and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Jan. 24, 1918. Serial No. 213,504. 16 Claims. (Cl. 112—11.)



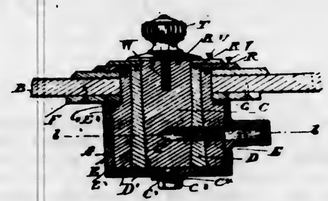
1. In a filled sack sewing apparatus, in combination with seam-forming and sack-conveying mechanisms, and driving means for said mechanisms, of work-controlled means for effecting action and inaction of one of said mechanisms, and manually operable means for arresting the action of each of said mechanisms independently of the other mechanism.

1,387,070. SPEED-CHANGING POWER-TRANSMISSION DEVICE. MARCELLIN POUGET, Detroit, Mich. Filed Oct. 18, 1919. Serial No. 331,578. 4 Claims. (Cl. 74—59.)



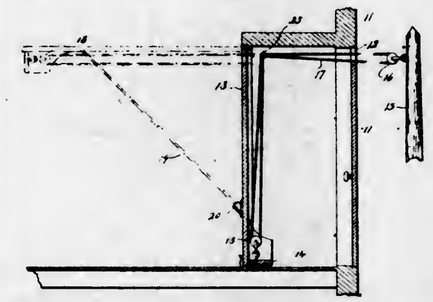
1. A speed-changing power transmission device comprising a driving shaft having a series of gears rotatable therewith, a driven shaft having gears rotatably mounted thereon each being in mesh with a complemental gear on the driving shaft, tubular members extending between the hubs of the gears of the driven shaft holding the same in spaced relation, said driven shaft having a slot and the driven gears each having keyways in the surface contacting the shaft adapted to be engaged by the key, the hub ends of said gears having a series of inclined portions each terminating at a keyway, a key extending through the slot of the shaft to engage the gear hub, the said inclined faces leading the key to the keyway, and means for moving the key longitudinally of the shaft from one gear to the other.

1,387,071. SPRAYING APPARATUS. CHARLES P. PRICE, Boston, Mass., assignor to American Tar Company, Boston, Mass., a Corporation of Massachusetts. Filed May 13, 1918. Serial No. 234,218. 3 Claims. (Cl. 299—35.)



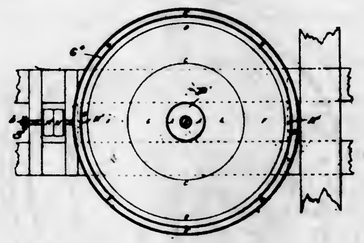
2. The combination with a tank wagon having an outlet pipe and a controlling valve therefor adjacent the tank, of a heating drum located centrally of the outlet pipe and extending longitudinally thereof between the main valve and the tank, a steam pipe connected to the drum for supplying the same with steam, a steam pipe connected with the drum through which the steam is discharged therefrom, said last named pipe extending outwardly through the outlet pipe.

1,387,072. APPARATUS FOR TREATING TEXTILES AND OTHER MATERIALS. BENJAMIN W. PUTNAM, Jamaica Plain, Mass. Filed June 3, 1918. Serial No. 238,038. 37 Claims. (Cl. 8—16.)



1. An apparatus for treating material comprising a plurality of simultaneously-movable reticulated members adapted to clamp the material therebetween in a thin layer, means for moving said members in unison in the direction of their length with the material between them, and means acting on said material during the movement of said members.

1,387,073. COMBINATION MULTIPLE VALVE AND LOCK. EDWARD P. REILLEY, Cleveland, Ohio. Filed Apr. 14, 1920. Serial No. 373,746. 3 Claims. (Cl. 251—6.)

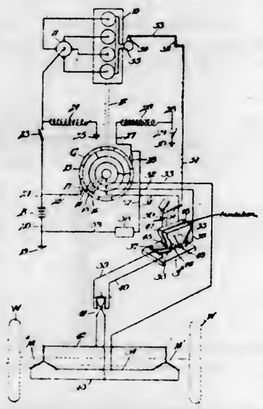


1. In a locking valve, the combination with a cylindrical casing having inlet and outlet openings arranged at an angle to each other, of an annular valve member having an outwardly tapered inner side, an intermediate annular valve tapered outwardly on its outer side and inwardly on its inner side, and a central inwardly tapering valve, and means for securing said inner and outer valves in said casing, said valves being provided with passages adapted to register with each other and with the openings in said casing.

1,387,074. CLOTHESLINE DEVICE. DAVID E. ROGANSON, Branford, Conn. Filed Sept. 26, 1919. Serial No. 326,478. 1 Claim. (Cl. 68—3.)

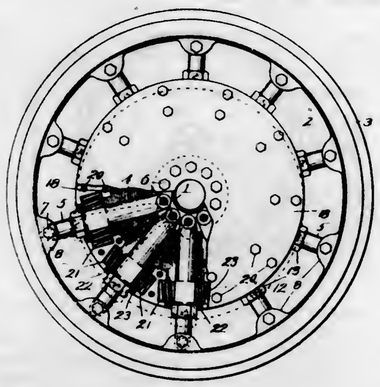
In combination with a structure having a floor and an inwardly extending horizontal rigid member, and a support exterior of the structure, a member pivoted to the inner end of the rigid member and having its lower end formed when vertical to lie adjacent the floor of the structure, means to support the pivoted member horizontally within the structure, pulleys borne by the exterior support and the lower end of the pivoted member, a clothes line engaged about the pulleys and means approximately beneath the rigid member to engage intermediate parts of the clothes line.

1,387,075. ORE-CONCENTRATOR. CHARLES C. RUEGER, Benicia, Calif. Filed Sept. 6, 1919. Serial No. 322,112. 8 Claims. (Cl. 83—88.)



1. An apparatus for concentrating ore sand, comprising a circular pan having a circular central rim for the discharge of tailings or waste, and a circular peripheral rim for the discharge of concentrates, the lowest or deepest part of said pan being located along a circular channel intermediate and concentric to the said discharge rims, the pan bottom rising from said lowest level by concentric slopes to said central and peripheral discharge rims, means for oscillating said pan, and a pulp feeder for said pan.

1,387,076. MOTOR-VEHICLE. JABEZ F. SHAWHAN, Dayton, Ohio. Filed Jan. 19, 1917. Serial No. 143,308. 6 Claims. (Cl. 290—11.)

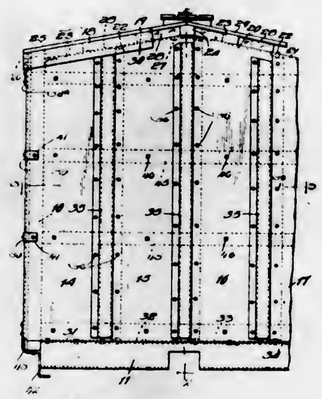


1. In a motor vehicle the combination of a prime mover, an electric machine mechanically connected with

the prime mover, a storage battery connected in circuit with said electric machine to be charged thereby when said machine operates as a generator, means whereby current may be supplied to said machine to drive it as a motor to start the prime mover, means for supplying constant flux to said machine, a driving wheel or wheels

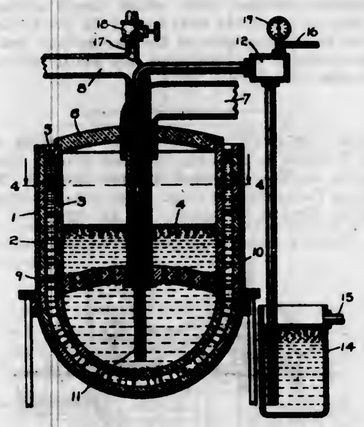
for the vehicle, an alternating current motor or motors connected to the working circuit of said electric machine and mechanically connected to the driving wheels, and means for varying the speed of the prime mover to vary the speed and current supply of said generator.

1,387,077. SPRING-WHEEL. JEFFERSON D. SHORT, Albuquerque, N. Mex. Filed Oct. 1, 1918. Serial No. 256,392. 1 Claim. (Cl. 152—28.)



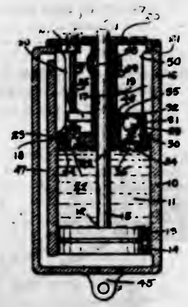
A spring wheel, comprising an inner member, consisting of a pair of disks, blocks and radially arranged spokes alternating in a circular series between said disks, said blocks being bolted rigidly to the disks and the spokes pivoted to the latter at their inner ends, pins projecting from the spokes, expansive coiled springs fitted around said pins and engaging sockets in the adjacent blocks, a circular outer member surrounding the inner member, outer spoke members pivoted at their outer ends to said outer member and fitting telescopically in the first-named spokes, and expansive coiled springs within the inner spoke members and abutting at one end thereagainst and at their other ends against the outer spoke members.

1,387,078. OIL-BURNER. THOMAS SIMON, San Francisco, Calif. Filed Oct. 5, 1920. Serial No. 414,806. 5 Claims. (Cl. 158—74.)



1. In an oil burner, a casing divided into two compartments longitudinally thereof and one of said compartments further divided to form a fuel compartment and an atomizing agent compartment, pipes with perforations extending from the fuel compartment and atomizing agent compartment into the undivided compartment of the casing, and a nozzle on the end of the casing adjacent the free ends of said pipes.

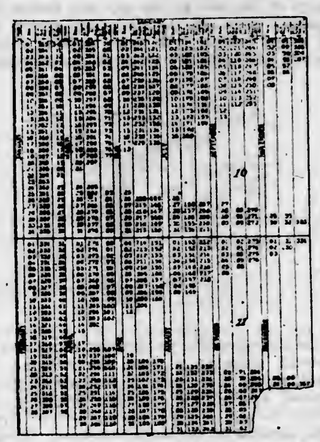
1,387,079. REINFORCED-SHEET-METAL END WALL FOR RAILWAY-CARS. VINTON E. SISSON, Chicago, Ill., assignor to Walter P. Murphy, Chicago, Ill. Original application filed Dec. 10, 1915, Serial No. 66,127. Patent No. 1,324,569, dated Dec. 9, 1919. Divided and this application filed July 24, 1919. Serial No. 312,898. 10 Claims. (Cl. 105—410.)



1. An end structure for a railway car comprising a plurality of sheet metal panels in vertical arrangement one beside the other, the edges of which overlap each other, one of said overlapping edges, in each case, being formed with a pressed out rib providing a roof supporting post and the corresponding edge of the other panel being secured to said first named panel, said panels being formed on their upper and lower edges with flanges and said hollow ribs falling short of said flanges, in each case.

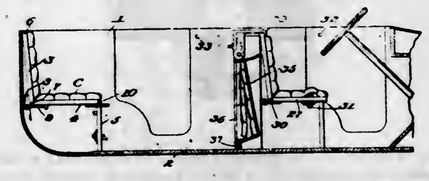
1,387,080. TANK. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 17, 1918. Serial No. 212,330. 14 Claims. (Cl. 23—1.)

1. In a tank adapted to contain a chemically active material, a shell, a lining therein inert to the material to be used in said tank, and means intermediate the shell and lining for sealing any leaks in said lining.



1,387,081. SHOCK-ABSORBER FOR VEHICLES. FRANKLIN WESLEY SPRINGER, Minneapolis, Minn. Filed Aug. 31, 1917. Serial No. 189,120. 10 Claims. (Cl. 188—88.)

1. A shock absorber comprising a casing forming a cylinder and an adjoining chamber connected with the same having a liquid therein, a piston in the cylinder having a bearing in the casing, means for controlling the flow of liquid between the chamber and cylinder and means for conducting liquid driven through the piston bearing back into the adjoining chamber.

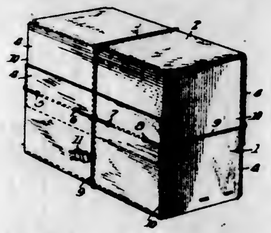


1,387,082. TIME-CALCULATOR. EMIL C. STUMME, Readlyn, Iowa. Filed Jan. 2, 1920. Serial No. 348,716. 1 Claim. (Cl. 283—2.)

A time calculator comprising a book of pages each of which is divided into twelve month groups each consisting of a number of vertical columns, one column of each month group having forwardly progressing dates of the month, corresponding columns of the month groups having the numerical days of the year in reverse order and continued throughout all of the month groups, the remaining corresponding columns of the month groups having the numerical days of the year in forwardly progressing order and continued throughout all of the month

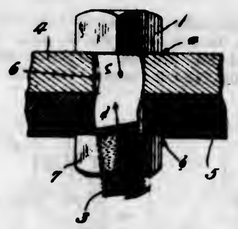
groups, the first-named columns representing dates of the months, the second-named columns representing past numbers of days, while the third-named columns represent the future numbers of days.

1,387,083. CONVERTIBLE SEAT FOR AUTOMOBILES. LORENZO B. WELCH, Fort Smith, Ark. Filed Apr. 1, 1920, Serial No. 370,368. Renewed Mar. 19, 1921. Serial No. 453,712. 3 Claims. (Cl. 155—7.)



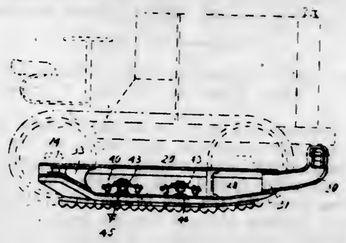
1. The combination with the sectional hinged rear seat members pivoted to the rear of the car and means for supporting said sections in horizontal position, of a front seat comprising a back supported in the car, a seat bottom pivoted to the back, a transverse frame at the rear of the front seat, a hinged plate on said frame having an engaging flange to hold said seat back in normal position, means for attaching the seat bottom to the sides of the car, and said seat back and bottom adapted to be moved to horizontal position to form a continuation of the front seat sections, for the purpose described.

1,387,084. BOX. HARVEY H. WELLS, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,591. 1 Claim. (Cl. 229—46.)



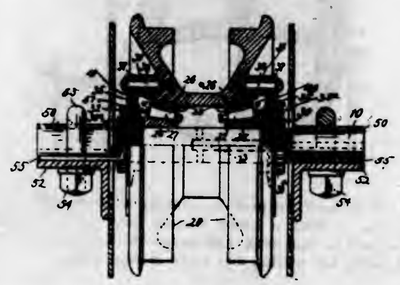
The combination with a box formed of sheet material and having four rectangular sides whose top and bottom edges respectively define rectangles, two opposite sides of the box being formed with foldable wing extensions projecting from the top and bottom edges thereof, the remaining opposite sides of the box being also formed with foldable wing extensions projecting from the top and bottom edges of these remaining box sides, the latter wing extensions upon the top of the box and also those upon the bottom of the box overlapping each other at their free ends, the first aforesaid wing extensions being inclosed by said overlapping wing extensions, an outer-

most one of the latter wing extensions having four holes distributed along its free end; of a string circumscribing the box and passing in one plane over those top and bottom corners of the box at the top and bottom edges of those opposite sides of the box from which the first aforesaid wings extend, this string passing through the holes nearest the adjacent sides of the box into place



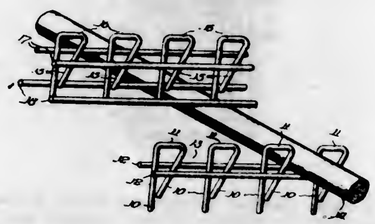
between the corresponding overlapping wings and through the remaining holes to be upon the exterior of these wings, said string also being passed about the box in another plane substantially at right angles to the first and between the box and the portion of the string that is upon the exterior of the box and between the aforesaid remaining holes.

1,387,085. LOCKING BOLT AND NUT. FREDERICK C. WHIPPEY, Chicago, Ill. Filed Nov. 9, 1920. Serial No. 422,754. 3 Claims. (Cl. 151—21.)



1. A device of the character described comprising a bolt whose head is designed to have a projecting contact point on its impinging face and a nut on said bolt also having a projecting contact point on its impinging face.

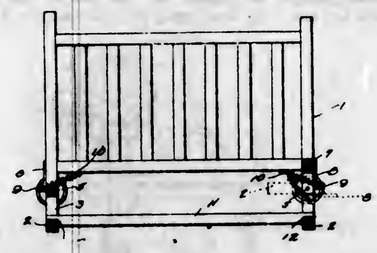
1,387,086. TRACK-LAYING TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Nov. 18, 1918. Serial No. 262,937. 2 Claims. (Cl. 305—9.)



1. In a track laying tractor, the combination of a track frame comprising two longitudinally extended parallel connected side beams, each beam comprising two longitudinally extended angle bars and a guard plate secured to the inside faces of said angle bars, two spring seat blocks which are secured in transverse alinement to the outwardly extended flanges of the two lower angle bars, a leaf spring secured upon each of said spring seat blocks and extended forwardly and rearwardly therefrom, two transversely extended shafts which extend between and are fixed, the one to the front ends of the two springs and the one to the rear ends of the two springs, and track wheels rotatably mounted upon said shafts between the side beams of said track frame.

1,387,087. DUSTPROOF BEARING. ROLLIN H. WHITE and MATHEW B. MORGAN, Cleveland Heights, Ohio, assignors to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed June 23, 1919. Serial No. 306,120. 4 Claims. (Cl. 64—22.)

1. The combination with a shaft, a wheel rotatably mounted thereon, a collar on the shaft adjacent an end of the wheel, a flexible packing disk which is fixed near its periphery to the end of the wheel and which is in sliding contact with the end face of said collar, and spring means for maintaining the contact of said parts.

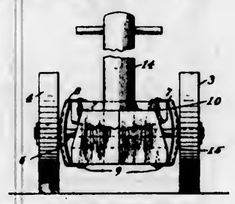


1,387,088. BEAM-SPACER. WILLIAM E. WHITE, Chicago, Ill. Filed Apr. 7, 1920. Serial No. 371,804. 6 Claims. (Cl. 72—122.)

1. A beam spacer comprising in combination a plurality of spacing elements, each element consisting of a length of wire bent to provide a horizontal member and two oppositely diagonally disposed end members constituting legs, said spacing elements being arranged in spaced relation with their horizontal members in line with each other, and a horizontal side member at each side of said spacing elements, said side members being welded to adjacent legs of said spacing elements at a point intermediate the ends of the legs.

1,387,089. CHILD'S CRIB. REUBEN M. WILLIS and HERMAN R. WILLIS, Chanute, Kans. Filed Feb. 17, 1920. Serial No. 359,471. 3 Claims. (Cl. 5—57.)

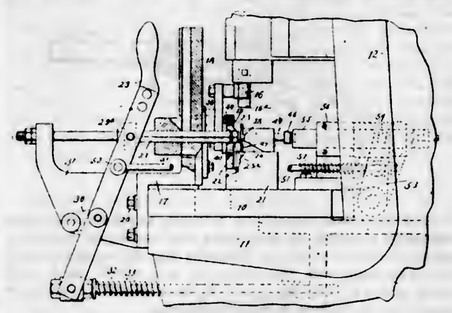
2. A crib comprising in combination wheels mounted on the crib, rockers pivoted to the crib, and spring means having connection with said rockers above their pivotal connection with the crib when in an operative position



and below said connection when in an inoperative position, whereby said rockers may be retained above or below said wheels.

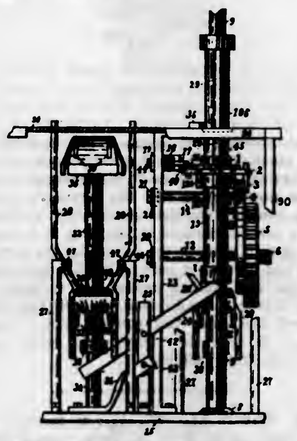
1,387,090. LICENSE-TAG-ATTACHING DEVICE. MAURICE E. WING, Lawrence Park, Pa. Filed May 20, 1920. Serial No. 382,845. 2 Claims. (Cl. 85—1.)

1. A license tag attaching device comprising a slotted bracket; a bolt having a head with one cross dimension greater than the other and one permitting its insertion through the slot and the other preventing its removal through the slot; a lock permitting the head to turn lengthwise of the slot for insertion through the slot and locking the bolt crosswise of the slot after the head is turned and the bolt clamped; and a nut on the opposite side of the bracket from the head, the bracket being unobstructed to permit the insertion and removal of the bolt.



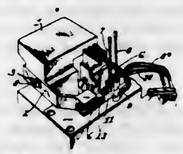
1,387,091. SELF-STEERING VEHICLE. HORACE M. WOOLLEY, Jr., and DONALD J. MCKEAN, Alameda, Calif.; said McKean assignor to said Woolley. Filed Sept. 7, 1920. Serial No. 408,651. 7 Claims. (Cl. 280—87.5.)

6. In a vehicle of the character described an axle, an elongated rocking member supported on the axle and having its longitudinal axis disposed parallel with the axle, a curved rocking face formed on the lower side of the rocking member to form a rocking surface between the rocking member and the axle, a vehicle body disposed below the axle, hangers connecting the body with the opposite ends of the rocking member, and means on said hangers for transmitting a turning movement to the axle on a horizontal plane when the rocker is tilted.



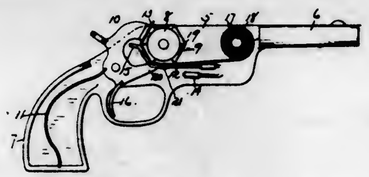
1,387,092. NUT-CASTELLATING MACHINE. LOUIS BARBER and EMMETT L. FILSON, Cleveland, Ohio, assignors to The National Screw and Tack Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,664. 12 Claims. (Cl. 10—7.)

1. In a nut castellating machine, a punch, a rotary holder for a nut blank, an endwise movable blank carrier having a die at its end for moving the blank into the rotary holder, said die adapted to enter the bore of the



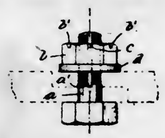
blank and having a slot to accommodate the end of the punch.

1,387,093. BASKET-MAKING MACHINE. WILLARD F. BARNES, Berkeley, Calif., assignor to S. V. Barnes, Berkeley, Calif. Filed May 20, 1920. Serial No. 382,920. 14 Claims. (Cl. 93—41.)



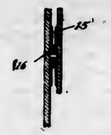
1. In a basket-making machine of the character described, a stationary mold-block, a cross-arm carrier carrying formers of such shape as to make the desired form of basket or other receptacle on each arm, mechanism by which said cross-arm is raised and lowered, and also given a revolving movement so that the reciprocating formers will co-act with the mold-block.

1,387,094. INTERCHANGEABLE NEEDLE-GUIDE. WILLIAM L. BARRON, Newark, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 25, 1918. Serial No. 255,692. 15 Claims. (Cl. 112—227.)



1. In a sewing machine, a reciprocating needle, and a guide therefor adjustable in a single movement transversely of both the needle-path and the line of seam-formation.

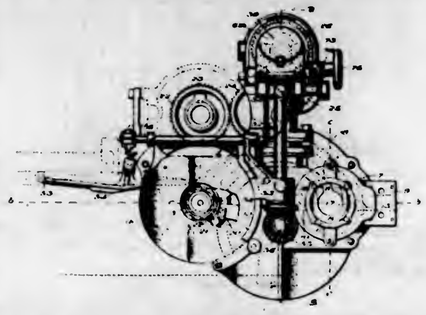
1,387,095. TOY PISTOL. CHARLES A. BAILEY, Cromwell, Conn. Filed May 28, 1919. Serial No. 300,419. 3 Claims. (Cl. 42—57.)



1. A toy pistol comprising a frame, a cap feeding wheel rotatably mounted on the frame and having an angularly shaped periphery and a guide having an angular shape to correspond with the angles of said wheel, said guide being pressed into contact with said wheel to coöperate therewith in feeding a tape therealong.

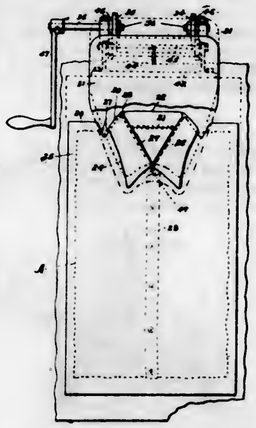
1,387,096. NUT-LOCK. ARTHUR J. BENSON, Malden, Mass. Filed Sept. 13, 1920. Serial No. 409,824. 1 Claim. (Cl. 151—4.)

A screw-threaded bolt having a longitudinal slot in its threaded portion, a nut and a washer on the bolt, said washer having an aperture therethrough between its outer and inner peripheries and having a recess in its inner side leading from said aperture to the washer opening, and a tongue disposed in said slot and longitudinally movable therein beneath the bottom of the screw threads, the inner end-portion of said tongue being extended transversely into said washer recess and through said aperture and having a headed end, to lock the same to the washer and the outer end portion of the tongue being adapted to be bent into engagement with the nut, to hold the same from turning.



1,387,097. TOY DOLL. WILLIAM E. BENTON, San Francisco, Calif. Filed May 18, 1920. Serial No. 382,297. 5 Claims. (Cl. 46—40.)

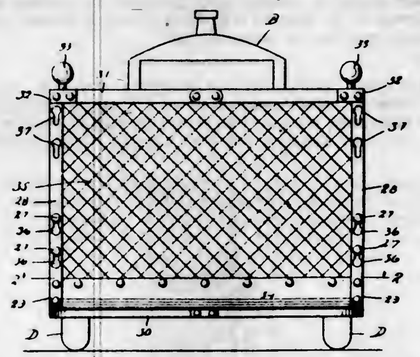
1. A joint for paper dolls and the like comprising a pair of disks riveted together in a manner to rotate relative to each other, the outer faces of said disks being treated with an adhesive material whereby the disk may be secured between parts to be pivoted.



1,387,098. CAN-END-FEEDING DEVICE. CHARLES E. BRAIT and GEORGE FLUCK, Syracuse, N. Y., assignors to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed June 28, 1919. Serial No. 307,414. 5 Claims. (Cl. 113—1.)

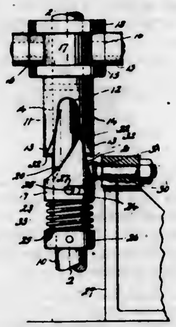
1. The combination of a supporting bracket having a can end seat at the seaming station, a stack-holder, a can end race formed in said bracket and leading from the stack-holder to the can end seat, a continuously rotating member adapted to engage the can end at the stack-holder and move the same along said can end race to said

can end seat at the seaming station, and rotating marking dies for impressing an identifying mark in the can end as it passes along said can end race and without stopping the movement of the can end.



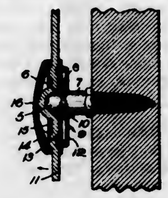
1,387,099. WORK-SHIRT PRESS. BLUFORD W. BROCKETT, Cleveland, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 9, 1916. Serial No. 119,200. 12 Claims. (Cl. 68—9.)

2. A garment pressing machine, comprising upper and lower relatively movable pressing members, a pressing plate or form upon which the garment is arranged, said plate or form having a recess in one end with substantially straight diverging edges for receiving and holding the collar during the pressing operation, and a holding plate lying above said pressing plate or form holding the garment collar down upon the same, and means for yieldingly pressing said holding plate down upon the garment when said pressing members are out of coöperative pressing relation.



1,387,100. SAFETY FENDER FOR AUTOMOBILES. THOMAS F. BUCK, New Castle, Pa. Filed May 17, 1921. Serial No. 470,375. 5 Claims. (Cl. 293—54.)

1. A safety fender attachment for automobiles comprising a pair of forwardly extending arms secured to the frame bars of an automobile, and a fender proper detachably connected with the forward extremities of said

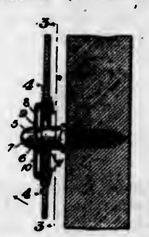


arms, the fender proper being capable of being mounted in inverted position to space it farther from the ground for avoiding obstructions.

1,387,101. MECHANICAL MOVEMENT. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 8, 1920. Serial No. 364,292. 25 Claims. (Cl. 74—1.)

4. The combination with a reciprocating shaft; of means for imparting a rotary movement thereto during its reciprocation, said means comprising a cam fixed to said shaft, and a second cam movably mounted thereon, said cams being so arranged that parts of one cam project into the open space between portions of the other cam.

1,387,102. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,768. 2 Claims. (Cl. 24—218.)



2. A separable fastener comprising, in combination, a stud having a head and a neck, a shank portion, a sloping shoulder between said neck and said shank portion, a socket including a fixed jaw and a spring jaw engaging opposite sides of the neck of said stud, said stud and socket when engaged separable only when an outward pull is exerted on that side of the socket where the spring jaw is located, thereby to tip the stud and socket one relative to the other by a rocking movement about said fixed jaw as an axis, said fixed jaw adapted to ride up said sloping shoulder and to wedge the stud and socket into engagement one with the other when an inwardly directed push is exerted on that side of the socket where the fixed jaw is located.

1,387,103. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,769. 3 Claims. (Cl. 24—218.)

1. A separable fastener comprising, in combination, a stud having a head and a neck, a socket providing a stud-receiving aperture therein having at one side thereof a fixed jaw for engagement with the neck of the stud, and on the other side thereof resilient means for pressing the neck of the stud into engagement with said fixed jaw, the shoulder between the neck of the stud and the head thereof being inclined, and the neck-engaging face of the fixed jaw being rounded in longitudinal section.

1,387,104. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,770. 4 Claims. (Cl. 24—218.)

1. A stud and socket fastener comprising, in combination, a stud having a head providing a sloping shoulder and a socket providing opposed jaws, one resilient, the other fixed, positively opposing rectilinear withdrawal of said stud from said socket, while permitting withdrawal thereof when said stud and socket are tipped one relative to the other, said fixed jaw being located above the stud and inclined inwardly and downwardly from the face of the socket.

1,387,105. SEPARABLE FASTENER. LARS ANDREW LARSSEN, Boston, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,771. 10 Claims. (Cl. 24—214.)

1. A stud for separable fasteners including a head, a neck, a shank portion and a base portion, the combined length of said head, neck and shank positions being substantially greater than the diameter of any of them, said

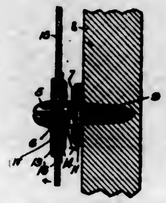
head portion, said neck portion, said shank portion and a part of said base portion being slotted to provide a re-

silient stud having the resiliency initiating in the base portion.

1,387,106. SEPARABLE FASTENER. LARS ANDREW LARSSEN, Boston, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,772. 3 Claims. (Cl. 24—214.)

1. A separable fastener comprising, in combination, a stud having a head and a neck, and a springless socket, said socket providing on one side of the fabric means for engaging the neck of said stud, and on the other side of the fabric means for limiting the direction of possible relative tipping movement of said stud and socket.

1,387,107. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,773. 6 Claims. (Cl. 24—214.)



1. A stud comprising, in combination, a head, a primary neck and a secondary recess, said stud being resilient, and providing a greater degree of resiliency adjacent the primary neck than adjacent said recess.

1,387,108. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,774. 8 Claims. (Cl. 24—214.)

1. An element for separable fasteners comprising, in combination, a pronged member for attachment to one side of a flexible carrier and a single part for attachment to the opposite side of the flexible carrier, said integral part providing integral anvil portions for turning the prongs of the pronged member and integral holding portions engaging the turned prongs.

1,387,109. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,775. 7 Claims. (Cl. 24—214.)

5. A split stud for separable fasteners having a base flange slotted to provide resiliency and a securing part having a head secured to said stud rearwardly of said slotted base flange and spaced therefrom adjacent the resilient portion thereof.

1,387,110. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,785. 4 Claims. (Cl. 24—218.)

3. A separable fastener comprising, in combination, a stud having a head and a neck, a socket having a plate providing an aperture therethrough, a spring providing a plurality of stud-engaging points intersecting said aperture and spring-supporting elements projecting from said casing adjacent said aperture.

1,387,111. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,776. 4 Claims. (Cl. 24—218.)

1. A fastener comprising, in combination, a stud having a head and a neck, and a socket providing at one side thereof a stud-receiving aperture providing a relatively shallow notch at at least one side thereof, said socket having a spring portion intersecting at least one side of said aperture at an angle relative to a line passing through the center of the aperture and the center of the notch.

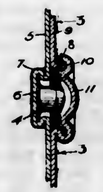
1,387,112. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,777. 5 Claims. (Cl. 24—218.)

1. A separable fastener comprising, in combination, a stud and socket including a plate having flanged marginal portions, a spring retained in said socket beneath said

flanged marginal portions, an aperture in said plate providing a narrowed portion at one side of said aperture,

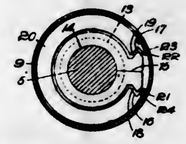
said stud and socket being proportioned to permit engagement of said stud with said spring from either side of said socket.

1,387,113. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,778. 3 Claims. (Cl. 24—218.)



1. A separable fastener comprising, in combination, a stud having a head and a neck, and a socket comprising a casing having an aperture therethrough and providing wedge surfaces for engagement with the neck of the stud under lateral strain, and a spring part pressing said stud toward said wedging portions.

1,387,114. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,779. 5 Claims. (Cl. 24—218.)

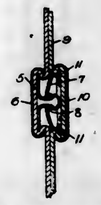


1. A socket for stud and socket fasteners comprising, in combination, a casing having a continuous lip flanged inwardly to retain a spring, said lip being extended at one side to overlie the ends of the spring.

1,387,115. SEPARABLE FASTENER. ANDREW G. ANDERSON, Wollaston, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,786. 7 Claims. (Cl. 24—217.)

1. A separable fastener comprising, in combination, a stud having a head and a neck, and a socket providing a spring having an opening at one side thereof and a spring casing, said spring and spring casing providing co-operating cam means tending to hold the spring closed about the neck of the stud entered therethrough when lateral strain is exerted between stud and socket.

1,387,116. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,787. 5 Claims. (Cl. 24—217.)



1. A separable fastener comprising, in combination, a stud having a head and a neck, and a socket containing a spring, said spring providing a stud-receiving aperture and an opening at one side thereof, said spring having oppositely disposed cam surfaces on each side of the opening, said cam surfaces all located on projections from the spring and adapted to coöperate with corresponding cam surfaces independent of the spring.

1,387,117. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,788. 2 Claims. (Cl. 24—208.)

2. A socket for separable fasteners having a dished casing providing a flange, and an expansible part secured to said casing by said flange; and socket-securing means including a flanged-over rim beneath which said expansible part may press the fabric to secure the socket to the fabric and hold said parts in assembled relationship.

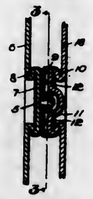
1,387,118. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,789. 1 Claim. (Cl. 24—208.)

A socket for separable fasteners comprising, in combination, a casing having a relatively large face portion and a stud receiving aperture therein, a rim for said face portion provided with expansible lip means, a casing-securing part having a flanged-over rim, said lip means expanded to interlock with the flanged-over rim of the casing-securing part.

1,387,119. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,790. 4 Claims. (Cl. 24—208.)

4. A socket for separable fasteners comprising, in combination, a spring-containing casing, having a flanged-over

rim, a socket-securing part having prongs projecting therefrom for engagement beneath the rim of said casing, said



socket-securing part being dished to throw the socket-carrying fabric toward the face of the socket.

1,387,120. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,791. 2 Claims. (Cl. 24—218.)

1. A socket for separable fasteners comprising, in combination, a casing having a notched stud-receiving aperture, a spring in said casing, a metallic securing device rotatably engaging said casing and means for fastening said securing device to a carrying part while leaving said casing free to rotate relative thereto.

1,387,121. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920, Serial No. 351,792. Renewed Apr. 23, 1921. Serial No. 463,907. 2 Claims. (Cl. 24—218.)

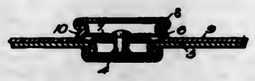
1. A socket for separable fasteners comprising, in combination, a dished spring-carrying plate having a tubular projection providing a stud-receiving recess, and securing means for fastening said spring-carrying plate to a fabric, said securing means proportioned to enter said dished spring-carrying plate and wedge the fabric therein, and having a hole therein through which said tubular projection and the adjacent fabric may pass.

1,387,122. SEPARABLE FASTENER AND MEANS FOR SECURING ITS STUD TO CARRYING FABRICS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,793. 4 Claims. (Cl. 24—208.)

1. A separable fastener comprising, in combination, a socket, a stud for engagement with said socket, said stud having a base, and securing means for securing the stud to its carrying fabric, said securing means having marginal flange means extending in the direction of the base

of the stud and effective to bring the stud-carrying fabric to a plane on the stud side of the stud base while forming a pocket about the stud of sufficient area to receive the socket.

1,387,123. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,794. 6 Claims. (Cl. 24—218.)



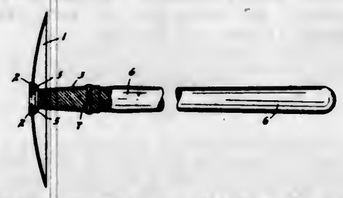
1. A separable fastener comprising, in combination, a stud having a head and a neck; a socket having a spring-containing casing containing a spring and having plates on each side of the spring, each of said plates being apertured to receive the head of the stud, the sides of each aperture being notched and said stud enterable into said socket from either side.

1,387,124. SEPARABLE FASTENER AND MEANS FOR SECURING ITS SOCKET TO CARRYING FABRICS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,795. 3 Claims. (Cl. 24—208.)

1. A socket for separable fastener comprising a casing having projections thereon, distortable inwardly, and casing securing means on the opposite side of the socket-carrying fabric over which said projections may be bent with the fabric interposed between the casing securing means and the projections on the casing.

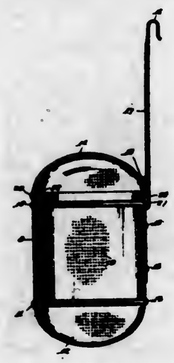
1,387,125. SEPARABLE FASTENER AND MEANS FOR SECURING ITS SOCKET TO CARRYING FABRICS. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1920. Serial No. 351,796. 4 Claims. (Cl. 24—216.)

3. A metallic-secured socket for separable fasteners comprising a casing and a securing ring, said casing of one



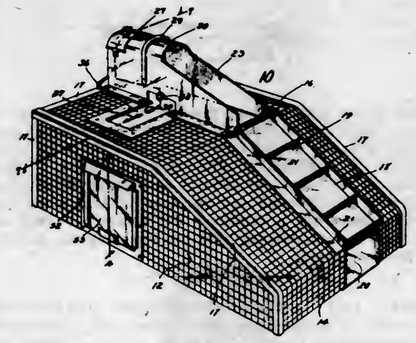
piece providing a stud-receiving aperture and a peripheral upstanding rim, parts of said rim overlying and underlying said ring with the socket-carrying fabric interposed and with the fabric exposed above said casing.

1,387,126. SEPARABLE FASTENER. MOSES F. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 24, 1920. Serial No. 353,758. 6 Claims. (Cl. 24—218.)



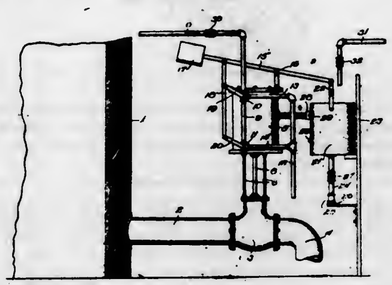
1. A socket for separable fasteners comprising, in combination, a spring-containing element having an expansible part or parts and coöperating securing means for securing the spring-containing part to a carrying fabric, said securing means located on the opposite side of the fabric from said spring-containing element and providing spreading means effective through the fabric for expanding said expansible part or parts, said securing means also providing means coöperating with said expansible part or parts for gripping the fabric.

1,387,127. CULTIVATING-HOE. RALPH D. CHURCH, Dallas, Tex. Filed Dec. 31, 1920. Serial No. 434,267. 4 Claims. (Cl. 55—5.)



1. A garden implement comprising a circular disk having a continuous cutting edge formed thereon and an operating handle secured at the center thereof.

1,387,128. COFFEE-PERCOLATOR. HENRY COWAN, New York, N. Y. Filed Oct. 25, 1920. Serial No. 419,181. 4 Claims. (Cl. 53—3.)



1. An article as characterized comprising an open-ended container; a suspension member rigidly attached thereto: a removable cover for said container, said cover having an outwardly projecting reinforcing ridge adjacent the open edge thereof; a locking member permanently formed on said suspension member for engaging said ridge when said cover is installed in service.

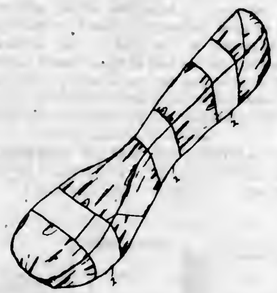
1,387,129. TRAP. WILLIAM I. CROYLE, Heilwood, Pa. Filed Feb. 14, 1921. Serial No. 444,857. 3 Claims. (Cl. 43—70.)

1. A trap including a closure member having a portion of the top cut away adjacent to one end of the top to afford an entrance, a balanced tilting platform pivotally supported in said entrance, a latch carried by the tilting platform adjacent to the end of the closure member, a spring mounted on the end of the closure member having a catch on it supper end for coöperating with said latch and a trigger coöperating with said catch for releasing it from the latch for allowing the platform to tilt downwardly.

1,387,130. AUTOMATIC VALVE CONTROL. THOMAS CURRAN, Chillicothe, Ill. Filed Nov. 13, 1919. Serial No. 337,881. 4 Claims. (Cl. 137—68.)

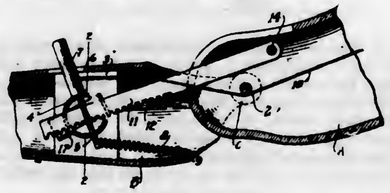
1. The combination of a discharge pipe, a control valve therefor, a cylinder, a piston in said cylinder connected with the control valve, a three-way valve at each end of the cylinder, an inlet and outlet pipe connected with said three-way valves, a weighted lever connected with said three-way valves, a movable bucket connected with said lever, means for filling said bucket with liquid, and means for regulating the flow of the liquid into the bucket.

1,387,131. REGISTER ADAPTED TO BE APPLIED TO THE FLOORS OR FOOTBOARDS OF AUTOMOBILES. CLARK A. DEAN, St. Louis, Mo., assignor, by mesne assignments, to Stark-Inland Machine Works, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 13, 1919. Serial No. 270,808. 6 Claims. (Cl. 98—49.)



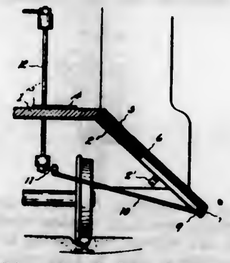
6. A device of the character described, comprising a relatively flat top plate extending across an opening in a

floor board and having a plurality of integral cross members extending from the marginal portions of the plate, said plate having rebent folds reinforcing marginal portions thereof and for a portion of their length lying in contact with the under sides of the plate and engaging the surface of the floor board, said rebent folds from a point near their outer ends being spaced from the bottom of the marginal side parts of the plate to provide receiving and guiding pockets, a movable slide beneath said plate, said



slide having side portions disposed within the space between the marginal folds of the plate, and adapted to be moved into and out of registration with the cross pieces thereof, in combination with means disposed at right angles to the plate and directly underlying the same for deflecting air through the openings in said plate, said means comprising a relatively flat deflector having side portions and outstanding ears for attaching the deflector to the floor board.

1,387,132. METHOD OF PACKING SILVERWARE. CONSTANT K. DECHERD, Middletown, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,563. 2 Claims. (Cl. 206—46.)

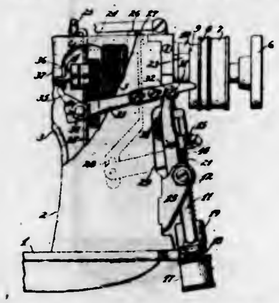


1. The method of packing silver-ware consisting in wrapping the article in paper containing a sulfid neutralizer and coating the package with a water-proof substance.

1,387,133. ARTIFICIAL LIMB. DAVID W. DORRANCE, San Jose, Calif. Filed Oct. 19, 1920. Serial No. 417,991. 6 Claims. (Cl. 3—12.)

1. The combination with the upper and lower arm section of an artificial arm and an elbow joint connecting the same, of a rack bar pivotally attached to the upper arm section and extending downwardly into the lower arm section, a tubular cylindrical member extending crosswise of the lower arm and having a limited turning movement therein, said cylinder having a pair of opposed slots formed therein through which the rack bar extends, means normally holding the cylinder in a position where the bottom edge of one of the slots will engage the teeth of the rack bar, and other means for turning the cylinder to disengage the teeth.

1,387,134. APPROACHWAY FOR PLATFORMS OF CARS. LOUIS DUFEK, Cashalis, Wash. Filed Apr. 20, 1920. Serial No. 375,864. 2 Claims. (Cl. 105—436.)

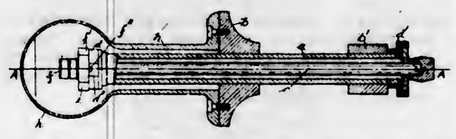


1. An extensible approach for cars comprising an inclinedly disposed base, a superstructural body slidably mounted upon said base, a plurality of linked together steps and risers pivotally attached to the upper end of said base and to said superstructural body, means for actuating said superstructural body whereby said entrance approach can be caused to assume either an inclined plane surface when extended or a step formation when contracted and a locking device for the actuating means.

1,387,135. SNAP-FASTENER. WALTER H. FARNHAM, Bucksport, Me. Filed Mar. 30, 1921. Serial No. 456,954. 5 Claims. (Cl. 24—226.)

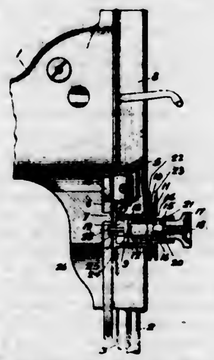
5. In combination with an eye plate having a slot and a bridge bar straddling the slot, the plate being downwardly inclined at one side of the slot to form a guiding surface, and a hook plate embodying a hook adapted to engage beneath the bridge bar, the initial engagement of the hook with the bridge bar being made at the opposite side of the bridge bar from the downwardly inclined portion of the plate, said hook and eye plate each embodying a hump, said humps frictionally engaging during the insertion of said hook beneath said bridge bar.

1,387,136. POWER-TRANSMITTER. JOHN S. FINCH, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed July 25, 1917. Serial No. 182,654. 5 Claims. (Cl. 192—116.)



1. In a stop-mechanism, the combination with a driving shaft and means for rotating the same, of coöperating elements operating first in one direction for frictionally retarding the rotation of said shaft with a braking effect varying proportionally with the speed of rotation of the shaft and operating subsequently in a direction substantially transversely to said first mentioned direction to arrest the rotation of the shaft.

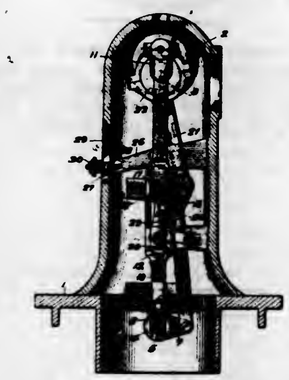
1,387,137. ALARM FOR AUTOMOBILE-JACKS. LOUIS M. FISHER, Clarksdale, Mo. Filed Aug. 26, 1920. Serial No. 406,070. 2 Claims. (Cl. 254—1.)



1. In combination with an automobile jack employing a swinging member, of a gong arranged adjacent to said member, a clapper pivoted adjacent to said gong, a spring normally holding said clapper retracted from said gong, an end of said spring slidably engaged with said clapper, and a contact member on said swinging member adapted to engage said spring end when moved in one direction to first retract the spring and the clapper and then to release the same to the action of said spring.

1,387,138. SEWING-MACHINE. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed Feb. 4, 1919, Serial No. 274,902. Renewed June 1, 1921. Serial No. 474,297. 8 Claims. (Cl. 112—215.)

1. A sewing machine comprising co-axial feed and looper shafts, means for oscillating the feed shaft, means for rotating the looper shaft, a cam fixed on the looper shaft, and a vertically and laterally reciprocating feed dog receiving positive upward and downward movement from the cam and lateral reciprocation from the feed shaft.

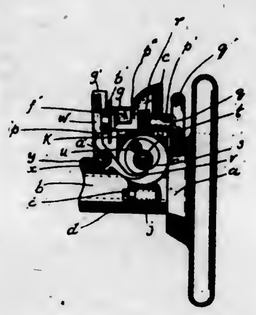


1,387,139. TENSION FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed Apr. 30, 1919, Serial No. 293,664. Renewed June 1, 1921. Serial No. 474,298. 9 Claims. (Cl. 112—238.)

1. A tension device, having a pair of oppositely arranged disks, one of which is stationary and the other movable, telescoping tubular extension portions on said disks and made as parts thereof, a tension spring concealed within said tubular extension portions, and means to vary the tension of the spring.

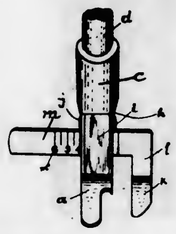
5. A tension device, having a pair of oppositely arranged disks, one of which is stationary and the other movable, telescoping tubular extensions on said disks, a tension spring concealed within said tubular extensions, a post extending through the disks and their extensions, an adjusting nut applied to one end of the post and a movable pin applied to the opposite end of the post with the tension spring interposed between them, and a presser-foot lifter having a face-cam to act upon the pin to release the tension upon the needle thread.

1,387,140. STITCH CONTROL FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed May 5, 1919, Serial No. 294,675. Renewed June 1, 1921. Serial No. 474,299. 1 Claim. (Cl. 112—210.)



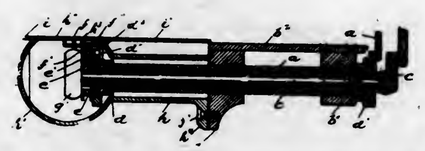
In a stitch control mechanism for sewing machines, a driving mechanism, a driven feed shaft, and a compound lever mechanism interposed between and connected with these shafts, comprising an arcuate rocking link provided with an undercut groove, a slotted link having one end connected with the feed shaft, and having at its other end a roller movable lengthwise of said groove for varying the length and direction of the feed, a link pivotally connected at one end with the arcuate link, and at the other end with the driving mechanism for imparting the rocking motion to the feed shaft, a bell crank having one arm provided with a pin movable in the slot of the first mentioned link, and having its other arm forked, and a slide engaging the forked arm of the bell crank lever and moving it to adjust the roller in the arcuate link.

1,387,141. BOBBIN-WINDING MECHANISM FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed Feb. 4, 1920, Serial No. 356,202. Renewed June 1, 1921. Serial No. 474,300. 2 Claims. (Cl. 242—22.)



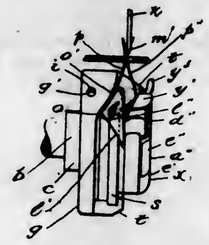
2. A bobbin winding mechanism for sewing machines comprising a supporting member, a spring pressed rocker arm pivoted to the supporting member having bobbin spindle bearings, one of which has a flattened detent engaging surface, a bobbin spindle journaled in the bearings having a friction wheel adapted to engage the fly wheel of the machine, a pivoted detent engaging the flattened surface of the bearing and holding the friction wheel in con-

tact with the fly wheel, and a cast off arm for the detent adapted to be engaged by the thread wound on the bobbin



for releasing the detent from the flattened surface of the bearing as the winding proceeds.

1,387,142. COMBINED PRESSER-FOOT AND WORK-GUIDE FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed Feb. 4, 1920. Serial No. 356,203. Renewed June 1, 1921. Serial No. 474,301. 3 Claims. (Cl. 112—151.)



1. A work guide for a sewing machine comprising a guide foot having a horizontal arm provided with a lengthwise rib, in combination with a presser foot having a vertical member formed with a transverse recess to receive the horizontal arm of the work guide and of a height sufficient for its vertical adjustment, horizontal grooves being formed in the wall of said recess to receive the rib and maintain the vertical adjustment of the work guide.

1,387,143. SEWING-MACHINE. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Original application filed Feb. 4, 1919, Serial No. 274,902. Divided and this application filed Feb. 4, 1920, Serial No. 356,204. Renewed June 1, 1921. Serial No. 474,302. 5 Claims. (Cl. 112—260.)

1. In a sewing machine, the combination of the feed and looper mechanisms, and a housing therefor comprising a spheroidal part and a horizontally extending tubular part constricted with regard to the spheroidal part and carrying the latter at the end thereof.

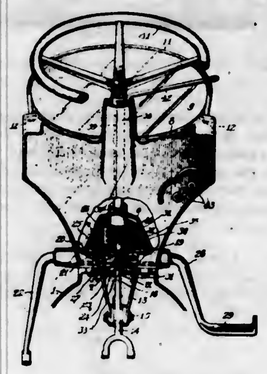
1,387,144. STITCH-FORMING MECHANISM FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed Feb. 7, 1920, Serial No. 357,017. Renewed June 1, 1921. Serial No. 474,303. 4 Claims. (Cl. 112—228.)

1. In a sewing machine, a stitch forming mechanism comprising a stationary thread case having a peripheral loop holder, and a rotary loop taker formed with a thread case cavity in which the thread case is journaled, and with a segmental frusto-conical loop deflector, partly encircling the thread case, having at its forward end a single beak moving in rear of the needle path, for entering the loop, drawing it through the needle eye, and passing the needle side of the loop across the back of the thread case, the beak having a thread race for directing the work side of the loop on the loop deflector to be passed by it across the front face of the thread case during the revolution of the loop taker.

1,387,145. FEEDING MECHANISM FOR SEWING-MACHINES. JAMES ALEXANDER FLANAGAN, Toronto, Ontario, Canada. Filed June 17, 1919, Serial No. 304,702. Renewed June 9, 1921. Serial No. 476,345. 5 Claims. (Cl. 112—215.)

1. A feeding mechanism for sewing machines comprising a reciprocating feed slide, having an open center, a hollow feed shaft, a looper shaft extending through the feed shaft, a cam on the looper shaft within the open center of the slide, causing its reciprocation, a feed dog having a lateral sliding connection with the slide for reciprocation therewith, and means rocked by the feed shaft, causing the reciprocation of the feed dog laterally with respect to the slide during its reciprocation by the cam.

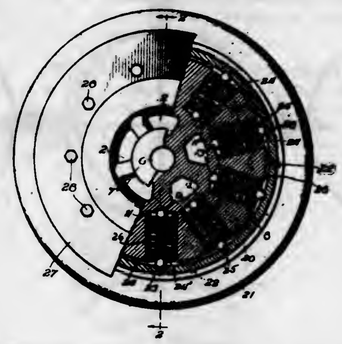
1,387,146. UMBRELLA. PHILIP C. FOLWELL, Vancouver, British Columbia, Canada. Filed July 24, 1919. Serial No. 312,880. 3 Claims. (Cl. 135—30.)



3. A means for securing the upper end of the ribs of the umbrella to the crown and the lower ends of the stretchers to the runner, said means comprising a central stick having socketed joines adjacent the crown and runner in the male member of each of which joints is a circumferential groove, a crown secured to the stick adjacent one socketed joint, a runner endwise movable on the stick, the adjacent edges of which crown and runner are outwardly and inwardly turned to form a circumferential groove in each and radially slotted for the reception of the rib and stretcher ends, ribs and stretchers the ends of which are T shaped and adapted to fit the slotted

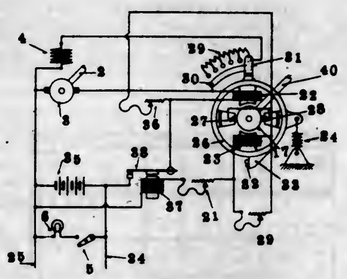
groove of the crown and runner respectively, means for securing the socketed joints, and means for releasing such

securing means that the groove of the male member of each joint may be brought adjacent the groove of the crown and runner respectively.



1,387,147. DASH-ASSEMBLY AND CONTROLLING DEVICE. HENRY FORD, Dearborn, Mich. Filed July 17, 1918. Serial No. 245,427. 19 Claims. (Cl. 180—90.)

1. A dash assembly for tractors comprising a housing adapted for mounting on a transmission casing, a steering arm journaled therein and extending at one side of the transmission casing, a clutch pedal journaled in said housing and extending at the opposite side of said transmission casing, a dash carried by said housing, and steering means on said dash for said steering arm.

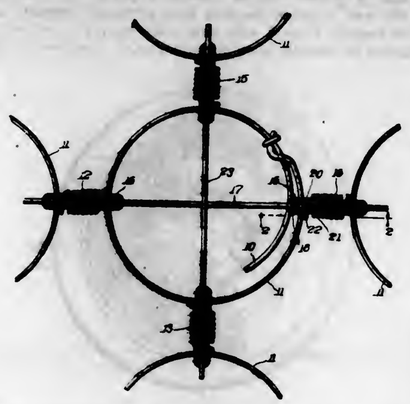


1,387,148. VEHICLE-WHEEL. ALBERT B. FUHR, Macomb, Ill. Filed Apr. 10, 1920. Serial No. 372,747. 2 Claims. (Cl. 152—29.)

1. A vehicle wheel comprising a hub, a plurality of radially extending spokes, a web formed integrally with said spokes and arranged concentrically with respect to said hub, said web having a plurality of radially extending cylindrical chambers formed therein and positioned at spaced distances apart around its periphery, having also a radially extending annular recess in one side adjacent its outer edge, and having an integral radially extending flange positioned at its opposite outer edge, said flange having a groove formed therein adjacent the periphery of the web, a closed resilient felly arranged concentrically with respect to said web, said felly having a lateral lug adapted to loosely work in said groove, resiliently yield-

ing means disposed in the chambers formed in said web and arranged to exert an outward thrust against the inner surface of said resilient felly, a resilient rim rigidly secured to said resilient felly, a tire mounted on said rim, and a removable annular flange arranged to have its inner portion secured within said first named annular recess in said web.

1,387,149. VOLTAGE-REGULATING APPARATUS. VALERE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 26, 1918. Serial No. 241,994. 4 Claims. (Cl. 171—229.)

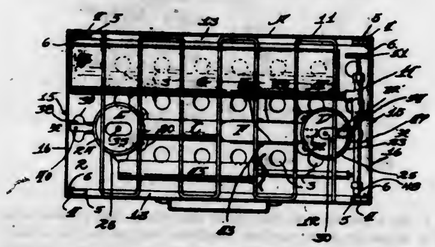


1. In apparatus of the class described, the combination of a main dynamo-electric machine, means for regulating the voltage thereof, and an auxiliary dynamo electric machine having both members movable, one of said members being provided with a commuted winding closed along an axis displaced from the axis of magnetization of the other member and one of said members being connected to actuate the voltage regulating means, and means for supplying to said auxiliary machine a voltage proportional to that produced by the main machine.

1,387,150. BED-SPRING. CHARLES H. GAIL, Cincinnati, Ohio, assignor to The Shott Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 22, 1921. Serial No. 463,633. 4 Claims. (Cl. 5—29.)

1. In a bed-spring, the combination of an upright spiral-spring, a horizontal helical-spring having an end loop overlying the top coil of said spiral-spring, and a wire having

a portion bent down through said loop inside of said top coil, then passing beneath the wire forming said top coil,



then extending upwardly through said loop, then over the top of one side of said loop, and then down over the side of the loop.

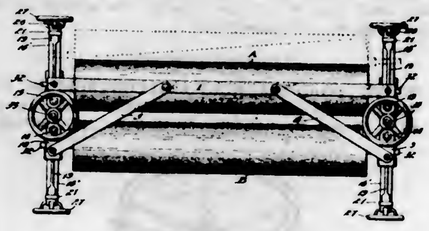
1,387,151. METHOD OF TREATING PHOSPHATE ROCK. WALTER GLAESER, Brooklyn, N. Y., assignor, by mesne assignments, to Potash Extraction Corporation, New York, N. Y., a Corporation of New York. Filed May 1, 1916. Serial No. 94,008. 2 Claims. (Cl. 71—7.)

1. A process of treating phosphate rock, the steps of which consist in grinding phosphate rock, heating the same with sodium carbonate and carbon, leaching out the water soluble phosphate product and treating the same with carbonic acid.

1,387,152. FOLDING CAMP-STOVE. HANS C. HANSON, Albert Lea, Minn., assignor to American Gas Machine Company, Albert Lea, Minn., a Corporation of Minnesota. Filed July 21, 1917. Serial No. 181,938. 9 Claims. (Cl. 126—38.)

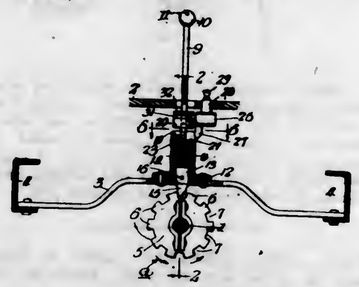
1. A folding camp stove having in combination a substantially rectangular casing having a perforated bottom, a stove having a plurality of burners fixedly secured to said bottom, said burners being disposed wholly within said casing, legs at each corner of said casing adapted to be received therein, said bottom having holes through which the legs are adapted to be extended when the stove is set up for use, and means on said casing for holding said legs extended.

1,387,153. DETERGENT. SIDNEY A. HARTMANN, St. Louis, Mo. Filed June 30, 1919, Serial No. 307,603. Renewed June 24, 1921. Serial No. 480,192. 6 Claims. (Cl. 87—5.)



1. A detergent composed of castile soap, ammonia, and potassium nitrite.

1,387,154. COT-BED. ARTHUR O. HUBBARD, Minneapolis, Minn. Filed Nov. 14, 1917. Serial No. 201,935. 3 Claims. (Cl. 5—5.)

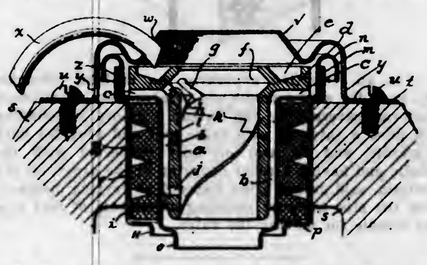


1. A folding bed comprising side rails, a flexible bottom secured thereto, legs for said side rails, flange plates secured to the upper ends of said legs and embracing the corners thereof and projecting upwardly on each side of said rails and having a pivotal connection therewith at one side of the longitudinal axis of said legs, said plates having bosses formed therein, said rails having heads for entering said bosses for temporarily holding said legs in place and the upper ends of said legs being seated against the underside of said rails when said legs are unfolded.

1,387,155. MACHINE FOR STRAIGHTENING THE WEFT-THREADS OF TEXTILE PIECE GOODS. EMIL HUBER, Chester, Pa. Filed Mar. 12, 1920. Serial No. 365,199. 16 Claims. (Cl. 26—8.)

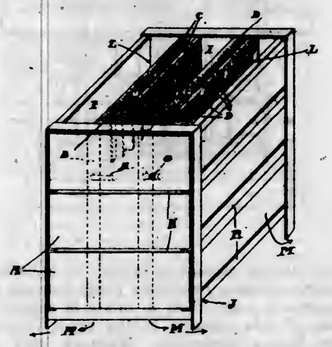
16. In a fabric tentering and stretching machine, the combination with the side bars of the frame, struts fastened at one end to the side bars and guide bars attached to the strut, or rolls, means for effecting angular adjustment of the rolls in one plane and means for effecting angular adjustment of the rolls in other planes.

1,387,156. LOCK FOR MOTOR-VEHICLES. JOSEPH H. IOO and WILLIAM T. MCKAY, Chicago Heights, Ill. Filed Sept. 24, 1920. Serial No. 412,519. 12 Claims. (Cl. 70—90.)



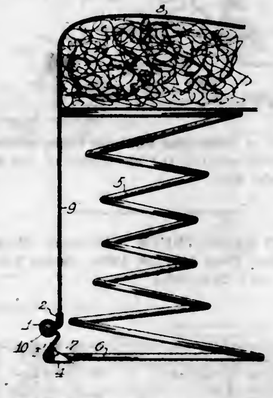
1. The combination with a shaft of a motor vehicle, of a locking mechanism, comprising two locking members, one fixed on said shaft to rotate therewith, and the other locking member being movably mounted on a fixed part of the motor vehicle and adapted to be moved into and out of locking engagement with the locking member on said shaft, said locking members having interlocking parts adapted when engaged in one position to lock the shaft against rotation in either direction, and when engaged in either one of two other positions to lock the shaft against rotation in one direction only.

1,387,157. WELDING AND BRAZING. ERNEST HENRY JONES, Canonbury, London, England. Filed Sept. 18, 1918. Serial No. 254,563. 3 Claims. (Cl. 29—182.)



1. In combination, a hollow member formed of a basic metal, an alloy and a welding mixture secured within said member.

1,387,158. YIELDABLE BEARING FOR CENTRIFUGAL MACHINES. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 373,651. 16 Claims. (Cl. 64—48.)



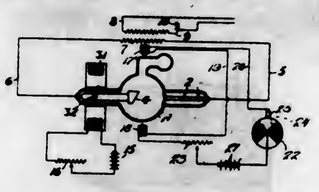
13. In a yieldable bearing for centrifugal machines, the combination of a bearing liner, means to feed oil to the upper end thereof, a shell around the liner, means affording passages for cooling air between the liner and shell and other passages, for flow of oil from the upper end outward, downward and inward to near the lower end of said liner, means to cause flow of oil within the bearing from the bottom to the top thereof, an oil shed from the top of the shell, a rubber cushion around the liner, and a cushion-surrounding member having its upper edge within and higher than the oil shed.

1,387,159. REFRIGERATOR. JOHN WALKER MCCRONE, Kansas City, Mo. Filed June 1, 1920. Serial No. 385,663. 2 Claims. (Cl. 62—130.)

1. In a refrigerator a salt and ice container, consisting of a plurality of rectangular shaped tanks, spaced apart from each other and connected at their ends, in such a manner as to make up a section having ice and salt tanks alternately with vertical air spaces between them; vertical wings or flanges extending from the sides of the ice and salt containers, sheets of fibrous or textile material disposed on the inner and outer surfaces of the salt and ice containers, whereby salt water is conveyed from the inside to the outside of the containers, and the vertical wings or flanges, for the purpose of preventing or removing frost and ice thereon.

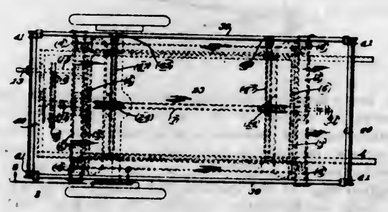
1,387,160. UPHOLSTERY-SPRING CONSTRUCTION. WILLIAM D. MCCULLOUGH and THOMAS MAHONEY, Detroit, Mich., assignors to Premier Cushion Spring Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 27, 1918. Serial No. 268,530. 14 Claims. (Cl. 155—180.)

1. In an upholstery spring construction wherein the upholstery is supported by spiral springs and the upholstery covering includes a marginal portion positioned to curtain the spring formation, a rim strip having a cross-sectional configuration to receive and secure the marginal edge of the curtain and support a spring turn, the strip configuration locating the secured edge and spring turn on the same side of the strip with the marginal edge of the curtain leading into the rim strip in a direction substantially transverse to the plane of the exposed curtain portion.



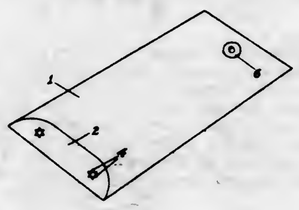
1,387,161. DISPLAY-FIXTURE. GERTRUDE M. MORRILL, San Francisco, Calif. Filed Mar. 1, 1920. Serial No. 362,466. 1 Claim. (Cl. 35—17.)

As an article of manufacture a hair dresser's advertising device consisting of a supporting member of thin



sheet-like material simulating, in elevation the shoulders and arms of a woman's form having the head turned to full profile view so as to effectually display, in full profile, an applied suit of hair to attractively advertise hair dressing or transformations.

1,387,162. X-RAY-TUBE-CONTROLLING MECHANISM. HARRY A. MULVANY and HARRY E. KENNEDY, Berkeley, Calif. Filed Jan. 24, 1918. Serial No. 213,475. 11 Claims. (Cl. 250—34.)

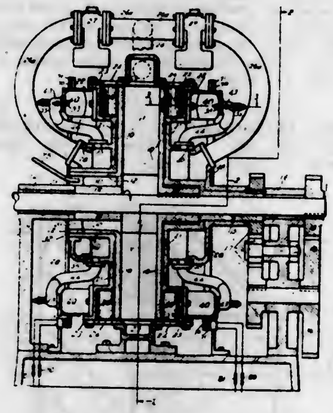


1. A method of rendering Röntgen tubes self-rectifying which consists in placing the electrodes of the tube in a field of magnetic flux.

1,387,163. DUMPING-TRUCK. RICHARD MUNZLINGER, St. Louis, Mo. Filed May 24, 1920. Serial No. 383,815. 21 Claims. (Cl. 214—85.)

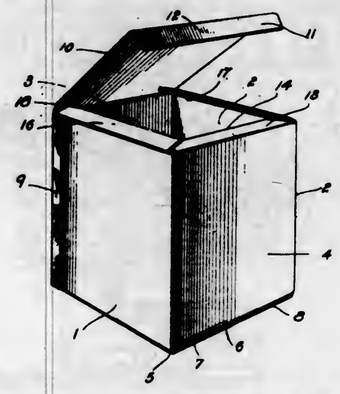
1. In a machine of the character described, the combination of a motor truck having a movable box mounted thereon, means for conveying said box to the ground-line, means for withdrawing said box from under the load therein, and means for holding said load in a stationary position while said box is withdrawn.

1,387,164. METHOD OF SEALING ENVELOPS. AMERICO NASSANO, San Francisco, Calif. Filed Aug. 16, 1919. Serial No. 318,034. 4 Claims. (Cl. 93—1.)



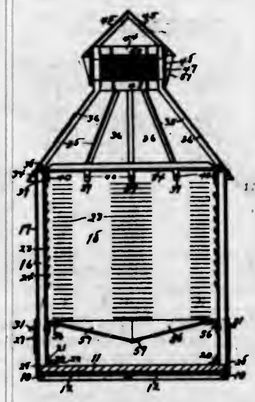
1. A method for securing superposed plies of flexible material together without any extraneous appliances, which consists of slitting the superposed plies to form a plurality of tongues about a common point, then bending collective tongues from said point, and folding them down over the contiguous face of one ply.

1,387,165. IRRIGATING APPARATUS. JAMES A. NORTON, Odebolt, Iowa. Filed June 4, 1920. Serial No. 386,575. 7 Claims. (Cl. 299—66.)



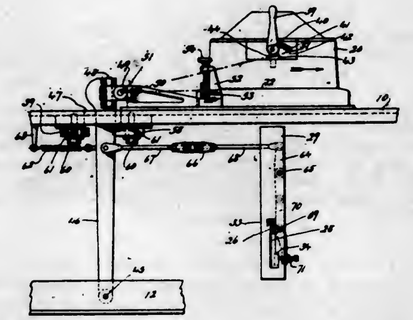
7. In an irrigating apparatus, an upright, revoluble pipe provided with a nozzle and a valve seat, a stationary platform traversed by and having a groove surrounding said pipe, a valve on said valve seat and provided with a spindle, and an arm pivotally connected with the spindle and having a roller engaging in the groove of the platform, said groove being disposed at varying distances from the pipe to cause swinging movements of said arm and spindle for moving the valve.

1,387,166. INTERNAL-COMBUSTION TURBINE. RICHARD PAZOS-MARTINEZ, Venice, Calif. Filed Aug. 5, 1918. Serial No. 248,433. 10 Claims. (Cl. 60—42.)



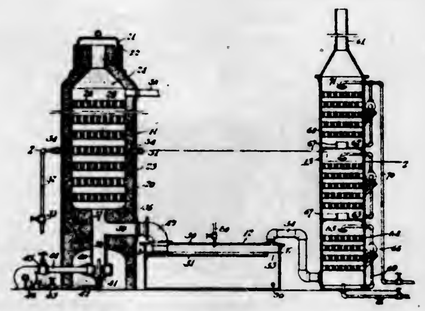
1. In an internal combustion turbine, the combination of two rotating elements, connection means between the two said elements to cause them to rotate in opposite directions, one of said elements having vanes thereon, and the other having combustion chambers with nozzles directing gases of combustion against the said vanes; and means to compress the combustible mixture into said combustion chambers embodying centrifugal means in the rotating element which carries the vanes.

1,387,167. CADDY-BOX. ARTHUR S. PECK, Lawrence, Kans., assignor to Lawrence Paper Manufacturing Company, Lawrence, Kans., a Partnership composed of M. G. Bowersock, Irving Hill, Paul A. Dinsmoor, Hortense B. Hill, Mary B. Dinsmoor, Jean B. Blackwelder, and Margery B. Dalton. Filed Mar. 22, 1920. Serial No. 367,671. 4 Claims. (Cl. 229—45.)



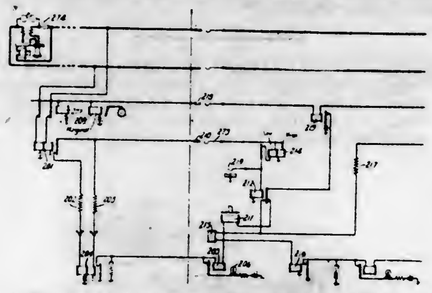
1. A caddy box consisting of a bottom, sides and ends with a swinging cover carried by one of the ends, inwardly projecting, yielding flaps on the upper edges of the sides, a flap on one end of the box and beneath the side flaps, and a depending flap on the free edge of the cover having a friction face for engagement with the face of the flap on the end of the box.

1,387,168. DRIER. WILLIAM E. PETTY, Providence township, Buena Vista county, Iowa. Filed May 12, 1919. Serial No. 296,314. 7 Claims. (Cl. 98—26.)



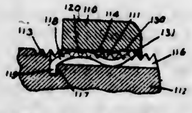
2. A drier provided with walls consisting of inner and outer shells and cross members between them forming a series of separated intervening flues, a central top ventilator, the interior being divided by a horizontal deflector to form an upper storage compartment and a lower heating compartment in communication at the periphery of the deflector, said deflector being inclined from its center upwardly to its periphery, a portion of the wall between two of said cross members and including less than the full height of the wall being hingedly mounted to form an entrance door, communication being provided between the top of the flue in said hingedly mounted portion and the flue in the remaining portion of the wall above the same, each flue, including the door portion, being provided in its outer shell near the bottom with screened air inlet openings and also being provided in its inner shell with horizontal slots affording communication with said storage compartment.

1,387,169. WIRE-DRAWING MACHINE. WILLIAM D. PIERSON, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 1, 1919. Serial No. 341,686. 8 Claims. (Cl. 205—16.)



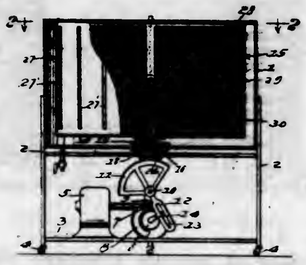
8. In a mechanism of the character described, the combination with a die block; of lever mechanism initiating the starting and stopping of said block; a movably mounted member; a connection between said movably mounted member and said lever mechanism whereby the movement of the former in one direction releases said lever mechanism; yielding means connected with said movable member and actuating the same in one direction; a die block connected with said movable member; and adjustable stop members for limiting the movement of said movable member in both directions.

1,387,170. PROCESS OF PRODUCING HYDROCYANIC ACID. ROBERT WADE POINDEXTER, Los Angeles, Calif., assignor to Poindexter and Company, a Copartnership. Filed July 6, 1920. Serial No. 394,343. 6 Claims. (Cl. 23—1.)



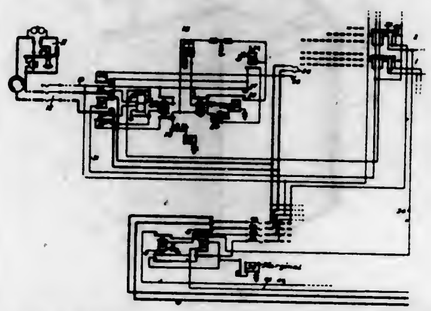
1. A process of producing hydrocyanic acid which comprises heating a hydrocarbon and injecting ammonia into said heated hydrocarbon.

1,387,171. **TELEPHONE-EXCHANGE SYSTEM.** Lipa Polinkowsky, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1919. Serial No. 278,178. 12 Claims. (Cl. 179—12.)



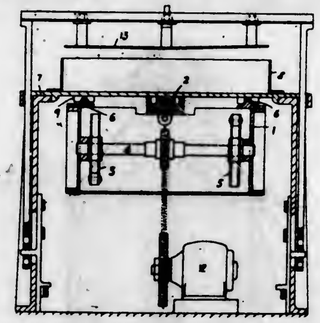
1. In a telephone system, telephone lines, an operator's position, connecting circuits for extending said lines to the operator's position, a register associated with each of said lines, automatic means for operating said registers during the release of the connecting circuits, and means under the control of the operator for rendering effective said automatic means.

1,387,172. **BOLT-LOCK.** Arthur F. Postel and Charles J. R. Postel, Indianapolis, Ind., assignors of one-fourth to Harry C. Krom and Charles D. Lockman, Indianapolis, Ind. Filed Aug. 20, 1920. Serial No. 404,734. 1 Claim. (Cl. 151—8.)



A locking device for male and female threaded members, each of said members being provided with an axially extending groove, said grooves being adapted to register with each other, and a resilient key member seatable in one of said grooves and adapted to project into the registering groove to lock the male and female threaded members together, said key member being provided with an angular end, and said key seating groove being provided with a depression to receive said key end to positively secure said key in said key-seating groove, said registering groove being provided with a cut-away portion and said key member being provided with an angularly extending portion seatable in said cut-away portion of said registering groove.

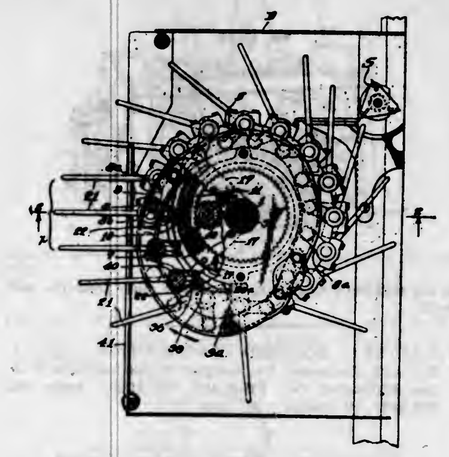
1,387,173. **CONVERTIBLE WASHING-MACHINE.** William E. C. Powell, Chicago, Ill. Filed May 15, 1919. Serial No. 297,248. 3 Claims. (Cl. 141—9.)



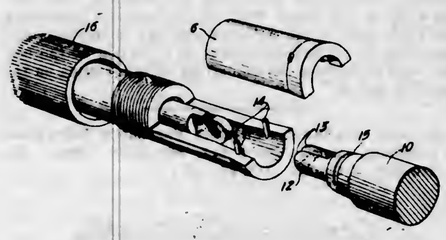
3. A receptacle having detachable interconnecting partition members each consisting of a frame formed with an inwardly extending lateral slot, whereby the members may be assembled in crossing relation with their side edges in the same planes, and covering means spanning the frames and provided with openings adapted for the passage of a fluid therethrough.

1,387,174. **MACHINE-SWITCHING TELEPHONE SYSTEM.** Winfred T. Powell, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1918. Serial No. 250,179. 8 Claims. (Cl. 179—18.)

1. In a telephone system, an arrangement of overflow trunks terminating at the outgoing end in line finding switches, and selector switches having over-run contact arrangements for actuating said line finding switches.



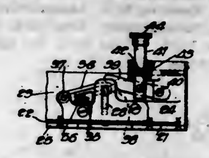
1,387,175. **APPARATUS FOR CONSOLIDATING GRANULAR SUBSTANCES IN MOLDS OR OTHER RECEPTACLES.** Frank George Price, Scotstoun, Glasgow, Scotland. Filed Sept. 1, 1920. Serial No. 407,490. 4 Claims. (Cl. 25—41.)



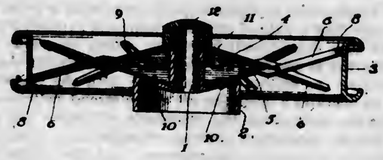
1. Apparatus for consolidating granular and other material comprising a carrier for the material to be consolidated, a bearing member having freedom for movement in directions transverse to one another and so disposed relatively to said carrier as by its movement to produce a tapping action on the carrier, and an unbalanced rotor rotatable relatively to said bearing member.

1,387,176. **COTTON-PICKER.** Theodore H. Price and Bruce Clark White, New York, and Walter J. Dudley, Brooklyn, N. Y.; said White and said Dudley assignors to said Price. Filed Dec. 7, 1917, Serial No. 206,000. Renewed Jan. 27, 1921. Serial No. 440,491. 10 Claims. (Cl. 56—118.)

1. In a cotton-picking machine, the combination of a revoluble picker-finger-carrying mechanism comprising a plurality of rockable carriers; a series of revoluble picker-fingers mounted in each carrier and each having a fixed pinion; mechanism for rocking the carriers and thereby determining the paths of the picker fingers during their travel; and a series of stationary arced racks with which the picker-finger pinions intermittently mesh during their travel.



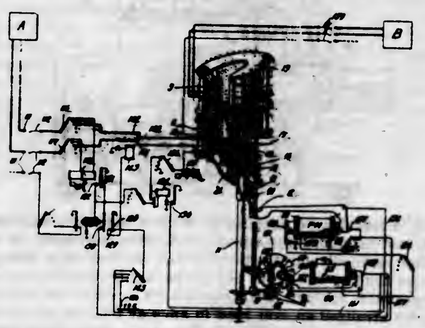
1,387,177. **FLEXIBLE SHAFT-COUPLING.** Charles E. Reddig, Kew Garden, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1920. Serial No. 409,375. 2 Claims. (Cl. 64—30.)



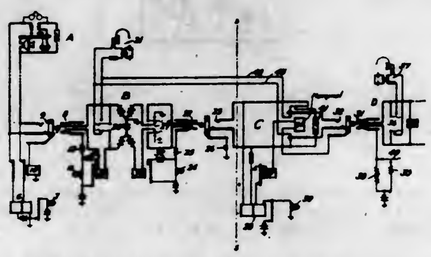
2. A shaft coupling comprising a rotatable driving member, a sleeve surrounding said driving member and having a removable portion, a driven member adapted for removable driving engagement with said driving member within said sleeve, there being a groove in said driven member, dowel pins adapted to coöperate with both portions of the sleeve and with the groove in the driven member, and a shell removably surrounding both portions of said sleeve and adapted to retain in place the removable portion of said sleeve.

1,387,178. **WATCHMAN'S CLOCK.** Thomas A. Rendle and Alois Beyer, Chicago, Ill., assignors to Hardinge Brothers, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1919. Serial No. 332,396. 6 Claims. (Cl. 234—39.)

1. In a watchman's clock the combination of a casing, a record receiving means therein, a recording element for making a record thereon, and devices for striking the recording element against the record receiving means, said devices comprising a pivoted recording element carrier, a finger-piece, a spring interposed between the finger-piece and carrier arranged to store energy applied to the finger-piece, and a resistance member preventing operation of the carrier until a certain predetermined amount of energy has been stored in the spring.

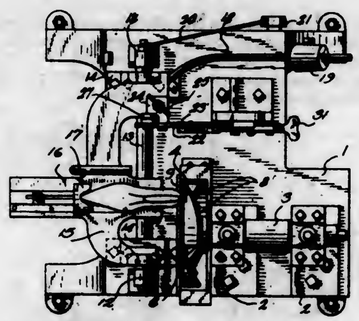


1,387,179. **WHEEL.** Henri Daniel Rey, Avarua, Rarotonga, New Zealand. Filed Feb. 7, 1920. Serial No. 356,856. 5 Claims. (Cl. 301—64.)



1. In a wheel, a hub and a rim and a body composed of sections, said sections being concave and having their concave faces adjacent, the sections having openings for the hub, the rim having lugs for engagement by the sections to limit their movement through the rim toward each other, and means for forcing the sections together, to flatten the sections to cause them to tightly engage the rim, said sections having interengaging means for preventing relative angular movement of the sections with respect to each other after they are in place on the wheel.

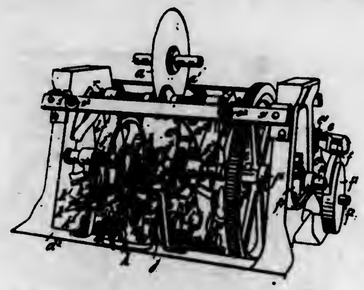
1,387,180. **TELEPHONE SYSTEM.** John Newberry Reynolds, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1917. Serial No. 203,091. 17 Claims. (Cl. 179—27.5.)



1. In an automatic switch, passive contacts, active contacts mounted for group and line selecting movements, a cylindrical member to which said active contacts are secured, said cylindrical member being provided with a spiral slot, an actuating member having an element coöperating with said slot, means for operating said actuating member, a controlling device for causing simultaneous operations of said members during group selecting movement of said contacts and for causing one member to move in one direction and for causing the other member to move in another direction during line selecting movements.

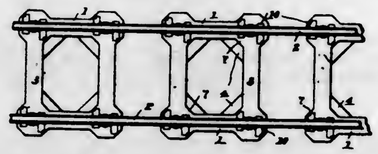
1,387,181. TELEPHONE-EXCHANGE SYSTEM. WILLIAM A. RHODES, New York, N. Y., and FREDERICK E. ANDERSON, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1918. Serial No. 256,272. 7 Claims. (Cl. 179—50.)

1. A telephone exchange system comprising a trunk circuit including a pair of talking conductors extending from a first to a second switchboard, a calling telephone line terminating at the first switchboard, a link circuit thereat connecting the calling telephone line with the trunk circuit, an operator's telephone set at the second switchboard, means for connecting the operator's telephone set with the talking conductors thereby establishing a telephonic connection between the telephone set and the calling telephone line, an operator's telephone set at the first switchboard, a switch at the second switchboard, and means in the trunk circuit responsive to the actuation of the switch to establish a circuit including the two operators' telephone sets.



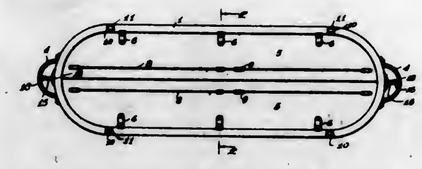
1,387,182. CONTOURING-MACHINE. CHARLES EUGENE RISSER, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 17, 1917. Serial No. 186,712. 7 Claims. (Cl. 144—145.)

1. A machine for shaping the ends of shoe lasts wherein the last is guided through an oscillatory movement in a plane perpendicular to the plane of rotation of a rotary cutter head by which the end of the last is reduced to predetermined contour, characterized by a series of cutter blades arranged on said head in angular relation one with the other to agree with the sides of a regular polygonal figure concentric with the center of rotation of the head, the radial distance of said blades from the center being substantially coincident with the point of application of the last to the head.



1,387,183. MACHINE FOR REMOVING THE CORES AND STONES FROM FRUIT. FRANK ROBBINS, Clifton Hill, Victoria, Australia. Filed Jan. 20, 1921. Serial No. 438,562. 5 Claims. (Cl. 146—6.)

1. In a machine for removing stones from fruit, devices for receiving and holding fruit, means for halving the fruit while held in said devices, means for separating r devices, a curved knife; and means for imparting motion

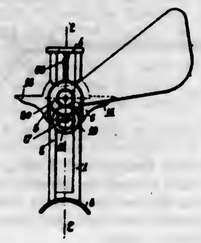


to the said knife to remove the core or stone from the said fruit.

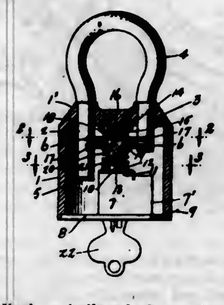
1,387,184. ROADBED CONSTRUCTION. CARL J. ROELKER, Richmond, Va., assignor of one-fourth to W. F. Lee, Richmond, Va. Filed Mar. 29, 1920. Serial No. 369,517. 12 Claims. (Cl. 238—42.)

1. A cement road-bed construction consisting of a pair of oppositely disposed stringers extending longitudinally with the road-bed under the rail positions, transversely disposed tie-members connecting the stringers, and footing-webs of less depth than the tie-members connecting the inner sides of the stringers with the tie-members and operating to support the weight of a portion of the ballast, and to increase the supporting surface resting on the earth or ballast.

1,387,185. BASKET. CHARLES FREDERICK ROTHWELL, Columbus, Mont. Filed Oct. 30, 1920. Serial No. 420,650. 3 Claims. (Cl. 27—28.)



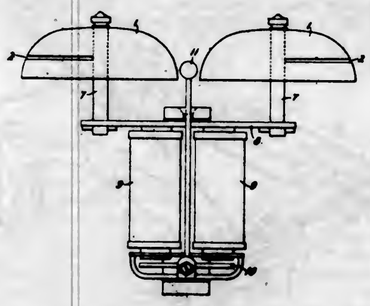
1. As a new article of manufacture, an inclosed body carrying basket including a base frame, a pair of doors hinged to the sides of the base frame and swingable downwardly and outwardly, and devices movable through the ends of the frame to lock the doors in closed position.



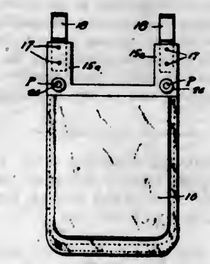
1,387,186. ROTARY POCKET-FAN. EUGÈNE SCHUELLER, Paris, France, assignor to Société Industrielle de Celluloid, Paris, France, a Limited Company of France. Filed Nov. 18, 1920. Serial No. 424,831. 2 Claims. (Cl. 230—33.)

1. A pocket fan comprising a slide consisting of two members connected together by tenons and mortises and carrying two push abutments, a blade shaft carried by

the slide, an intermediate shaft carried by the slide, means interconnecting said shafts, and a rack for actuating the intermediate shaft and serving as a guide for the slide.

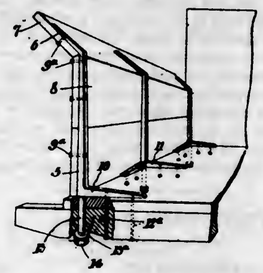


1,387,187. PADLOCK. SAMUEL SEGAL, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,822. 8 Claims. (Cl. 70—108.)



4. In a padlock, a hollow body, a shackle, a rotatable post within said body provided with a slot, a key-plug supported within said body, a stem connected to said key-plug and entering the slot in said post, locking means carried by said post adapted to interlock with said shackle and a spring engaging said key-plug and said locking means for maintaining said locking means in proper position.

1,387,188. BELL. OSCAR A. SHANN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1917. Serial No. 204,026. 5 Claims. (Cl. 116—149.)



1. A gong having a circumferential slot and a second slot extending from said circumferential slot to the edge of the gong.

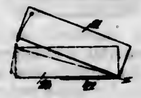
1,387,189. COMBINED TOOL-POUCH AND TESTING DEVICE. ALBERT E. SHARKEY, Cuyahoga Falls, Ohio, assignor to The General Rubber Goods Co., Cleveland, Ohio. Filed Mar. 6, 1920. Serial No. 363,696. 2 Claims. (Cl. 175—183.)

1. A device of the character described comprising, a plate of insulating material, a resistance wire coiled about said plate, a pouch for housing said plate and wire, terminal posts carried by the pouch and electrically connected to the ends of said wire, and supporting hooks carried by said pouch.

1,387,190. VEHICLE-BODY BRACE. LOUDON SILCOTT, Mount Vernon, Ohio. Filed Dec. 28, 1920. Serial No. 433,622. 1 Claim. (Cl. 296—36.)

A vehicle-body brace unit consisting of a main body standard-forming portion having in continuation thereof an attenuated and bent upper end portion, a lower end portion also in alinement with said standard-forming portion, and horizontal portions extending laterally from said standard-forming portion intermediate the base thereof and the said lower end at right angles to each other, said standard-forming portion with its attenuated end and said horizontal portions being provided with fastening-receiving openings, the said lower end portion being equipped with fastening means, substantially as shown and described.

1,387,191. AUTOMOBILE-BODY AND TOP THEREFOR. CONOVER T. SILVER, New York, N. Y. Filed Feb. 28, 1917. Serial No. 151,447. 19 Claims. (Cl. 296—116.)



1. An automobile body having an opening through its upper surface, a support pivoted in the opening, lids for

closing the opening and having adjacent edges with cut-away portions extending through the edges, and means for closing the cut-away portions in the lids when the body of the support is lowered into the opening in the body.

6. An automobile top having two supporting arms, a front intermediate bow pivoted to the arms, a rear intermediate bow pivoted to the arms, supporting means pivoted to the arms and extending beyond the bows in one direction, supporting means pivoted to the arms and extending beyond the bows in the opposite direction, and links pivoted together and to the bows and to the said means.

1,387,192. COMBINED CARTON AND DISPLAY DEVICE. JOSEPH B. SINGER, Brooklyn, and ARTHUR B. LEVY, New York, N. Y. Filed Oct. 14, 1916. Serial No. 125,575. 4 Claims. (Cl. 206—44.)

1. An improved display carton, comprising a container portion, a cover portion adapted to have its open side moved into engagement with the bottom of said container portion to constitute a support therefor, one end of said container portion adapted to rest on the base of said cover portion, the other end thereof adapted to rest upon the edge of one end of said cover portion, and a hinged member connecting said container portion and said cover portion, and adapted to guide the movement of said cover into supporting position, said hinged member in display position extending beneath and engaging the bottom of said container portion, and forming with said end of the cover portion a rest for the container portion for supporting the same in inclined position and occupying an inclined position extending below the horizontal plane of its point of connection with said cover portion.

1,387,193. [WITHDRAWN.]

1,387,194. [WITHDRAWN.]

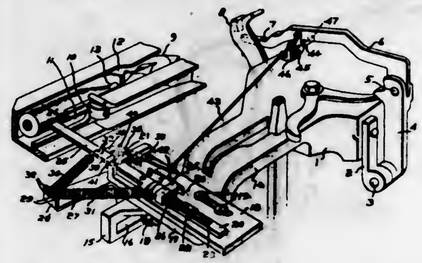
1,387,195. [WITHDRAWN.]

1,387,196. [WITHDRAWN.]

1,387,197. [WITHDRAWN.]

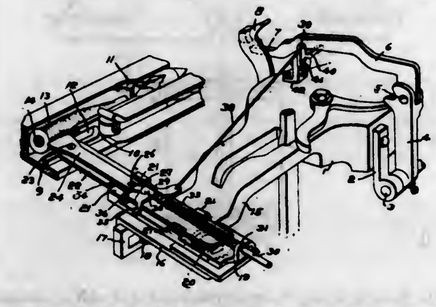
1,387,198. [WITHDRAWN.]

1,387,199. METHOD OF MAKING TUBING. GEORGE A. SMALL, Philadelphia, Pa., assignor, by direct and mesne assignments, to Philadelphia Bronze Bearing & Tube Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 22, 1920. Serial No. 390,891. 9 Claims. (Cl. 29—156.)



1. The art of making butt joint metallic tubes which consists in bending a metal blank to a tubular form with longitudinal edges in juxtaposition but not final relation and then drawing said form so as to flow the metal and set said edges in closer firm abutting relation.

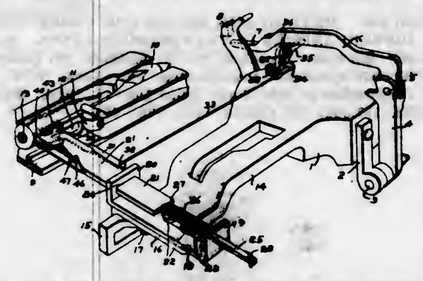
1,387,200. LIGHT-SHIELD. OSCAR PECK SMITH, Worcester, Mass. Filed Nov. 13, 1920. Serial No. 423,972. 8 Claims. (Cl. 20—0.5.)



1. As a new article of manufacture, a light excluding strip attachable to a closure frame to prevent light from entering between the closure and frame, said strip being formed of cardboard treated to present a light reflecting and light absorbing surface, said strip having a longitudinal fold line adjacent one edge, and means for attaching the strip to a closure frame.

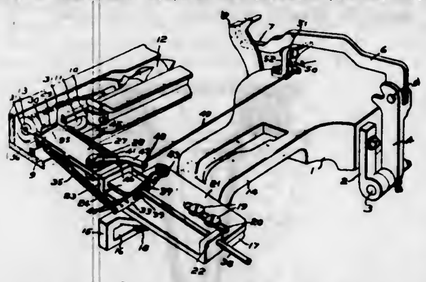
1,387,201. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1919. Serial No. 328,079. 8 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler stand, a feeler carrier mounted on the stand for movement toward and from the front of the loom, a feeler pivotally connected to the feeler carrier, two springs one connected to the feeler rearwardly of its pivotal connection with the feeler carrier, and the other connected to the feeler frontwardly of its pivotal connection with the carrier, and normally acting to hold the feeler and feeler carrier rearwardly in feeling position, and having their relative tensions changed to cause movement of the feeler in a direction longitudinally of the shuttle when the filling is substantially exhausted on a detecting beat, and means actuated by movement of the feeler longitudinally of the shuttle to effect replenishment of filling.



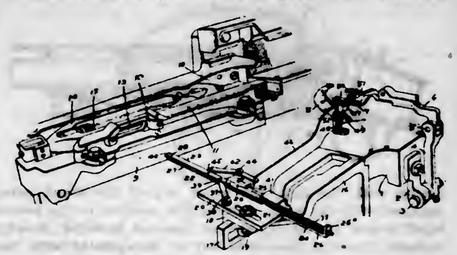
1,387,202. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 1, 1920. Serial No. 362,378. 10 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from



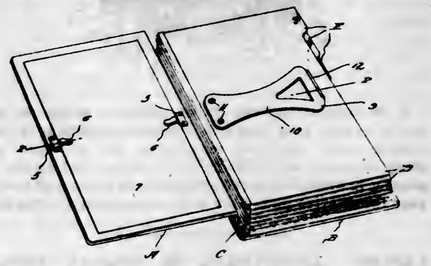
the front of the loom, a feeler pivotally mounted on the feeler carrier for movement in a direction longitudinally of the shuttle and held from such movement on a detecting beat by engagement with the filling until substantial exhaustion thereof, a rocking member mounted on the feeler carrier and connected to the feeler, a spring acting through the rocking member to normally maintain the feeler carrier and feeler in rearward feeling position and to effect movement of the feeler longitudinally of the shuttle when the filling is substantially exhausted on a detecting beat.

1,387,203. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 1, 1920. Serial No. 362,380. 15 Claims. (Cl. 139—85.)



1. In a feeler mechanism for looms, the combination of a feeler slide mounted for movement toward and from the front of the loom, a feeler carrying lever pivotally mounted on the feeler slide, one arm of said lever being extended laterally to be engaged by a surface within the shuttle on each detecting beat and tending, under the frontward pressure upon it, to turn the said lever, a feeler pivotally mounted on the said arm and having teeth which sink into the filling on a detecting beat and prevent movement of the feeler carrying lever responsive to the frontward push upon the arm until the filling is substantially exhausted, and means connected to the feeler carrying lever for effecting replenishment of filling when the said lever is turned on its pivotal mounting.

1,387,204. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 1, 1920. Serial No. 362,381. 13 Claims. (Cl. 139—85.)



1. In a feeler mechanism for looms, the combination of a feeler carrier mounted for movement toward and from the front of the loom, a feeler tip mounted for bodily movement laterally on the feeler carrier, a spring which normally tends to move the feeler carrier to its rearward position and the feeler tip laterally and is prevented from effecting lateral movement of the feeler tip by its engagement with the filling on a detecting beat until substantial exhaustion of filling, and means linked to the feeler tip to effect replenishment of filling when the feeler tip is bodily moved laterally on a detecting beat.

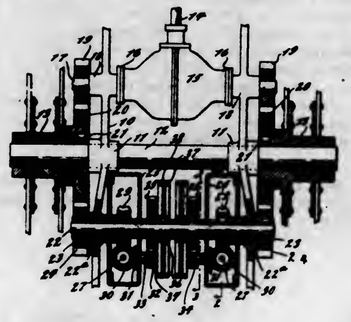
1,387,205. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 7, 1920. Serial No. 372,008. 14 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler jointed intermediate of its ends and supported to be engaged by a surface in the shuttle and pushed frontwardly thereby on a detecting beat, means for yieldingly maintaining the sections of the jointed feeler extended substantially in alinement, teeth upon the feeler to engage the filling and hold the feeler from moving longitudinally of the shuttle, means for deflecting the intermediate portion of the feeler laterally as the feeler is pushed frontwardly by a surface in the shuttle when a substantial amount of filling is present and for moving the rear end of the feeler longitudinally of the shuttle when filling is substantially exhausted, and means operable upon movement of the feeler longitudinally of the shuttle to effect replenishment of filling.

1,387,206. BOOK CONSTRUCTION. RUTH G. SODERBERG, Grand Marais, Minn. Filed Nov. 9, 1916. Serial No. 130,435. 1 Claim. (Cl. 129—20.)

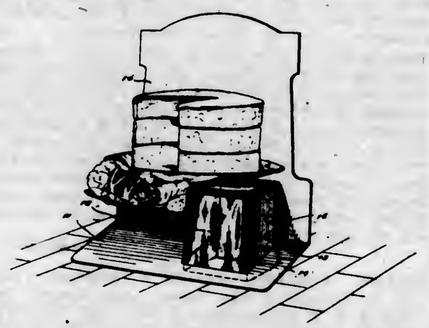
In a device of the kind described, a series of pages, a series of resilient clips arranged in pairs with the two of each pair positioned against the opposite sides of each page, the inner end of said clips being secured to each page and their outer ends being free and formed with an outwardly curved lip disposed substantially at a right angle to the clip, the lips of facing clips on adjacent pages abutting each other to space adjacent pages from each other, and a flexible binding strip having its opposite marginal portions secured to the two outer of the series of pages, the said strip being formed with a plurality of folds so arranged that the several pages are secured between them in a manner to permit the pages to be swung apart or against each other, the folds intervening between the pages forming means to space the pages apart, whereby open ended compartments are provided by the said folds and the abutting lips of said clips.

1,387,207. FIREARM. FRANCIS A. STAFFORD, Fulton, N. Y., assignor to The Hunter Arms Company Inc., Fulton, N. Y., a Corporation of New York. Filed June 8, 1917. Serial No. 173,539. 2 Claims. (Cl. 42—44.)



2. In a gun, a frame including a breech block, a barrel hinged to the frame, the breech block having a horizontal

shelf between its upper and lower sides and also having a lock opening for the barrel above the shelf, a thumb lever having a shank extending downwardly through the top of the frame to the rear of the opening for the lock and co-



acting with the lock, the lower end of the shank being engaged with the shelf, a firing pin movable in the breech block below the shelf, and a hammer movable directly beneath the shelf into and out of engagement with the firing pin, substantially as and for the purpose described.

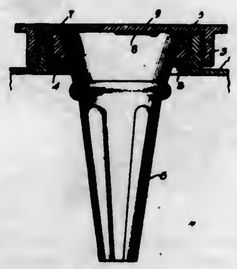
1,387,208. CONTROL DEVICE FOR DRIVEN MEMBERS. NORMAN C. STOREY, Passaic, N. J. Filed Nov. 7, 1919. Serial No. 336,491. 10 Claims. (Cl. 180—17.)

1. In combination, two driven members, means for normally locking said members together comprising a self-locking worm and gear constructed and arranged normally to rotate with said driven members, and means for causing relative movement between said worm and gear to vary the relative movement between said driven members.

1,387,209. ADVERTISING OR DISPLAY DEVICE. JULIEN STRANDBAS, New York, N. Y., assignor to Harry B. Kruger, New York, N. Y. Filed Mar. 11, 1918. Serial No. 221,695. 8 Claims. (Cl. 211—24.)

1. A display device comprising a main panel and a secondary panel having a horisontal hinge connection along one of its edges to said main panel, said secondary panel being provided with an article receiving opening extending from one side of the main panel to a point in spaced relation to the free longitudinal edge of the secondary panel, said device adapted for arrangement upon a supporting surface with the main panel vertically disposed and the secondary panel extending forwardly and downwardly at an inclination from the main panel and resting at its free edge upon the supporting surface, the device being retained in display position by the article positioned in the opening of the secondary panel and said main panel having parts contacting with the article above and below the horizontal hinge line connecting the panels to prevent hinging movement of the main panel in either direction with respect to the secondary panel.

1,387,210. METHOD AND MEANS FOR CORRECTING IRREGULARITIES IN TRANSMISSION-LINES. MORTON SULTZER, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1916. Serial No. 137,601. 23 Claims. (Cl. 178—45.)



6. A unitary multiple condenser structure containing a plurality of units composed of sheets of conducting and insulating material, and comprising means for varying the capacity of one unit without affecting the capacity of another of said units.

10. The method of correcting irregularities in sections of transmission lines which comprises inserting a corrective impedance in a section between the sheath and a wire of said line to bring the value of the impedance therebetween to a desired value.

19. A transmission cable comprising a plurality of wires and a sheath, corrective capacities between said wires and said sheath and between said wires.

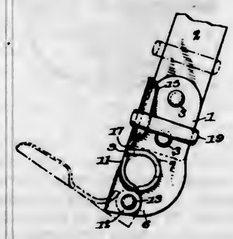
1,387,211. POURING ATTACHMENT FOR CANS. GILBERT C. SWEENY, Brooklyn, N. Y. Filed Jan. 4, 1921. Serial No. 434,877. 2 Claims. (Cl. 221—24.)

1. The combination with a container having an opening therein, an internally screw threaded ring around the opening and a cap normally fitting over the ring, of an annular externally threaded reversible funnel carrying member fitting within the ring, a funnel having its mouth fixed to the funnel carrying member, and a handle member secured transversely across the mouth of the funnel.

1,387,212. PROCESS OF MAKING ARSENATE OF LEAD. MAX LEONARD TOWER, Middleport, N. Y. Filed Aug. 3, 1920. Serial No. 400,899. 6 Claims. (Cl. 23—13.)

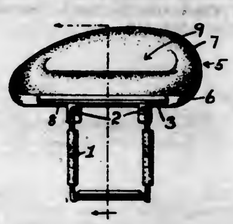
1. A process of making arsenate of lead which consists in dissolving litharge in a dilute solution of acetic acid, adding arsenic acid in small streams, and filtering off the resulting precipitate of arsenate of lead.

1,387,213. PROCESS OF MAKING LEAD ARSENATE. MAX LEONARD TOWER and FREDERIK LANGE BEGTRUP, Middleport, N. Y., assignors to Niagara Sprayer Co., Middleport, N. Y., a Corporation. Filed Aug. 31, 1920. Serial No. 407,198. 7 Claims. (Cl. 23—13.)



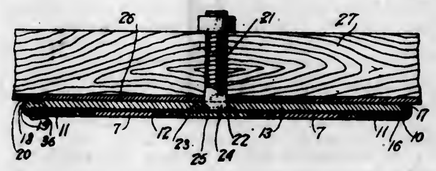
1. A process of making lead arsenate, which consists in treating litharge with arsenic acid in the presence of a neutral nitrate.

1,387,214. COMBINATION-TOOL. HENRY E. J. WACKWITZ, Port Washington, N. Y., assignor of forty-nine per cent. to Walter Hewett, Sands Point Road, N. Y. Filed Apr. 16, 1920. Serial No. 374,300. 4 Claims. (Cl. 7—1.)



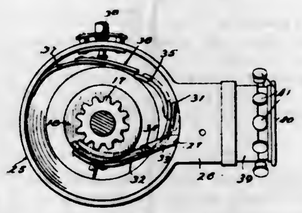
1. A combination tool, comprising a can-opener and a screw-driver pivotally connected together, said can-opener having a portion serving to guard the end of said screw-driver, and said screw-driver having a portion serving to guard said can-opener and so arranged that when desired the guarding portions may be swung out of position so that a tool can be used.

1,387,215. FRONT-FORK CLIP FOR VELOCIPEDES. EDWARD R. WAGNER, Milwaukee, Wis., assignor to E. R. Wagner Manufacturing Company, North Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 8, 1920. Serial No. 372,187. 5 Claims. (Cl. 208—96.)



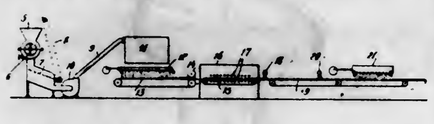
1. In a front fork clip for velocipedes, the combination of an attachment member adapted to be fastened to a fork arm and formed with a recess in one edge, a semi-cylindrical axle bearing fitted and secured in said recess transversely to the attachment member, a cap member folded to embrace the edge of the attachment member and pivoted thereto on one side of the recess, and means for holding the cap member in closed position.

1,387,216. VIOLIN CHIN-REST. STEPHEN J. WALLACE, Logansport, Ind. Filed Oct. 25, 1920. Serial No. 419,363. 4 Claims. (Cl. 84—279.)



1. A violin chin rest including a supporting plate, a pad resting on said plate and having a base formed of thick resilient material provided with a pocket designed to engage said plate, and a soft porous body resting on said base.

1,387,217. INTERCHANGEABLE-INITIAL PLATE. WILLIAM W. WATTERS, New Rochelle, N. Y. Filed Oct. 19, 1920. Serial No. 417,907. 15 Claims. (Cl. 40—124.5.)



10. In a device of the character described, a base plate adapted to be secured to a support and having undercut rearward edges, a frame adapted to receive interchangeable initial plates and having flanges to engage over the undercut edges of the base plate, said frame being partly open at one end to enable endwise engagement of the same over the base plate and provided at said end with a spring lip, and a lug on the forward face of the base plate positioned to be engaged by said spring lip.

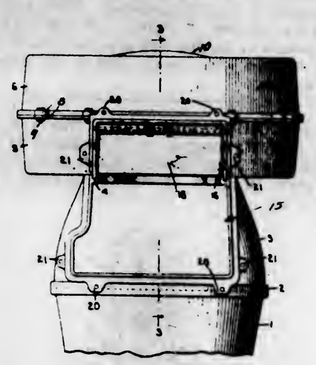
1,387,218. STEERING-WHEEL LOCK. GEORGE ANTHONY WEHNER, Savannah, Ga. Filed Aug. 2, 1920. Serial No. 400,843. 6 Claims. (Cl. 70—129.)

1. In combination with a vertically movable steering wheel and its gear-carrying shank, having a collar, of a combined latching and locking lever pivotally supported intermediate its ends and shiftable by gravity to engage the shank above and below its collar for respectively holding the same in active and inactive positions, freely movable means including a push button, engageable with the lever in its latching position above the collar to release the same, and out of the path of movement of which means the lever is positioned when said lever is in locking engagement with the shank beneath the collar, and a release lock mechanism having means for engaging and releasing the said lever when the latter is in locked position.

1,387,219. COMPOSITE FIBROUS PRODUCT. HOWARD FREDERICK WEISS, Madison, Wis., assignor to C. F. Burgess Laboratories, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 25, 1919. Serial No. 292,677. 20 Claims. (Cl. 154—40.)

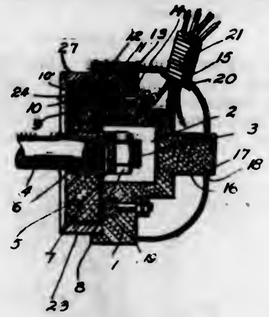
1. The method of manufacturing composition roofing material which comprises mixing in a substantially dry and solid condition fibrous material and a binding agent, subjecting said material to compression to shape the same, and spraying the compressed mixture with a saturant.

1,387,220. CLIP FOR PENS AND PENCILS. GLEN R. WELLS, Fort Wayne, Ind. Filed Mar. 3, 1921. Serial No. 449,525. 4 Claims. (Cl. 24—11.)



3. In combination with a spring pen or pencil clip, a washer loosely secured upon the clip and being adapted to be tilted in one position so as to engage the cloth of the garment and resist withdrawal of the pen or pencil to which the clip is attached, and in another position so as to slide freely over the cloth during withdrawal of the pen or pencil.

1,387,221. COMBINATION TRUNK-SECTION COVER AND LAUNDRY-BAG. GEORGE HENRY WHEARY, Racine, Wis. Filed May 13, 1920. Serial No. 381,058. 4 Claims. (Cl. 190—13.)

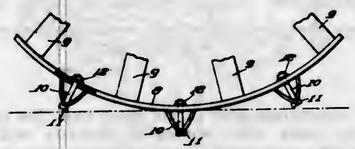


1. The combination with a trunk wardrobe section having an open front and a shoe box mounted in its lower portion and closing a part of said open front, of a combined cover and laundry bag for the remaining portion of the open front, comprising a double thickness of flexible material covering said open portion and having its inner thickness expansible inwardly into the said trunk section, the outer thickness of material provided with an opening, a bar engaging the upper portion of the material and having means which removably engage the upper front portion of the trunk section, and means releasably connecting the lower portion of the flexible material to the upper portion of the shoe box.

1,387,222. FURNACE. WILBERT G. WISE, Akron, Ohio, assignor to The Wise Furnace Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 24, 1921. Serial No. 455,031. 7 Claims. (Cl. 126—102.)

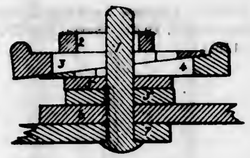
2. In a furnace construction, a combustion chamber, a radiator above the combustion chamber, the combustion chamber and the radiator being open at one side, an integral extension about the opening in the combustion chamber, and an integral extension about the opening in the radiator, the said extensions together forming a fuel feeding passageway.

1,387,223. ELECTRIC TIMER. RUSSELL L. WYSS, Kansas City, Mo., assignor of one-half to Derwood L. Piggott, Kansas City, Mo. Filed July 21, 1919. Serial No. 312,252. 3 Claims. (Cl. 200—19.)



1. In an electric timer for ignition systems, a distributer comprising a block having a recessed central portion, a ring carried by the face of the block and extending outwardly therefrom, a shaft extending into the recessed central portion, a commutator disk on the shaft comprising an insulation block co-extensive with the space sealed by the ring and receivable within the ring, a spring-pressed contact parallel with the axis of the shaft and carried by the commutator disk, distributing contacts on the block having faces flush with the end thereof and in line with the circular band scribed by the contact carried by the commutator, and means for conductively connecting the commutator contact with the shaft.

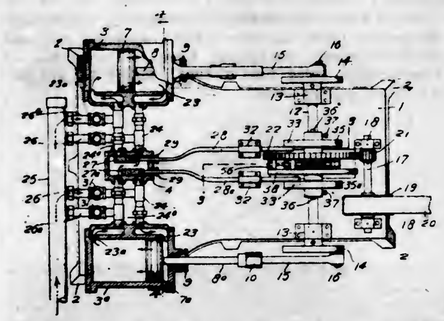
1,387,224. DOLL. EDWIN ARTHUR AHLSS, Chester, Pa. Filed July 8, 1920. Serial No. 394,777. 3 Claims. (Cl. 46—40.)



1. In a doll, a body portion, a head revolubly mounted thereon, a gear wheel carried by the head, a second gear wheel meshing with the first-mentioned gear wheel, and reciprocating means for imparting rotary movement to said gear wheels to effect a step-by-step rotary movement of the head of the doll.

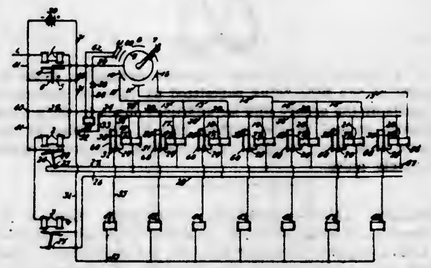
1,387,225. TRACTOR. CHARLES J. ALLEN, Moorestown, N. J., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Nov. 7, 1919. Serial No. 336,384. 2 Claims. (Cl. 301—44.)

1. A traction cleat for a tractor wheel, comprising a pair of oppositely disposed, longitudinally extending and outwardly convexed members, each of said members having a single free longitudinally extending edge and the common edges of said members forming the apex of the cleat, said longitudinally extending edges and said common edge lying at the vertices of an equilateral triangle.



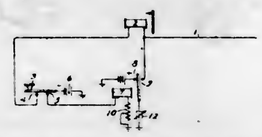
1,387,226. CLAMPING DEVICE. GEORGE AIRD, North Bay, Ontario, Canada, and WILFRED AIRD, San Francisco, Calif. Filed May 21, 1920. Serial No. 383,330. 1 Claim. (Cl. 85—8.)

A clamping device which consists of a bolt, to pass through the plates to be riveted together, the shank thereof flattened on opposite sides to form a T head at its smaller end; a locking washer to resist the pressure of the wedges against the head of the bolt, said washer having near one of its edges a hole to pass over the T head of the bolt and a slot to fit the flattened part of the shank extending from the said hole toward the opposite edge and wedges to press together the plates to be riveted against the head of the bolt; said wedges having a hole near their thin end to pass over the head of the bolt and a slot to fit the flattened part of the shank, extending along their axis from the said hole toward the thick end thereof in the manner and for the purpose herein above described.



1,387,227. STEAM-ECONOMIZER. JOHN LOUIS BARNETT, Chicago, Ill. Filed Feb. 28, 1920. Serial No. 362,062. 1 Claim. (Cl. 103—79.)

A device of the character specified, adapted to be arranged between a steam engine and the boiler from which the engine receives steam and adapted to be connected with the exhaust of the engine to return the exhaust products to the boiler, and comprising a pair of parallel cylinders, an operating shaft, a piston in each cylinder connected with the operating shaft, a driving shaft, a yieldable



connection between the driving shaft and the operating shaft, a valve chest arranged between the cylinders, valves in connection with the chest and operated by the operating shaft, the chest and the cylinders being ported to alternately connect the ends of the cylinder to the boiler and to the exhaust.

1,387,228. SELECTIVE SYSTEM. JOHN HUME BELL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1917. Serial No. 182,961. 10 Claims. (Cl. 178—33.)

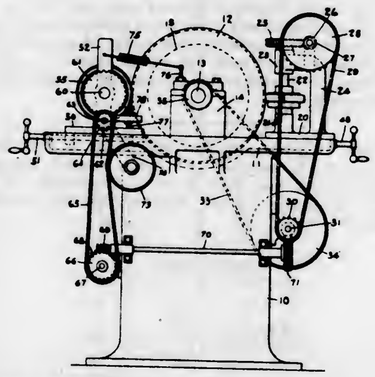
1. In a telegraph system, a line, a plurality of impulse receiving relays serially connected with said line, a plurality of selecting relays, a source of potential, and means for consecutively connecting said source of potential with said selecting relays upon the energization of a pair of said impulse receiving relays for causing the operation of said selecting relays.

1,387,229. TELEGRAPH SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1918. Serial No. 227,567. 6 Claims. (Cl. 178—63.)

4. A telegraph system comprising a line, a source of current, a condenser normally connected with said source of current, a transmitting key, and a relay controlled by

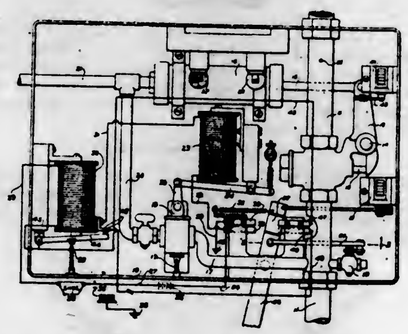
said transmitting key and adapted upon its deënergisation to connect said condenser with said line whereby a current impulse of a polarity opposite to that of the line current present at the remote station traverses said line.

1,387,230. CLASP-STUD. GEORGE T. BRANNIGAN, Bridgeport, Conn., assignor to The Connecticut Web and Buckle Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 6, 1921. Serial No. 475,263. 3 Claims. (Cl. 24—245.)



1. A clasp-stud formed from a wire blank and comprising an approximately circular head formed at one end of the blank, the blank being then bent inward and downward to form half a shank, the blank being then bent outward and curved and recurved twice on opposite sides of the shank to form web slots, and then upward to complete the shank.

1,387,231. FLEXIBLE TUBE. LOUIS H. BRINKMAN, Glen Ridge, N. J., assignor to Titeflex Metal Hose Corporation, a Corporation of New York. Filed Nov. 18, 1915. Serial No. 62,108. Renewed Feb. 20, 1920. Serial No. 360,073. 16 Claims. (Cl. 137—75.)

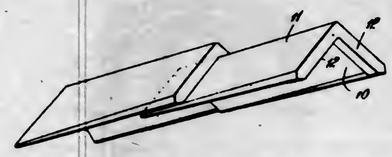


2. A flexible tube having a groove extending about it, flexure of the tube being permitted by relative movement of walls of the groove and an auxiliary layer in strip form helically wound in the bottom and at the sides of the groove, said layer bending transversely as the groove walls relatively move.

1,387,232. LENS-GRINDING MACHINE. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Feb. 12, 1919. Serial No. 276,539. 6 Claims. (Cl. 125—11.)

4. A frame, means on said frame for rotating a lens surfacing wheel, a vertical shaft carried by said frame near the surfacing wheel and at a right angle to the axis thereof, a truing wheel mounted on said shaft so its periphery will engage the periphery of the surfacing wheel transversely thereof, and means for driving said means for rotating the surfacing wheel and shaft simultaneously.

1,387,233. SAFETY ATTACHMENT FOR AUTOMATIC TRAIN-STOPS. MELBERN BENNIE BULLA, El Paso, Tex. Filed July 2, 1919. Serial No. 306,107. 1 Claim. (Cl. 246—183.)



The combination with an air brake train line pipe, a normally closed valve serving to maintain said pipe charged with compressed air and automatic means to open the valve when the train passes a danger point without authority, of an auxiliary valve having a small delivery port, electric controlled means under the command of the engineer whereby he may pass a danger point under orders without causing the main valve to be opened or stopping the train within a reasonable time, and connections between the auxiliary valve having the small port and the said electric controlled means whereby irrespective of the will of the engineer the train line pipe is bled of air and the train is caused to stop if the manually controlled devices are not restored within a reasonable time to normal position.

1,387,234. TOOL. ANDREW JACKSON BURKE, New Haven, Conn. Filed Apr. 6, 1920. Serial No. 371,700. 1 Claim. (Cl. 145—116.)

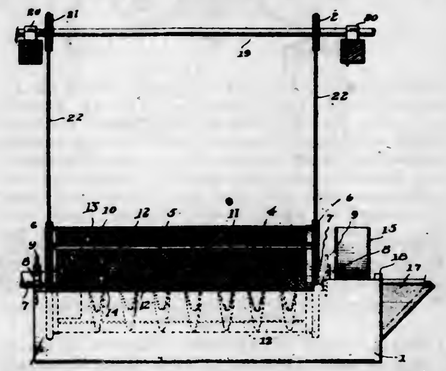
A boring tool including in combination with a shank a worm secured to said shank, and a bit at the lower end of said shank, of a series of teeth formed in the upper side edges of said worm.

1,387,235. RIDGE-SADDLE. CURT E. BURKHARDT, Teaneck, N. J. Filed Apr. 21, 1919. Serial No. 291,747. 3 Claims. (Cl. 108—24.)

1. A ridge saddle of an asbestos and cement mixture comprising angularly disposed flat sides of substantially uniform thickness but tapering in width, inwardly extending flanges at the wider end thereof and longitudinal flanges connecting at one end thereof with said end flanges and being tapered toward the other end thereof.

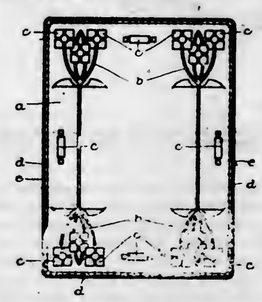
1,387,236. BOX FOR HEAT-TREATING METALLIC ARTICLES. CLARENCE BERNARD CALLOMON, South Orange, N. J., assignor to Driver-Harris Company, Harrison, N. J., a Corporation of New Jersey. Filed Oct. 28, 1920. Serial No. 420,185. 3 Claims. (Cl. 263—49.)

1. A box for heat treating metallic articles, comprising a hollow cylindrical body portion having an opening on one side constituting the mouth of the box, said opening extending approximately the full length of said body portion, vertical end closing portions for said box body, and a cover for said box.



1,387,237. CONTAINER. CORA H. CARTLEDGE, Philadelphia, Pa. Filed Aug. 22, 1919. Serial No. 319,142. 2 Claims. (Cl. 220—24.)

2. A dispensing container, comprising a body portion, a vertically extending draining channel formed in the wall thereof and discharging from the upper edge thereof, said channel extending from a point at or near the bottom of the body portion to the upper edge and gradually enlarged on diverging lines from the bottom to the top, a flange permanently secured to the upper edge of the body portion and extended to cover the upper end of the channel, a filling opening formed in said flange and a sealing cap fitted to the opening.

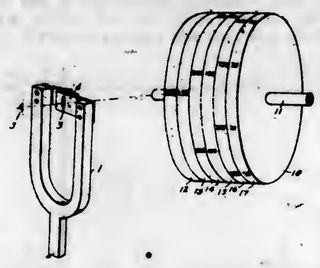


1,387,238. PLACER-GOLD CONCENTRATOR. DANIEL B. CAVE, Lincoln, Nebr., assignor of one-fourth to Harold M. George, one-fourth to E. Alfred Willner, one-eighth to C. Petrus Peterson, and one-eighth to Robert W. Devoe, Lincoln, Nebr. Filed Nov. 22, 1918. Serial No. 263,773. 1 Claim. (Cl. 83—56.)

An apparatus of the class described comprising a tank, a rotatable drum arranged therein and consisting of end walls and foraminous sides, an involute receiver arranged within said drum at one end of the same, a spiral conveyer secured within said drum for rotation with the same and adapted for directing material into said involute receiver, a hollow shaft extending through one of said end walls and having communication with said receiver, a partition arranged in said tank and defining an intake section, a

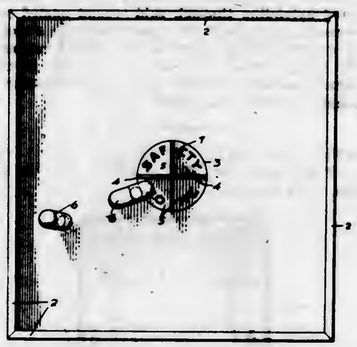
second involute receiver arranged in said intake section, a hollow shaft extending through one end wall of said drum and extending through said second named receiver, said second named shaft being provided with a slot establishing communication between the second named shaft and the second named receiver, the capacity of the first and second named receivers being approximately equal, and means rotating said drum.

1,387,239. TABLE-MAT. BERTHA F. CHANDLER, Chicago, Ill. Filed Sept. 24, 1917. Serial No. 192,867. 1 Claim. (Cl. 65—53.)



A table mat comprising a surfaced fabric body, a relatively narrow border of the same material as the body, a relatively thick adhesive coating applied to said border giving it additional weight, firmness and rigidity, the connecting part between said body and said border being weakened by a line of closely spaced interstices and stitching passing through said interstices wrapped about and binding said border, said stitching further increasing the weight of said border, whereby the relatively heavy border, through its weakened connection to the body portion prevents curling thereof.

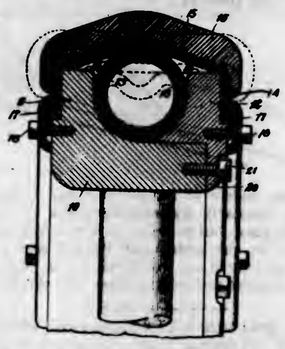
1,387,240. STROBOSCOPIC SYSTEM. RAYMOND E. COLLIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1918. Serial No. 217,153. 5 Claims. (Cl. 88—14.)



1. A stroboscopic system comprising a moving body carrying a plurality of sets of numerals, the numerals of

each set being equally spaced and of the same value, the numerals of the respective sets being spaced at different distances apart and of different values, and means for

rendering any of the numerals of any of the sets legible during the rotation of said body when the speed thereof corresponds to the value of the numerals in one of such sets.

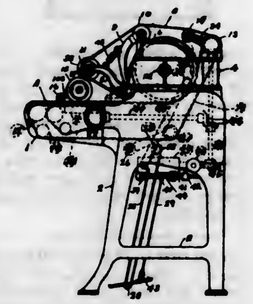


1,387,241. GAME APPARATUS. ALBERT O. COULLIARD, Milford, Mass. Filed Dec. 14, 1920. Serial No. 430,642. 1 Claim. (Cl. 46—41.)

In a game apparatus, a shallow rectangular box-like container, the base of said container forming a field having a centrally disposed circle thereon, diametrically opposed upstanding intersecting partitions parallel to the wall of the container, and dividing the circle into sectors, a plurality of weighted tumblers adapted to be actuated by tilting the field, said circle having displayed therein a caption including the words "Safety zone."

1,387,242. TIRE. JOSHUA CRANE, Westwood, Mass. Filed Dec. 24, 1919. Serial No. 347,115. 1 Claim. (Cl. 152—10.)

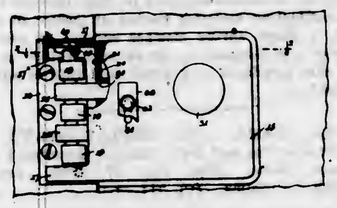
A vehicle wheel, having a rim of substantially channel form in cross section with comparatively thick outwardly extending approximately parallel flanges, presenting comparatively wide cylindrical load supporting surfaces, an inflatable and substantially non-extensible tube within said channel and having a diameter, when inflated, greater than the depth of the channel, so as to project outward radially beyond said surfaces, and a casing of substantially channel shape in cross section, the flanges of said casing extending inward radially of the wheel and overlapping the flanges of said rim, and detachably secured to the outer surface of the latter, the web of said casing channel being of substantially uniform thickness through its width, and normally bowed outwardly from the outer edge of one of said surfaces to the opposite outer edge of the other surface, so as to be free



of said surfaces when said tire is inflated and adapted to rest on said surfaces and directly transmit the weight of the load to said surface when said tube is deflated.

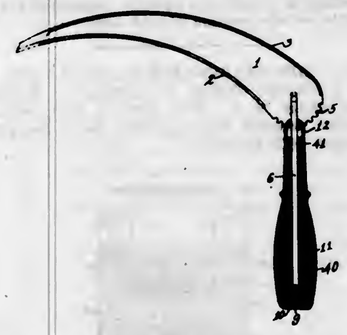
1,387,243. RUBBER HEEL AND INSERT THEREFOR. GEORGE N. DAMON, Lorain, Ohio, assignor to The Lorain Rubber Heel Company, Lorain, Ohio, a Corporation of Ohio. Filed Jan. 7, 1920. Serial No. 349,970. 3 Claims. (Cl. 36—75.)

1. A resilient heel having a body portion provided with an upper cushioning chamber and a wear resisting member embedded in said body portion below said chamber and provided with body and anchor portions lying in different planes, said member extending horizontally beyond the edges of said chamber.



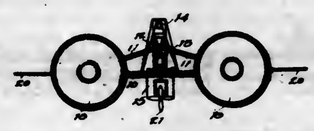
1,387,244. TOBACCO STEMMING AND BOOKING MACHINE. JOHN H. DEAN, Grand Rapids, Mich. Filed Jan. 13, 1919. Serial No. 270,938. 10 Claims. (Cl. 131—57.)

8. A tobacco stemming machine comprising a support, a table having a longitudinal slot therein carried by the support, conveying means leading over the table to carry a leaf of tobacco in the direction of the length of the stem



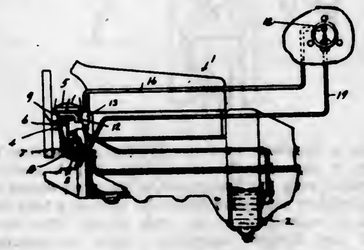
thereof over the table, a belt mounted directly below the slot in the table, said belt at its outer side having a plurality of spaced apart notches cut therein and having portions cut at an angle from the belt whereby the outer side of the belt has two angularly disposed portions leading downwardly and away from each other, said belt also being formed with a groove at the meeting edges of said angularly disposed portions, means to move the belt in the same direction as said conveying means, means to press the stem of the leaf against the belt at said grooved and notched portions thereof, and cutting means located between the belt and upper surface of the table for severing the stem from the leaf as it is carried into the machine, substantially as described.

1,387,245. LOCK. FRANCIS J. DOWLING, New York, N. Y. Filed Apr. 25, 1919. Serial No. 292,540. 12 Claims. (Cl. 70—46.)



1. In a door lock, the combination of a casing having a portion projecting beyond the striking edge of the door, bolt means carried by the casing and projecting beyond the door within the projecting portion of the casing and movable inward automatically with respect to the casing into locking position, means carried by the casing to control the movement of the bolt means, a stationary plate for the door jamb, and rigid means carried by the plate and projecting therefrom perpendicular to the plane of the door for coöperation with said bolt means and the casing projection whereby relative movement between the casing, the bolt means and the plate is prevented in every direction when the door is locked.

1,387,246. GRASS-HOOK. HORATIO S. EARLE, Detroit, Mich., assignor to H. S. Earle Mfg. Co., Detroit, Mich., a Corporation of Michigan. Filed Apr. 17, 1916. Serial No. 91,582. 8 Claims. (Cl. 30—9.)



1. In a grass hook, a blade having a rounded heel provided with a serrated edge and a central aperture, a tang having a terminal portion adapted to pass through the aperture and a portion to pivotally support the blade, the terminal portion and body portion contacting opposite sides of the blade, a handle adapted to receive the tang, the handle being movable longitudinally of the tang and adapted to engage the serrations in the edge of the heel.

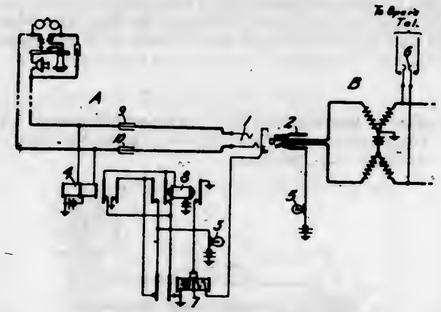
1,387,247. AIRSHIP. KANUTE A. ENLIND, South Nyack, N. Y. Filed July 23, 1919. Serial No. 312,691. 2 Claims. (Cl. 244—6.)

1. An airship comprising a pair of longitudinal parallel cylinders, each forming a series of independent cylindrical containers, a shaft extending axially through each of the cylinders and connecting the several containers thereof in endwise spaced apart relation and connections between the two cylinders including transverse horizontal connecting bars forming a car supporting frame and inclined brace beams, the outer ends of which are connected to said shaft between the containers, a longitudinal ridge beam to which the inner ends of the inclined brace beams are connected, and means connecting the ridge beam with the car supporting frame and forming with the ridge beam and brace beams a truss for the said frame.

1,387,248. OIL SIGHT-FEED. WESLEY J. FACKLER, Los Angeles, Calif. Filed Sept. 25, 1919. Serial No. 326,325. 2 Claims. (Cl. 184—6.)

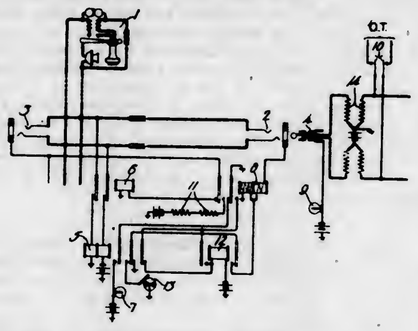
2. In combination with a Ford engine construction an oil sight feed comprising an accessory bracket adapted to be mounted on the engine in the place of the usual timing mechanism having a crown adapted to receive the timing mechanism, a spindle rotatably mounted in the bracket for operating the timing mechanism having a beveled gear at its lower end, a companion gear meshing with the first named gear fixed on the timing shaft in the usual position of the timing arm, an oil pump cylinder positioned on the bracket having a plunger, an eccentric mounted on the spindle having a strap pivotally connected with the plunger, a suction conduit communicating between the cylinder and the fly wheel case of the engine carrying a suction valve, a discharge conduit for the cylinder having a discharging valve and communicating with an oil sight feed means, and the oil sight feed means positioned in view of a driver having a return conduit communicating with the forward end of the engine crank case.

1,387,249. TOOL FOR TWISTING TIES. HENRY B. FOULDER, Brooklyn, N. Y., assignor to J. P. Curry Mfg. Co., Inc., Stamford, Conn., a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,312. 9 Claims. (Cl. 140—119.)



1. In a tie-twisting tool, the combination of a tie-holder adapted to retain the ends of a wire tie during the twisting of the same, members, one of which is movable relatively to the other in one direction to twist the tie, means adapted to engage against each other at a determined

point during said relative movements of said members, one of said means being adjustable in position so that the engagement of said means may occur after a greater or

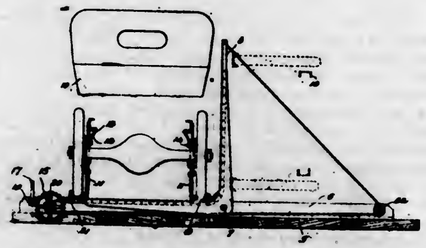


less relative movement of said members, and means operable upon the continuation of such relative movement past said point to release the ends of the tie.

1,387,250. TELEPHONE-EXCHANGE SYSTEM. CLARENCE B. FOWLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,609. 8 Claims. (Cl. 179—73.)

8. In a telephone exchange system, a subscriber's line circuit, a signaling device therefor, a link circuit for connection with the line circuit, a signaling device therefor, subscriber controlled means for operating both devices during a connection of the link circuit with the line circuit and operator controlled means for maintaining the link circuit signaling device in an operated condition during the continuance of such connection.

1,387,251. TELEPHONE SYSTEM. CLARENCE B. FOWLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1919. Serial No. 345,311. 3 Claims. (Cl. 179—58.)

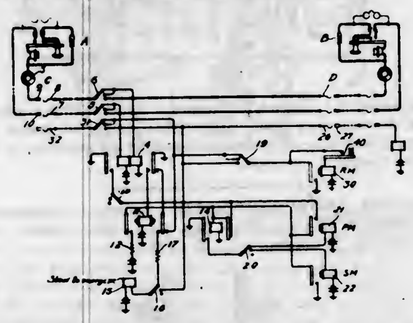


1. In a telephone system the combination with a telephone line, a cord circuit for extending said line, a signaling device individual to said cord circuit, and means individual to said telephone line responsive to an interruption of said line for operating said signaling device in one manner to give a disconnect signal, said means being responsive to a subsequent closure of said line to operate said signaling device in a different manner to give a recall signal.

1,387,252. TEST-CONNECTOR. JOHN FREDRICKS, Kings Bridge, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1918. Serial No. 217,141. 3 Claims. (Cl. 173—363.)

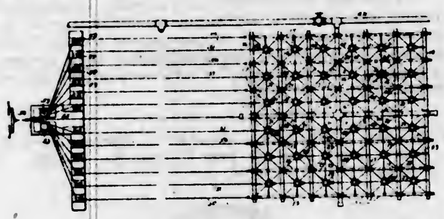
1. The combination with electrical apparatus having a plurality of terminals mounted in close proximity, a tube of nonconducting material having an orifice in one side thereof, a single spring member secured at one end of said tube and adapted to lie in such orifice to engage one of said terminals over which said tube is adapted to be slipped.

1,387,253. WORK AND DISPLAY STAND. PAUL HENRY GARTNER and JOHN HERMAN GARTNER, Lava Hot Springs, Idaho. Filed Feb. 27, 1920. Serial No. 361,695. 3 Claims. (Cl. 214—1.)



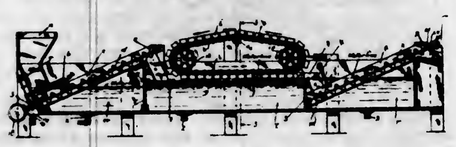
1. A work stand including a plurality of rockingly mounted bell cranks, one of the arms of each of said bell cranks resting in a normally horizontal plane, means for engaging the opposite arms of said bell cranks for rocking the same, rails extending between said horizontally disposed arms, and means attached to said rails for retaining a vehicle and entirely supporting the same irrespective of the position of said arms.

1,387,254. SIDE-BEARING FOR RAILWAY-CARS. WILLIAM A. GRIGGS, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 22, 1914, Serial No. 867,998. Renewed Nov. 18, 1916. Serial No. 132,205. 7 Claims. (Cl. 64—64.)



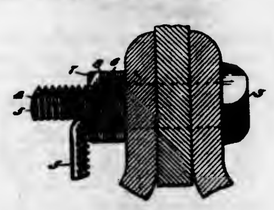
1. In a side bearing, in combination, a bracket, a roller mounted in said bracket, a base member and bolts, the base member having a longitudinal groove, the bracket having a longitudinal protuberance conformed to slide in said groove, the bracket and base member being perforated for the passage of the bolts, said perforations being of a larger diameter than the diameter of the bolts, the bracket being provided with shoulders adapted to engage the base member and limit the sliding movement of the bracket upon the base member.

1,387,255. TELEPHONE-EXCHANGE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,579. 8 Claims. (Cl. 179—18.)



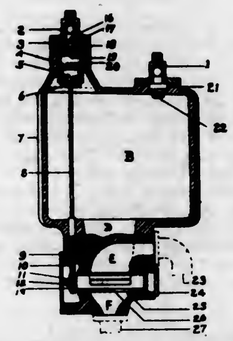
6. In a telephone system, an automatic switch having a plurality of operating magnets, a relay common to said magnets, means for associating the relay successively with said magnets, means for intermittently energizing the relay to operate said magnets, and means operable by the magnet associated with the relay to intermittently short-circuit the winding of the relay.

1,387,256. PORTABLE IRRIGATION APPARATUS. WILLIAM FLOURNOY GRIFFIN, Greenfield, Okla. Filed June 26, 1918. Serial No. 241,973. 17 Claims. (Cl. 299—55.)



1. In a portable irrigating apparatus, a plurality of pipes having spraying outlets, spaced apart horizontally over a predetermined area, transverse horizontal means for holding the pipes in position relatively to each other, a plurality of standards disposed between the pipes, means for holding the standards in position relatively to each other, and means supported by the standards for raising the pipes and the transverse horizontal means.

1,387,257. NUT-WASHING MACHINE. FERDINAND GRONER, Hillsboro, Oreg. Filed Apr. 6, 1921. Serial No. 458,979. 17 Claims. (Cl. 146—14.)

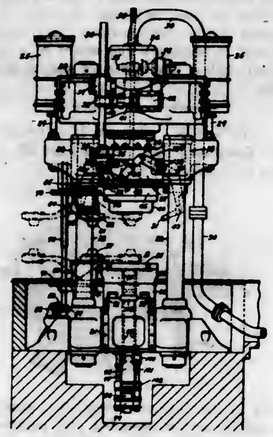


17. In a washing machine of the character described, a trough, a table in the trough, provided with apertures, a series of driven brushes supported for being moved longitudinally over said table in a plane spaced from the top thereof, means on the table top serving to provide some resistance to the movement by the brushes of the fruit deposited on the table, and a water feeder for said trough adapted to maintain the water at a level covering said table, but below the plane of the working faces of said brushes.

1,387,258. NUT-LOCK. GEORGE M. GUNNETT and OLEN GUNNETT, Frostburg, Md. Filed July 20, 1920. Serial No. 397,717. 1 Claim. (Cl. 151—29.)

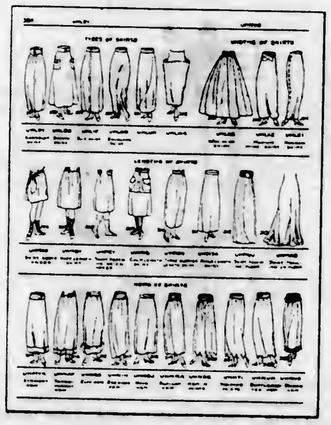
A nut lock of the character described, comprising a bolt having its entire screw-threaded end portion split longitudinally with a plurality of diagonally arranged slots extending transversely therethrough forming four longitudinal sections, and a nut provided with a plurality of recesses formed in its outer face, said recesses being adapted to receive one of the bolt sections to lock the nut to said bolt.

1,387,259. GAS-COMPRESSOR. JOSEPH N. HADJISKY, Detroit, Mich. Filed June 23, 1919. Serial No. 305,971. 9 Claims. (Cl. 230—18.)



1. A gas compressor comprising a casing provided with a pair of compartments each having a gas inlet and a gas outlet, and with a liquid outlet and a liquid inlet common to both compartments, means in each compartment adapted to automatically seal the gas outlet thereof when liquid reaches a predetermined height in the compartment, and a single liquid controlling member operatively connected to each gas outlet sealing means and adapted to throw a compartment into communication with the liquid outlet when the gas outlet thereof is sealed, and to simultaneously connect the other compartment with the liquid inlet.

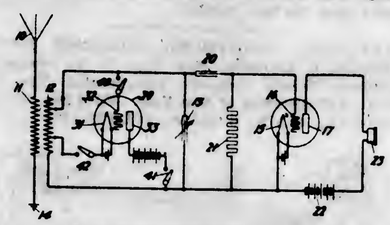
1,387,260. TIRE SLABBING AND PUNCHING PRESS. THOMAS WILTON HAND, Sheffield, England, assignor to Davy Brothers, Limited, Sheffield, England. Filed Apr. 15, 1920. Serial No. 374,190. 7 Claims. (Cl. 29—34.)



2. A tire slabbing and punching press of the kind referred to comprising a bed plate, a flattening anvil mounted thereon and arranged to receive the blank, a re-

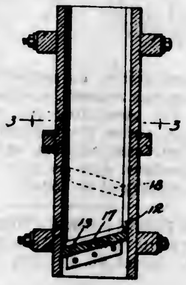
ciprocable press-head, gripping jaws mounted upon said press-head for lifting the blank from the flattening anvil

and manipulator mechanism for operating said jaws substantially as and for the purpose set forth.



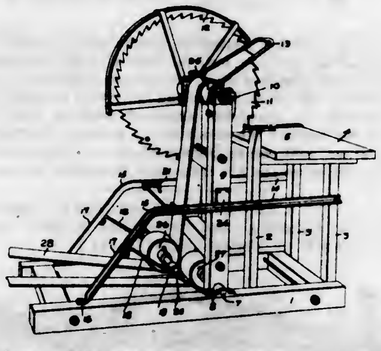
1,387,261. ILLUSTRATED CODE. LOUIS HARMUTH, South Orange, N. J., assignor to Fairchild Publishing Co., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,516. 3 Claims. (Cl. 283—1.)

1. A code which includes the grouping of individual elements into the respective subclasses to which they relate, and in properly identifying each of these elements by a code symbol, whereby these symbols may be grouped together to identify a unitary article of a main class, said article including any desirable aggregation of individual elements.



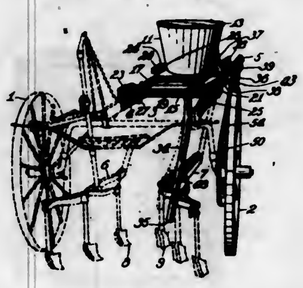
1,387,262. RECEIVING APPARATUS FOR WAVE-SIGNALING. RALPH V. L. HARTLEY, East Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Sept. 30, 1915. Serial No. 53,430. 18 Claims. (Cl. 250—8.)

1. In a radio receiving system, a receiving antenna, a detector and a tarnslating device, a circuit tuned to the signaling frequency and connected between said antenna and said detector, means conductively connected to said tuned circuit to cause the production of high frequency oscillations of a frequency different from the signaling



frequency for heterodyne reception, and switching means for disconnecting said conductively connected means to render said detector and translating device operative to receive telephonic messages.

1,387,263. MONUMENT-MOLD. GROVER C. HASTINGS, Memphis, Tenn. Filed Jan. 17, 1920. Serial No. 352,005. 2 Claims. (Cl. 25—121.)



1. A concrete mold comprising a plurality of oppositely disposed side members, and means carried on two of the opposite side members for supporting end members, said oppositely disposed side members adapted to be reversed to support the end members in different positions relative to the length of the mold.

1,387,264. WOOD-SAW. RUDOLPH A. HEISEL, Luverne, Minn. Filed Dec. 14, 1920. Serial No. 430,623. 3 Claims. (Cl. 143—46.)

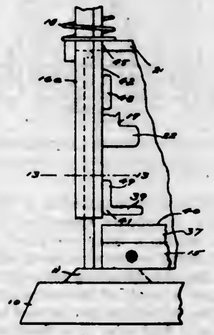
1. A saw of the character described, comprising a base, a table supported on the base, a saw frame pivotally mounted on the base, a pair of rails between which the saw frame is movable, and means for adjusting the rails toward and away from each other to control the frictional engagement of the rails and the saw frame.

1,387,265. FERTILIZER-FEEDER FOR CULTIVATORS. OSCAR HENTHORN, Brown township, Montgomery county, Ind. Filed Jan. 24, 1919. Serial No. 272,828. 2 Claims. (Cl. 275—9.)

1. In a fertilizer feeder for cultivators, the combination of two base beams spaced apart, a fertilizer box with an outlet, said box having arms secured to one of said beams and arms secured to the remaining one of said beams, a long journal box integral with a portion of the fertilizer box between said beams, a brace integral with the journal box and a side portion of the fertilizer box, two braces integral with the journal box and also with two of said arms respectively, a driving shaft arranged between said beams and rotatably supported in said journal box, said shaft extending beyond said beams, a sprocket wheel secured to said shaft beyond said beams, and an agitator and feeder in the fertilizer box geared to said shaft.

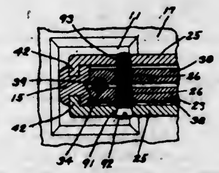
1,387,266. CLOTHESLINE-SUPPORT. ROBERT E. HINES, Brooklyn, N. Y., assignor of one-half to Abraham Tweel, New York, N. Y. Filed Nov. 6, 1919. Serial No. 336,010. 3 Claims. (Cl. 68—3.)

3. In a clothes line support, a hook, a bracket acting as a guide for the clothes line, an arm and a pivot pivotally holding said bracket and arm together and provided with an eye for removably hanging said bracket on said hook, said arm being adapted to be turned at right angles on said hook and to be swung on its pivot and means on the end of said arm over which the clothes line is adapted to pass.



1,387,267. MAGNIFYING ATTACHMENT FOR SLIDE-RULES. CHRISTIAN HOLLE, Jr., San Diego, Calif. Filed Apr. 5, 1920. Serial No. 371,516. 1 Claim. (Cl. 88—39.)

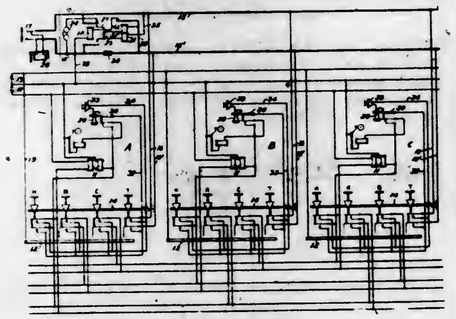
The combination with the ordinary reading glass of a slide rule, of a transparent member flat on one side and cylindrical on the other side secured thereto by adhesion



of the flat surface of the glass and provided with flat translucent ends.

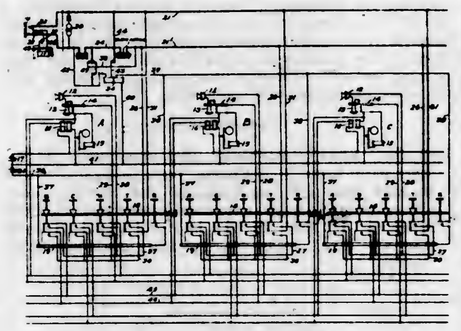
1,387,268. STAPLE-BINDER. BERTHOLD JAHN and ERNEST E. KAHL, New Britain, Conn., assignors to The B. Jahn Manufacturing Company, New Britain, Conn., a Corporation. Filed June 19, 1919. Serial No. 305,431. 3 Claims. (Cl. 1—2.3.)

1. A staple binder comprising a die having a cutting edge at one end and having a reduced portion along one face for slidably supporting a staple strip, a housing connected with the said die inclosing the said reduced portion, feeding mechanism for feeding the said strip along the said reduced portion contained in the said housing, a plunger operatively supported by the said housing, having a cutting edge for coöperating with the said cutting edge on the die, and also having means for operating the said feeding mechanism, the said housing comprising a pair of side plates positioned on opposite sides of the said reduced portion, and inwardly directed ribs being provided on the inner faces of the said side plates for overhanging the said reduced portion, suitably to engage with the upper face of the said staple strip.



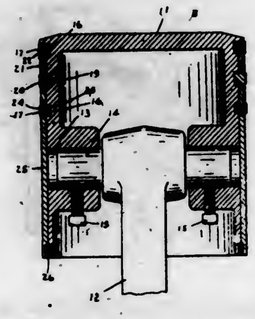
1,387,269. STAPLE-BINDER. BERTHOLD JAHN and ERNEST EMIL KAHL, New Britain, Conn., assignors to The B. Jahn Manufacturing Company, New Britain, Conn., a Corporation. Original application filed Nov. 25, 1916, Serial No. 133,357. Divided and this application filed Mar. 19, 1920. Serial No. 367,238. 9 Claims. (Cl. 1—2.3.)

7. A staple binder comprising a die member that serves as a guide way for slidably receiving a staple strip and has a die at one end for severing individual staples from the said strip, a plunger operatively mounted for coöperat-



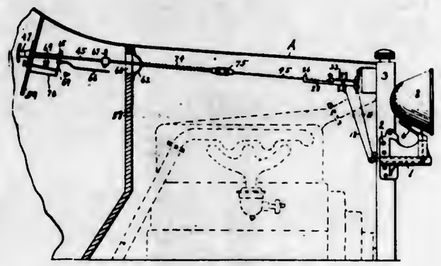
ing with the said die and having one face opposed to the said die, and the said die being in the form of a separate member that is removably mounted in the said die member.

1,387,270. SIGNALING AND TELEPHONE SYSTEM. CHARLES W. KECKLER, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1918. Serial No. 224,923. 5 Claims. (Cl. 179—40.)



1. A telephone system comprising a line, a signal connected therewith, telephonic apparatus, a source of current, switching means, a relay energized upon the actuation of said switching means to connect said source of current with said line for operating said signal, and a second relay operating as a result of the energization of said first relay to cause the deënergization thereof and operating independently of said first relay as a result of the connection of said telephonic apparatus with said line.

1,387,271. TELEPHONE SYSTEM. CHARLES W. KECKLER, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1918. Serial No. 224,924. 17 Claims. (Cl. 179—40.)

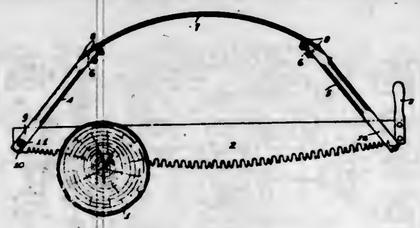


14. In a telephone system, in combination, a plurality of subscribers' stations, a trunk circuit common to said stations, a telephone set at each station for connection with said circuit, a bridging connection arranged on establishment to hold said circuit in substitution of a telephone set, means for establishing said bridging connection, means for disabling said bridging connection, and means responsive to the connection of the telephone set of a station with the trunk circuit to prevent operation of said disabling means until after establishment of said bridging connection.

1,387,272. PISTON AND PISTON-RINGS. WILLIAM OREN KEELING, Franklin, Ind. Filed Sept. 7, 1920. Serial No. 408,417. 4 Claims. (Cl. 74—109.)

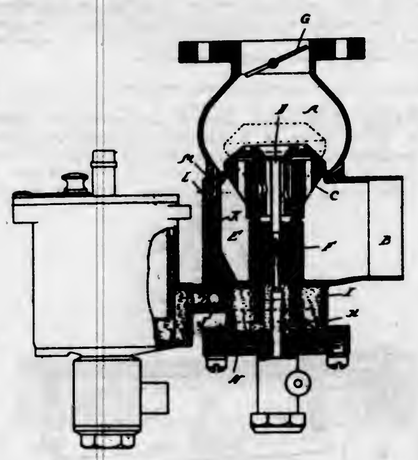
1. A piston including a body portion provided with an annular groove, an expansible piston ring seatable in said groove and provided with a cam surface, and a cam member operable by said piston and cylinder by the movement of the former for expanding said expansible piston ring.

1,387,273. DIRIGIBLE HEADLIGHT. KARL A. KENDRICK, Detroit, Mich. Filed Jan. 28, 1920. Serial No. 354,580. 12 Claims. (Cl. 240—61.)



1. In combination, a lamp and a mounting therefor comprising a vertical and a horizontal axis and a support for the vertical axis, a wheel secured to the lower end of the vertical axis, a slidable and rotatable rod, a drum mounted on the rod and rotatable therewith and through which the rod is slidable, a continuous flexible connector wound on the drum and extending around the wheel on the vertical axis of the lamp whereby the lamp may be rotated on its vertical axis through unlimited arcs, and means connecting the slidable rod to the lamp whereby the lamp may be tilted on its horizontal axis when the rod is moved longitudinally.

1,387,274. CROSSCUT-SAW EQUALIZER. LAWRENCE EDWARD KILLIAN, Fillmore, Ill. Filed Feb. 10, 1921. Serial No. 443,867. 2 Claims. (Cl. 145—33.)

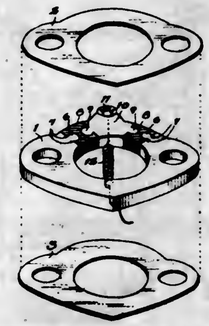


2. The combination with a saw of the character described having a handle at one end, of an equalizer independent of the saw and handle and comprising a pair of equalizer handles bifurcated to receive the saw blade, a bolt securing one bifurcated end to the saw blade, a plate

secured to the other bifurcated end and located against the toothed edge of the saw, and a spring connecting the

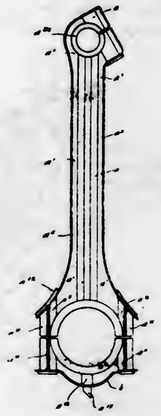
free ends of the equalizer handles and holding one of said equalizer handles against the saw handle.

1,387,275. CARBURETER. CHARLES H. KIRBY, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 20, 1915. Serial No. 51,583. 6 Claims. (Cl. 261—41.)



1. In a carbureter, the combination with a mixing chamber and an automatic valve controlling the air inlet thereto, of a dash-pot for retarding the opening movement of said valve, said dash pot having connection with the oil supply, a check valve for closing the oil supply when said dash-pot is in action, an oil passage rising from said dash-pot filled by the pressure in said dash-pot when said check valve is closed, and a vent passage connecting with said mixing chamber intercepted by said oil passage.

4. In a carbureter, the combination with a mixing chamber and an automatic valve controlling the air inlet thereto, of a dash-pot for retarding the opening movement of said valve, said dash pot having connection with the oil supply, a check valve for closing the oil supply when said dash-pot is in action and an oil passage rising from said dash-pot filled by the pressure in said dash-pot when said check valve is closed, said passage having communication with the mixing chamber.

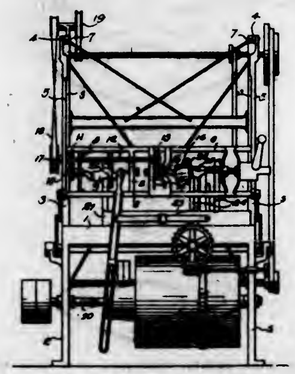


6. In a carbureter, the combination with a mixing chamber, of an automatic valve controlling the air admission to said chamber, a cylinder connected with the oil supply, a piston in said cylinder connected to said automatic valve and co-acting with said cylinder to form a dash-pot for said valve, a check valve in the oil supply closed by the rise in pressure in said cylinder due to lifting of said valve and piston, a check valve permitting the free descent of said piston and a passage connecting with said cylinder rising to above the normal level of the oil and communicating with the mixing chamber.

1,387,276. ELECTRIC VAPORIZING-GASKET. WILBER KUTSCHE, Western, Nebr. Filed Apr. 7, 1921. Serial No. 459,278. 10 Claims. (Cl. 219—38.)

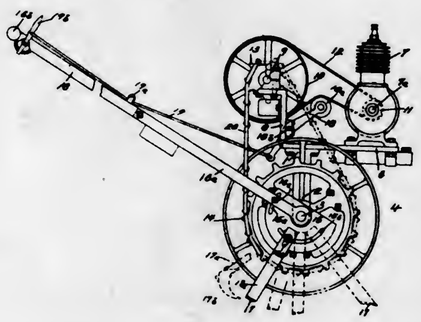
1. A vaporizing gasket, composed of a body of insulating and conducting parts, and insulating pieces laid above and below when the gasket is clamped between a manifold and carbureter and a resistance element contained within the gasket.

1,387,277. CONNECTING-ROD. HEBRON B. LAYMAN, New York, N. Y., assignor to The Layman Pressed Rod Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 24, 1916. Serial No. 86,361. 12 Claims. (Cl. 74—17.)



1. A sheet metal connecting rod having portions of one end portion bent inwardly to receive a portion of a cap securing means, and exteriorly applied elements secured to the end of the rod and adjacent the inwardly bent portions to coöperate therewith to receive the said cap securing means.

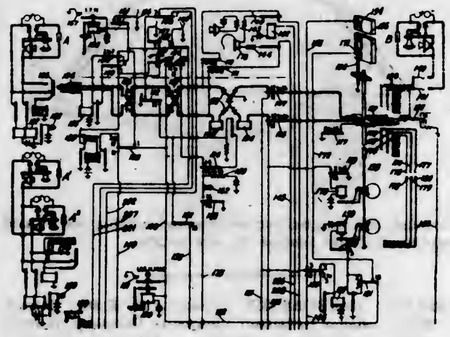
1,387,278. CUTTER-HEAD FOR WOODWORKING-MACHINES. CLAUDE L. LONG and CONRAD SCHMAUS, Dayton, Ohio, assignors to The Crawford, McGregor and Canby Co., Dayton, Ohio, a Corporation of Ohio. Filed Oct. 15, 1917. Serial No. 196,617. 23 Claims. (Cl. 142—15.)



1. A wood working machine of the type embodying a work support in which the work is revolubly mounted, a

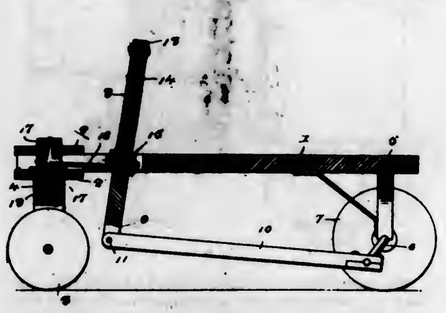
cutter head support, and means for relatively moving the work support and cutter head support in a direction substantially parallel with the axis of rotation of the work and a cutter head, characterized by a plurality of peripherally serrated plates of different diameters concentrically

arranged in progressive series to form a cone of low pitch, the face of which forms an abrupt angle with the axis of rotation of the work, said head engaging the work laterally, and a second rotary cutter of less diameter rotating in a parallel plane closely adjacent to the base of said conical head and projecting therebeyond.



1,387,279. POWER-CULTIVATOR. MAXAMILIAN LUGER, Robbinsdale, Minn. Filed Nov. 16, 1920. Serial No. 424,348. 32 Claims. (Cl. 97—30.)

1. A straddle row self-propelled walking cultivator comprising an arched axle, bull wheels mounted thereon, a motor mounted on said axle and connected to drive said wheels, and a guiding tongue normally fixed to said axle for control by the operator walking behind the cultivator in guiding the same.

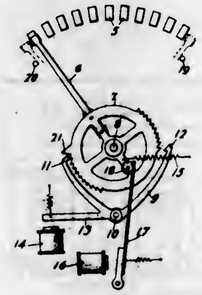


1,387,280. TELEPHONE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1916. Serial No. 139,936. 4 Claims. (Cl. 179—27.)

1. In a telephone system, a plurality of telephone lines, a connecting circuit and an automatic switch for interconnecting said lines, an audible indicating device therefor, a register for registering the number of the called line and for determining the setting of said automatic

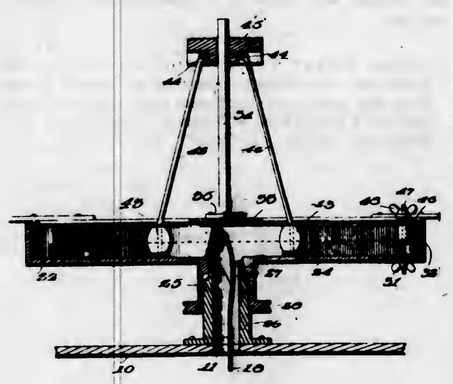
switch, said indicating device operating in accordance with the number set up on the register, and means operated at will under the control of the operator for repeating said number on said indicating device.

1,387,281. TOY CART. JOHN H. MCCARTHY and HENRY E. GRAFF, Lyons, N. Y., assignors, by direct and mesne assignments, to The McCarthy Novelty Company, Whitehall, N. Y., a Corporation of New York. Filed June 4, 1920. Serial No. 386,429. 1 Claim. (Cl. 208—33.)



A device of the class described comprising a seat part having a forked front end, a front wheel supporting post rotatably mounted in said forked end, a rocker lever pivotally mounted between the forks of said forked end, a block connected with the rear end of the seat part, a crank shaft carried by said block, rear wheels carried by the crank shaft, a bar connecting the crank shaft with the lower end of the rocker lever, a foot bar connected with the lower end of said lever, a shaft rotatably mounted in the upper end of said lever, a handle bar connected with said shaft, a drum on said shaft, a cable connecting the drum with the front wheel supporting post, and a foot rest on said post.

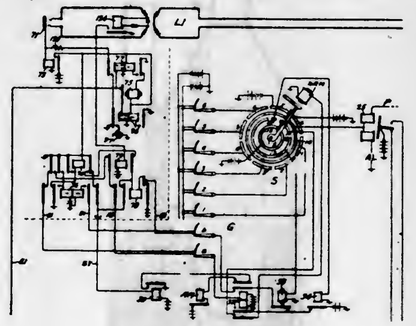
1,387,282. TELEPHONE SYSTEM. JAMES L. MCQUARRIE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,623. 3 Claims. (Cl. 179—27.5.)



1. In an electrical switching device, a terminal bank comprising a row of equi-distantly spaced contacts, a

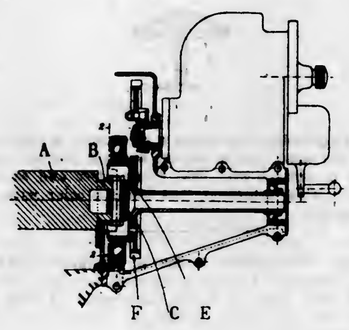
brush for engaging said contacts, and means operable to step said brush by equi-distant steps over the intermediate contacts of said bank, and operable when said brush is on

the contact next to the end to impart a long step to said brush whereby the latter is carried over and to a position out of engagement with the end contact, and to return said brush to a resting position on said end contact.



1,387,283. FILM-FEED APPARATUS FOR PROJECTION DEVICES. CLAUDE H. MCQUILLAN, Green Bay, Wis. Filed July 9, 1920. Serial No. 395,104. 5 Claims. (Cl. 88—18.7.)

1. In a device of the character described, a film feeding device including a rotatable flanged plate having a downwardly opening film feeding aperture at its center and provided with a radial slot, means adjustably held in the said slot for engaging the outer periphery of a film roll on the plate, and a cover for the plate having adjustable pressure means engaging the inner surface of the film roll.

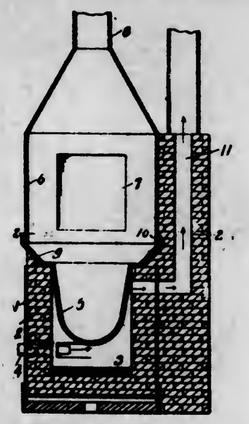


1,387,284. TELEPHONE SYSTEM. HARRY W. MACDOUGAL, East Orange, and HUGH D. MACPHERSON, Maplewood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1919. Serial No. 314,503. 6 Claims. (Cl. 179—50.)

1. In a telephone system, in combination, a plurality of trunk lines and a signaling path common thereto extending between two stations, means at one station for transmitting over the signaling path code signals individual to the different trunk lines, a normally inactive switching device common to the trunk lines for determining the codes of the signals to be transmitted, and means con-

trolled by a change in condition on any one of the trunk lines for rendering the switching device active.

1,387,285. APPARATUS FOR DRIVING MAGNETOS IN CONNECTION WITH INTERNAL-COMBUSTION ENGINES. AUGUSTE MAIRE, Argenteuil, France, assignor to Societe Lorraine Des Anciens Etablissements De Dietrich & Cie., De Luneville, Paris, France. Filed Sept. 25, 1917. Serial No. 193,213. 4 Claims. (Cl. 123—148.)

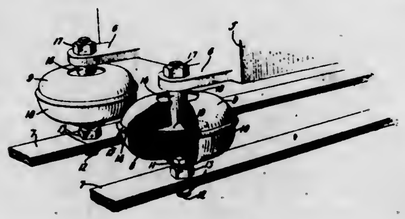


1. An igniting mechanism for explosion engines comprising in combination the motor shaft, two magnetos, two sparking plugs in each motor cylinder respectively connected to said magnetos, two toothed gears adapted to drive the two magnetos respectively, one toothed wheel meshing with said toothed gears, a sleeve concentric with said toothed wheel, secured to the same and mounted in the prolongation of the motor shaft, means for rigidly and rotatably supporting said sleeve, a bushing formed by one end of said sleeve and one elastic coupling operatively connecting said motor shaft to said bushing.

1,387,286. CYANID-FURNACE. RALPH MARSHALL MAJOR, Bloomfield, N. J., assignor to Driver-Harris Company, Harrison, N. J., a Corporation of New Jersey. Filed Feb. 17, 1920. Serial No. 359,280. 7 Claims. (Cl. 263—11.)

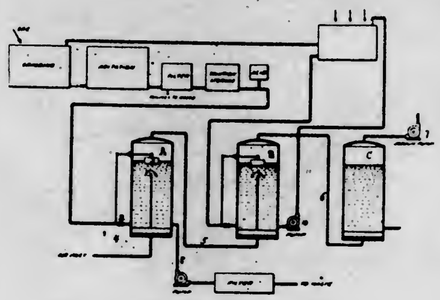
1. The combination of a refractory cyanid pot, a furnace for heating the same, a hood for said pot substan-

tially preventing cyanid from said pot entering the interior of said furnace, a flue for said hood and a flue for



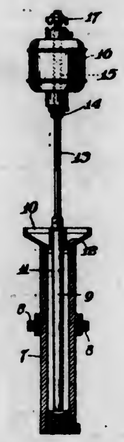
the products of combustion of said furnace independent of said hood and its flue.

1,387,287. WEATHER-INDICATOR. WILLY MARGRAF, New York, N. Y. Filed June 26, 1919, Serial No. 306,865. Renewed Apr. 25, 1921. Serial No. 464,259. 3 Claims. (Cl. 23—3.)



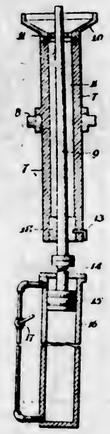
1. A hygroscope comprising a receptacle, a fabric piece closing the same, and absorbent material within said receptacle in contact with said fabric piece and saturated with a chemical substance that changes color with varying moisture.

1,387,288. SUPPORT. HARRY R. MENEFEE, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1919. Serial No. 348,230. 1 Claim. (Cl. 267—63.)



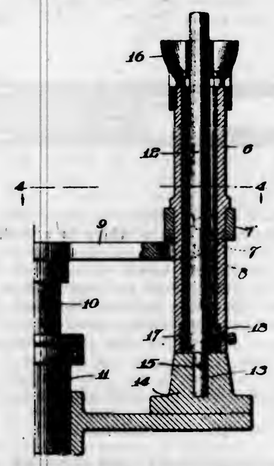
An apparatus support comprising a substantially spherical casing, a body of resilient material inclosed therein, an attachment lug provided at one end with a flange portion centrally located in said body of resilient material and extending through a suitable opening in the casing, and a second attachment lug rigidly secured to the casing in alinement with said first lug and perpendicular to the plane of said flange portion.

1,387,289. CYANIDING PROCESS. LOUIS D. MILLS, San Francisco, Calif., and THOMAS B. CROWE, Victor, Colo., assignors to The Merrill Company, San Francisco, Calif., a Corporation of California. Filed Mar. 21, 1918. Serial No. 223,694. 3 Claims. (Cl. 75—185.)



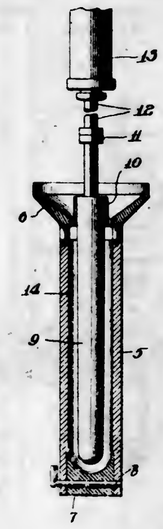
1. A cyaniding process comprising dissolving metal in cyanid solution, adding acid to said solution to generate hydrocyanic acid gas, connecting the surface of the solution with an alkali absorbent of cyanogen by a connection which excludes the atmosphere, admitting air to the bottom of the solution, establishing beyond said absorbent a partial vacuum to draw the air through said solution to pick up the hydrocyanic acid gas therefrom and through said absorbent to absorb said hydrocyanic acid gas.

1,387,290. BILLET AND METHOD AND MEANS FOR CASTING THE SAME. CHARLES S. MORSE, Roland Park, Md., assignor to Baltimore Tube Company, Incorporated, a Corporation of Virginia. Filed May 2, 1919. Serial No. 294,154. 5 Claims. (Cl. 22—216.)



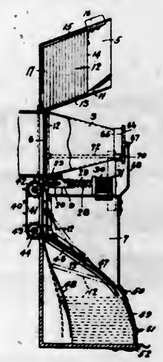
1. The method of casting a hollow billet which consists in introducing the molten metal into the space formed between coöperating separable metal mold and core elements having approximately parallel walls and, simultaneously with the pouring, causing a relative and continuous separating movement between the core and the mold and casting.

1,387,291. METHOD AND MEANS FOR BILLET-CASTING. CHARLES S. MORSE, Roland Park, Md., assignor to Baltimore Tube Company, Incorporated, a Corporation of Virginia. Filed June 8, 1920. Serial No. 387,348. 9 Claims. (Cl. 22—200.)



1. The method of casting hollow billets which consists in introducing the molten metal into the space formed between a mold element and a separable tapered core element and withdrawing the core element from the mold element while pouring, the degree of taper of the core element and the speed of its withdrawal being dependent upon the degree of contraction of the metal of the casting in the process of cooling.

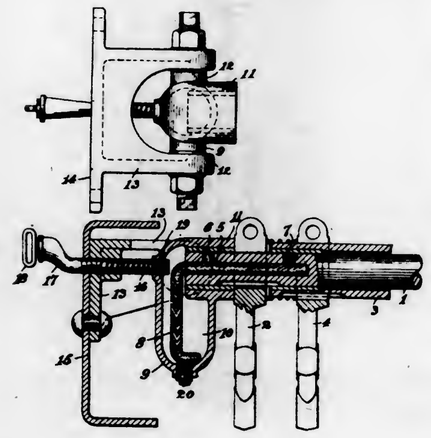
1,387,292. METHOD AND MEANS FOR BILLET-CASTING. CHARLES S. MORSE, Roland Park, Md., assignor to Baltimore Tube Company, Incorporated, a Corporation of Virginia. Filed June 30, 1920. Serial No. 392,993. 7 Claims. (Cl. 22—75.)



1. The method of casting hollow billets, which consists in introducing the molten metal into the space formed between a mold element and a separable core element and moving a mold element relatively to the core element to cause the withdrawal of the core from the mold during the pouring operation.

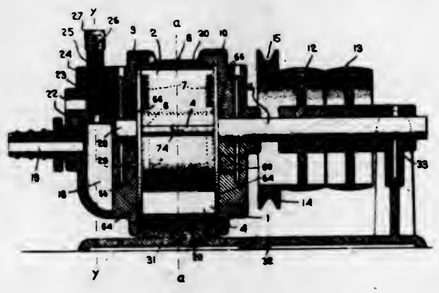
1,387,293. METHOD AND MEANS FOR BILLET-CASTING. CHARLES S. MORSE, Roland Park, Md., assignor to Baltimore Tube Company, Incorporated, a Corporation of Virginia. Filed July 26, 1920. Serial No. 399,152. 4 Claims. (Cl. 22—140.)

1. The method of casting hollow billets which consists in introducing the molten metal into the space formed between a mold element and a core, the core tapering downwardly toward the bottom of the mold element, and causing relative continuous movement between the mold element and the core to cause the withdrawal of the core from the mold, during the pouring operation, said movement being timed so that the lower end of the core shall be maintained below the level of the molten metal until the pouring has been completed.



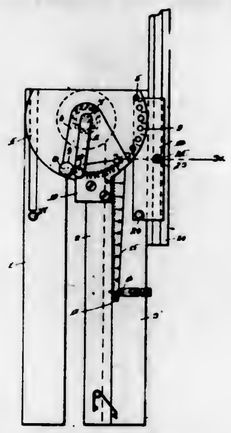
1,387,294. EXHIBITING APPARATUS. THOMAS J. MOSURE, Niles, Ohio. Filed Mar. 19, 1920. Serial No. 367,145. 7 Claims. (Cl. 40—78.)

1. An exhibiting device comprising a magazine for holding transparent slides or the like, a display space below the said magazine, an escapement device adapted to reciprocate horizontally and rectilinearly across the path of



movement of the said slides below the said display space and automatically operable means for reciprocating the said escapement device at predetermined time intervals.

1,387,295. VEHICLE-BRACKET LUBRICATOR. CORNELIUS T. MYERS, Avenel, N. J. Filed Aug. 23, 1919. Serial No. 319,513. 9 Claims. (Cl. 64—27.)



1. A fitting for a vehicle frame adapted to support a reciprocating surface friction member, comprising, integrally associated, a bearing, a load supporting or attaching member and intermediate connections forming a lubricant supply-reservoir, a filling opening for said reservoir and a closure therefor, means to convey a controlled supply of lubricant from the reservoir to bearing including a guide terminating in a position accessible from the filler opening.

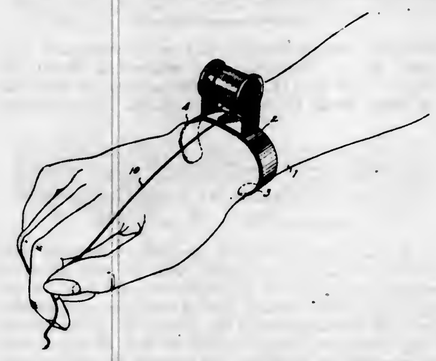
1,387,296. ROTARY PUMP. ALBERT H. NELSON, Boston, Mass., assignor to Babcock-Davis Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1915, Serial No. 20,307. Renewed Dec. 2, 1919. Serial No. 342,016. 4 Claims. (Cl. 230—30.)

1. In a blower, the combination with a rotor-receiving chamber having inlet and outlet ports, of a rotor therein having radially-extending blades, and means to rotate the rotor, the peripheral and end walls of said rotor-receiving chamber being freely rotatable.

1,387,297. PROTRACTOR. JOHN NEUMAIER, Dayton, Ohio. Filed June 6, 1919. Serial No. 302,315. 6 Claims. (Cl. 33—97.)

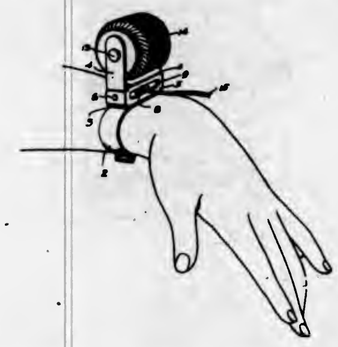
1. A protractor having two arms thereon pivoted on a center and extending normally in the same direction therefrom, the outside of each arm being parallel to the outside of the other arm when in zero position, one of said arms having its inner edge extending radially from the center and the other arm having its inner edge normally parallel to and spaced apart therefrom with an open space between them, an extension on one of said arms extending in the opposite direction, said arms being adapted to measure angles on one side of the common pivot of the arms, the extension being used to measure the same angle at the other side of the common pivot of the arms.

1,387,298. FOUNTAIN-PEN BLOTTING ATTACHMENT. BLAINE W. ODOM, Dallas, Tex. Filed Feb. 14, 1921. Serial No. 444,741. 2 Claims. (Cl. 120—42.)



1. A fountain pen attachment comprising a guard member in the outer end of which is a socket, a cap mounted on and removable from said guard member, a plug secured in the said socket of the guard member, a stem having an enlargement at one end secured in the said plug and also having its outer end upset, a blotting roller mounted on and revoluble about the said stem, a washer loosely surrounding the stem and interposed between the base of the roller and the said plug, and a washer loosely mounted on the stem and interposed between the outer end of the roller and the upset portion of the stem.

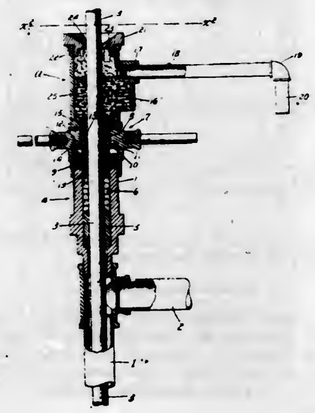
1,387,299. THREAD GUIDE AND SUPPORT. JOHN W. OLIVER, New York, N. Y. Filed Oct. 26, 1920. Serial No. 419,728. 2 Claims. (Cl. 242—140.)



1. A thread guide and support comprising a sheet of resilient material adapted to embrace the wrist of an operator, a supporting member of sheet metal attached to the rear face thereof and adapted to support a spool

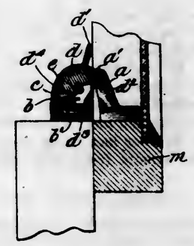
of thread thereon, and a channel member formed integrally with the supporting member and having therein

a long, narrow passage through which the thread is adapted to extend and by which it is frictionally engaged to prevent unreeling.



1,387,300. THREAD GUIDE AND SUPPORT. JOHN W. OLIVER, New York, N. Y., and HENRY BRUCKER, Newark, N. J. Filed Nov. 17, 1920. Serial No. 424,645. 2 Claims. (Cl. 242—136.)

1. A thread guide and support comprising a U-shaped integral body portion, a removable shaft extending between the outer ends of the legs of the U and adapted to receive a spool of thread, resilient gripping members attached to the lower face of the base of the U, a slotted plate disposed across between the leg members adjacent the base of the U frame, flanges on said slotted plate attached to the leg members, integral overturned flange portions on the upper and lower edges of the plate adjacent the slot and forming a channel, and a washer located in said channel and adapted loosely to slide therein and guide the thread.

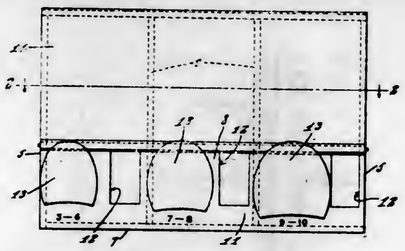


1,387,301. LUBRICATED STUFFING-BOX. EVAN E. OSBORNE, Los Angeles, Calif. Filed Dec. 23, 1916. Serial No. 138,673. 17 Claims. (Cl. 286—17.)

1. A vertical rod having a stuffing box provided at its upper end with a bowl that surrounds the rod and is adapted to hold liquid lubricants thereon; means at the upper end of the bowl for collecting leakage above and outside of the bowl and for directing the leakage thereinto; a drainage pipe leading from the bowl near the top thereof and loose packing material in said bowl for the purpose of stripping the oil from the polished rod at the upper part of the rod so as to allow the same to be drawn off and yet to leave an accumulation of oil

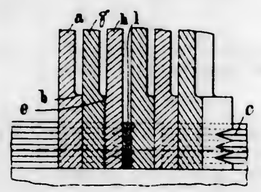
in the bowl without allowing the polished rod to be covered with oil where exposed to the outside.

1,387,302. SAFETY-LOCK FOR WINDOWS AND THE LIKE. PETER PAGE, Pawtucket, R. I. Filed Dec. 23, 1918. Serial No. 268,053. 6 Claims. (Cl. 292—198.)



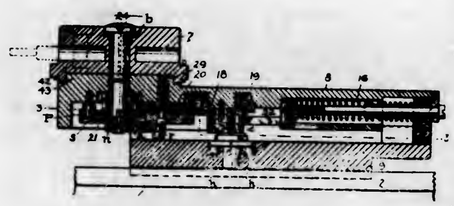
1. The combination of two frames arranged in juxtaposition to slide by each other in parallel planes, a hook member secured to one frame close to the plane dividing the two frames, a latch pivotally mounted on the other frame and provided with two angularly disposed hook engaging portions one of which when projected beyond the dividing plane acts to lock both frames against sliding movement, the other of which when projected beyond the dividing plane acts to restore the latch automatically to locking position when either sash is moved by the other, and a spring engaging said latch to hold the same yieldingly on either side of its dead center of pivotal movement, substantially as described.

1,387,303. COBBLER'S CABINET. MARTIN PANIAN, Eveleth, Minn. Filed Mar. 19, 1921. Serial No. 453,657. 1 Claim. (Cl. 211—7.)



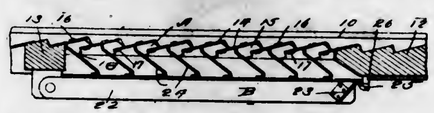
A cabinet comprising end walls and a rear wall, a bottom member having connection with the end and rear walls, the bottom member extending beyond the front portion of

the end walls to provide a compartment, partitioning members for dividing the cabinet and compartment into



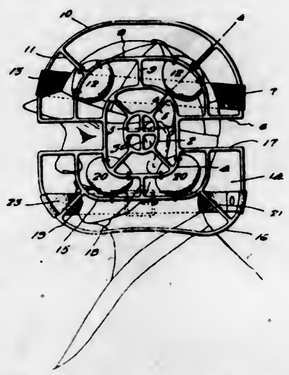
sections, a movable wall forming the front of the cabinet, and a front wall for the compartment.

1,387,304. TURBINE-BLADE ATTACHMENT. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, and LOUIS MORTIMER DOUGLAS, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Filed June 16, 1920. Serial No. 389,428. 2 Claims. (Cl. 253—77.)



1. In a turbine, the combination of a blade carrier having a groove on the sides of which projections are provided which are cut away at one point, members including blades and packing pieces adapted to be inserted through the space left by the cut-away part and interlocking with the said projections and including also a separate packing piece calked into position, a blade-carrying member adjacent said packing piece interlocking with a portion of the adjoining member located on the side of said blade-carrying member remote from said packing piece, as set forth.

1,387,305. TURRET-LATHE. FREDERICK W. PARSONS, Cleveland, Ohio. Filed Jan. 7, 1920. Serial No. 349,926. 6 Claims. (Cl. 29—49.)

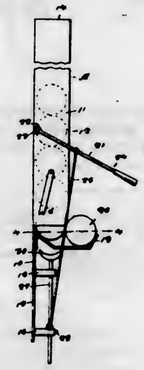


2. In a lathe, a rotatable turret and a fixed base and a support for the turret slidable on said base, a bolt and a tightening nut thereon adapted to clamp the turret on said support and said nut having a lateral arm with a roller at its end, a rotatable cam member fixed on said base having opposite inclined surfaces with a space between adapted to receive said roller and rotate said nut alternately in opposite directions, adjusting screws to rotate and fix said cam member in different position, and means to move said turret support back and forth and thus bring said roller into engagement with said inclined surfaces and release and lock said bolt.

1,387,306. GRAIN-SIEVE. DANIEL F. PEHRSSON, Buffalo, N. D. Substitute for application Serial No. 97,112, filed May 12, 1916. This application filed Dec. 2, 1919. Serial No. 342,080. 3 Claims. (Cl. 130—19.)

1. A grain sieve having a plurality of inclined grain passages through it, the lower wall of each of which passages terminates at its discharge end short of the upper wall of the passage, a stop plate for each passage across the discharge end of the passage in spaced relation to the discharge end of the bottom wall of the passage and extending at its lower end beneath the bottom wall of its corresponding passage and a movable support for the stop plates by which they are simultaneously movable into and out of their respective positions.

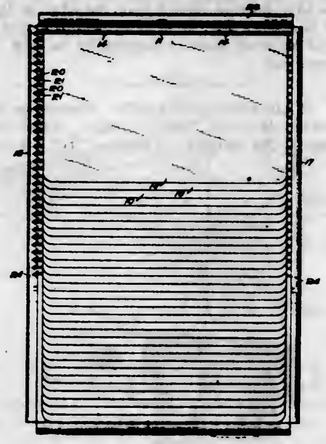
1,387,307. MASK. HERMAN H. POHLMANN, St. Louis, Mo. Filed Nov. 16, 1920. Serial No. 424,468. 1 Claim. (Cl. 2—193.)



In a mask designed to be arranged on the side of the face and head of a batter of a baseball team, a main frame comprising inner and outer elliptical wires, right angular braces for the inner wire, angular braces between the inner and outer wires, upper and lower auxiliary frames connected to the main frame and constructed of wires, the upper auxiliary frame having inner and outer arched wires, arched brace wires connecting the same and securing the auxiliary frame to the main frame and arranging the said upper auxiliary frame at an inward arch with respect to the main frame, spaced inwardly projecting pads in the upper auxiliary frame, a flexible band secured to the ends of the said auxiliary frame, the lower auxiliary frame comprising inner and outer members which have their side portions arranged at approximately the same curvature as the sides of the main frame, and their lower portions arched toward the main frame, brace wires connecting the inner and outer braces of the lower auxiliary frame together and to the main frame, and said brace wires being arched to direct the lower auxiliary frame inwardly of the main frame, inwardly projected pads on the lower auxiliary frame, straps secured to the sides of the lower auxiliary frame, and adjustable means for connecting the straps.

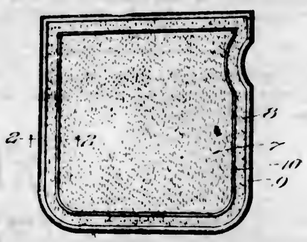
1,387,308. ATTACHMENT FOR FIREARMS. TRUMAN W. POST, New York, N. Y., assignor to Arms Products Company, New York, N. Y., a Corporation of New York. Filed July 20, 1918. Serial No. 245,831. 3 Claims. (Cl. 89—1.)

1. In ordnance, a portable firearm, a body harness for carrying the same, and a ground sprag forming, with the body harness, a support for the firearm in firing position.



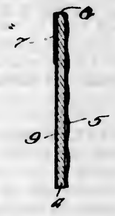
1,387,309. CAN-RACK. LEONARD L. PRATER, Denver, Colo. Filed July 22, 1920. Serial No. 398,283. 6 Claims. (Cl. 214—17.)

1. In combination, a receptacle adapted to receive a plurality of cans arranged in superimposed relation, said receptacle including front and rear walls, bracket arms projecting from the rear wall of the receptacle at a point beneath the front wall thereof, and means mounted on said receptacle for refilling the latter, and operable to move the cans within the rack a predetermined distance.



1,387,310. FILING AND INDEXING EQUIPMENT. JOHN T. QUIGLEY, Boston, Mass., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed June 5, 1919. Serial No. 301,886. 5 Claims. (Cl. 129—16.)

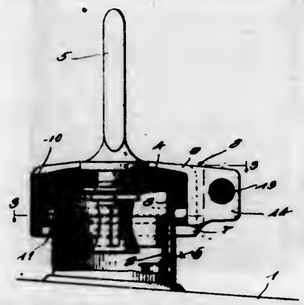
1. A filing and indexing equipment comprising, in combination, a plurality of sheets having spaced, overlapped margins, a plurality of sheet-holders, and a pair of guides provided with channels in which the ends of said sheet-holders are received and mounted to turn about their respective axes, said sheet-holders and guides having coöperating means normally locking said sheet-holders



in said guides but adapted to unlock and permit said sheet-holders to be removed by rotation about their axes to predetermined positions.

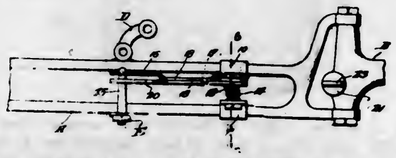
1,387,311. DOOR-PANEL AND THE LIKE. JOSEPH REGENSTEIN, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,682. 5 Claims. (Cl. 154—46.)

1. As a new article of manufacture, a door panel or the like comprising a sheet of body material and a sheet of waterproofed fabric and a sheet of waterproof paper applied to the opposite faces thereof, and a distinctive design embossed around the border of the completed panel and through all of the thicknesses thereof, substantially as described.



1,387,312. DOOR-PANEL AND THE LIKE. JOSEPH REGENSTEIN, Chicago, Ill. Filed Oct. 30, 1920. Serial No. 420,684. 2 Claims. (Cl. 154—46.)

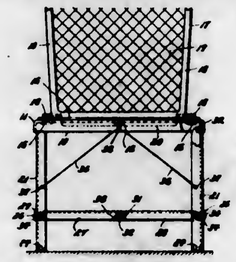
1. As a new article of manufacture, a door panel comprising a sheet of non-metallic composition body material



cut to the appropriate size and contour, a sheet of water proof material applied to the back face thereof, and a sheet of fabric extending over the front face of the panel having its edge portion lapped over the edge of the body sheet and laid down and secured to the back face of the water proof backing sheet, substantially as and for the purpose described.

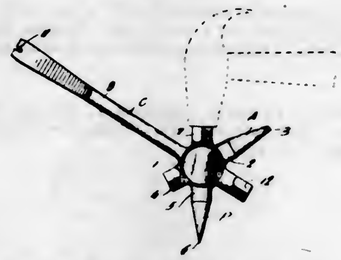
1,387,313. RADIATOR-CAP LOCK. SHERWOOD P. RICE and EDWARD MICHELL, Detroit, Mich. Filed July 26, 1920. Serial No. 398,864. 3 Claims. (Cl. 70—90.)

2. The combination with an automobile radiator including a filling-neck, a closing cap for the latter, and a temperature gage connected to and carried by said cap; of a jacket surrounding said neck and provided with a laterally extending lug, a cup-shaped housing placed in an inverted position on and surrounding the aforesaid cap, said housing having an opening formed in its closed side to permit passage therethrough of said gage, said housing being also provided with a shoulder for coaction with the aforesaid lug.



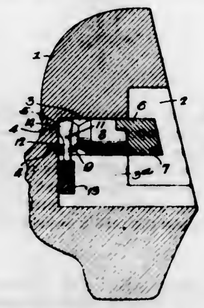
1,387,314. AUTOMOBILE-LOCK. FRANKLIN E. ROUSH, Dayton, Ohio. Filed July 10, 1920. Serial No. 395,200. 2 Claims. (Cl. 70—90.)

1. An automobile locking device comprising a pair of clamping plates engaged upon the front axle of an automobile, a bolt passing through and securing said plates together, a bar pivotally engaged upon said bolt beneath the upper of said plates and having its free end formed with a longitudinal slot, a second bar pivoted upon the first named bar intermediate the ends thereof and having one end notched for engagement with the head of said bolt, the other end of said second named bar being provided with a longitudinal slot adapted to register with the first named slot, a rod secured to one of the steering spindle arms and formed with an ear disposable between the free ends of said first and second named bars, said ear being provided with a hole registering with the slots in said bars for the passage of a shackle of a padlock.



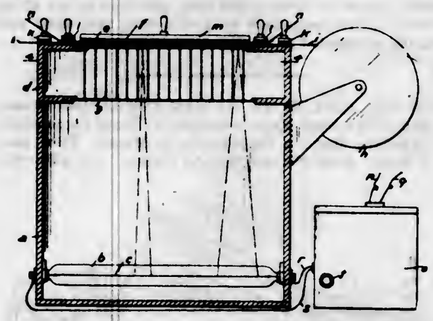
1,387,315. FOLDING SEAT. RUDOLPH G. SCHAUB, Woodbury, N. J. Filed Jan. 23, 1920. Serial No. 353,476. 2 Claims. (Cl. 155—148.)

2. In a chair, the combination of a rectangular open frame of angle iron, hinges having members fixed to the pendent portions of opposite bars of the frame, and pairs of legs fixed with respect to the other members of the hinges, the legs of each pair being connected together, and being arranged when not in use to be nested in the angle iron frame, with a seat superimposed on the frame and having pendent turn buttons detachably arranged with



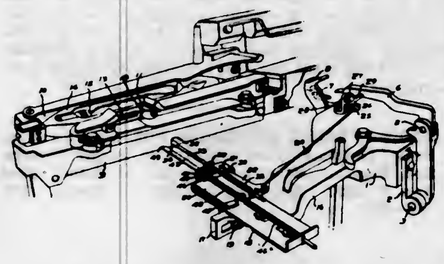
the horizontal portions of the frame bars, and a back hinged to the seat and having a pendent portion adapted to bear against the frame to maintain the back in working position.

1,387,316. COMBINATION-TOOL. JAMES JOSEPH SCHMIDT, Rahway, N. J. Filed May 26, 1920. Serial No. 384,376. 2 Claims. (Cl. 7—17.)



1. A combination tool comprising a body portion, and a plurality of tool shanks radiating therefrom at equal distances from each other, and a butt disposed on said body portion opposite each shank.

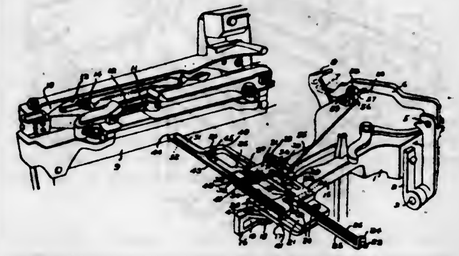
1,387,317. DOLL. HARRY E. SCHOENHUT, Philadelphia, Pa., assignor to The A. Schoenhut Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 26, 1920. Serial No. 368,863. 4 Claims. (Cl. 46—40.)



1. The combination of a doll's head having a recess at the back, a socket extending from said recess toward the front of the head, said socket having an eye opening at its forward end; an eye section having a ball portion at one end, said ball portion being located in the socket; and a lid between the ball portion and the socket and adapted to move so as to close the eye opening when the doll is in a recumbent position.

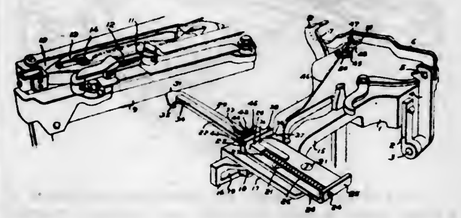
1,387,318. PROCESS AND DEVICE FOR ASCERTAINING THE CORRECT EXPOSURE FOR COPYING ROWS OF PICTURES ON FILM-BANDS. ARTHUR SCHULZE, Berlin, Germany, assignor of one-half to Deutsche Lichtbild-Gesellschaft E. V., Berlin, Germany. Filed Jan. 20, 1920. Serial No. 352,848. 5 Claims. (Cl. 95—10.)

1. A process for producing trial pictures for ascertaining the correct time of exposures for copying a row of pictures on a film band consisting in exposing an unexposed positive film through a negative band film bearing a plurality of pictures side by side to different quantities of light for the different pictures for an interval of time.



1,387,319. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1919. Serial No. 328,975. 18 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, the combination of a feeler stand, a feeler carrier mounted on the stand for movement toward and from the front of the loom, a lever pivotally mounted on and movable with the feeler carrier, a feeler carried by the lever, a spring for holding it normally in rear position, a feeler actuator movable frontwardly on each detecting beat, an arm extending laterally from the lever and through which extends the feeler actuator, a shoulder or abutment on the feeler actuator for engaging the arm as the feeler actuator moves frontwardly and acting through said arm to move the feeler carrier frontwardly and to turn the lever in a direction longitudinally of the shuttle when the feeler fails to be held from said movement by filling in the shuttle on a detecting beat.

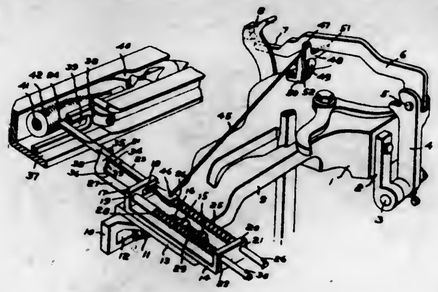


1,387,320. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1919. Serial No. 328,976. 11 Claims. (Cl. 139—85.)

1. In a feeler mechanism for looms, a feeler carrier movable toward and from the front of the loom on each detecting beat, a feeler relieving member connected to the feeler carrier and adapted to be engaged by a surface on the lay for moving the feeler carrier frontwardly on each detecting beat, a cam member mounted for lateral movement on the feeler carrier, a spring acting to move the cam member laterally on the feeler carrier, a feeler

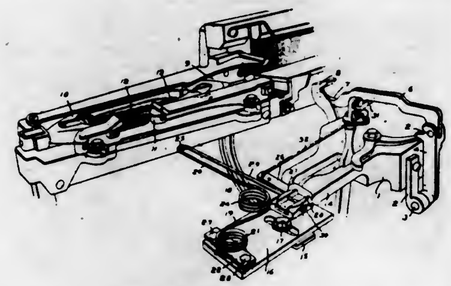
mounted on the cam member and adapted to be held from movement laterally of the feeler carrier by engagement of the filling until the latter is substantially exhausted, and means actuated by bodily movement of the feeler in a direction longitudinally of the shuttle to effect replenishment of filling.

1,387,321. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 7, 1919. Serial No. 328,977. 7 Claims. (Cl. 139—85.)



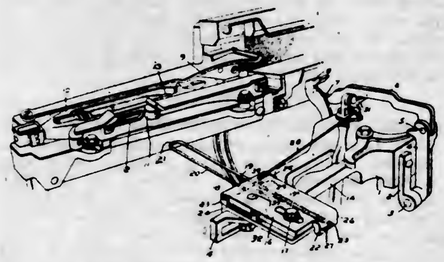
1. In a feeler mechanism for looms, a feeler guide mounted for movement toward and from the front of the loom, a feeler lying alongside the feeler guide, and mounted for movement toward and from the front of the loom and in a direction longitudinally of the shuttle but held from such longitudinal movement by engagement with the filling on a detecting beat until substantial exhaustion thereof, a coöperating cam and recess, one on the feeler and the other on the feeler guide for causing frontward movement of the feeler to move the guide frontwardly without relative frontward movement of the two when a working supply of filling is present on a detecting beat and for causing the feeler to move laterally away from the feeler guide when filling is substantially exhausted, a stop for limiting the movement of the feeler away from the feeler guide and yielding means tending to hold the cam and recess in engagement.

1,387,322. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 1, 1920. Serial No. 362,379. 11 Claims. (Cl. 139—85.)



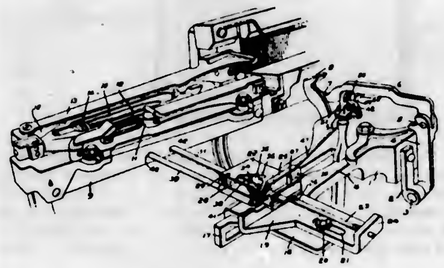
1. In a feeler mechanism for looms, the combination of a feeler and a deflector each mounted for movement toward and from the front of the loom, one of said members having an inclined surface which is engaged by the other member and tends to move the feeler laterally under the frontward pressure against the feeler on a detecting beat to effect replenishment of filling and is prevented from

effecting such lateral movement by engagement of the feeler with the filling until substantial exhaustion thereof,



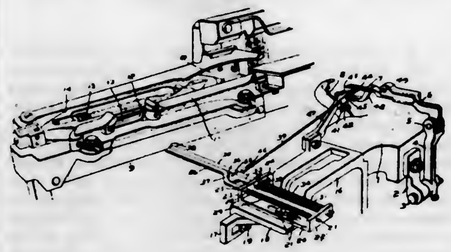
and means connected to the feeler for effecting replenishment of filling.

1,387,323. **FEELER MECHANISM FOR LOOMS.** ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 8, 1920. Serial No. 364,157. 15 Claims. (Cl. 139—85.)



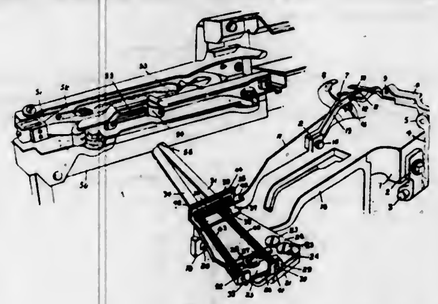
1. In a feeler mechanism for looms, the combination of a feeler stand, a feeler operated lever pivotally mounted upon said stand, means for effecting replenishment of filling when the lever is turned upon its pivot, and an inherently resilient feeler having a portion secured in fixed position to said stand and provided with a toothed portion to engage a surface within the shuttle on each detecting beat and with a portion slidably secured to said lever.

1,387,324. **FEELER MECHANISM FOR LOOMS.** ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 8, 1920. Serial No. 364,158. 12 Claims. (Cl. 139—85.)



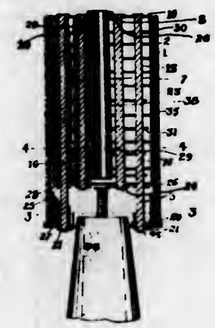
1. In a feeler mechanism for looms, a feeler stand, a feeler slidably mounted thereon and having a toothed portion positioned to engage a surface within the shuttle upon each detecting beat, resilient means for normally holding said feeler in its extended position, means operable by a lateral movement of said feeler for effecting replenishment of filling, said feeler having an integral resilient portion arranged to exert a lateral force upon the feeler to operate said replenishment effecting means upon movement of the feeler toward the front of the loom, and held by the filling against lateral movement on a detecting beat until substantial exhaustion of the filling occurs.

1,387,325. **FEELER MECHANISM FOR LOOMS.** ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 8, 1920. Serial No. 364,159. 11 Claims. (Cl. 139—85.)



1. A feeler mechanism, comprising, in combination, a feeler and a feeler actuator both of which engage a surface within the shuttle on a detecting beat, a laterally movable slide carrying the feeler, means connecting the feeler actuator and slide tending to cause lateral movement of the slide by the frontward push upon the actuator and held from effecting such movement by engagement of the feeler with the filling on a detecting beat until the filling is substantially exhausted, and means for effecting replenishment of filling when the slide is moved laterally on a detecting beat.

1,387,326. **FEELER MECHANISM FOR LOOMS.** ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 7, 1920. Serial No. 372,006. 9 Claims. (Cl. 139—85.)

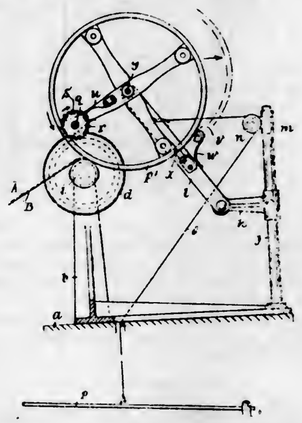


1. In a feeler mechanism for looms, the combination of a feeler having a cam surface, a second feeler movable longitudinally of the shuttle and provided with teeth positioned to engage the filling upon a detecting beat and to be held thereby from such longitudinal movement until substantial exhaustion occurs, a deflector positioned to be moved longitudinally of the shuttle by said cam surface upon a detecting beat, and constructed to exert a displacing force longitudinally of the shuttle upon the second feeler, and means operable by said longitudinal movement for replenishing filling.

1,387,327. **FEELER MECHANISM FOR LOOMS.** ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 31, 1920. Serial No. 400,451. 14 Claims. (Cl. 139—85.)

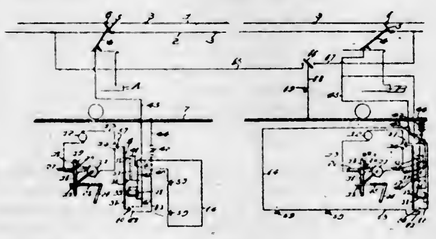
1. In a feeler mechanism for looms, the combination of a feeler that is mounted to enter the shuttle in a direction inclined to the longitudinal axis of the filling carrier or bobbin and is held from movement longitudinally along the filling carrier or bobbin on a detecting beat by engagement with the filling until substantial exhaustion thereof, a feeler displacer which is mounted to enter the shuttle in a direction inclined to the longitudinal axis of the shuttle and which tends to slide longitudinally of the filling carrier or bobbin under the frontward pressure on each detecting beat but is held from such movement by the feeler until the filling is substantially exhausted and then acts against the feeler to insure its movement longitudinally of the shuttle, and means for replenishing the filling when the feeler is so moved.

1,387,328. **AIR-PREHEATER FOR EXPLOSIVE-ENGINES.** SAMUEL S. STALEY and MARK W. COLLET, Philadelphia, Pa. Filed Jan. 7, 1918. Serial No. 210,628. 4 Claims. (Cl. 126—67.)



1. In an air preheater for internal combustion engines an air heating chamber, a fire box, and its chimney, said firebox and chimney together inclosing the air heating chamber at the bottom and the sides, the walls between the firebox and the air heating chamber and the walls between the chimney and the air heating chamber being of heat conducting material, a series of baffles in the air heating chamber, each alternate baffle being slightly spaced from, and fitting snugly to the wall separating the air chamber from the chimney, a draw off pipe for the heated air, leading from the air heating chamber to the outside of the heater, and having its intake mouth near the wall between the air chamber and the firebox.

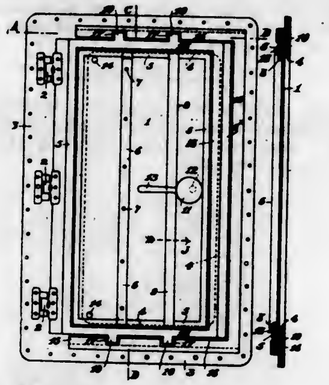
1,387,329. **DRILL-PARALLELER.** WALTER STARK, Auburn, Calif. Filed May 6, 1920. Serial No. 379,416. 7 Claims. (Cl. 32—10.)



1. A device for drilling holes in parallel relation comprising an anchorage portion, a plurality of horizontally swinging joints carried by the anchorage portion, a vertically swinging portion carried by the horizontally swinging joints, and means carried by the vertically swinging portion for engaging a tool.

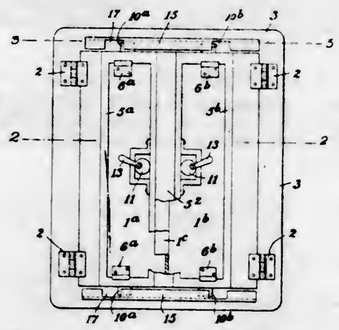
1,387,330. **MEANS FOR MARKING WOUND STRIP MATERIAL.** WILLIAM STRITTMATTER, North Bergen, N. J. Filed Feb. 19, 1921. Serial No. 446,496. 5 Claims. (Cl. 101—74.)

1. In combination, means to wind up strip material on a definite axis and mechanism, normally urged toward but movable away from said axis, for marketing the material at predetermined intervals lengthwise thereof including a rotary prime mover arranged to bear peripherally thereof on the periphery of and be rotated by the rotating already-wound mass of material.



1,387,331. **AUTOMATIC SAFETY APPLIANCE FOR RAILWAYS.** JOHN H. STRUNK, Jacksonville, Fla. Filed June 19, 1919. Serial No. 305,230. 7 Claims. (Cl. 246—66.)

1. The combination with the throttle valve of a locomotive, of a motor, means for operating the motor, a

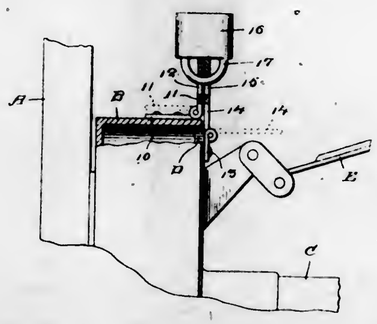


rock shaft, operative connections between the rock shaft and the throttle, a rack bar, operative connections between the rack bar and the rock shaft and a pinion carried by the motor and meshing with the rack bar, so that when the motor is operated the rack bar may effect movement of the rock shaft for the closing of the throttle.

1,387,332. DOOR APPLICABLE FOR CLOSING THE OPENINGS OR WAYS THROUGH BULKHEADS, PARTITIONS, WALLS, AND THE LIKE. ORSINI STUART, Liverpool, England. Filed June 25, 1918. Serial No. 241,903. 2 Claims. (Cl. 292—159.)

1. The combination of a door frame, a door hinged thereto and adapted to seat thereagainst, a set of keepers one of which is substantially coextensive with that edge of the door opposite its hinges, and a wedging member having a continuous edge substantially coextensive with the edge of the door opposite its hinges, arranged so that the wedging member engages the keeper along substantially its entire length.

1,387,333. FASTENER FOR BULKHEAD-DOORS. ORSINI STUART, Liverpool, England. Original application filed June 25, 1918, Serial No. 241,903. Divided and this application filed Apr. 5, 1920. Serial No. 371,543. 2 Claims. (Cl. 222—159.)

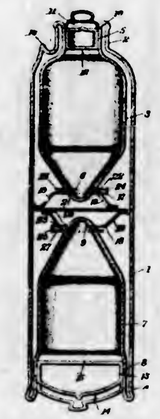


1. The combination of a door frame, a pair of doors hinged at opposite sides of the said frame and adapted to seat thereagainst, one of the said doors having a portion overlapping the other door when they are closed, keepers mounted upon the said frame adjacent the free edges of said doors, and locking members, one mounted on the face of each door to slide from and toward the hinged edge thereof, each of the locking members having beveled lugs adapted to engage said keepers, the locking member on the overlapped door having a beveled bar coextensive with and wedging against the overlapping portion of the overlapping door, and the locking member on the overlapping door having a beveled portion adapted to engage the overlapped door.

1,387,334. CABLE-SPLICE. CHARLES VIGNOS, Canton, Ohio, assignor to The American Mine Door Company. Filed Feb. 3. 1920. Serial No. 356,067. 3 Claims. (Cl. 173—263.)

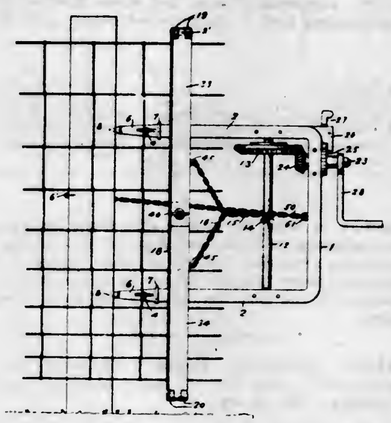
3. A cable splice comprising a flexible metallic strip provided at each end with a single longitudinally disposed tongue, one tongue being arranged at one side of the strip and the second tongue being arranged at the opposite side of the strip, the inner longitudinal edge of each of the tongues being inclined inwardly and in a direction away from the tongue, the end of the strip at the side of the tongue providing a transversely extended shoulder, the outer end of each of the tongues terminating in an edge affording a blunt end adapted to contact with the shoulder at the opposite end of the strip, said tongues being substantially in duplicate.

1,387,335. AUTOMOBILE-LOCK. GEORGE SHARPE WHITE, Nashville, Tenn. Filed June 26, 1920. Serial No. 392,067. 2 Claims. (Cl. 188—31.)



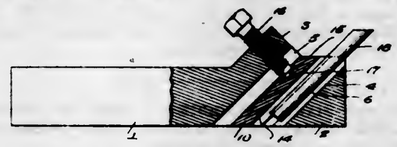
1. A locking device for motor vehicles comprising the combination with a fixed element of the rear construction and one of the rear brake drums, of a pivoted leaf carried by said stationary element, and a pivoted leaf carried by the brake drum, said leaves being capable of being brought together and being formed with openings adapted for registration and through which the shackle of a padlock may be passed.

1,387,336. CRIB. ROBERT P. WHITON, Utica, N. Y., assignor to Hasselbarth-Whiton Co., Inc., Utica, N. Y., a Corporation of New York. Filed Feb. 14, 1920. Serial No. 358,708. 2 Claims. (Cl. 5—58.)



1. In a crib of the character described, the combination of a mattress-supporting frame, corner-posts supporting said frame, upright side sections at opposite sides of the frame, one of said sections being movable vertically, guides for the vertically movable section, a bail extending lengthwise of and in a plane some distance below the lower edge of the vertically movable section when the latter is elevated, and provided with up-turned ends hinged to the adjacent side of the frame to swing about a horizontal axis toward and from said vertically movable side-section, pawls pivoted to the up-turned ends of the bail and normally extending under the lower edge of the vertically movable side-section to support the same in its elevated position, and devices for supporting said pawls against downward swinging movement and for permitting them to swing upwardly, the upper faces of said pawls which engage the lower edge of the vertically movable section being substantially flat and straight to permit them to be withdrawn inwardly by the inward rocking movement of the bail without lifting the vertically movable side-section therefrom, said bail extending downwardly a sufficient distance below the lower edge of the vertically movable section to permit it to be engaged by the foot or hand of the operator at any point in its length when said side-section is elevated and resting upon the pawls.

1,387,337. VACUUM-BOTTLE. CHARLES F. P. ANDERS, Urbana, Ill., assignor, by direct and mesne assignments, to Eugene L. Greenewald, Washington, D. C. Original application filed Dec. 2, 1910, Serial No. 595,324. Divided and this application filed Feb. 19, 1916. Serial No. 79,394. 12 Claims. (Cl. 49—82.)

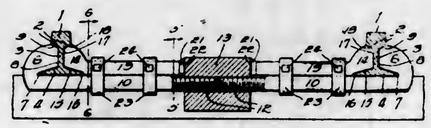


5. A method of making containers which comprises forming an outer wall blank and two receptacle blanks, inserting said receptacle blanks into said wall blank and centering them therein, and joining said receptacle blanks to said wall blank.

1,387,338. WIRE-FENCE STRETCHER. JOHN FLOYD BALL, Estep, W. Va. Filed Mar. 8, 1921. Serial No. 450,728. 2 Claims. (Cl. 254—83.)

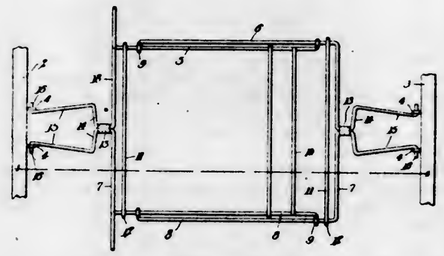
1. In combination with a fence post, a U-shaped frame, a transverse driven shaft held to the two parallel stems of said frame, a bevel gear fixed to said shaft, a stub driving shaft held to the intermediate portion of said frame, a bevel pinion on said stub shaft meshing with said gear, a crank for operating said stub shaft, a ratchet wheel secured to said stuff shaft, a pawl held to said frame in engagement with said ratchet wheel, a chain fixed to said driven shaft, a clamp secured to said chain and adapted to engage a wire fence, and a brace-chain having one end fixed to said frame, the other end engaging said post, whereby said frame is braced against the tension of the fence, as and in the manner set forth.

1,387,339. TOOL-HOLDER. ROBERT H. BANISTER, Anniston, Ala. Filed May 17, 1920. Serial No. 382,025. 1 Claim. (Cl. 29—96.)



A tool member comprising a member including a shank and a head at one end of the shank, said head having an angle extension on the upper face thereof and having an inwardly directed downwardly inclined slot entering from its upper and outer corner and also entering the angle extension, the outer wall provided by the slot having a longitudinal V-shaped groove therethrough, a threaded element entering the head in a line with one of the walls of the slot thereof, a plate comprising a movable law arranged in the slot of the head and having a groove on one side thereof receiving therethrough the said element, said movable jaw having its active face provided with a V-shaped groove, and its rear and inactive face provided with a cup-shaped depression, the extension of the head having an angle threaded opening therethrough communicating with the slot, and a headed threaded element having a cone-shaped end engaging the threads of the said opening and received in the cup-shaped groove on the rear face of the movable jaw.

1,387,340. RAIL-ANTISPREADING DEVICE. NORMAN E. BASLER, St. Louis, Mo. Filed May 1, 1920. Serial No. 378,255. 2 Claims. (Cl. 238—52.)

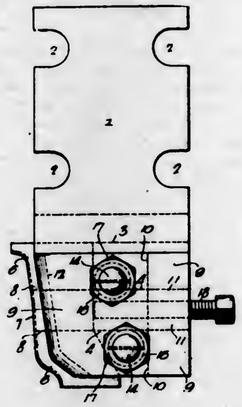


1. An anti-spreading device for railways comprising a pair of shanks having their upper faces flat and their

inner ends screw-threaded, a coupling for uniting said screw threaded shanks, a rail engaging head at the outer end of each screw threaded shank, a gage shank having a flat lower face mounted upon each screw threaded shank, a rail engaging head at the outer end of each gage shank,

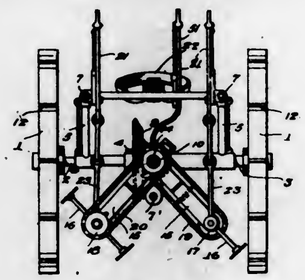
a head at the inner end of each gage shank having abutting engagement with the end faces of the coupling and guide loops removably fixed to the gage shanks and encircling the screw threaded shanks to prevent lateral displacement of the gage shanks upon the screw threaded shanks.

1,387,341. HATRACK. ROBERT V. BEHNING, Los Angeles, Calif. Filed Feb. 15, 1921. Serial No. 445,160. 4 Claims. (Cl. 45—13.)



1. In combination with the top of a vehicle, of a hat rack having its ends supported thereon, and means between the ends of the hat rack and the supports therefor permitting the downward swinging of the rack on its support from either end of the rack.

1,387,342. GARMENT-POCKET. CYRUS E. BENNETT, Buffalo, N. Y. Filed Mar. 10, 1920. Serial No. 364,667. 4 Claims. (Cl. 2—151.)

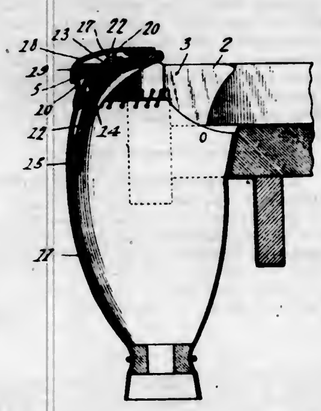


1. In combination with a garment, a pocket in said garment having a series of openings, non-elastic shirring means passed through said openings and adapted to shirr the material of the pocket to lock the pocket against entrance, and means within said pocket to hold the shirring means in locking position.

1,387,343. TOOL-HOLDER. SAMUEL G. BETZ, Lewiston, Pa., assignor to Standard Steel Works Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1920. Serial No. 428,522. 3 Claims. (Cl. 29—96.)

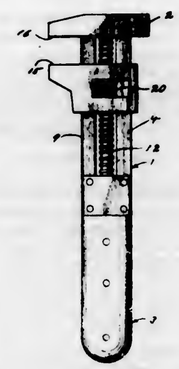
1. The combination of a holder having a grooved face; a tool adapted to rest against said face and having a rib which enters the groove; a clamp bearing against the holder back of the tool and against the tool near its cutting edge; and means for securing the clamp and tool to the holder.

1,387,344. COTTON-CHOPPER. MARION D. BOLAND, Appleton, Ark. Filed Aug. 24, 1920. Serial No. 405,563. 2 Claims. (Cl. 97—46.)



2. The combination in a cotton chopper of a longitudinal shaft, means carrying said shaft, means to rotate the shaft, cotton choppers arranged at opposite sides of the vertical plane of said shaft and having shafts in parallelism to the first-named shaft, and driving connections between the first-named shaft and the second-named shafts.

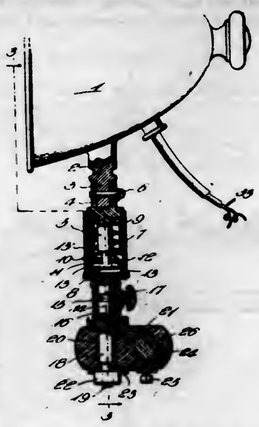
1,387,345. POOL-TABLE. ANDREW G. BRANDT, Scranton, Pa. Filed July 21, 1920. Serial No. 397,816. 8 Claims. (Cl. 46—12.)



1. The combination with a table having a rail and a ball receiving opening in the rail, of a downwardly and

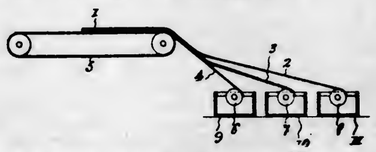
inwardly curved deflecting element extending below the playing surface of the table and having its upper end

portion overhanging a portion of the opening and supported in the path of a ball shot into the opening.



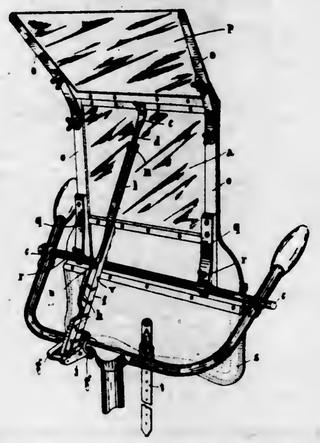
1,387,346. WRENCH. MANUEL BRICHER, Pocatello, Idaho. Filed Jan. 11, 1921. Serial No. 436,498. 3 Claims. (Cl. 81—173.)

1. A wrench having a fixed jaw member provided with a shank bifurcated at its inner end, a screw associated with the shank, a jaw movable on the shank, adjusting means for the movable jaw coöperating with the screw, a block having a socket to journal the screw, said block being recessed for interfitting with the shank, a handle plate extending into the block and shank and fastening means common to the said shank and said plate.



1,387,347. SPOTLIGHT FOR MOTOR-VEHICLES. FRANK GRANT BULLIS, Vancouver, Wash. Filed Mar. 22, 1920. Serial No. 367,767. 2 Claims. (Cl. 240—7.)

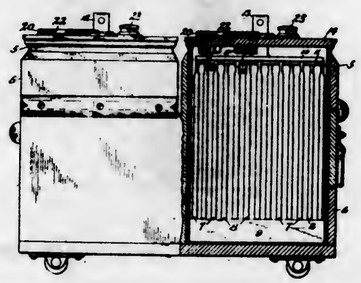
1. In a device of the character described, a spotlight mounting including a cup having a slotted bottom, and a spotlight having a stem terminating in a cross bar for passing through the slot, a shell positioned about the stem in spaced relation thereto with its upper end connected with the stem and its lower end open and terminating short of the cross bar, and a spring positioned



about the stem between the cross bar and the upper end of said shell.

1,387,348. PIPE-COVERING AND FABRIC FROM WHICH PIPE-COVERINGS ARE MADE. ABRAM K. BUAGSTRESSER, Norristown, Pa., assignor to Norristown Magnesia and Asbestos Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Sept. 25, 1920. Serial No. 412,783. 7 Claims. (Cl. 154—44.)

1. In a fabric for heat insulating in combination, outer layers of asbestos fabric, and between said layers, an intermediate layer of infusorial earth and asbestos fiber.

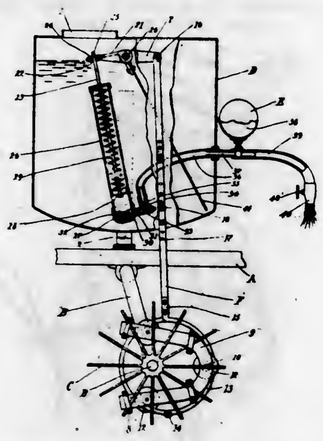


1,387,349. WIND AND WEATHER SCREEN FOR MOTORCYCLES. ARCHIBALD GOWAN CAMPBELL, Richmond, England. Filed Dec. 31, 1919. Serial No. 348,671. 3 Claims. (Cl. 208—150.)

1. A wind and weather screen for the protection of the rider of a motor-cycle including in combination a pivoted

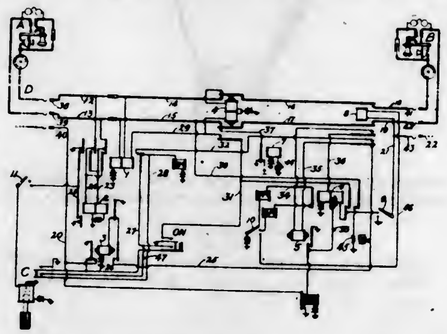
screen, a bearing member rigid with the handle-bars of the motor-cycle upon which said screen can rock, said bearing member restraining said rocking action to a transverse axis, and resilient means connecting said screen to the motor-cycle.

1,387,350. SAFETY DEVICE FOR STORAGE BATTERIES. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignors to Gould Storage Battery Co., Depew, N. Y., a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,592. 6 Claims. (Cl. 204—29.)



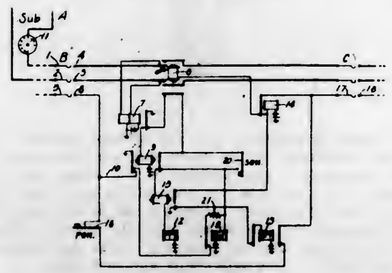
6. A storage battery having its tank provided with a safety passage of comparatively large area relative to the closed area of the tank, and a member normally closing said passage and adapted to be displaced by an explosion of the gas within the tank.

1,387,351. WELDING COMPOUND. WILLIAM RAY CHAPIN, Indianapolis, Ind. Filed May 2, 1919, Serial No. 294,182. Renewed Nov. 23, 1920. Serial No. 426,102. 4 Claims. (Cl. 148—23.)



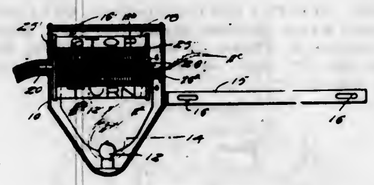
4. A welding compound composed of ferro-silicon, powdered iron, and borax, in proportion substantially as follows: 60% ferro-silicon, 20% powdered iron, and 20% borax.

1,387,352. SPRAYER DEVICE. JOSEPH CLARK, De Graff, Minn. Filed Apr. 23, 1920. Serial No. 375,991. 5 Claims. (Cl. 299—30.)



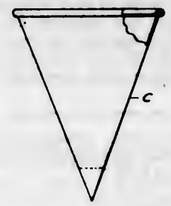
1. In combination with the frame and a supporting wheel, an adjacently supported liquid container, a rock shaft within the container projecting through the side at the top thereof, mechanism operatively connecting the wheel with said rock shaft to actuate the latter when the wheel is moved, a water pump having an intake and a discharge opening within the container operatively connected with said rock shaft to be operated thereby and extending downwardly and having pivotal support adjacent to the bottom of said container to be oscillated thereon, a discharge pipe rigid in the side of said container and projecing therethrough, and a flexible connection within the container between the said discharge pipe and discharge opening.

1,387,353. MACHINE-SWITCHING TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1917. Serial No. 203,979. 10 Claims. (Cl. 179—18.)



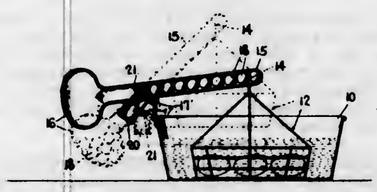
1. In a machine switching telephone system, calling and called subscribers' lines, automatic switches including a connector for interconnecting said lines, a magnetic device associated with said connector to control the release of said connector, normal means to release said connector and auxiliary means controlled by a predetermined series of line interruptions for actuating said device.

1,387,354. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 5, 1919. Serial No. 301,866. 8 Claims. (Cl. 179—18.)



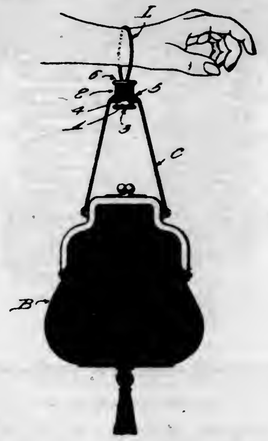
1. In a telephone system, a switch for extending a call and having directive and automatic movements, means for controlling the directive movements of said switch, other means for automatically moving said switch, and means effective until the call is abandoned for preventing directive and automatic movements of said switch should the first named means be operated before said other means has completed its operation.

1,387,355. SAFETY-SIGNAL FOR MOTOR-VEHICLES. WILLIAM H. COLLINS and FREDERICK R. BAUKHAGE, Danville, Ill. Filed June 4, 1920. Serial No. 386,461. 3 Claims. (Cl. 116—43.)



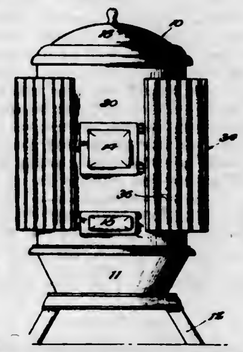
1. A device of the class described having a casing, a signal drum movably mounted therein, means operable to move the drum to give different signals, and automatically operable detent means for the drum within the casing associated with an end of the drum and the adjacent wall of the casing.

1,387,356. LUBRICANT-DISPENSING CONTAINER. WILLIAM H. COOK, Los Angeles, Calif. Filed Apr. 4, 1917. Serial No. 160,204. 1 Claim. (Cl. 206—56.)



As a new article of manufacture, a package comprising lubricant, and a closed container occupied by the lubricant and including a cone-shaped body of thin and pliable material tapered to a point, and a disk-like head of thin and pliable material hermetically joined to the large end of the body, whereby when the apex end of the body is cut-off, the container is adapted for use as a dropper or funnel, and the discharge of the contents of the container may be accelerated by inward pressure imposed on either the side of the body or the head.

1,387,357. EGG-BOILER. WILLIAM A. CORBETT, Winnipeg, Manitoba, Canada. Filed May 25, 1918. Serial No. 236,608. 2 Claims. (Cl. 161—16.)

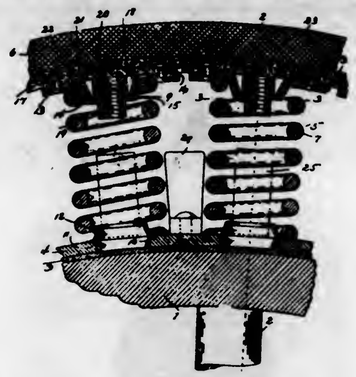


1. In a device of the class described, a receptacle, a tubular member mounted for pivotal movement, said receptacle being connected with the tubular member, a plurality of weighted members within the tubular member, a hollow, flexible, and collapsible time measuring device constituting an obstruction, retaining the weighted members in one end of the tubular member, and permitting them after the expiration of an interval to move to the opposite end, for overbalancing the latter.

1,387,358. LOSS-PREVENTING DEVICE. JOSEPH COSTELLO, New York, N. Y. Filed Jan. 20, 1921. Serial No. 438,679. 4 Claims. (Cl. 24—115.)

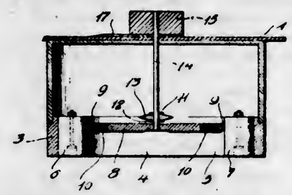
4. A loss preventing device of the class described comprising a cylindrical screw-threaded sleeve having portions thereof bent laterally to simultaneously form shoulders and openings, the latter being intended to permit passage of a carrying cord therethrough, a second like sleeve engaged with the first sleeve, having a lateral flange on its inner end to bind the cord against said shoulders and being equipped at its opposite end with an annular bead, and an apertured disk loosely seated in said bead, said cord being adapted to pass through said apertures.

1,387,359. HEAT-STOVE. EVAN J. DAVIS, Yakima, Wash. Filed May 29, 1920. Serial No. 385,282. 3 Claims. (Cl. 126—58.)



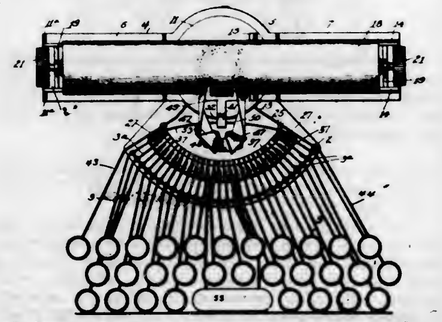
1. The combination of a stove having a plain cylindrical drum, and a split resilient jacket adapted to be sprung about said plain cylindrical body and held thereto by its own resiliency and provided with interior and exterior air conducting passages.

1,387,360. SPRING-TIRE. JOHN DAVIS, Detroit, Mich. Filed Apr. 15, 1920. Serial No. 374,226. 7 Claims. (Cl. 152—8.)



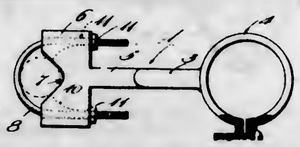
3. In a spring tire, the combination with a slip rim, of a series of spring elements arranged circumferentially around said slip rim, each spring element comprising inner and outer spring abutments and a coil spring therebetween, said outer abutments having hollow inwardly extending projections, a pliable belt surrounding said outer abutments and positioning members permanently

secured to the inner surface of said belt and having inwardly extending projections slidably engageable within



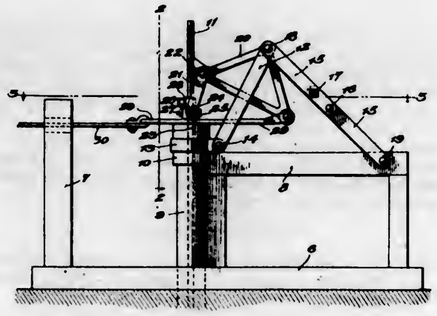
said hollow inwardly extending projections of said outer abutments.

1,387,361. ROTARY SWITCH. WALTER DAVIS, Tulsa, Okla. Filed Sept. 20, 1919. Serial No. 325,053. 1 Claim. (Cl. 200—43.)



A rotary switch comprising a top plate, a cylindrical shell secured upon the underside of said plate, a ring member of insulating material secured within the lower end of said shell, a plurality of contacts embedded within said ring and flush with the wall of the opening therein, a rod journaled through said top plate, a switch arm carried by the lower end of said rod, outwardly spring-pressed ball contacts in the ends of said arm bearing against the wall of the opening in the ring, a knob on the upper end of the rod, and a pointer on the rod beneath the knob, the top plate being provided with a series of graduations concentric with the rod and traveled over by said pointer.

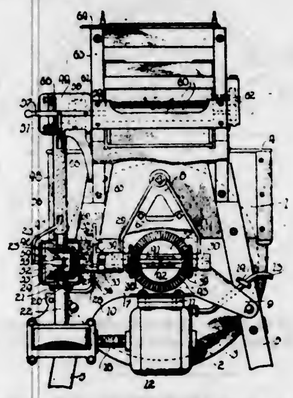
1,387,362. FOLDING TYPEWRITING-MACHINE. PHILIPPE DE CLAMECY, New York, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Mar. 29, 1917. Serial No. 158,284. 34 Claims. (Cl. 197—186.)



1. In a typewriting machine, the combination of a carriage support, a platen carriage mounted thereon, means whereby the platen carriage may be folded relatively to the carriage support when the carriage is moved to one end of the support, and means whereby said support may be collapsed.

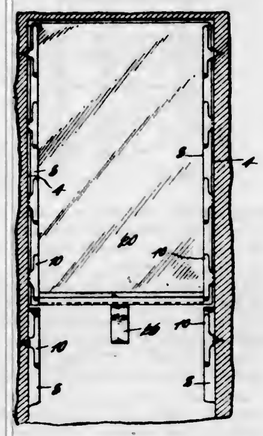
1,387,363. SUPPORT FOR LIQUID-SOAP CONTAINERS. THOMAS MYRON DE FORE, Minneapolis, Minn., assignor of one-half to William T. Olson, Minneapolis, Minn. Filed Jan. 20, 1921. Serial No. 438,732. 1 Claim. (Cl. 248—20.)

A device of the class described comprising a bracket adapted for vertical disposition, the upper end thereof being directed laterally and formed with an integral clamp-ring for connection to a liquid soap-dispensing jaw, the other end of the bracket being directed laterally in an opposite direction and formed on its extremity with an integral flat substantially rectangular head, the latter having a notch formed in its outer longitudinal edge for reception of a portion of a faucet, said head being also formed on opposite sides of said notch with recesses extending therethrough and enlarged at their outer ends and the walls thereof nearest the notch being curved, a U-shaped yoke having its ends extended through said recesses, these ends being screw-threaded, and nuts on said ends.



1,387,364. PUMP-JACK. CHRISTY JOHNSON DEVER, Clinton, Okla. Filed Sept. 30, 1920. Serial No. 413,704. 3 Claims. (Cl. 74—5.)

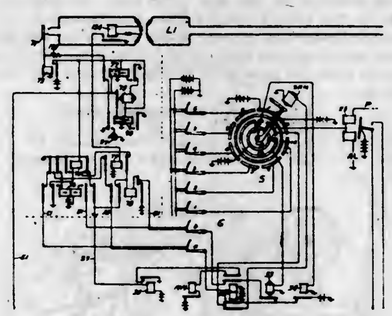
1. A pump-jack comprising struts swingably connected together at an apex and swingably mounted at their lower ends, one of said struts being of swingably-connected parts, means whereby said parts are releasably maintained in substantially straight position, an operating-beam rockably mounted at the apex of said struts, and means for connecting said beam with a pump-rod.



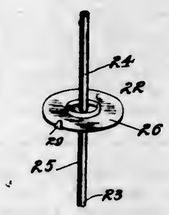
1,387,365. GEARING FOR WASHING-MACHINES AND THE LIKE. JOHN A. DIENNER, Chicago, Ill., assignor to Walter J. Conlon, Chicago, Ill. Filed Apr. 2, 1918. Serial No. 226,144. 11 Claims. (Cl. 74—59.)

1. In a washing machine, washing mechanism, wringing mechanism, power means for driving said mechanisms, a power driven member, a first gear driven directly by said power driven member, a plufality of transmission gears all in mesh and driven from said first gear, driving means for said washing mechanism, driving means for said wringer mechanism, and control means operable to releasably connect said driving means for said washing mechanism through said gears, and to selectively connect said driving means for said wringing mechanism whereby said latter driving means is driven directly from said power driven member for motion in one direction or is clutched to one of said plurality of transmission gears for motion in the other direction.

8. In combination, three meshing gears, a plurality of shafts for said gears, the first of said shafts being forward driven, the remainder of said shafts being normally disconnected from said gears, clutching means on a second shaft for driving said second shaft in unidirectional rotation from said gears, and clutching means on a third shaft for driving said third shaft in either direction from said gears.



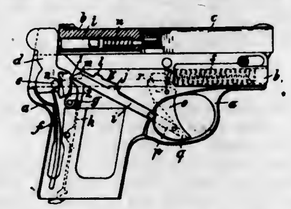
1,387,366. WINDOW-RUNWAY. JOHN F. DODGE and GEORGE E. GODDARD, Detroit, Mich., assignors to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed June 20, 1919. Serial No. 305,463. 15 Claims. (Cl. 296—48.)



1. A window runway having in combination, longitudinal guides comprising a pair of angle bars between which a sash may slide, each pair of bars independently movable toward and from each other.

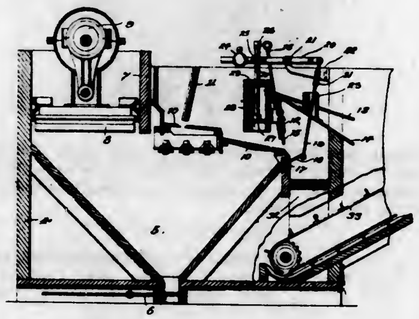
1,387,367. TELEPHONE SYSTEM. WILLIAM L. DODGE and HUGH D. MACPHERSON, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1919. Serial No. 315,816. 18 Claims. (Cl. 179—50.)

1. In a telephone system, in combination, a plurality of trunk lines and a signaling path common thereto extending between two stations, a signaling device at one station, means at the other station responsive to rapid changes in the condition of one of the trunk lines to transmit only two successive signals over the signaling path, a signal receiving circuit at the one station and means controlled over the signal receiving circuit and responsive to the two transmitted signals for causing the intermittent operation of the signaling device.



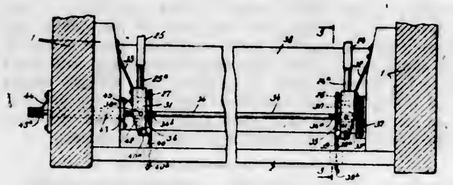
1,387,368. BOBBIN-WINDING APPARATUS FOR SEWING-MACHINES. RAY DOUGLASS, Deer Park, N. Y. Filed Apr. 21, 1915. Serial No. 22,735. 3 Claims. (Cl. 242—134.)

3. A spool support for sewing machines having a spool-holding spindle and a bobbin winder, comprising a tube adapted to be frictionally supported by the spindle and having an intermediate spool-supporting guard extending beyond the base of the spool supported thereby, said guard carrying a thread guide at its outer edge, whereby sewing and bobbin winding operations may be had concurrently, and movements of either spool during operation will be ineffective to shift the position of the thread guide.



1,387,369. GUN-LOCK FOR AUTOMATIC FIREARMS. JOSEF DUFFEK, Steyr, Upper Austria, Austria, assignor to the Firm of Oesterreichische Waffenfabriksgesellschaft, Steyr, Upper Austria, Austria. Filed Aug. 24, 1920. Serial No. 405,766. 6 Claims. (Cl. 42—69.)

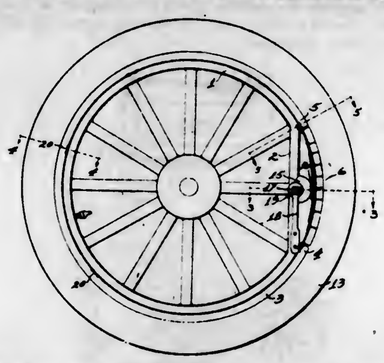
1. A gun-lock for automatic firearms, comprising in combination, a trigger, a press-lever connected to the said trigger, a projection on the press-lever, a guide attached



to the firearm in which said projection is adapted to slide, a depression in the said guide into which the projection of the said press-lever may enter, and a hammer, pivotally connected to the fire-arm and adapted to be moved to cocked position by the said press-lever, whereby on the entry of the said projection into the depression of the guide the hammer is released by the press-lever, and spring means acting on said hammer for causing the latter when released from the press-lever to jump forward and fire the cartridge.

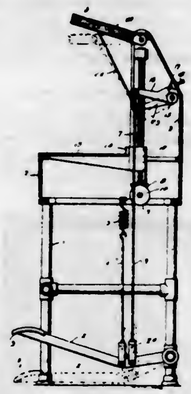
1,387,370. JIG. GUY H. ELMORE, Swarthmore, Pa. Filed Dec. 23, 1919. Serial No. 346,812. 9 Claims. (Cl. 83—79.)

1. The combination with a jig having a screen and a constantly open discharge opening for heavier materials at a side of said screen, of a plate over which the material after passage through said discharge opening flows; and means serving to vary the inclination of said plate to vary the rate of flow of material thereover.



1,387,371. TRACKING DEVICE. CHARLES L. EMMONS, Cranford, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Oct. 21, 1920. Serial No. 418,431. 6 Claims. (Cl. 84—138.)

1. In a tracking device for an automatic musical instrument, the combination of a unitary structure comprising the control ports of the tracking device together with means for adjusting them equally and simultaneously nearer together or farther apart; and means for adjusting said unitary structure to centralize it in its operative position.

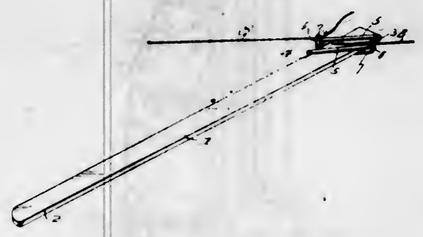


1,387,372. WHEEL AND DEMOUNTABLE RIM. JOSEPH EULBERG, Alton, Iowa. Filed Oct. 18, 1919. Serial No. 332,081. 6 Claims. (Cl. 301—11.)

6. In a wheel and demountable rim the combination of a felly having one portion thereof flattened, a rim including an arc shaped portion and a flexible portion hinged to said arc shaped portion, spring means for normally holding said flexible portion flattened in respect to said arc shaped portion, extensions carried by said flexible portion and extending beyond the hinged joints thereof, and adapted to lie within recesses in the arc shaped portion of said rim when said flexible portion is flattened in respect

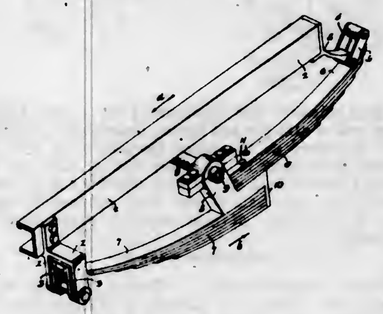
to the arc of said rim, and to lie in recesses in said felly when said flexible portion lies in the arc of said rim.

1,387,373. CAPPING-MACHINE. DANIEL FASSON, Rochester, N. Y. Filed Apr. 23, 1920. Serial No. 376,118. 2 Claims. (Cl. 113—30.)



1. A capping machine comprising a base frame, a lever pivoted thereon, spring means for normally retaining the free end of the lever in an elevated position, a table frame mounted upon the base frame and having an upwardly disposed portion, a table panel mounted above the table frame, means for adjusting the table panel vertically with relation to the table frame, a shaft journaled in the hood portion of the table frame, an arm carried by the shaft and operatively connected with the lever, a stop member adjustably mounted in the hood located in the path of movement of the arm, and a capping panel pivotally mounted upon the hood and operatively connected with the shaft which is journaled in the hood.

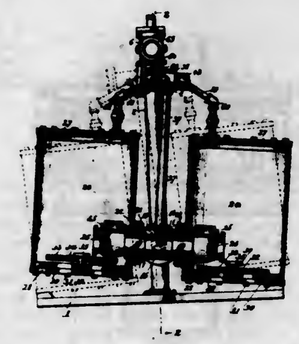
1,387,374. WIRE-STRETCHER. FRED FRANK, Dublin, Tex. Filed Nov. 26, 1919. Serial No. 340,957. 1 Claim. (Cl. 254—81.)



A device of the kind described comprising a lever having notches formed on opposite edges of which one is adjacent the end of the lever and the other spaced from the said end, and a pair of rectangular links each of which is formed from a piece of flat strip metal bent back on itself to provide two parallel elements for disposition against opposite faces of the lever, the connecting ends of said

elements being upturned to provide a grab formed with a tapered slot constituting a wire seat, the ends of the said

elements remote from the grab being spanned by a round pin seating in one of the notches of said lever in the manner and for the purpose specified.



1,387,375. VEHICLE-SPRING. CHARLES FERNOFER, Philadelphia, Pa. Filed May 10, 1920. Serial No. 380,138. 8 Claims. (Cl. 267—44.)

3. The combination of a member having two arms at an obtuse angle to each other, one of said arms being formed to rotatably engage an axle; two quarter elliptic leaf springs mounted respectively adjacent the upper and lower faces of a second arm of said member; with common means connecting said springs to said other member.

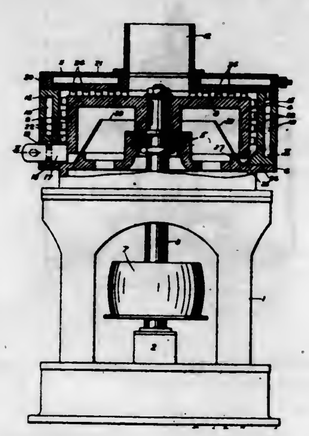
1,387,376. PNEUMATIC PUMP. HORACE LEE FROST, Elizabethton, Tenn. Filed May 24, 1919. Serial No. 299,399. 10 Claims. (Cl. 103—8.)

1. An automatic pneumatic pump having a compressed air inlet and a water outlet, a rockable pair of cylinders or tanks for submergence in a body of water and having inwardly opening valves for access of water to the tanks, and an air valve rockable with the tanks and arranged for connection with a source of air under pressure, said air valve comprising a differential piston structure and having air connections with the tanks controlled by the piston structure, and an auxiliary valve structure carried by the air valve and responsive to rocking movements of the cylinders and air valve to direct air under pressure to

the cylinders in alternation and connect the cylinders in similar manner to the atmosphere.

1,387,377. MANUFACTURE OF HIGH-CLASS "FONDANT" CHOCOLATE AND SIMILAR CHOCOLATES. FREDERICK GEORGE FRYER and BASIL GORDON MCLELLAN, York, England. Filed July 27, 1920. Serial No. 399,343. 4 Claims. (Cl. 99—11.)

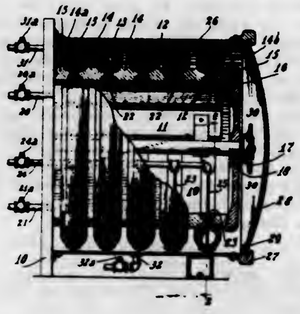
1. In the manufacture of high class "fondant" chocolate and similar chocolates of the smooth variety, mixing together materials comprising partially ground cocoa liquor and sugar, repeatedly grinding the mixture and subsequently subjecting it to a liquefying operation and then to extreme agitation for a few minutes.



1,387,378. MANUFACTURE OF HIGH-CLASS "FONDANT" CHOCOLATE AND SIMILAR CHOCOLATES. FREDERICK GEORGE FRYER and BASIL GORDON MCLELLAN, York, England. Filed July 27, 1920. Serial No. 399,344. 5 Claims. (Cl. 99—11.)

1. In the manufacture of high class fondant chocolate and similar chocolates the solid particles of the cocoa and sugar in which are of such a degree of fineness that at least 98% of each will pass through a standard sieve having 240 meshes to one inch having holes approximately 53/1000 of a millimeter square and that 100% of the sugar will pass through a standard sieve having 200 meshes to one inch having holes approximately 68/1000 of a millimeter square, the steps which consists in separately grinding the different ingredients to be mixed to a fineness such that 90% of the solid particles will pass through a standard sieve having 240 meshes to one inch, then mixing the ingredients and subsequently passing the mixture through a grinding machine.

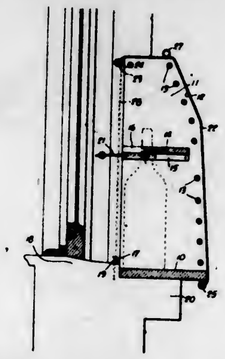
1,387,379. MANUFACTURE OF HIGH-CLASS "FONDANT" CHOCOLATE AND SIMILAR CHOCOLATES. FREDERICK GEORGE FRYER and BASIL GORDON MCLELLAN, York, England. Filed July 27, 1920. Serial No. 399,377. 5 Claims. (Cl. 99—11.)



1. The manufacture of high class fondant chocolate or similar chocolates consisting in separately grinding the cocoa liquor and the sugar to a fineness such that at least 98% of the solid particles of each will pass through a standard sieve having 240 meshes to one inch having holes approximately 53/1000 of a millimeter square and such that 100% of the sugar will pass through a standard sieve having 200 meshes to one inch having holes approximately 68/1000 of a millimeter square, and then mixing the ingredients and subjecting the mixture to an operation producing the "fondant" effect.

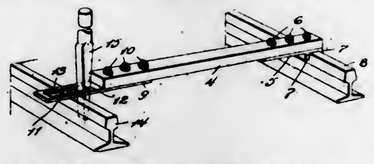
1,387,380. BEATING OR THRESHING MACHINE. FREDERICK GEORGE FRYER, York, England. Filed July 27, 1920. Serial No. 399,439. 6 Claims. (Cl. 259—7.)

1. In a machine for beating liquids, a rotor having an upper horizontal surface and a peripheral surface of revolution, a stator surrounding the rotor and defining therewith a narrow space, projections on the said surfaces of the rotor extending substantially across the whole width of said space, means defining an inlet and an outlet for said space and means for rapidly revolving the rotor.



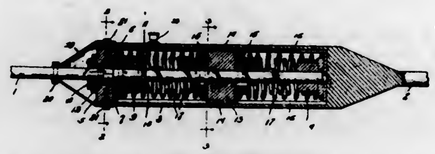
1,387,381. TIRE-VULCANIZING METHOD AND APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1921. Serial No. 462,162. 23 Claims. (Cl. 18—17.)

1. The method of vulcanizing pneumatic tires which comprises applying heat to the inner surface of a tire whose outer surface is exposed, and applying a cooling fluid to the outer surface of the tire.



1,387,382. WINDOW-CUPBOARD. CARL A. GEIB, New York, N. Y., assignor of one-half to Alfred Richter, New York, N. Y. Filed Sept. 24, 1920. Serial No. 412,471. 2 Claims. (Cl. 45—104.)

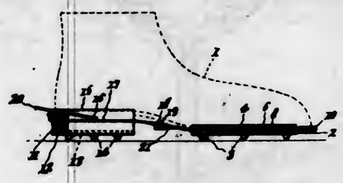
1. A window cupboard comprising a frame having an open top and back, a portion of the back being inclined, an opaque weather and rain proof cover for the top and back, means to attach the cover to the front corners of



the top, and means to secure the remote portion of the cover to another part of the frame.

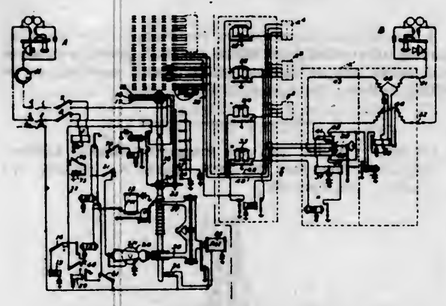
1,387,383. GAGE-ADJUSTING TOOL. JAMES W. GILLIAM, Pevely, Mo. Filed June 26, 1920. Serial No. 392,126. 1 Claim. (Cl. 254—43.)

A gage adjusting tool comprising a bar; a plate secured to one end of said bar and having downwardly projecting teeth so spaced as to engage the ball of a rail; and another plate fixed to the other end of said bar and having a longitudinal slot of such length as to be evenly balanced over the ball of the other rail and having a space at each side of said rail-ball, substantially as described.



1,387,384. DRIVE-SHAFT. JAMES E. GODDARD, Baltimore, Md., assignor of one-half to Michael Chonkich, Baltimore, Md. Filed Mar. 27, 1920. Serial No. 369,215. 2 Claims. (Cl. 64—96.)

2. In combination with a drive shaft having a worm thereon and a driven shaft, a casing carried by the driven shaft and receiving the wormed portion of the drive shaft, a nut member on said portion, said casing having longitudinally extending grooves in its inner walls and the nut member having projections engaging said grooves, a screw plug closing the open end of the casing, a cap fitting over said open end and having a small opening therein for receiving the drive shaft, means for holding the cap in position and preventing unscrewing of the plug, a bearing carried by the screw plug for the drive shaft, chairs at the ends of the casing and on each face of the nut member, a pair of coiled springs having their ends bearing against said shafts, one spring of each pair being of



smaller diameter than the other spring to fit within the same and said chairs having portions of less diameters than the diameters of the small springs so that said portions will engage each other when the load is greater than the strength of the springs.

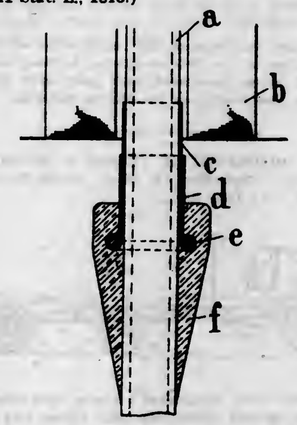
1,387,385. HEEL-GUARD AND TOE-CLIP. EMANUEL O. GOLDSMITH, Memphis, Tenn. Filed Feb. 9, 1921. Serial No. 443,577. 3 Claims. (Cl. 36—62.)

1. A heel guard and toe clip comprising guard means fitting the heel of a shoe, an auxiliary sole fitting beneath the shoe sole, coupling members engaged with the auxiliary and shoe soles, flexible securing means engaging with the guard means and said coupling members, and resilient means across the toe of the shoe connecting the ends of the flexible securing means.

1,387,386. TELEPHONE SYSTEM. CHARLES L. GOODSUM, New York, and HENRY P. CLAUSEN, Mount Vernon, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1917. Serial No. 182,963. 11 Claims. (Cl. 179—18.)

7. In a telephone system, a trunk line, a plurality of relays associated with said trunk line, a plurality of other trunk lines accessible to said first trunk line, means whereby the operation of each one of said relays connects said first trunk line with one of said other trunk lines, and an automatic progressively movable switch for seizing said first trunk line, and for electing which one of said relays shall be operated and for operating the elected relay.

1,387,387. PROCESS OF PRODUCING BREAD AND OTHER LIKE FOODSTUFFS. ROBERT GRAHAM, Cupar, Scotland. Filed Apr. 23, 1919. Serial No. 292,225. 4 Claims. (Cl. 99—10.)

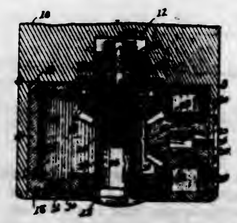


1. A bread or other food stuff composed essentially of a cereal flour and a predominating quantity of additional starch containing material other than a cereal, gelatinized and converted by treatment with a diastatic and solubilising agent.

1,387,388. SPRING-BED. MAURICE GREENWOOD, Revere, Mass. Filed Feb. 12, 1921. Serial No. 444,523. 9 Claims. (Cl. 5—40.)

1. A spring bed comprising a frame including a pair of rigid side-members, a fabric, a plurality of tensile springs connecting the head and foot edges of said fabric whereby to support said fabric resiliently under tension, and means to support said fabric locally comprising an auxiliary frame disposed beneath and carried by said fabric and having its opposite sides secured rigidly to the opposite side edges of said fabric, and springs carried by said auxiliary frame extended upwardly and in engagement with said fabric to support it, and springs carried by said rigid side-members in engagement with said auxiliary frame whereby additionally to support it.

1,387,389. APPARATUS FOR THE HIGH-VOLTAGE WINDINGS OF ELECTRICAL MACHINES. FRITZ HÄBERLI, Ennetbaden, and JOHANN KÜBLER, Baden, Switzerland, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Filed July 30, 1920. Serial No. 400,262. 3 Claims. (Cl. 171—206.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

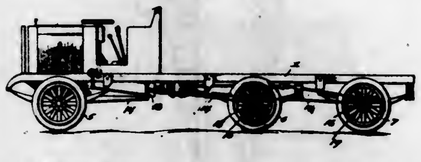


1. An apparatus for the high voltage windings of electrical machines including a stator, an insulated high tension conductor emerging therefrom and an electrically conducting covering of said insulated conductor, one end of the conducting covering being connected electrically to the stator, the other end being removed spacially from the stator and protected from exposure to the air by an insulating sheath.

1,387,390. ADJUSTABLE TABLE-LEG. GEORGE T. HAGGENMILLER, San Francisco, Calif., assignor of one-half to Joseph Warren, San Francisco, Calif. Filed Oct. 5, 1920. Serial No. 414,817. 1 Claim. (Cl. 46—13.)

The combination with a billiard table leg having a main chamber a centrally located auxiliary chamber and a side opening formed therein, an externally threaded shaft positioned within the main chamber, means for guiding said shaft vertically, an internally threaded gear wheel

encircling said shaft, antifriction means disposed between said gear wheel and said casing, a miter gear meshing with said gear wheel and imparting rotary movement



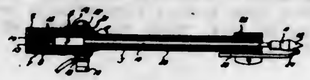
to said shaft through the medium of said gear wheel for the purpose of raising or lowering the billiard table leg, and means disposed on the side of the billiard table leg for holding said shaft in a locked position.

1,387,391. YIELDING MAT CONSTRUCTION. CHARLES C. HALL, Alexandria, Ind., assignor to Banner Rock Products Company, Alexandria, Ind., a Corporation. Filed Oct. 9, 1920. Serial No. 415,872. 8 Claims. (Cl. 154—58.)

1. In a mat construction, the combination of a pair of separated cover plates, fibrous material between said cover plates, and means associated with said cover plates for limiting the compression of the fibrous material.

1,387,392. MOTOR-TRUCK. EDWIN A. HALLAM, Portland, Oreg. Filed Nov. 13, 1919. Serial No. 337,756. 4 Claims. (Cl. 180—24.)

1. A motor truck comprising a single rigid frame, three dead axles, springs connecting said frame and axles, a pair of spindles for each axle, each spindle having a wheel rotatably mounted thereon, king pins for pivotally connecting the spindles to each axle, a bevel gear secured to each wheel of the two rearmost axles, gearing rotatably mounted on the king pins of the spindles of the two rearmost axles, said gearing including a bevel pinion adapted to mesh with said bevel gear, means for driving said gearing including a separate differential mechanism for each pair of traction wheels, and means connected with said spindles for steering all of said wheels.



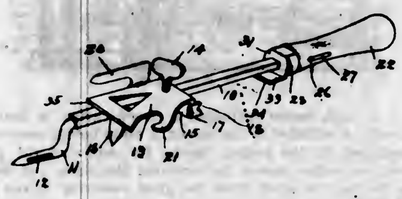
1,387,393. DIP-NET. ALBERT B. HANEL, Milwaukee, Wis. Filed Apr. 14, 1919. Serial No. 289,946. 4 Claims. (Cl. 43—12.)

1. A foldable net, comprising a rim formed of a pair of bows, an oscillatory coupling member having eccentrically curved slots in which the bows are slidingly engaged at one side of the rim, and a handle adapted to removably connect the ends of the bows at the other side of the rim, said coupling member being adapted, in one

position of adjustment, to hold the bows in a common plane with their ends substantially in abutting contact.

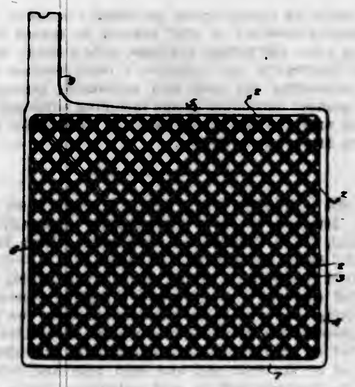
1,387,394. ELECTRIC ETCHING INSTRUMENT. EDWARD F. HANKIN, Philadelphia, Pa. Filed Aug. 23, 1920. Serial No. 405,346. 6 Claims. (Cl. 219—20.)

1. An etching instrument of the character described including an etching point and a solenoid operative to move said point out of electric contact with material to be etched; substantially as described.



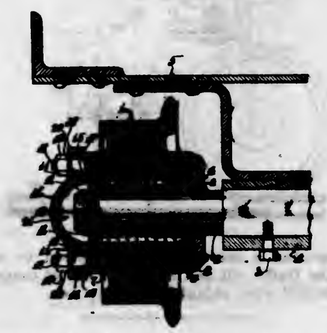
1,387,396. PRESS. FRANCIS BRUERTON HARPER, London, England. Filed Nov. 28, 1919. Serial No. 341,053. 12 Claims. (Cl. 100—57.)

1. A press, comprising a back-board, an outer board, said boards being connected together at one extremity, means for closing said boards one toward the other, and an intermediate member located between said boards, said intermediate member being connected to one of said boards by yieldable means to regulate the pressure exerted by said boards.



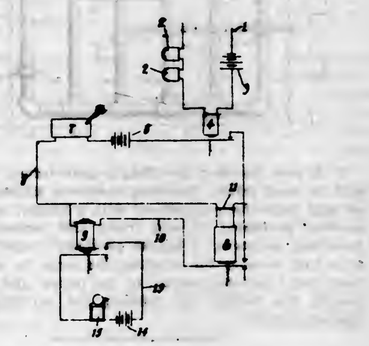
11. A garment press, comprising a back board, an outer board, said boards being connected together at one extremity, means for closing said boards one toward the other, an intermediate board located between said boards and being of shorter length than either of said boards, yieldable means supporting said intermediate member away from said back board, the extremity of said intermediate member adjacent to the connection of said boards adapted to grip an extremity of a garment inserted between said outer board and intermediate member, and means for gripping and stretching the garment toward its other extremity as the boards are closed together.

1,387,396. CAN-OPENER. ARTHUR HERCHER, Providence, R. I. Filed May 14, 1920. Serial No. 381,412. 2 Claims. (Cl. 81—3.1.)



1. A receptacle opener comprising a shank having a gripping plate adjustably mounted thereon, a gripping jaw on said plate, means for securing said plate with its jaw in operative position on said shank, an operating handle slidable endwise on said shank and carrying a jaw coöperating with that on said plate whereby a single endwise movement of said handle will cause the receptacle cap to be gripped between the handle jaw and that on said plate so as to be readily unscrewed from the receptacle.

1,387,397. STORAGE-BATTERY GRID. WALTER E. HOLLAND and JAMES M. SKINNER, Philadelphia, Pa., assignors to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1918. Serial No. 260,192. 7 Claims. (Cl. 204—29.)

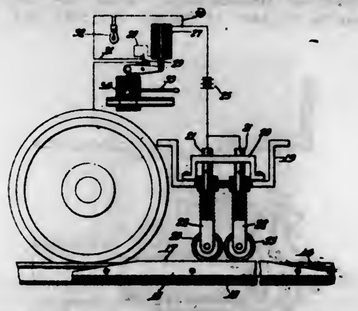


1. As a new article of manufacture a storage battery grid consisting of a relatively dense homogeneous body of metal.

1,387,398. WHEEL. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 15, 1919. Serial No. 344,943. 17 Claims. (Cl. 295—48.)

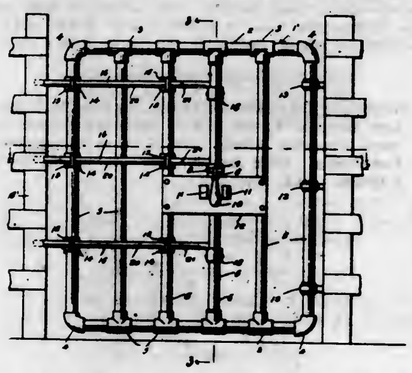
1. In combination, an axle, a wheel thereon, sectional interlocking means therefor, and means on said wheel for holding the same in position, said means being releasable by partial revolution relative to said wheel.

1,387,399. SIGNALING DEVICE. RICHARD M. HOPKINS, New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 27, 1917. Serial No. 144,953. 4 Claims. (Cl. 177—352.)



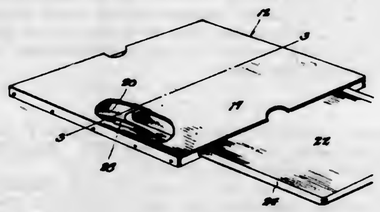
2. In a signaling system, the combination of a circuit including one or more signal transmitters, of a relay controlled by said circuit, a second circuit comprising a register, a relay having resistance shunt across its terminals, and a slow-acting relay in shunt to said first-named relay and having its circuit closed through the front contact of the latter.

1,387,400. TRAIN-CONTROL SYSTEM. ROBERT F. HUDSON, Richmond, Va. Filed Oct. 27, 1919. Serial No. 333,784. 3 Claims. (Cl. 246—70.)



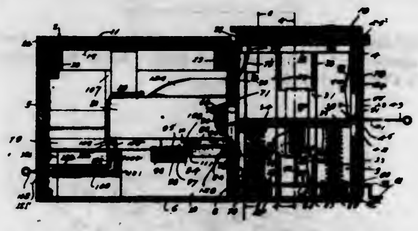
3. The combination with a vehicle having controlling mechanism for regulating the speed thereof, of means carried by the vehicle and along the right of way for actuating said controlling means, said latter coöperating means comprising a ramp rail and a traffic rail, the

upper surface of the ramp rail being spaced from and slightly above the traffic rail and a vehicle carrying mem-



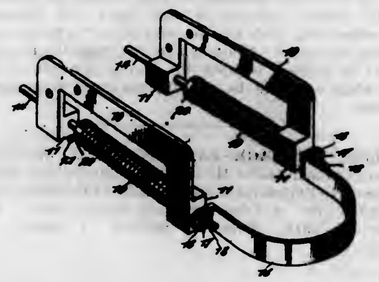
ber comprising a contact surface disposed to normally engage the traffic rail and to be held out of contact with the traffic rail when engaging the ramp rail.

1,387,401. BULL-PEN-GATE LOCK OR FASTENER. ROSS ALBERT HUGHES, Mahnomen, Minn. Filed Oct. 5, 1920. Serial No. 414,922. 3 Claims. (Cl. 292—33.)



1. A gate fastener including a gate frame, panels carried by said frame, fastening members slidably mounted on said frame for engagement with a keeper, an actuating member journaled to said frame and connected to the fastening members, a handle pivotally connected to the actuating member for rotating the same in either direction, and a fastener carried by the panels and adapted to receive the handle for holding the actuating member against rotation.

1,387,402. STOVE-BOARD. AUGUST HUTCH, Chicago, Ill. Filed Nov. 4, 1920. Serial No. 421,725. 3 Claims. (Cl. 126—278.)

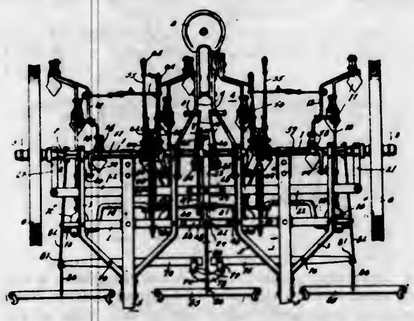


1. A stove board having upstanding sides and a cover plate secured to said sides thereby forming a compartment, a tray slidable within said compartment, and yieldable means within the compartment and engaging the tray to hold the same in a set position.

1,387,403. DAYLIGHT TANK-LOADING MACHINE. CELESTIN E. JECHORT, Lankin, N. D. Filed Oct. 3, 1919. Serial No. 328,114. 20 Claims. (Cl. 95—90.)

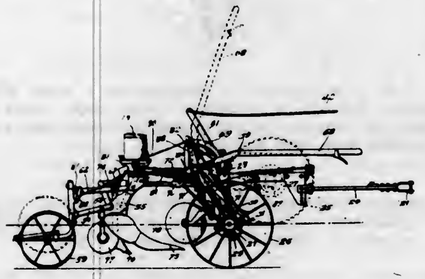
1. A tank loader including a closed casing, a tank removably positioned in the casing, a plate holder removably positioned in the casing, means for releasing the plate from the holder, means for receiving the plate, and means for forcing the plate from the plate receiving means into the tank.

1,387,404. PICKER-CHECK FOR LOOMS. DIEU DONNE JODOIN, Plainfield, Conn. Filed Apr. 22, 1921. Serial No. 463,536. 1 Claim. (Cl. 139—22.)



A device as characterized including a support, a pair of brackets attached to said support in spaced relation to each other and having bearings, rods slidably mounted in the bearings of said brackets, a check-member detachably connecting the rods and adjustable thereon, and check-member tensioning means including adjustable stops on said rods and springs between the stops and a bearing of each bracket respectively.

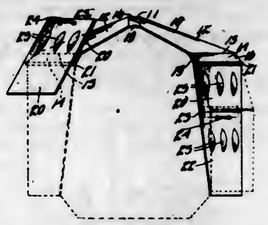
1,387,405. CULTIVATOR. LEE H. KAUPKE, Rock Island, Ill., assignor to Rock Island Plow Company, Rock Island, Ill., a Corporation of Illinois. Filed July 27, 1917. Serial No. 183,154. 7 Claims. (Cl. 97—35.)



1. In a cultivator, a frame, an axle, supporting wheels mounted thereon, a transversely extending steering bar connecting said wheels, foot-lever mechanism for moving said steering bar to angle said wheels, cultivator gangs mounted on said frame, a longitudinally extending arm mounted at its rear end and said axle and connected near its forward end to said cultivator gangs, means intermediate of said connections for connecting said longitudinal member to said steering bar, whereby said wheels may be angled and said gangs swung laterally simultaneously, and means for connecting the forward end of said longitudinal member to said frame to thereby lock said wheels and gangs in a straight-ahead position.

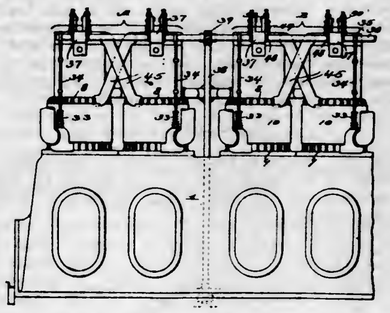
5. In a cultivator, a frame, supporting wheels therefor, a pair of vertically movable cultivator gangs supported by said frame, a shaft, connections from said shaft to one of said gangs, whereby rotation of said shaft causes said gangs to be raised, a hand lever rigidly mounted on said shaft for rotating the same, a toothed rack mounted adjacent said hand lever and loosely mounted upon said shaft, a second hand lever loosely mounted upon said shaft and connections from said second lever to said gang

for raising the same, a second toothed rack associated with said second lever and loosely mounted upon said shaft, said racks being rigidly connected together, a spring tooth for each hand lever for engaging the respective toothed rack, whereby said hand levers can be held in adjusted position, and spring means for shifting the position of said toothed racks to thereby simultaneously raise said disk gangs, said spring means operating to hold said gangs in their raised position.



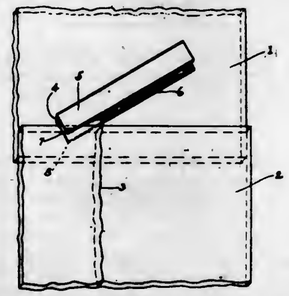
1,387,406. POWER-LIFT LISTER. LEE H. KAUPKE, Rock Island, Ill., assignor to Rock Island Plow Company, Rock Island, Ill., a Corporation of Illinois. Filed July 7, 1919. Serial No. 309,054. 20 Claims. (Cl. 97—55.)

1. In a power lift implement, a plurality of plow beams, a transverse axle secured to said beams and having offset laterally extending end portions, supporting wheels mounted upon said end portions, clutch mechanism associated with each of said wheels, a single controlling means for controlling the operation of both of said clutch mechanisms, whereby the power derived from said supporting wheels operates to rock said axle to thereby raise said plow beams, and means for automatically disconnecting the power from the axle when said beams have been raised to a predetermined height above the ground.



1,387,407. AUTOMOBILE-HOOD. WILLIAM A. KING, Memphis, Tenn. Filed May 17, 1920. Serial No. 382,138. 3 Claims. (Cl. 180—69.)

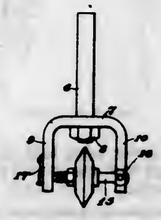
1. A vehicle hood comprising a stationary central sheet, a flat closure leaf pivoted to and depending from the edge of the central sheet, a second flat closure leaf pivoted to and depending from the lower edge of the first mentioned



closure leaf, said leaves being held by gravity in contact with each other and with the central sheet when the hood is opened, substantially as set forth.

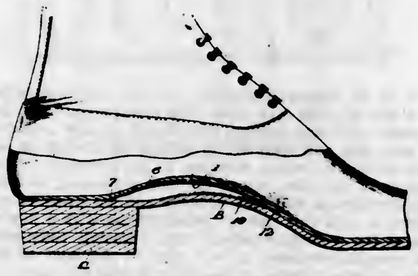
1,387,408. INTERNAL-COMBUSTION ENGINE. HARMON J. KLINE, Lansing, Mich. Filed June 11, 1917. Serial No. 174,155. 11 Claims. (Cl. 60—15.)

1. In an internal combustion engine, the combination of a pair of units each comprising high pressure and low pressure cylinders, pistons reciprocable in said cylinders of each unit and operative in unison, the pistons of one unit moving in reverse direction to the movement of the pistons in the other unit of the pair, a pumping chamber located between said high pressure and low pressure cylinders of each unit and in communication with a face of one of the respective pistons, and a conduit connecting the pumping chamber of each unit to the inlet of the high pressure cylinder of the other unit of the pair.



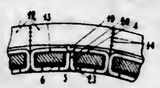
1,387,409. CLAMP FOR GREENHOUSE-ROOFS. ALEXANDER KLOKNER, Wauwatosa, Wis. Filed Feb. 17, 1921. Serial No. 445,618. 3 Claims. (Cl. 108—16.)

1. A repair clamp for broken panes of glass, comprising a rear portion and a pair of arms extending therefrom, one



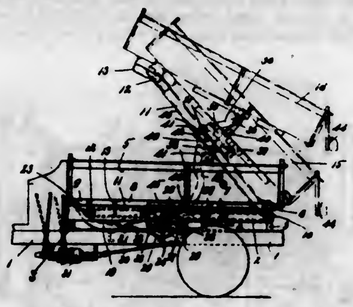
of said arms having an outwardly turned ear to automatically aid in guiding the associated arm over the edge of the pane.

1,387,410. SOUND-REPRODUCER MOUNTING. FRITZ KORABITZ, San Francisco, Calif. Filed May 4, 1920. Serial No. 378,894. 2 Claims. (Cl. 274—38.)



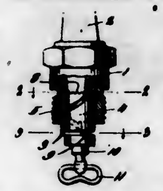
1. A stylus mounting comprising a shank, a bracket secured to said shank and terminating in slotted arms, a spindle pivoted at one end to one arm of said bracket, and detachably fastened to the other arm of said bracket, a disk shaped sound reproducing member mounted on said spindle, and stops on said spindle to retain said sound reproducing member in a vertical position, one of said stops being integral with said spindle, and the other of said stops being adjustable on said spindle.

1,387,411. ARCH-SUPPORT. JOHN F. KOLKEBECK, New York, N. Y. Filed July 12, 1919, Serial No. 310,457. Renewed Nov. 27, 1920. Serial No. 426,849. 2 Claims. (Cl. 36—71.)



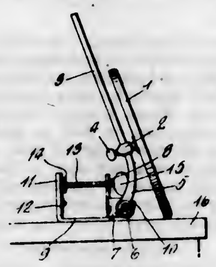
1. As an article of manufacture, an arch and instep brace formed from a single piece of material arched to conform to the human foot and having its end slitted longitudinally to form resilient supporting members, the extremities of said members being transversely corrugated.

1,387,412. MUDGUARD FOR MOTOR-CARS. JEAN-BAPTISTE MARIUS BENONIN LAGGIARD, Marseille, France. Filed Aug. 20, 1919. Serial No. 318,706. 4 Claims. (Cl. 280—156.)



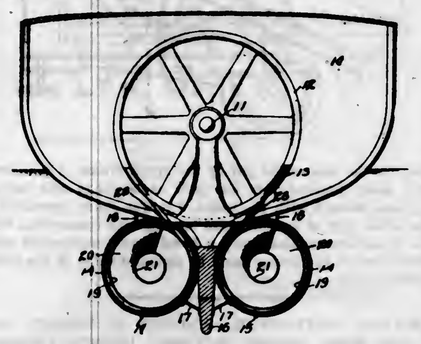
3. A wheel mudguard comprising a screen made up of a plurality of sections, a fastening member to overlie a portion of each section and engage beneath the wheel rim, and means to engage said member and interlock with the wheel rim.

1,387,413. COMBINED DUMPING AND REAR-END-ELEVATING VEHICLE-BODY. GEORGE W. LALLY, Boston, Mass., assignor to The Lally Commercial Body Company, Everett, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1918. Serial No. 264,940. 4 Claims. (Cl. 298—11.)



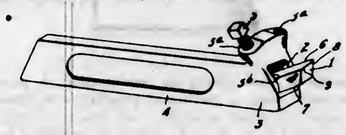
1. Apparatus of the kind described comprising a vehicle body adapted to be raised in an inclined position, hoisting means for raising the front end of said body at an inclined position and means operable at will to automatically elevate the rear end of said body while maintaining the same inclined, said means comprising arms, each having a projecting finger-like member to engage a lifting portion at will.

1,387,414. SPARK-PLUG CLEANER. EMERY G. LA VOIE, Greenwich, Conn. Filed May 26, 1921. Serial No. 472,633. 6 Claims. (Cl. 83—64.)



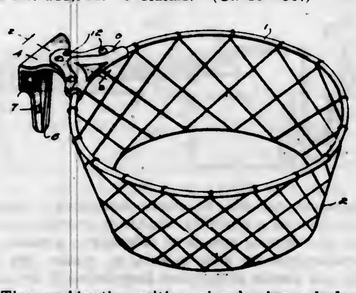
1. As a new article of manufacture, a spark plug cleaner including a cylindrical hollow shell having a spiral slot therein, one end of said shell being open and provided with teeth thereon.

1,387,415. MIRROR-SUPPORT. WALKER C. LEE, Loudonville, Ohio. Filed Mar. 30, 1921. Serial No. 456,885. 1 Claim. (Cl. 45—97.)



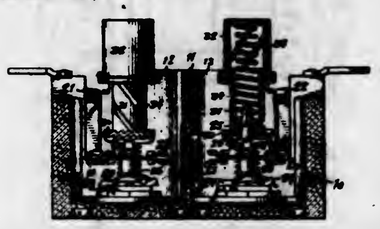
A device of the character described comprising a mirror, a post extending from the back of the mirror and provided with a perforation extending parallel with the plane of the mirror, a set screw extending through said post, a rod extending through the perforation in the post and adapted to be secured therein by said set screw, said mirror having a longitudinal adjustment on said rod and an angular adjustment about said rod, a curved arm extending from one end of the rod, a clamp piece, means whereby said clamp piece may be secured to a support, a curved lug extending from said clamp piece, means for pivotally holding said rod on said lug, and means whereby the lug and rod may be secured together against relative movement, substantially as described.

1,387,416. PROPELLER. JOHN M. LEMIEUX, Bath, Me. Filed Mar. 7, 1921. Serial No. 450,254. 6 Claims. (Cl. 115—34.)



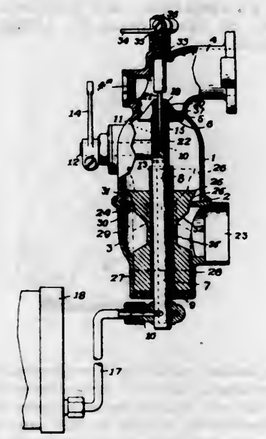
1. A propeller comprising impelling means, supporting means for the outer edges thereof, and a tubular support for the inner edges of said impelling means allowing free passage of the water therethrough, substantially as set forth.

1,387,417. CUTTING-TOOL AND HOLDER THEREFOR. PATRICK T. LENNON, Cleveland, Ohio. Filed Oct. 11, 1920. Serial No. 416,009. 7 Claims. (Cl. 29—96.)



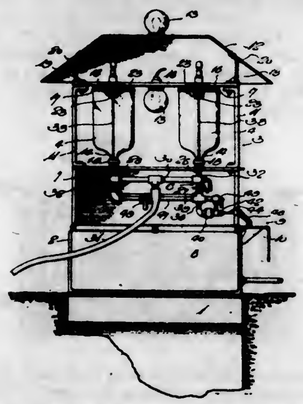
1. In a device for cutting metal in combination, a cutting tool having a cutting edge, each end of the said edge being adapted for either right or left hand cutting without alteration of the cross section of the tool, and a holder having an opening adapted to receive the said tool for either right or left hand cutting and to position it with suitable side clearance at the cutting edge.

1,387,418. GOAL FOR ATHLETIC GAMES. DUANE M. LILLIBRIDGE, St. Charles, Ill. Filed Jan. 31, 1921. Serial No. 441,351. 3 Claims. (Cl. 46—59.)



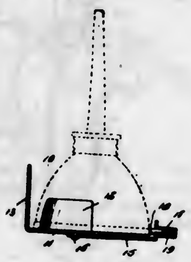
1. The combination with a ring having a body portion and an off-set portion arranged in the plane of the body portion, and a net secured thereto, of a bracket comprising a pair of plates, each of said plates being provided with registering grooves corresponding in shape to the offset in said ring and adapted to receive the off-set portion of said ring, and means for securing said plates to each other to retain the ring in said grooves.

1,387,419. ELECTRIC SWITCH. FRED W. LOEFFLER, Irondequoit, N. Y., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 3, 1917. Serial No. 140,479. 3 Claims. (Cl. 200—64.)



1. An electric switch comprising a cup-shaped insulating body, barrier means subdividing the interior thereof into separate switch chambers, independent switch mechanisms and switch terminals mounted in said switch chambers, wire terminals at the opposite ends of said body respectively connected to said independent switch terminals, in combination with a wire terminal mounted on said body and comprising a strap having lugs offset into the respective switch chambers to coöperate with the switch mechanisms therein, substantially as described.

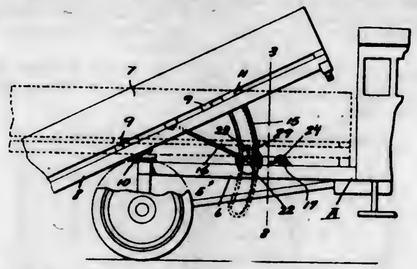
1,387,420. CARBURETER. NATHANIEL LOMBARD, Worcester, Mass., assignor to Lombard Carburetor Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1917. Serial No. 188,264. 5 Claims. (Cl. 261—50.)



1. In the carbureter of an internal combustion engine, the combination of a casing inclosing three separate chambers, namely, mixing, vacuum and air chambers located one above the other in the order named with the mixing chamber uppermost, with valve controlled openings between each of said chambers, said air chamber having a communication with the outside air, a valve for closing the opening between the mixing and vacuum chambers, provided with a hollow valve stem extending through the bottom of the casing and having a connection outside the casing between said valve stem and a source of fuel supply.

1,387,421. GASOLENE SERVICE-STATION. URIAH R. MCCUTCHEN, Springfield, Ill., assignor of one-third to John A. Bryden and one-third to James A. Hall, Springfield, Ill. Filed Apr. 15, 1919. Serial No. 290,202. 8 Claims. (Cl. 221—100.)

3. In a liquid dispensing system, a dispensing container having outlet means and a supply tank below said container, supply piping from said tank to said container, and means for supplying said cotnainer with liquid by way of said piping, a valve in said supply piping for normally preventing return of liquid through said piping, a housing for parts of said system having a door to be closed when operation of said system is to be discontinued, and means for controlling said valve from said door to hold the former against closing when said door is closed, whereby drainage of the system may take place through said piping.

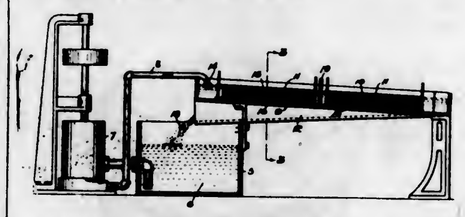


1,387,422. CAN-HOLDER. ROY MCGREGOR, Miami, Ariz. Filed Nov. 23, 1920. Serial No. 425,991. 2 Claims. (Cl. 248—20.)

1. A can holder embodying a supporting bracket, said bracket including a base and means extending from said base upon one side thereof for engagement with the can, an arm eccentrically pivoted to the base and a spring actuated lug carried by the free end of the arm for frictional engagement with the can.

1,387,423. TRUCK-BODY TILTING OR DUMPING DEVICE. CUMIAN J. MCTIGHE, Cedar Canyon, S. D. Filed June 17, 1919. Serial No. 304,760. 1 Claim. (Cl. 298—19.)

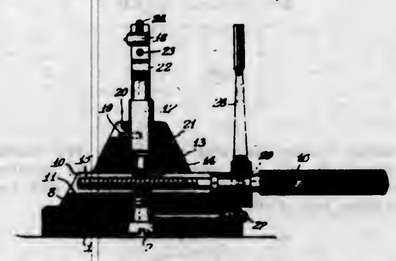
The combination with a wheeled truck frame having channeled side sills, of a tilting body having a part provided with slots in its sides, means pivotally securing the tilting body on the truck frame, lifting rack depending from the body forwardly of its axis of movement and having a cross-piece adjustably engaged in the slots in the bed of said body to permit variable changing of the rack, pairs of bearings each having a companion base flange and jaw for engagement with the channeled sill of the truck frame, set screws carried by the base flanges of said bearings for locking the latter in adjusted position on the channeled sill of the truck frame, a transmission shaft journaled in one pair of bearings and having pinions meshed with the racks, a power shaft journaled in the other pair of bearings and having gear connection with the transmission shaft and a hand crank engageable with either end of the power shaft at opposite sides of the truck frame.



1,387,424. REFLECTOR. MATTHEW M. MERRITT, Danvers, Mass., assignor to Copper Products Company, Boston, Mass., a Corporation of Maine. Filed July 19, 1917. Serial No. 181,636. 2 Claims. (Cl. 240—103.)

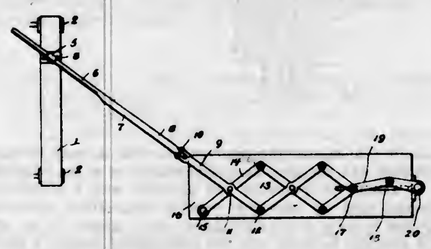
1. A reflector, comprising in combination, a glass, silvering on said glass, a coating of graphite and linseed oil back of said silvering, a coating of relatively high conductive material back of said coating of graphite and linseed oil, and a sheet of electrolytically deposited metal back of said relatively high conductive coating.

1,387,425. ELECTROLYTIC PROCESS AND APPARATUS. MATTHEW M. MERRITT, South Middleton, Mass., assignor to Merritt Metals Company, Salem, Mass., a Corporation of Maine. Filed Oct. 13, 1919. Serial No. 330,403. 5 Claims. (Cl. 204—5.)



1. Apparatus for use in electro-deposition comprising means for holding a plurality of objects distributed longitudinally of a flowing stream of electrolyte, negative electrical connections to said objects to render the same cathodes, and anodes distributed lengthwise of the stream adjacent said cathodes.

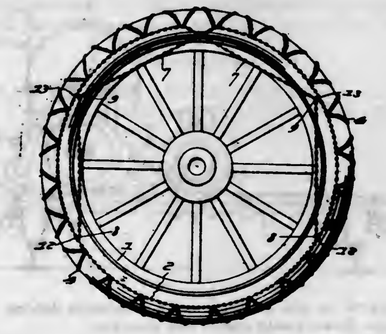
1,387,426. METHOD OF SOLDERING ALUMINUM. MATTHEW M. MERRITT, South Middleton, Mass., assignor to Merritt Metals Company, Salem, Mass., a Corporation of Maine. Filed Oct. 13, 1919. Serial No. 330,404. 10 Claims. (Cl. 204—3.)



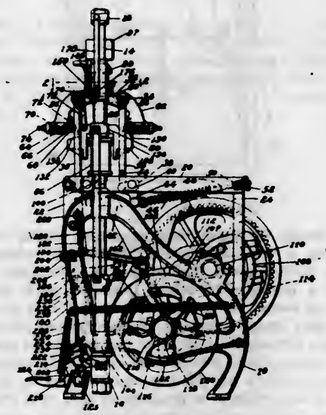
1. The method of preparing aluminum for a soldering operation which comprises initially treating the surface of the aluminum with a solution containing muriatic acid and then electrolytically depositing copper thereon.

1,387,427. WHEEL-DRESSING TOOL. OTTO A. MILLER, Detroit, Mich. Filed May 3, 1919. Serial No. 294,462. 5 Claims. (Cl. 125—11.)

1. A wheel dressing tool comprising a base, a rotatable guide member on said base and provided with a tongue, an adjustable support having connection with the tongue of said guide member, an adjustable holder carried by said support, a diamond mounting carried by said holder, a nut and screw adapted for adjusting said support relative to the tongue of said rotary guide member, and a gage carried by said rotatable guide member and disposed in parallelism with said holder.



1,387,428. MECHANICAL MOVEMENT. WILLIAM MOIR, Chicago, Ill. Filed Nov. 15, 1919. Serial No. 338,289. 4 Claims. (Cl. 74—14.)

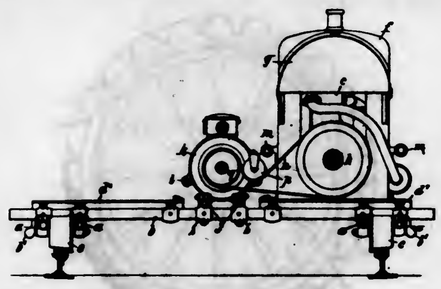


2. In combination with a belt, a sleeve having an adjustable connection with the belt and lever having one end portion slidably mounted in the sleeve and an extensible device actuated by the movement of the lever and an element for guiding the movement of the device.

1,387,429. GRIP-CHAIN FOR AUTOVEHICLES. NICHOLAS E. MONTGOMERY, Blackfoot, Idaho. Filed Mar. 17, 1919. Serial No. 283,163. 2 Claims. (Cl. 152—14.)

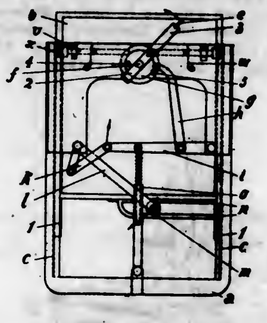
2. A device of the kind described comprising a pair of side chains and a plurality of cross chains interconnecting the two, the side chains having extension sections provided with terminal and intermediately positioned fasteners, the extension sections overlapping each other when the device is attached to the tire, the terminal fasteners being engaged with the side chains previous to the intermediate fasteners, whereby tension is created in the side chains in the manner and for the purpose specified.

1,387,430. STRETCHING-MACHINE. JOHN B. HADAWAY, Swampscott, and THOMAS H. SEELY, Malden, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 5, 1918. Serial No. 220,495. 94 Claims. (Cl. 69—8.)



7. In a machine of the class described, a form for cooperation with the material to be operated upon, means operating successively under the control of the machine for placing the material under tension to stretch it across the form, and yieldable connections for the tension-applying means, said connections being differently and progressively tensioned during the successive operations.

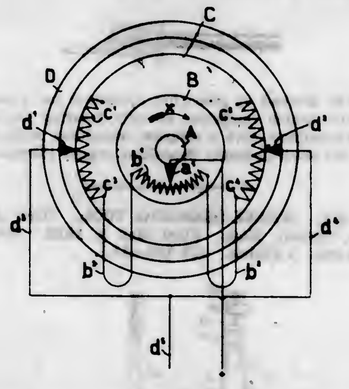
1,387,431. GENERATING SET MOVABLE UPON RAILS. ALBERT COLLET, Paris, France, assignor to Societe Maurice et Pierre Collet & Cie., Paris, France. Filed Apr. 28, 1915. Serial No. 24,617. 4 Claims. (Cl. 105—102.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A mobile electricity generating set for use on rails and adapted for quick removal from the rails, comprising

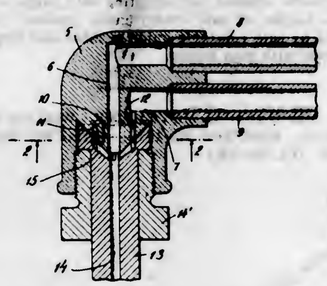
a carriage, a manually removable internal combustion engine unit removably seated on said carriage, an electric

generator on said carriage, and a detachable driving connection between said engine and generator.



1,387,432. WINDOW-OPERATING MECHANISM. CONRAD GERHARD, Munich, Germany, assignor to "Anfag" Aktiengesellschaft, Glarus, Switzerland. Filed Aug. 12, 1920. Serial No. 403,161. 4 Claims. (Cl. 268—4.)

1. A device for fixing and actuating sliding windows, comprising a window adapted to slide in recesses of a frame, a folding lever rigidly fixed to a turnably mounted axle, a plurality of levers linked to each other and operatively connected to said folding lever and to the window so that upon a turning of said folding lever in one of the two directions of rotation the window is raised and lowered respectively, lateral rods operatively connected to clamping members provided in the recesses in which the window glides whereby a pressure of said rods causes the clamping members to be pressed against the window and fix the latter in any given elevation, and an operative connection between said folding lever and the lateral rods so that upon a folding of the lever said rods are caused to actuate said clamping members.

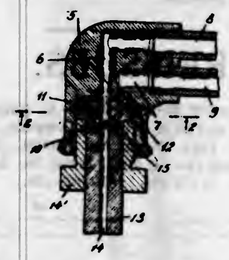


1,387,433. SYSTEM OF CONNECTIONS. HERMANN SUNDHAUSSEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,088. 2 Claims. (Cl. 219—20.)

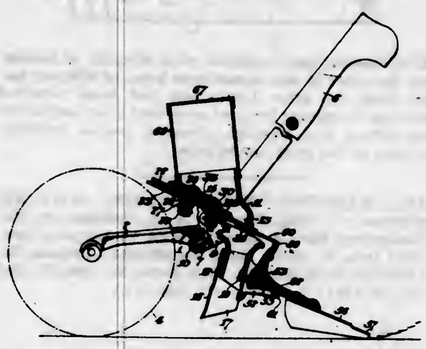
1. System of connections for regulating the strength of a current in the divisions of a two-part divided current circuit, characterized by the fact, that two points of a variable resistance (b^1) movable relatively to a conducting piece (a^1) electrically connected to one pole of a source of current which forms the starting point of the current division, are respectively connected to one end of two variable resistances (c^3, c^4) movable conjointly relatively to the aforesaid variable resistance (b^1) and that the conjointy movable variable resistances (c^3, c^4) have

in rubbing contact therewith respectively two conducting pieces (d^3, d^4) also movable conjointly relatively thereto and from which a common conductor (d^5) leads to the other pole of the source of current.

1,387,434. BLOWPIPE. GEORGE L. WALKER, New York, N. Y., assignor to Air Reduction Company, Incorporated, a Corporation of New York. Filed May 1, 1919. Serial No. 294,004. 4 Claims. (Cl. 158—27.4.)



1. In a blowpipe, the combination with a head having oxidizing and combustible gas passages, of a tip adapted to be assembled therewith and provided with a discharge passage, said tip and head having coöperating surfaces adapted to form a gas tight joint, and a groove in one of said surfaces forming with the coöperating surface a passage of uniformly diminishing cross sectional area arranged to deliver combustible gas to said discharge passage.

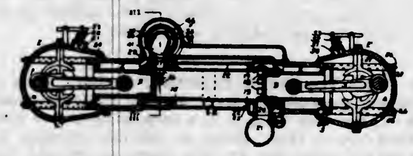


1,387,435. BLOWPIPE. GEORGE L. WALKER, New York, N. Y., assignor to Air Reduction Company, Inc., a Corporation of New York. Original application filed May 1, 1919, Serial No. 294,004. Divided and this application filed Nov. 20, 1920. Serial No. 425,334. 1 Claim. (Cl. 158—27.4.)

In a blow pipe, the combination with a head having oxidising and combustible gas passages, of a tip adapted to be assembled therewith and provided with a discharge passage, said head having a projecting conical seat and

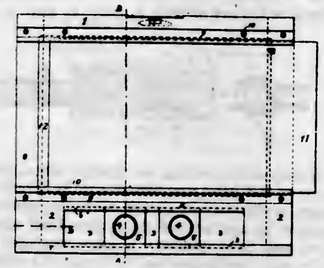
said tip having a corresponding recessed surface provided with a groove of substantially uniform depth and diminishing width to provide a passage of diminishing cross sectional area arranged to deliver combustible gas to said discharge passage.

1,387,436. SEED-SOWING DEVICE. SAMUEL L. ALLEN, deceased, Moorestown, N. J., by Sarah H. Allen, Elisabeth R. Allen, Susan J. Allen, and Charles J. Allen, executors, Moorestown, N. J. Original application filed Mar. 29, 1916, Serial No. 87,385. Divided and this application filed Dec. 15, 1919. Serial No. 345,010. 10 Claims. (Cl. 221—120.)



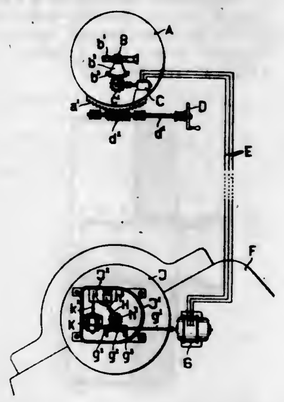
1. In a seed sowing device, the combination with a hopper having a discharge outlet, of a serrated agitator movable laterally across said outlet.

1,387,437. LUBRICATING COMPOUND. ROBERT MCLEOD, Auckland, New Zealand. Filed Mar. 8, 1919. Serial No. 281,478. 1 Claim. (Cl. 87—9.)



A compound for lubricating and other purposes, consisting of an intimate mixture, uniform throughout, of about eight parts of rubber and one part of tallow.

1,387,438. INTERNAL-COMBUSTION ENGINE. GEORGE F. DILLIG, Pittsburgh, Pa. Filed Jan. 13, 1921. Serial No. 436,910. 16 Claims. (Cl. 123—51.)



1. In a balanced two stroke internal combustion engine, the combination of a group of units each comprising a pair of alined compressor cylinders and a firing cylinder of less diameter interposed between the same, a pair of differential pistons working in opposite directions in each of said units, a pair of crank shafts at opposite ends of said units coupled to the adjacent pistons, and means whereby the air compressed in the compressor cylinders of each unit is discharged into the firing cylinder of the unit next in order of firing.

1,387,439. DRAWING AND PAINTING GLASS. ANSON K. CROSS, Ashland, Mass. Filed Oct. 16, 1916. Serial No. 125,834. 5 Claims. (Cl. 35—12.)

1. A painting corrector comprising a spirit level and means for producing side by side two blurred images, one of the subject and the other of its representation, and a frame in which said elements are so mounted that the spirit level indicates the correct leveling of both the frame and the image-producing means.

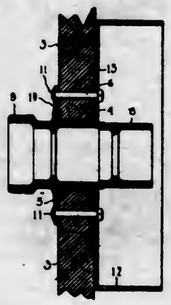
1,387,440. FIRE-CONTROL APPARATUS PARTICULARLY INTENDED FOR NAVAL GUNS. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 3, 1920. Serial No. 408,072. 7 Claims. (Cl. 89—41.)

1. An apparatus of the class described which comprises a sighting device, means for stabilizing said sighting device, an indicator mounted adjacent the trunnion of a gun, electrical means operatively connecting the sighting device to the indicator, a circuit closing piece carried by said indicator, a second indicator coöperating with the first mentioned indicator, and operatively connected so as to take part in the elevating movement of the gun barrel, said second indicator embodying means which coöperate with the first mentioned indicator and circuit-closing piece, substantially as and for the purpose set forth.

1,387,441. PROCESS OF PRODUCING CELLULOSE. CARL ALFRED BRAUN, Munich, Germany, assignor to Hildegard Marie Lachmann, Rudolf Georg Lachmann, and Gerhard Hans Lachmann, Berlin, Germany. Filed Apr. 1, 1920. Serial No. 370,603. 8 Claims. (Cl. 92—11.)

1. The process which consists in heating vegetable matter with a watery solution of an alkali sulfite and an alkali sulfid.

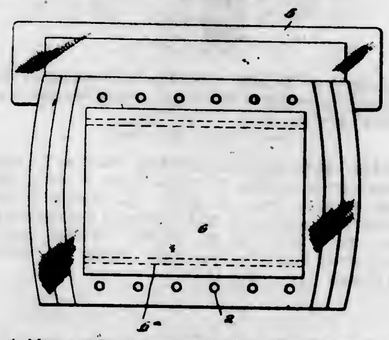
1,387,442. LOCKING DEVICE. HENRY JAMES LEE, London, England. Filed June 9, 1920. Serial No. 387,752. 4 Claims. (Cl. 70—47.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A locking device having in combination a cylindrical casing, rotary and fixed members co-axially located within said casing, a plurality of spring controlled plungers disposed parallel to and around the longitudinal axis of the said rotary and fixed members, a screw threaded member operable by said rotary member for imparting a longitudinal movement to the said screw threaded member.

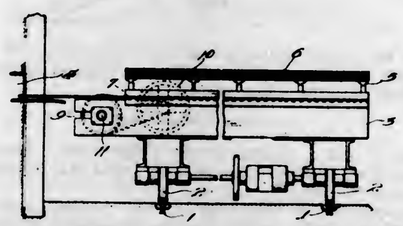
1,387,443. METHOD OF OBTAINING IRON AND TIN FROM TIN SCRAP. PHILIP ALEXANDER MACKAY, New York, N. Y. Filed Apr. 4, 1921. Serial No. 458,468. 8 Claims. (Cl. 75—56.)

8. A method of separating the tin and iron in tin scrap which comprises subjecting the scrap to the action of sulfuric acid containing free sulfur trioxid in solution by successively dipping the scrap in the acid for short periods, and subsequently washing the separated iron in water, and recovering the oxidized tin from the acid solution and the water as set forth.



1,387,444. COMBINED WHEEL-HUB AND BRAKE-DRUM. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 8, 1919. Serial No. 316,266. 4 Claims. (Cl. 301—6.)

1. In a combined wheel hub and brake drum construction, a hub having an outwardly extending flange intermediate its ends; a sleeve surrounding said hub and having two outwardly extending flanges spaced apart from one another, and one of which is in contact with the flange of said hub; a plurality of separate and independent spokes the inner ends of which abut against said sleeve and are held in place between the flanges thereof; a brake drum having an inwardly extending flange in contact with the other of the flanges of said sleeve; and a plurality of fastening bolts extending through holes provided in the flanges of said hub and brake drum and through holes provided in said spokes and whereby the elements aforesaid are secured together.



REISSUES.

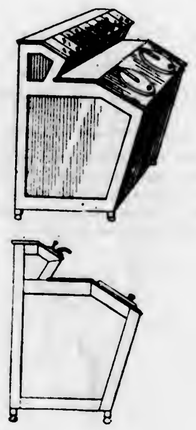
15,174. BLOW-OUT BOOT. JOHN A. BARNES, Dallas, Tex., assignor to Fowler-Williams Company, Dallas, Tex. Filed June 23, 1921. Serial No. 479,924. Original No. 1,364,677, dated Jan. 4, 1921, Serial No. 384,395, filed May 26, 1920. 4 Claims. (Cl. 152—24.)

2. A blow-out boot composed of a plurality of laminations, the outer of said laminations being of different material from the other laminations and being detached therefrom throughout its great area, said outer lamination being formed of a material possessing greater flexibility than that of the other laminations.

15,175. MAGNETIC SKELP-CHARGING MACHINE. STEWART C. COEY, Newark, N. J., assignor to The Youngstown Sheet & Tube Company, Youngstown, Ohio. Filed June 27, 1921. Serial No. 480,911. Original No. 1,019,759, dated Mar. 12, 1912, Serial No. 668,578, filed Dec. 29, 1911. 5 Claims. (Cl. 198—47.)

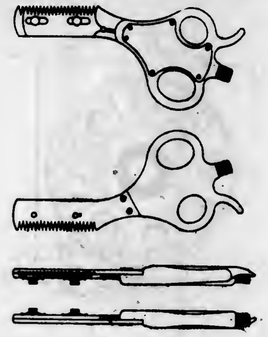
1. The combination of a furnace, a charging table at one end thereof and a rotating magnetic roller having its axis below the table and having surface travel toward the furnace, said surface of the magnetic roller being arranged to be engaged by linear magnetic materials and to transfer the same to the furnace, the table being extended on one side of the magnetic roller to afford a storage space for said material prior to its delivery to the surface of the magnetic roller, substantially as described.

15,176. PORTABLE ELECTRIC LIGHT. JOHN T. DRUFVA, Longmeadow, Mass., assignor to Henry Hyman & Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 8, 1920. Serial No. 422,736. Original No. 1,287,919, dated Dec. 17, 1918, Serial No. 183,653, filed July 31, 1917. 9 Claims. (Cl. 240—8.5.)



9. In a battery hand lamp having a metallic casing part and a metal reflector at one end thereof, an insulating ring seated on said casing part and in which said reflector is adapted to seat, and a conductor passing inside of

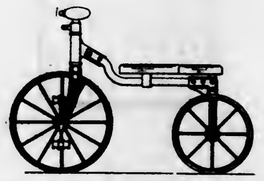
said ring and sustained thereby against lateral displacement and contacting with said reflector.



DESIGNS.

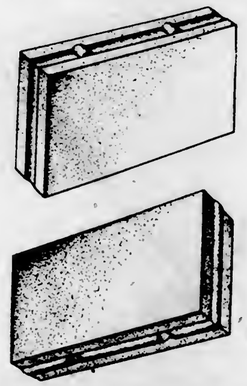
58,657. SODA-FOUNTAIN AND ICE-CREAM-DISPENSING APPARATUS. WILLIAM F. BEATTY, Cincinnati, Ohio. Filed Nov. 8, 1920. Serial No. 422,744. Term of patent 7 years.

The ornamental design for a soda fountain and ice-cream dispensing apparatus, as shown.



58,658. POWER HAIR-CUTTER. JOHN G. BEGHARA, Lawrence, Mass. Filed Dec. 29, 1920. Serial No. 433,945. Term of patent 7 years.

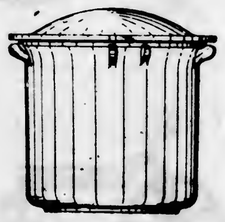
The ornamental design for a power hair cutter, as shown.



58,659. CHILD'S VEHICLE. JOHN THOMAS CASEY, Philadelphia, Pa., assignor to Keystone Lantern Company, Philadelphia, Pa. Filed Feb. 3, 1921. Serial No. 442,296. Term of patent 7 years.

The ornamental design for a child's vehicle as shown.

58,660. BUILDING-BLOCK. HARRY E. CLOUSER and EDGAR R. THORNTON, Stockton, Calif. Filed Aug. 16, 1920. Serial No. 403,953. Term of patent 14 years.

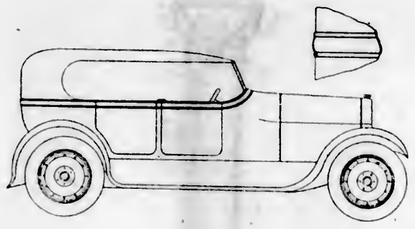


The ornamental design for a building block, as shown.

58,661. GAME-BOARD. ALBERT COHN and LOUIS H. DEBS, Chicago, Ill. Filed June 13, 1921. Serial No. 477,283. Term of patent 7 years.

The ornamental design for a game board, as shown.

58,662. PRESSURE-COOKER. THOMAS VINCENT CONNOR, Denver, Colo. Filed Jan. 24, 1921. Serial No. 439,697. Term of patent 14 years.



The ornamental design for a pressure cooker, as shown.

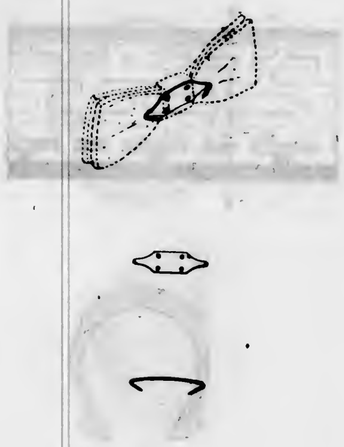
58,663. COMBINATION-TOOL. ALFRED H. CRAMPTON, Stockton, Calif. Filed Feb. 25, 1921. Serial No. 447,881. Term of patent 7 years.

The ornamental design for a combination tool, as shown.

58,664. AUTOMOBILE-BODY MOLDING. HARLEY J. EARL, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,029. Term of patent 3½ years.

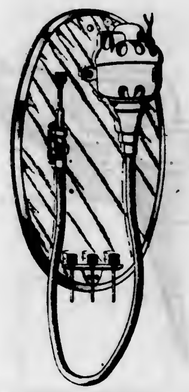
The ornamental design for an automobile body molding as shown.

58,665. AUTOMOBILE-BODY. HARLEY J. EARL, Los Angeles, Calif. Filed Nov. 16, 1920. Serial No. 424,556. Term of patent 3½ years.



The ornamental design for an automobile body as shown.

58,666. SCREW OR SIMILAR ARTICLE. JOHN P. EUSTIS, Newton, Mass., assignor to J. P. Eustis Manufacturing Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Sept. 27, 1920. Serial No. 413,253. Term of patent 14 years.



The ornamental design for a screw or similar article, as shown.

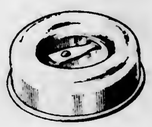
58,667. COMBINED TIE-FASTENER AND SOFT-COLLAR RETAINER. HUGO I. FELIX, Kansas City, Mo. Filed Mar. 7, 1921. Serial No. 450,493. Term of patent 14 years.

The ornamental design for a combined tie fastener and soft collar retainer as shown.

58,668. COMBINED TOOTH-CLEANER AND SUPPORT. LOUIS A. GABLE, Harrisburg, Pa. Filed Nov. 22, 1920. Serial No. 425,916. Term of patent 14 years.

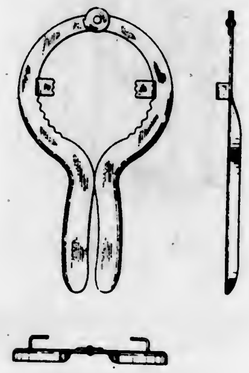
The ornamental design for a combined tooth cleaner and support as shown.

58,669. COMBINATION TOOTH-CLEANER AND SUPPORT. LOUIS A. GABLE, Lancaster, Pa. Filed Dec. 27, 1920. Serial No. 433,498. Term of patent 14 years.



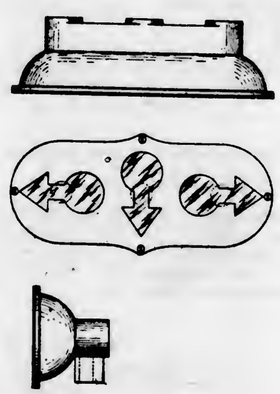
The ornamental design for a combination tooth cleaner and support, as shown.

58,670. GAME-BOARD. GEORGE P. GARIN, Chicago, Ill. Filed Apr. 27, 1921. Serial No. 464,992. Term of patent 7 years.



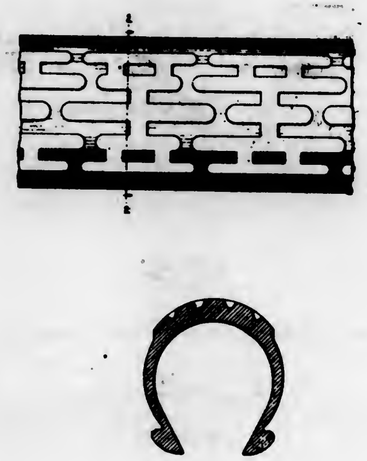
The ornamental design for a game board, as shown.

58,671. BOTTLE-CAP. GILBERT W. GOODRIDGE, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 18, 1921. Serial No. 438,250. Term of patent 14 years.



The ornamental design for a bottle cap, substantially as shown.

58,672. FRUIT-JAR OPENER. ARTHUR R. GURNETT, Toronto, Ontario, Canada. Filed Feb. 18, 1921. Serial No. 446,190. Term of patent 14 years.

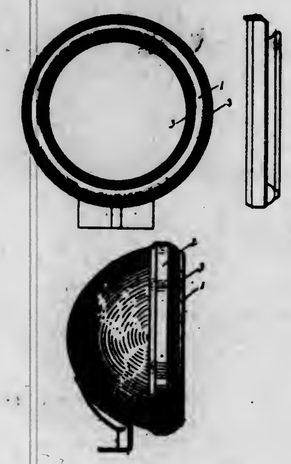


The ornamental design for a fruit jar opener, as shown.

58,673. TRAFFIC-SIGNAL. JOHN P. HOTZ, Newton, Mass. Filed Feb. 28, 1921. Serial No. 448,604. Term of patent 7 years.

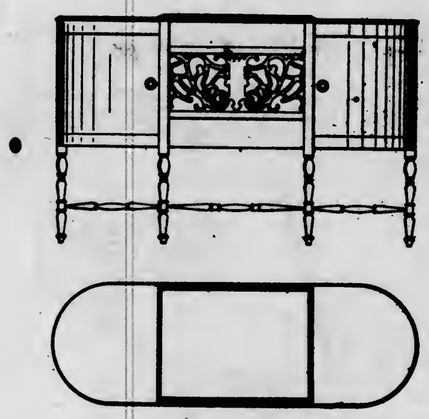
The ornamental design for a traffic signal as shown.

58,674. TIRE-TREAD. WILLIAM G. LEECH, Akron, Ohio, assignor to India Tire and Rubber Company, Magadore, Ohio. Filed Mar. 26, 1921. Serial No. 455,991. Term of patent 14 years.



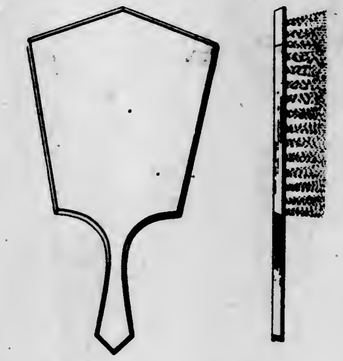
The ornamental design for a tire tread, as shown.

58,675. BATTERY-CONNECTOR. GUSTAVE E. LUNDBERG, Kewanee, Ill. Filed Feb. 2, 1920. Serial No. 355,772. Term of patent 14 years.



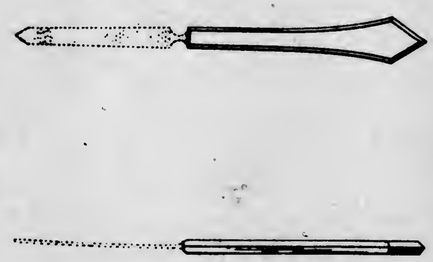
The ornamental design for a battery connector, as shown.

58,676. LAMP-DOOR. NEIL MACNEALE, Cincinnati, Ohio, assignor to the Corcoran-Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 366,113. Term of patent 7 years.



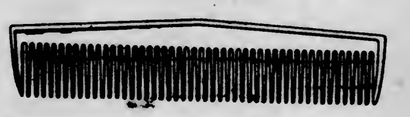
The ornamental design for a lamp door, as shown.

58,677. PHONOGRAPH-CABINET. HENRY L. MEIDINGER, Sioux City, Iowa. Filed Apr. 28, 1921. Serial No. 463,966. Term of patent 7 years.



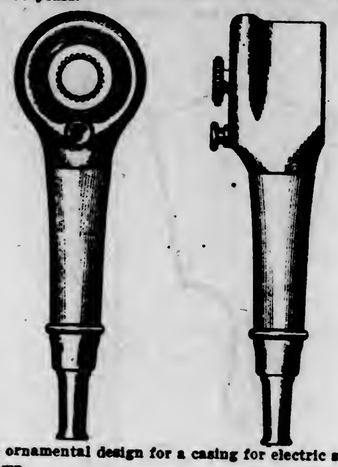
The ornamental design for a phonograph cabinet, as shown.

58,678. BACK FOR A BRUSH, MIRROR, OR THE LIKE. HARRY DANIEL MOSAUER, New York, N. Y., assignor to Tuskeloid Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,233. Term of patent 7 years.



The ornamental design for a back for a brush, mirror, or the like as shown.

58,679. HANDLE FOR TOILET ARTICLES. HARRY DANIEL MOSAUER, New York, N. Y., assignor to Tuskeloid Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,236. Term of patent 7 years.



The ornamental design for a handle for toilet articles as shown.

58,680. COMB. HARRY DANIEL MOSAUER, New York, N. Y., assignor to Tuskeloid Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,237. Term of patent 7 years.

The ornamental design for a comb as shown.

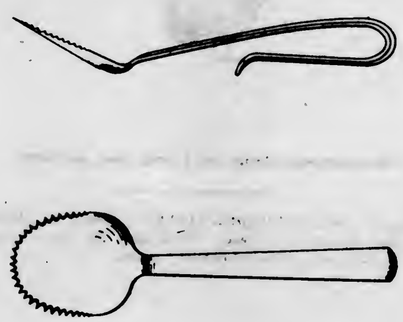
58,681. CASING FOR ELECTRIC SWITCHES. OSCAR H. PIERPS and ALPHONSE F. PIERPS, Rochester, N. Y. Filed Mar. 19, 1921. Serial No. 453,787. Term of patent 14 years.

The ornamental design for a casing for electric switches, as shown.

58,682. TELEPHONE-EARPIECE. RONALD W. POST, Mountain Lakes, N. J. Filed Mar. 25, 1921. Serial No. 455,657. Term of patent 14 years.

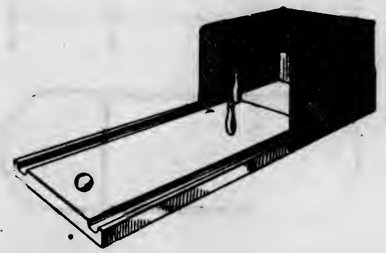
The ornamental design for a telephone earpiece as shown.

58,683. TIRE-TREAD. JOHN W. PRICE, Baltimore, Md., assignor to the Delion Tire and Rubber Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 5, 1921. Serial No. 450,164. Term of patent 14 years.



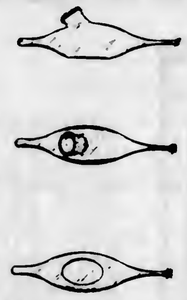
The ornamental design for a tire tread, as shown.

58,684. CAN-TESTER. HECTOR RABBEANA, Flint, Mich. Filed Apr. 20, 1921. Serial No. 466,229. Term of patent 14 years.



The ornamental design for a can tester, as shown.

58,685. ICE-CREAM SPOON. JOSEPH A. RAYDER, Philadelphia, Pa. Filed Mar. 18, 1921. Serial No. 453,399. Term of patent 7 years.

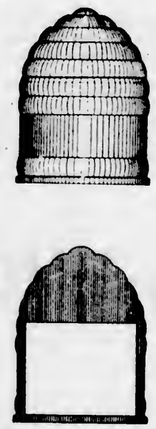


The ornamental design for an ice cream spoon as shown.

58,686. TOY BOWLING-ALLEY. HENRY REUHL, Cincinnati, Ohio. Filed Apr. 22, 1921. Serial No. 463,636. Term of patent 7 years.

The ornamental design for a toy bowling alley, as shown and described.

58,687. AMPUL. JOHN LA RUE ROBINSON, Reno, Nev. Filed Oct. 13, 1920. Serial No. 416,763. Term of patent 14 years.



The ornamental design for an ampul as shown.

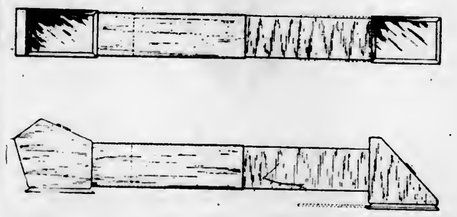
58,688. ELECTRIC-LIGHT BRACKET. CEPHAS B. ROGERS, Danbury, Conn. Filed Dec. 3, 1920. Serial No. 428,132. Term of patent 3½ years.

The ornamental design for an electric light bracket, as shown.

58,689. CONTAINER. HERMAN SENFTEN, Los Angeles, Calif. Filed Apr. 5, 1920. Serial No. 373,017. Term of patent 7 years.

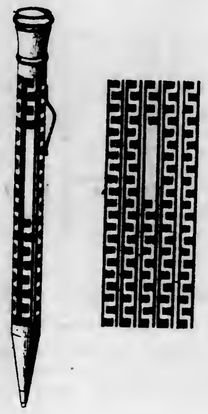
The ornamental design for a container, as shown.

58,690. STORE-FRONT. CHARLES H. SEYMOUR, Flushing, N. Y., assignor to National Drug Stores Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 5, 1920. Serial No. 371,467. Term of patent 14 years.



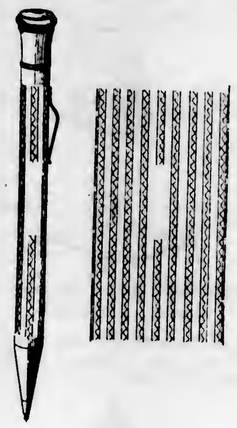
The ornamental design for a store front as shown.

58,691. DRILL-HOLE CLEANER OR SIMILAR ARTICLE. LESTER J. SORTOR, Des Moines, Iowa. Filed Feb. 9, 1921. Serial No. 443,709. Term of patent 14 years.



The ornamental design for a drill hole cleaner or similar article, as shown.

58,692. AUTOMOBILE REAR-SIGHT DEVICE. HARRY W. STOVER, Oakland, and BERTRAM M. COATES, Piedmont, Calif. Filed Feb. 23, 1921. Serial No. 447,323. Term of patent 7 years.



The ornamental design for an automobile rear sight device, as shown.

58,693. PEN OR PENCIL CASE. JOHN C. WAHL, Chicago, Ill., assignor to the Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 25, 1921. Serial No. 464,449. Term of patent 14 years.

The ornamental design for a pen or pencil case as shown.

58,694. PEN OR PENCIL CASE. JOHN H. WORTHY, Elgin, Ill., assignor to the Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 25, 1921. Serial No. 464,452. Term of patent 14 years.

The ornamental design for a pen or pencil case as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 9, 1921.

[PUBLISHED AUGUST 23, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

DU PONT *v.* THE GINTER COMPANY.

Decided July 7, 1921.

1. TRADE-MARKS — IDENTITY—"DU PONT" ASSOCIATED WITH COAT-OF-ARMS—SURNAME OF INDIVIDUAL—NOT REGISTRABLE.

A mark consisting of the words "Du Pont" above a fanciful design resembling a coat-of-arms on which are the letters "D P" refused registration on the opposition of one having the surname "Du Pont," although opposer had not applied the name to any goods, the modification from the name alone being comparatively insignificant.

2. SAME—OPPOSITION TO REGISTRATION—DAMAGE.

In order to sustain an opposition, it is not necessary to show trade interference and specific damage.

3. SAME—REGISTRABILITY—SURNAME THAT OF NOTED CELEBRITY.

That a mark is the surname of a noted celebrity is not sufficient basis for its registration.

APPEAL on motion.

TRADE-MARK FOR CANDY, CRACKERS, BISCUITS, TEA, COFFEE, COCOA, CHOCOLATE, CANNED FRUITS, ETC.

Messrs. Prindle, Wright, and *Small* for Du Pont.

Mr. Henry C. Thomson for The Ginter Company.

FENNING, *Assistant Commissioner:*

This is an appeal from a decision of the Examiner of Interferences adjudging that the applicant is not entitled to the registration of a trade-mark.

The opposer is an individual whose surname is Du Pont. The mark sought to be registered consists of the words "Du Pont" above a fanciful design resembling a coat-of-arms on which are the letters "D P."

The opposition proceedings are instituted under section 6 of the act of February, 1905, which allows any person who believes he would be damaged by the registration of a mark to oppose the same, and section 5 of the same act, which provides that no mark which consists merely in the name of an individual, firm, corporation, or association, not written, etc., in a distinctive manner, shall be registered. After answer was filed opposer moved for judgment under equity rule 29.

It is urged that applicant's mark does not consist merely of the name of an individual. Applying to the mark the test indicated in *ex parte A. Engelhard & Sons Co.*, (1904, C. D., 122; 109 O. G., 1880,) it seems clear that—

> the mark under consideration presents an appearance so little modified from the name used alone as to make the modification comparatively insignificant.

In that case there was a picture of a cloud-bank associated with the name. In this case there is the representation of a coat-of-arms which would seem to emphasize the surname feature of the mark. The same conclusion is supported by *American Steel Foundries,* (264 O. G., 353;) *Simplex Electric Heating Company* v. *Ramey Co.*, (243 O. G., 793; 46 App. D. C., 400,) and other cases. It is true that in at least some of these cases the question of the use of the mark on certain goods was considered, whereas in the present case it is admitted in the opposition papers that the opposer has not applied the mark to any goods; but under the clear words of section 5 of the statute it would seem that the name is not registrable, irrespective of use. Moreover, in such cases as *Mansfield Tire & Rubber Company* v. *Ford Motor Company* (222 O. G., 1056; 44 App. D. C., 205) it is held that trade interference and specific damage need not be shown. Applicant calls attention to the fact that the mark comprises the surname of a noted celebrity; but it has been held that this is not sufficient basis for the registration of a mark. (*Stephano Bros.* v. *Stamatopoulos*, 238 Fed. Rep., 89.)

It may be that applicant has a common-law right to its mark, but it cannot be registered under the statute. (238 Fed. Rep., 89.)

The decision of the Examiner of Interferences is affirmed.

THE ROSENBERG COMPANY *v.* PHILLIPS-JONES COMPANY, INC.

Decided July 19, 1921.

1. TRADE-MARKS—IDENTITY—"AMERICAN ACE"—"ACE" AND REPRESENTATION OF AEROPLANE-PROPELLER, ETC.

A mark consisting of the words "American Ace" *Held* to so nearly resemble a mark consisting of the word "Ace" surmounting the representation of an aeroplane-propeller, below which appear two stars, the whole being surrounded by a rectangular border, as to be likely to cause confusion.

2. SAME—IDENTITY OF GOODS.

Overalls, combination-suits, pants, shirts, and work-clothing are goods of the same descriptive properties as men's outer shirts, men's pajamas, men's night-shirts, men's underwear, both knit and woven goods, and men's collars and cuffs, both soft and laundered.

3. SAME—INTERFERENCE—REGISTRATION AFFORDS PRIMA FACIE PROOF OF OWNERSHIP AT DATE OF FILING APPLICATION.

The filing of a regular application for the registration of a trade-mark supported by an affidavit under section 2 and accompanied by specimens of the mark as actually used should be taken as *prima facie* proof that the applicant was the owner of the mark on the date the application was filed, and that fact having been established the presumption must arise that the applicant continued to own the mark and to use it.

4. SAME—INTERFERENCE—APPLICANT AND REGISTRANT—APPLICANT'S PROOFS MUST OVERCOME REGISTRANT'S FILING DATE.

In an interference between a registrant and an applicant the certificate of registration is *prima facie* proof of use and ownership of the mark on the filing date of the application for registration, which *prima facie* proof is not overcome by proof of adoption and use by the applicant prior to the date of registration, but subsequent to the date of the application.

APPEAL from Examiner of Interferences.

OVERALLS, COMBINATION-SUITS, PANTS, SHIRTS, AND WORK-CLOTHING.

Messrs. H. B. Willson and Co. for The Rosenberg Company.

Mr. W. B. Morton for Phillips-Jones Company, Inc.

FENNING, *Assistant Commissioner:*

This is an appeal from the decision of the Examiner of Interferences awarding priority of a trade-mark to The Rosenberg Company, Inc., the junior party.

The Phillips-Jones Company, Inc., filed an application on February 8, 1919, for its trade-mark which was registered on July 22, 1919, No. 126,057. The mark is applied to men's outer shirts, men's pajamas, men's night-shirts, men's underwear, both knit and woven goods, and men's collars and cuffs, both soft and laundered. The mark consists of the word "Ace" surmounting the representation of an aeroplane-propeller, below which appear two stars, the whole being surrounded by a rectangular border.

The Rosenberg Company filed its application complete on May 14, 1919, having filed an informal application on April 12, 1919. It claims use on overalls, combination-suits, pants, shirts, and work-clothing of its mark consisting of the words "American Ace." The labels filed with the application show an aeroplane in addition to the words "American Ace."

The Rosenberg Company contends that there is no interference in fact because the marks are distinguishable, but the word "Ace" associated with the aeroplane-propeller is certainly near enough to the mark "American Ace," as shown, to be likely to cause confusion.

The Rosenberg Company further contends that the marks are applied to goods of different descriptive properties; but it is believed that a reading of the list of articles referred to in the two applications, as indicated above, will show this ground untenable.

The Phillips-Jones Company took no testimony.

Arthur Rosenberg, president of The Rosenberg Company, testified that their mark had been used continuously since April 1, 1919, and he mentions the names of a number of customers in various States. To some extent this testimony is supported by the deposition of Goldsmith. This sufficiently shows use of the mark by The Rosenberg Company prior to the date of registration of the mark by the Phillips-Jones Company, and on this state of facts the Examiner of Interferences awarded priority to The Rosenberg Company.

The Phillips-Jones Company before the Examiner of Interferences and also on this appeal urges that it should be given its record filing date of February 8, 1919, for the use of its mark. Such date is prior to any use alleged or proven by The Rosenberg Company and consequently would necessitate awarding priority to the Phillips-Jones Company.

The Examiner of Interferences, however, held that the Phillips-Jones Company could not have the benefit of its filing date, and in support thereof cited several cases.

I have been unable to find a case directly in point. In *Canepa* v. *Boehm* (C. D., 1905, 291; 117 O. G., 2089,) the Commissioner says that the date to be conceded a registrant is the date of the certificate of registration and not an earlier date, but it was unnecessary for him to consider that matter, since the junior party there proved a date prior to the registrant's application date, and the same is true of *Voegeli Brothers* v. *Knee* (2 C. D., 1912, 391; 185 O. G., 258; T. M. Rep., 390,) and *Greene, Tweed & Co.* v. *Manufacturers' Belt Hook Company*, (C. D. 1908, 294; 137 O. G., 2,221,) in both of which the junior party proved use prior to the application date of the other party.

The attorney for The Rosenberg Company cites two other cases which contain statements supporting his contention; but in neither case was the particular point here considered in issue. In *Lowden* v. *Allen Brothers Company*, (C. D., 1908, 247; 137 O. G., 979,) neither party had taken testimony, but priority was awarded to the party whose application date was earlier. In *Dunlevy & Brother* v. *Nelson Morris & Co.*, (C. D., 1908, 52; 132 O. G., 1588,) there was an interference between an applicant and a registrant under the statutes in effect prior to the 1905 Trade-Mark Act. The Commissioner there said that where a registrant took no testimony the applicant should prevail if he established a date of adoption and use prior to the date of registration; but in fact in that case the applicant established a date which was not merely prior to the date of registration, but which was also prior to the date of the application on which the registration was based.

In the case of *William Wrigley, Jr., & Co.* v. *Norris* (C. D., 1910, 307; 152 O. G., 488; 34 App. D. C., 138,) the Court of Appeals of the District of Columbia considered an opposition proceeding

brought against an applicant who was endeavoring to register his mark under the ten-year clause of the statute. The court there held that the application being regular in form entitled the applicant *prima facie* to the right of registration; but since the opposer had introduced testimony showing the use of the mark by others during a part of the ten years next preceding February 20, 1905, the date of the Trade-Mark Act, the applicant was not entitled to registration. By inference, at least, the court there indicated that in the absence of testimony to the contrary the applicant would have had *prima facie* title to the mark for the ten years prior to February 20, 1905, based on his application.

In the present case The Rosenberg Company's testimony is not in the least directed toward showing that the Phillips-Jones Company did not use the mark or that they abandoned the mark. The Rosenberg Company's testimony was directed solely to its use of its own mark. All that The Rosenberg Company endeavored to prove may be taken for true, but still the Phillips-Jones Company will be entitled to the registration of its mark if the sworn statement in its formal application for registration is believed, and, as stated, this has not been questioned.

The Trade-Mark Act of 1905 in section 1 provides for the filing of the application, which, among other things, shall state the length of time during which the mark has been used and which shall be accompanied by specimens of the mark *as actually used*. Section 2 provides "In order to create any right whatever" the application must be accompanied by a verification to the effect that the applicant is the owner of the trade-mark and that no other person has the right to use the mark in the United States, (of course, at the date of the application.)

Section 11 of the law provides that the certificate of registration shall state the date on which the application for registration was filed or received in the Patent Office, and section 16 provides that the registration of a trade-mark under the provisions of this act shall be *prima facie* evidence of ownership.

The natural inference from this would be that the certificate of registration, which by law includes the date of the application, should be taken as evidence of ownership of the mark by the applicant on the date the application was filed, especially in view of the fact that the application must be sworn to and must be accompanied by other evidence in the form of specimens of the mark *as actually used*. It would seem that this is the "right" which may be created under section 2, else the "right" will be barren.

Moreover, section 13 provides for the cancelation of the registration of a mark if it shall appear that the registrant was not entitled to the use of the mark *at the date of his application* for registration thereof—not the date of registration.

All this leads to the conclusion that the filing of a regular application for the registration of a trade-mark supported by an affidavit under section 2 and accompanied by specimens of the mark as actually used should be taken as *prima facie* proof that the applicant was the owner of the mark on the date the application was filed, and that fact having been established the presumption must arise that the applicant continued to own the mark and to use it.

Therefore the junior party to an interference or the opposer to an application for registration should not be awarded priority unless he shows use by himself prior to the application date of the opponent, or that his opponent is not entitled to the use of the mark, or that his opponent has not used the mark or has abandoned the use of the mark.

In the case of *Deitsch et al.* v. *George R. Gibson Co.*, (155 Fed. Rep., 383,) Judge Hough, in considering a trade-mark, apparently assented to the suggestion that the *prima facie* ownership of the mark was not limited to the date of the certificate of registration, although he did in that case find that affidavits which were submitted on a motion for preliminary injunction set out facts sufficient to overcome this *prima facie* right.

Whether an applicant should be given the date he claims for first use in his application is not in issue here.

Inasmuch as the Phillips-Jones Company's application was filed prior to any date of use proven by The Rosenberg Company and inasmuch as there is nothing in the record to combat the presumption of ownership of the mark by the Phillips-Jones Company on the date their application was filed, the Examiner of Interferences is reversed, and priority is awarded to The Phillips-Jones Company.

Renewal of Trade-Marks—Abstract of Title.

(ORDER NO. 2,686.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 6, 1921.

On and after this day in applications for the renewal of a registration of a trade-mark no abstract of title need be furnished by the applicant, but the matter will be referred to the Assignment Division for report thereon. This order shall affect pending applications in which abstracts have not been furnished by the applicant.

In all cases where an applicant for trade-mark registration alleges ownership of a trade-mark previously registered to another an official abstract of title, to be furnished by the applicant, showing such ownership will be required for the application, or the applicant will be required to pay to the Office the usual charge for making the title search on such previously registered trade-mark.

THOMAS E. ROBERTSON,
Commissioner.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 289—No. 3. TUESDAY, AUGUST 16, 1921. Price—$5 per year.

[PUBLISHED AUGUST 30, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

International Bureau at Habana—Protection of Trade-Marks.

(ORDER NO. 2,685.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 6, 1921.

Under the convention adopted for the establishment of the International Bureau at Habana and regulations of such Bureau (280 O. G., 195) it is provided, to carry into effect the convention for the protection of trade-marks, that the legal representative of the administration of the country of origin shall communicate to the International Bureau (articles 2–1) the claim of the owner of the mark.

Hereafter no official abstract of title need be furnished by the applicant, but a fee of $5 must be paid the U. S. Patent Office, which will make the title search and perform the other work in connection with the certificate to the Habana Bureau.

Hereafter the applicant need not fill in the official form for such certificate, but in addition to paying the fee of $5 must provide the Office with (*a*) an international money order for $50 to the order of "Director of the International Bureau, Habana;" (*b*) an electrotype of the trade-mark, not larger than 10 centimeters in either dimension; (*c*) should the United States registration claim color as a distinctive element of the trade-mark he shall furnish thirty copies of the mark printed on paper, reproduced in color; (*d*) a statement including (1) the name of the owner of the mark; (2) the address of the owner of the mark; (3) the number and date of registration of the mark in the United States Patent Office, and (4) a translation into Spanish of the particular description of goods as stated in the certificate of registration.

THOMAS E. ROBERTSON,
Commissioner.

Fee for Recording Articles of Incorporation.

(ORDER NO. 2,688.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 9, 1921.

For the present the Patent Office is recording the articles of incorporation of companies, so that their names may be available for trade-mark searchers. This is done at the request of the attorneys and is not advocated by the Office. As long as this practice continues a charge will be made for such record of $1.00 for 300 words or less; $2.00 if over 300 words and under 1,000 words; $1.00 for each additional 1,000 words or portion thereof.

THOMAS E. ROBERTSON,
Commissioner.

Photostat Copies.

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the number will vary according to the year.

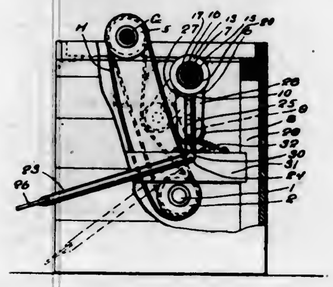
TRADE-MARK SECTION OF THE OFFICIAL GAZETTE.

In response to the public demand a section of the Official Gazette containing all matter relating to Trade-Marks may be procured separately beginning with volume 290, September 6, 1921.

The Trade-Mark section will include: Trade-Marks published under the act of 1905; Trade-Marks registered under the act of 1905 and under the act of 1920; Labels and Prints; the indexes, and decisions from time to time in Trade-Mark cases.

The cost will be five cents each number, or $2.50 for annual subscriptions, to which must be added $2.00 to cover postage to subscribers in foreign countries.

Condition of Applications Under Examination at Close of Business August 6, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Aug. 16; oldest amended, Nov. 1.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

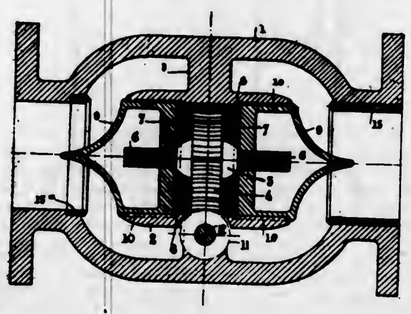
PATENTS



GRANTED AUGUST 16, 1921.

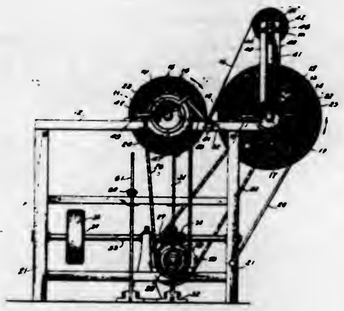
1,387,445. CONTROL MEANS FOR DRIVE MECHANISM. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed May 28, 1919. Serial No. 300,304. 6 Claims. (Cl. 64—5.)

1. The combination with a drive pulley, a driven pulley, a slack belt extending between said pulleys, a belt-tightener movable into and out of belt-tightening position, and a frame for supporting all of said parts, of a foot lever pivotally supported by said frame, being connected to swing said belt-tightener into tightening position at will, and having a foot treadle portion extending to a position of accessibility beyond said frame.

1,387,446. VALVE FOR PIPES FOR WATER AND OTHER FLUIDS. ANTOINE JOSEPH ASTIER, Colombes, France. Filed Mar. 19, 1919. Serial No. 283,636. 2 Claims. (Cl. 277—33.)

1. A valve comprising a body having alined outlets at opposite ends and also having a sleeve between and concentric with said outlets, valve seats at the inner ends of said outlets, valves mounted for sliding movement in said sleeve toward and from said seats, a shaft having oppositely threaded end portions engaging corresponding openings in the valves, an operating gear on said shaft and between the valves, cushioning members between the valves and said gear to permit slight independent movement of the valves, and means, coacting with said gear to turn said shaft and thereby operate the valves.

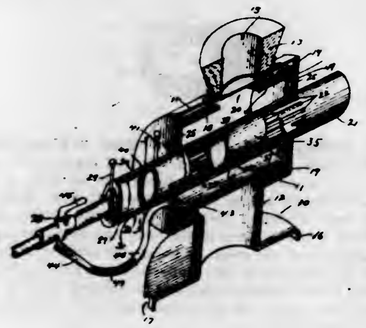
1,387,447. ROCK-DRILL. ALLEN ALFORD, Waco, Tex. Filed July 28, 1920. Serial No. 399,483. 2 Claims. (Cl. 255—71.)



2. A drilling tool for wells for boring rock and similar hard formations, comprising a conoidal shaped drill body and a conical bit on one end thereof, a plurality of supporting members placed through the drill body from side to side and extending from the top to the bottom of the body from opposite sides of the body and extended beyond the periphery of the body, corrugatedly surfaced rotatable rollers on the ends of the supporting members, means for securing the supporting members in the body and for locking the drill bit in the body and onto the lowermost supporting member.

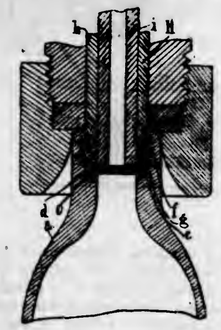
1,387,448. SHIP'S-BOTTOM PAINT. SEIJI ASAKAWA, Tokyo-Fu, and KAICHI NOSAWA, Chiba-Ken, Japan. Filed Nov. 26, 1920. Serial No. 426,622. 4 Claims. (Cl. 134—39.)

1. A paint for submarine use including kwashi-pan as an ingredient thereof.



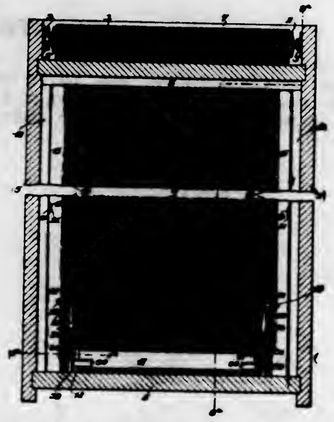
1,387,449. CLOTH-SPONGING MACHINE. LOUIS BAJETT, New York, N. Y. Filed Apr. 30, 1921. Serial No. 465,813. 10 Claims. (Cl. 26—7.)

3. In a cloth sponging apparatus, a rotatable steam cylinder, releasable means for driving the cylinder to wind thereon alternate layers of a sponging web and a cloth to be sponged, a rotatable drum carrying the windings of the sponging web; driving of the steam cylinder being effective to unwind the web drum, releasable provisions for driving the drum to rewind thereon the sponging web and unwind the same from the steam cylinder, the cylinder and drum being spaced to provide a short free span for the windable and rewindable sponging web



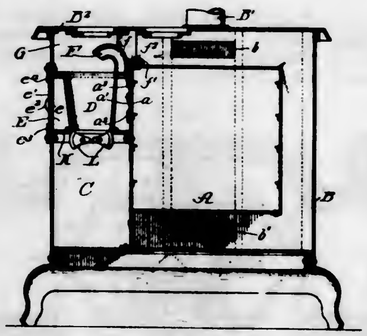
movable therebetween, supporting means for a reel of cloth to be sponged, said supporting means including elements for supporting the reel of cloth during the winding and rewinding operations, the supporting means being also spaced from the cylinder to provide a relatively short and free span for the cloth wound and rewound therebetween, and instrumentalities for alternatively tensioning the cylinder and drum, said instrumentalities providing a control for tensioning the free span of the sponging web.

1,387,450. GAS-BURNER. HENRY C. CALDWELL, Buffalo, N. Y. Filed July 17, 1920. Serial No. 396,905. 8 Claims. (Cl. 158—99.)



8. A gas burner characterized by having a jacket forming a secondary mixing chamber, a combustion chamber mounted on the jacket and in communication with the interior thereof, a mixing tube passing through the secondary mixing chamber and forming a primary mixing chamber, such tube being provided with fuel element outlets, means for projecting gas under pressure through an air space located between the tube and the gas outlets and thence into the tube, valve controlled means for regulating the quantity of gas introduced into the tube, means for regulating the size of the fuel element outlets and for controlling the admission of air to the air space, and means for supplying additional air to the fuel elements at the combustion zone.

1,387,451. CAPSULE OR CONTAINER FOR GASES OR LIQUIDS UNDER PRESSURE. ROBERT HUNTER CAMPBELL, Upper Edmonton, England. Filed Oct. 23, 1919. Serial No. 332,822. 5 Claims. (Cl. 220—3.)

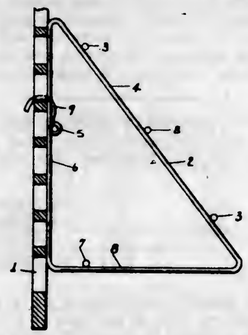


1. A capsule or container for gases or liquids under pressure including an internally threaded neck, a seating, sealing means co-acting with said seating and a plastic element expanded into said internally threaded neck to retain said sealing means on said seating.

1,387,452. ROLLING WINDOW-SCREEN. JOHN J. CHAPIN, Rochester, N. Y., assignor, by mesne assignments, to Fil-Bac Screen Corporation, Rochester, N. Y., a Corporation of New York. Filed Dec. 3, 1917, Serial No. 205,013. Renewed Jan. 11, 1921. Serial No. 436,613. 11 Claims. (Cl. 156—39.)

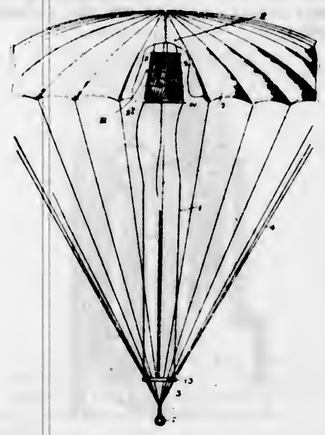
8. A rolling window screen fixture comprising oppositely disposed hollow side edge guides having a channel receiving one edge of the screen, and a rod pivoted within each guide and twisted to provide a spiral surface which acts gradually lengthwise upon the screen to clamp it within the guide, and means for turning the rod.

1,387,453. STOVE. HUGH A. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation. Filed Jan. 5, 1920. Serial No. 349,515. 10 Claims. (Cl. 126—15.)



7. In a stove, the combination with the ash pit and combustion chamber, of an air chamber arranged between the ash pit and combustion chamber, a fire pot arranged within said air chamber, a valve for controlling the admission of air to said air chamber, a port at the top of said air chamber, and a hot blast pipe communicating with said port, extending over said fire pot and having a downturned discharge outlet for directing heated air downwardly into the upper central portion of said fire-pot.

1,387,454. FOOTREST FOR REGISTERS. WILLIAM H. COLEMAN, Jackson, Mich. Filed Mar. 28, 1921. Serial No. 456,425. 2 Claims. (Cl. 155—168.)

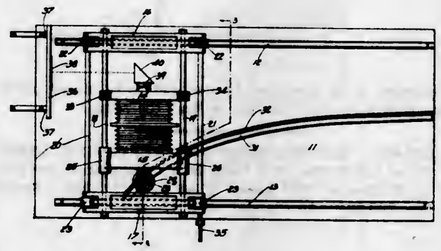


2. A foot rest for registers comprising triangular end members and front and rear cross bars secured thereto, said end members and cross bars being formed of wire

the end members being disposed with their front portions upwardly inclined when their rear portions are resting against the face of a register, and hooks loosely mounted

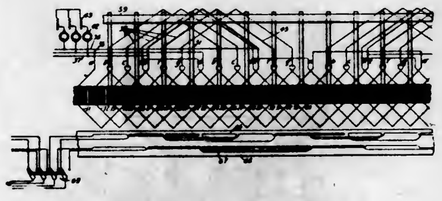
on the rear cross bar to be adjusted thereon and engageable with the register face whereby the foot rest is supported thereon.

1,387,455. PARACHUTE. FELIX J. COUGHLIN, Versailles, Ohio. Filed Apr. 30, 1919. Serial No. 293,858. 6 Claims. (Cl. 244—21.)



1. In a parachute, the combination with the sail having a vent and a load carrier, of readily frangible sail supporting cords, flexible connections between the middle part of the sail and the load carrier and an air tunnel collapsible in the direction of its length, and extended by the tautening of the flexible connections secured between the load ring and the top of the sail.

1,387,456. AUTOMOBILE-BUMPER. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed May 20, 1921. Serial No. 471,162. 10 Claims. (Cl. 293—55.)

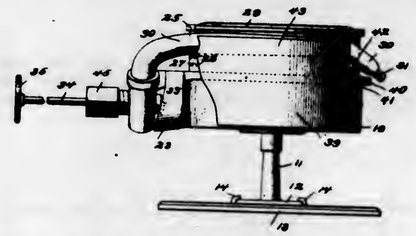


10. An automobile bumper, comprising a bar of flat spring metal curved rearwardly at two places and terminating in two arms adapted to support the bumper and bent at intervals on obtuse angular lines to provide vertically-inclined and parallel horizontal portions between its extremities.

1,387,457. AUTOMATIC FOCUSING DEVICE FOR CAMERAS. JEAN A. DE BOUZEK, Salt Lake City, Utah. Filed Apr. 26, 1918. Serial No. 230,984. 8 Claims. (Cl. 88—24.)

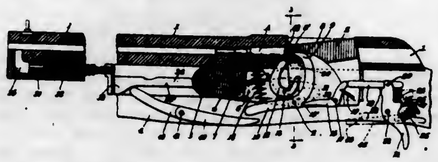
1. In an automatic focusing device for cameras, the combination with suitably supported rails, of a carriage mounted thereon and adapted to travel back and forth thereover; a camera, having a relatively fixed part and a relatively movable part mounted on the said carriage; and a suitably curved fixed track adapted to engage the said movable part, whereby the said camera will be kept constantly focused with reference to a fixed copy as the said camera is moved along the said rails toward or away from, the said copy.

1,387,458. WINDING STRUCTURE FOR MULTI-SPEED INDUCTION-MOTORS. HAROLD L. BARNHOLDT, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 2, 1917. Serial No. 165,843. 8 Claims. (Cl. 172—274.)



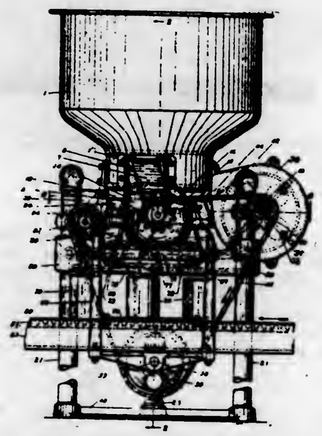
1. In an induction motor, a phase-winding embodying a plurality of current paths, each path including a plurality of pairs of pole-groups of mutually opposite polarity, the pole-pairs of one circuit being interspersed between the pole-pairs of another circuit, the pole-groups being so arranged that the north pole of one group is adjacent the south pole of the next adjacent group.

1,387,459. HYDROCARBON-GAS BURNER. JOHN R. BATES, Chicago, Ill. Filed Aug. 25, 1919. Serial No. 319,742. 3 Claims. (Cl. 158—71.)



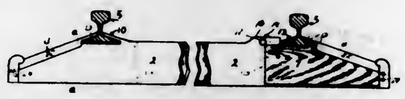
1. In an oil-gas burner, a base portion, a cylindrical burner plate mounted thereon, a curved generator disposed to be heated by the combustion at the burner plate

to generate gas, and a curved priming pan hinged to the base portion and adapted to be swung away from said



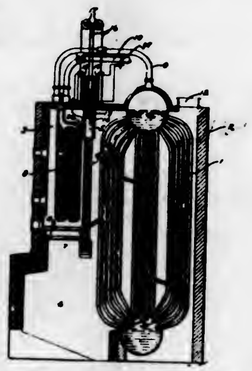
generator to be filled and ignited and to be moved under the generator when ignited to heat the same.

1,387,460. BLOCK-ACTION FOR REPEATING ARMS. NICOLAAS BEETS, New York, N. Y., assignor of one-half to William J. Wilkinson. Filed Dec. 11, 1918. Serial No. 266,201. 10 Claims. (Cl. 42—3.)



1. The combination of a barrel, of a block for closing one end thereof, means tending to support said block in position to form an obstruction to said end of the barrel without closing the same, and means controlling the movement of said block relatively to said barrel adapted to cause the block to be moved against the action of said first named means away from said end of the barrel sufficiently far to remove said obstruction and permit the free extraction of a shell.

1,387,461. CAN-CAPPING OR DISK-FEEDING MACHINE. CHARLES H. BIRCH, Chicago, Ill. Filed Mar. 14, 1916. Serial No. 84,039. 22 Claims. (Cl. 113—27.)

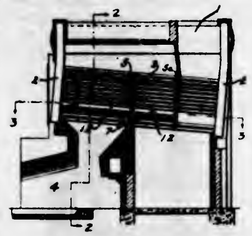


1. In a disk feeding machine of the kind described. a container adapted to receive a plurality of similar articles and having a discharge opening at its bottom and a receptacle arranged to receive said articles escaping through said opening, in combination with a valve for controlling said opening and means for controlling the operation of said valve by the amount of said articles in said receptacle, comprising a member operatively connected with the valve, means for positively actuating said member, and means in the receptacle for moving said member into operative relation with the said actuating means.

1,387,462. RAILWAY-METAL-TIE APPLIANCE. CHARLES BRADLEY, Denver, Colo. Filed Aug. 25, 1919. Serial No. 319,813. 4 Claims. (Cl. 238—70.)

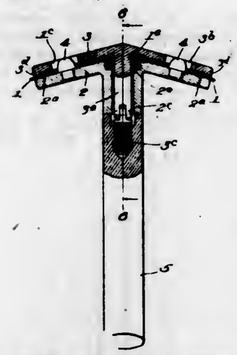
1. A rail support, comprising a tie, a tongue on the tie to engage one side of the base of a rail, a slidable plate having a tongue to engage the other side of the rail base, guides for said slidable plate, said plate extending to the end of the tie, and vertically-disposed means on the end of the tie engaging the end of the plate to retain the plate with its tongue engaging said base.

1,387,463. SUPERHEAT-REGULATOR. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed May 2, 1918. Serial No. 232,149. 7 Claims. (Cl. 122—480.)



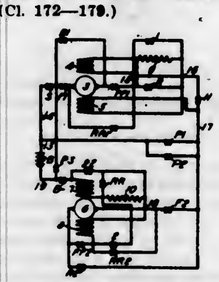
4. In apparatus of the class described the combination of a chamber, a superheater in said chamber, said chamber having an inlet and an outlet for heating gases, a damper controlling said outlet, operating means for said damper, means tending to cause said operating means to move the damper toward its closed position when the temperature of the gases leaving the chamber is above a predetermined point and to move it toward its open position when it is below a second predetermined point, and other means tending to cause said operating means to move the damper toward its closed position when the temperature of the steam leaving the superheater is above a predetermined point and to move it toward its open position when it is below a second predetermined point.

1,387,464. BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed July 27, 1918. Serial No. 247,028. 3 Claims. (Cl. 122—473.)



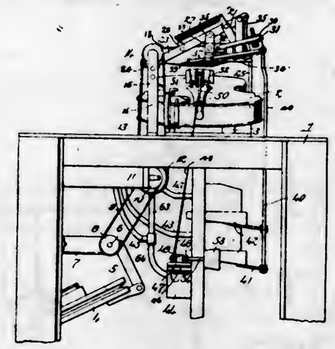
3. In a water tube boiler the combination of two spaced parallel rows of water tubes, a superheater with alined

elements extending at right angles to the water tubes into the space between the rows and in a row parallel to them, each element being of greater depth than width, a space being left between the row of superheater elements and one of the adjacent rows of water tubes, the space



being greater than the width, but less than the depth of an element, and a setting comprising a wall adjacent to the water tubes, said wall having an opening alined with the space and with its front and rear sides at an oblique angle to the wall.

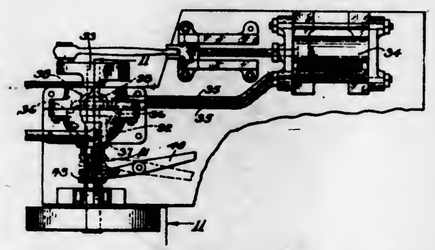
1,387,465. SAFETY-RAZOR. GEORGE BROWNING, Chicago, Ill., assignor to Lee Razor Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Continuation of application Serial No. 317,861, filed Aug. 15, 1919. This application filed Dec. 29, 1919. Serial No. 347,900. 7 Claims. (Cl. 30—12.)



1. A safety razor comprising in combination with a holder, two blades each having two apertures, the holder having means for engaging said apertures positioned for positioning the blades with their cutting edges at an angle to each other.

1,387,466. SYSTEM OF CONTROL. ANDREW H. CANDEE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1918. Serial No. 260,281. 3 Claims. (Cl. 172—179.)

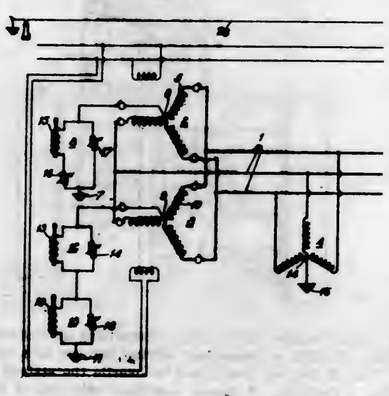
2. In a system of control, the combination with a dynamo-electric machine having an armature and a two-section field winding, of a resistor permanently connected intermediate said sections, and three switches respectively connected across the resistor alone and across the resistor together with the one or the other field-winding section.



1,387,467. AUTOMATIC VIOLIN-PLAYER. ERICK VALDEMAR CARLSON, Chicago, Ill. Filed Mar. 6, 1917. Serial No. 152,681. 11 Claims. (Cl. 84—10.)

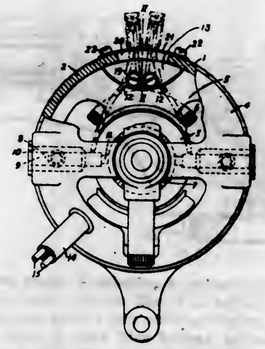
1. An automatic violin player comprising an instrument holding element, a constantly moving endless belt, one of the runs of the belt positioned to overlie the strings of a violin, a plurality of fingers overlying said run, a finger being associated with each string, and means for individually actuating the fingers to move the belt into contact with the strings.

7. An automatic violin player comprising an instrument holding element,. a lever having one end extended for engagement with all of the strings of a violin, a pneumatic including a bellows and a box, means connecting said bellows with said lever, means for admitting air to the box of the pneumatic, and additional means for introducing rapid intermittent charges of air into the box to cause a vibration of said bellows and lever.



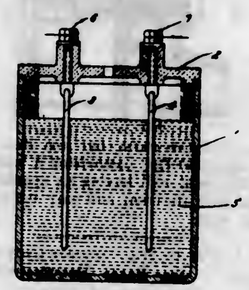
1,387,468. STEAM-ENGINE VALVE AND REVERSING MEANS THEREFOR. JAMES CHAMBLESS, Jasper, Ala., assignor of one-half to Albert Russell, Jasper, Ala. Filed Mar. 15, 1919. Serial No. 282,958. 1 Claim. (Cl. 121—179.)

In a steam engine, a cylinder, a steam chest therefor, an axle journaled in a wall of said steam chest and having an end projecting thereinto, a valve mounted upon said end and bearing against said wall, a steam supply port opening through said wall at each side of said axle and leading to the opposite ends of said cylinder, and a separate exhaust port arranged adjacent to each of the supply ports in said wall and having a common outlet, said valve comprising a chamber adapted during rotation of said valve to establish communication successively between each



pair of supply and exhaust ports while cutting off said ports from communication with said steam chest, and a portion adapted to simultaneously close the other exhaust port.

1,387,469. MEANS FOR SUPPRESSING HARMONICS. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 13, 1917. Serial No. 148,425. 4 Claims. (Cl. 172—237.)



4. The combination with a polyphase network, of a plurality of polyphase translating devices adapted to be connected to said network, each of said devices having a neutral point, and impedance elements connecting said neutral points together, characterised by the fact that said impedance elements are selectively conductive for currents of a particular frequency while impeding currents of all other frequencies.

1,387,470. ARRANGEMENT OF CONNECTIONS FOR DYNAMO-ELECTRIC MACHINES. JOEL R. COOK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 15, 1916. Serial No. 137,223. 3 Claims. (Cl. 172—36.)

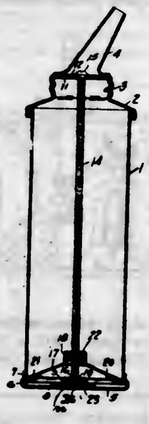
1. In a dynamo-electric machine, the combination with a magnetizable core member provided with a recess therein and an inclosing casing provided with an opening adjacent said recess, of electric conductors normally located within said recess and having portions thereof removable through said opening for altering the circuit connections of said machine.

1,387,471. ELECTROLYTE. JOHN COULSON, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1917. Serial No. 149,530. 2 Claims. (Cl. 175—318.)

Electrolyte containing a normal ammonium tartrate

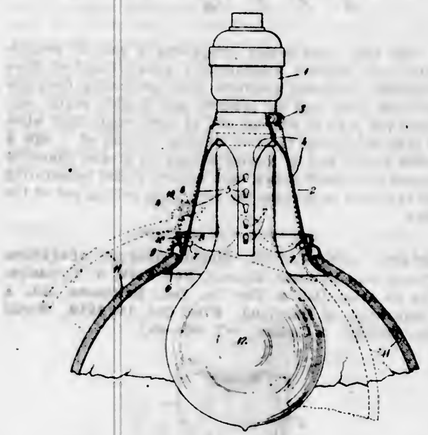
1. An electrolyte for electrolytic condensers, lightning arresters, rectifiers and the like comprising an aqueous solution containing approximately 1% of normal ammonium tartrate.

1,387,472. MOP-CLOTH. WILLIAM H. COX, Collegeville, Pa. Filed Sept. 10, 1920. Serial No. 409,439. 1 Claim. (Cl. 15—54.)



A mop in the form of an endless loop comprising a strip of fabric wound in superposed layers with the layers stitched together.

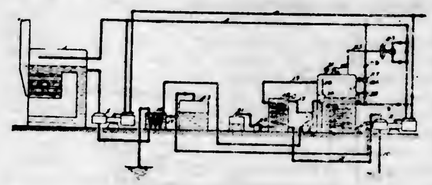
1,387,473. RECEPTACLE FOR CONTAINING AND DISCHARGING SEMISOLID AND PASTY SUBSTANCES. JAMES F. CRAVEN, Pittsburgh, Pa. Filed Aug. 28, 1916. Serial No. 117,360. 5 Claims. (Cl. 221—79.)



1. A container of the class described comprising a receptacle provided at one end with an apertured cap, a follower for exerting pressure on the substance in said receptacle, an axially disposed rod adapted to pass freely through the cap and threaded through the follower and

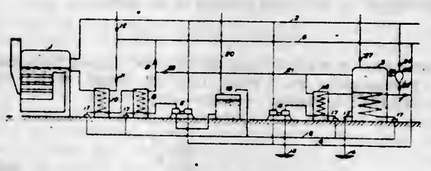
provided with a head seating on the outside of the cap for retaining said rod in fixed longitudinal but rotatable

position, and a rotatable base for the receptacle having a detachable threaded engagement with said rod.



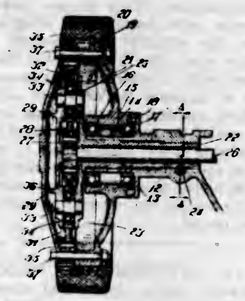
1,387,474. SHADE-HOLDER. EDWARD J. DAILEY, Jr., New York, N. Y., assignor to Holophane Glass Co. Inc., a Corporation of New Jersey. Filed Dec. 18, 1919. Serial No. 345,723. 6 Claims. (Cl. 240—115.)

1. A shade holder comprising: a socket retaining member having a plurality of dependent arms, a shade retaining member fitting over the arms and provided with means of retention by the dependent arms to permit of angular adjustment of the shade.



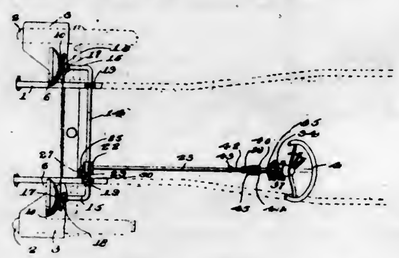
1,387,475. EVAPORATOR CONTROL. WILLIAM L. DE BAUFRE, Annapolis, Md. Filed Sept. 6, 1916. Serial No. 118,726. 10 Claims. (Cl. 203—5.)

2. In an evaporator control, an evaporator containing evaporating and condensing compartments, means of supplying the said evaporating compartment with solution to be evaporated, a safety valve on the said evaporating compartment, means for supplying a heating vapor of a definite maximum pressure to said condensing compartment and means for limiting the rate of supply of vapor to



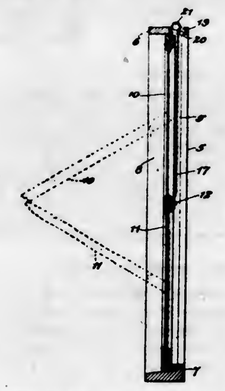
said condensing compartment to less than the capacity of said safety valve by an orifice of fixed and predetermined capacity through which the said vapor flows.

1,387,476. SYSTEM FOR EVAPORATING WATER. WILLIAM L. DE BAUFRE, Annapolis, Md. Filed Jan. 23, 1917. Serial No. 143,970. 1 Claim. (Cl. 203—5.)



In a system for evaporating water, a boiler, two feed heaters in series, an evaporator, apparatus operated by steam from said boiler, an ejector for withdrawing vapor from said evaporator, means for heating the solution contained in said evaporator by the commingled steam and compressed vapor from the said ejector, means for heating the boiler feed water in the first of the said feed heaters by vapor from the said evaporator, and means for further heating the boiler feed water in the second of the said feed heaters by exhaust steam from the said apparatus.

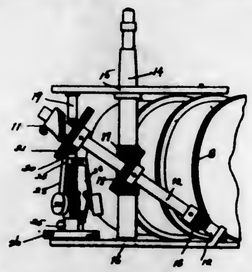
1,387,477. DRIVING MECHANISM FOR MOTOR-VEHICLES. LEONEL A. DE MORE, Oak Park, Ill., assignor to Mercury Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1920. Serial No. 386,724. 6 Claims. (Cl. 74—7.)



1. The combination of a frame comprising a sleeve, a supporting wheel revolubly mounted on said sleeve, a second sleeve extending into the outer end of said first-named sleeve and readily removable outwardly therefrom, means for holding said second sleeve at all times against rotation, and means carried by said second sleeve and removable therewith for transmitting power to said supporting wheel.

1,387,478. DIRIGIBLE HEADLIGHT. HEARD D. DENSON, Miami, Fla., assignor to Milburn C. Weaver, Miami, Fla. Filed Aug. 27, 1919. Serial No. 320,115. 7 Claims. (Cl. 240—61.)

1. The combination in a dirigible light with a fixed bearing head, of a movable lamp fashioned with rigid outer and inner shells forming a casing and reflector, to co-act with said head, and means for imparting universal movement to said lamp relative to the head.

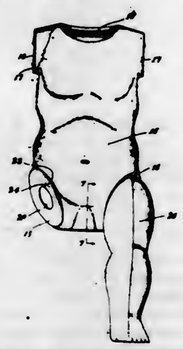


1,387,479. WINDOW CONSTRUCTION. FRANK DUTCHER, Philadelphia, Pa. Filed July 22, 1920. Serial No. 398,193. 5 Claims. (Cl. 20—42.)

1. The combination with a window frame, of a pair of sashes hingedly connected to each other at one of their ends, means for slidably and pivotally mounting the sashes at their other ends in the window frame for relative vertical movement, counterbalancing means common to both sashes to maintain the sashes in adjusted position, and a yieldable connection between said counterbalancing means and one of the sashes to permit of an independent movement of said means with respect to said sash in the movement of the sashes to open or closed position, said connection including an adjustable part movable relatively to the sash to control the effective operation of said counterbalancing means.

1,387,480. SPRING-MOTOR. WILLIAM R. EVERETT, Benton Harbor, Mich., assignor, by mesne assignments, to F. G. Hogland, Rockford, Ill. Filed June 27, 1918. Serial No. 242,160. 5 Claims. (Cl. 185—37.)

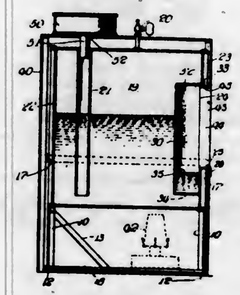
1. The combination with a frame of a winding shaft, a plurality of coil springs mounted thereon, a spur gear mounted on said shaft and suitably connected to said springs, a vertical turntable shaft, an intermediate shaft suitably journaled in said frame, and inclined from the axis of the turntable shaft and also diverging from the axis of the spring shaft, a spiral gear on said intermediate shaft driven by said spur gear, a vertical turntable shaft, a spiral pinion on the turntable shaft, a spiral gear on the intermediate shaft which meshes therewith, a vertical governor shaft, a spiral pinion thereon, a spiral gear on



said intermediate shaft which meshes therewith, a ball governor on said governor shaft, a disk splined thereon, and a brake adapted to engage said disk at a predetermined point.

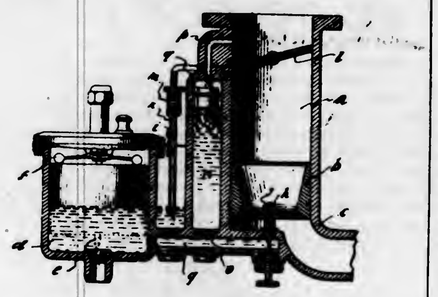
1,387,481. ROPE-SOCKET. CHARLES N. FINTON, Lykens, Pa. Filed Sept. 17, 1920. Serial No. 410,902. 1 Claim. (Cl. 24—123.)

A one piece rope socket comprising a pair of complemental and opposed substantially semi-cylindrical jaws of uniform thickness, coniform teeth projecting inwardly from said jaws, and an integral and flexible shank connecting the jaws at one end and of such length that when the jaws are forced together to grip the end of a rope a tapered socket will be formed having its greater diameter adjacent the curved shank, such tapered socket coöperating with the teeth to prevent the rope from pulling out of the socket.



1,387,482. AUTOMATON. MORRIS GERBERG, ALEXANDER HIRSH, and MITCHEL MORGAN, New York, N. Y., assignors to Atlas Doll & Toy Co., Inc., Baltimore, Md., a Corporation of Maryland. Filed Oct. 14, 1919. Serial No. 330,582. 3 Claims. (Cl. 46—40.)

1. In a doll of the class described, the combination with a hollow metallic body and pairs of upper and lower

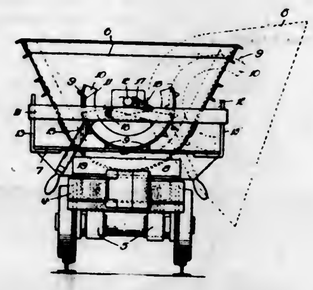


limbs, of pairs of seats formed on opposite sides of said body, said seats containing central openings, coöperative seats formed with each of said limbs, spring plate washers secured to the seats of said limbs, said washers being slit tangentially; and means formed in the seats of said body receptive of said washers whereby said limbs are pivotally engaged and prevented from separating.

1,387,483. STOCK-WATERER. RAYMOND B. GLIDDEN, Kewanee, Ill., assignor to Kewanee Implement Company, Kewanee, Ill., a Corporation of Illinois. Filed Apr. 19, 1919. Serial No. 291,304. 5 Claims. (Cl. 119—73.)

1. In a stock watering-appliance of the character described, the combination of a cylindrical water-supply tank, means to support said tank with its axis substantially horizontal, a head of said tank having an opening, and a trough inside of said tank and in communication with the water-supply thereof to which trough the animal has access through said opening, said trough having a substantially semi-circular apertured side-wall, the edge portions of which extend through said head opening and are bent over to form flanges outside of and secured to the head, a bottom wall above the bottom of the tank, and a top wall having an edge portion extended through said head opening and bent over to form a flange outside of and secured to said head, substantially as described.

1,387,484. CARBURETER. GEORGE N. GOODRICH, Detroit, Mich. Filed Nov. 28, 1919. Serial No. 341,027. 5 Claims. (Cl. 261—41.)

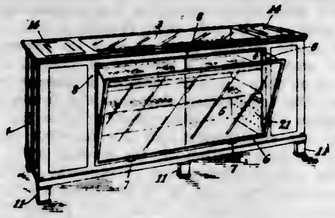


1. In carbureting apparatus, the combination with an intake line, of a throttle valve therein, a fuel nozzle, an accelerating well closed to the atmosphere and having a control for permitting the engine suction at closed throttle to hold the fuel level therein at substantially a given point above the float chamber level, and a passage-way leading from the accelerating well to the intake line for discharging the oil from the accelerating well thereinto when the throttle is suddenly opened.

2. In a carbureting apparatus, the combination of an intake passage, a throttle valve therein, a fuel nozzle on the side of the throttle valve opposite the engine, an accelerator well having the capacity of holding a higher column of oil than the float chamber, a passage-way leading from the accelerating well into the intake between the throttle and the engine whereby when the throttle is closed the accelerating well fills up with oil, means for automatically cutting off the suction when the accelerating well is filled, and a passage-way leading from the accelerating well into the intake line for allowing the discharge of the excessive oil into the intake when the throttle is suddenly opened and the suction influence on the oil in the accelerating well is weakened.

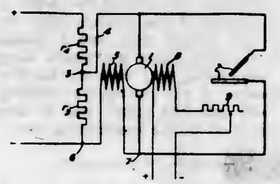
5. In a carbureting apparatus, the combination of an intake passage, a fuel nozzle leading thereinto, a throttle valve between the fuel nozzle and the engine, a float chamber supplying the fuel nozzle, an accelerating well having the capacity of holding a higher level of fuel oil than the float chamber, a passage-way leading from the accelerating well into the intake between the throttle and the engine whereby when the throttle is closed the suction of the engine will fill up the accelerating well to a higher level than the normal fuel level, a valve for automatically cutting off the suction when the well has been filled to the desired level, and a passage-way for furnishing to the fuel nozzle the excess supply of fuel oil from the accelerating well when the throttle is opened and the depression at the passage-way leading from the accelerating well into the intake line is insufficient to hold the higher level in the accelerating well.

1,387,485. SIDE-DUMP CAR. ALEXANDER M. GOW, Duluth, Minn. Filed Apr. 6, 1921. Serial No. 458,929. 15 Claims. (Cl. 105—264.)



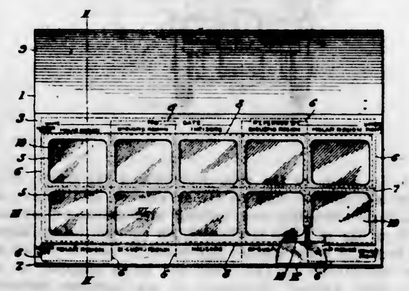
1. In a car of the type described, a car frame, a car body adapted to rock to either side of said frame, and duplicate dumping and locking mechanism on opposite ends of the car, the mechanism on one end being adapted to lock the body against movement in one direction and the mechanism on the other end being adapted to lock the body against movement in the opposite direction, each mechanism being adapted to be actuated by a single lever to both unlock and dump the car.

1,387,486. REFRIGERATOR DISPLAY-CASE. LEONARD G. GRAY, Decatur, Ill., assignor to Walrus Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed May 1, 1918. Serial No. 231,807. 3 Claims. (Cl. 211—25.)



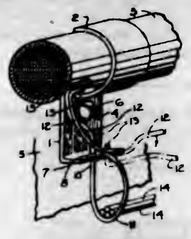
1. In a device of the character described, the combination with a refrigerator display case, having a glass front and top, and a plurality of ice containers therein,

of a plurality of food containers located beneath said ice containers, with a perforated shield located adjacent



the said food containers and which shields the contents therein from observation through said glass front.

1,387,487. ELECTRIC-ARC-WELDING SYSTEM. KLAUS L. HANSEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 3, 1919. Serial No. 321,437. 9 Claims. (Cl. 219—15.)

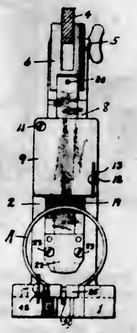


1. In an exciting system for generators, the combination with two exciting field windings, of means for exciting one of the windings in the same direction at all times, and means for exciting the remaining winding in one direction at certain times, and in the opposite direction at other times.

1,387,488. FILE-RECORD AND MOUNT FOR X-RAY NEGATIVES. OLIVER A. HELMER, New York, N. Y. Filed Dec. 14, 1920. Serial No. 430,592. 3 Claims. (Cl. 40—159.)

1. A mount for X-ray negative films, comprising an outer body member and an inner body member of opaque material and formed with registering openings, a sheet of flexible material between said body members and bridging the said openings said flexible material permitting the passage of light rays therethrough, and lines of stitches connecting the body members and the flexible sheet together and forming a pocket around the openings, the inner body member being slit to form an opening into said pocket and to permit the X-ray negative film to be placed in the pocket and against the inner side of the flexible sheet.

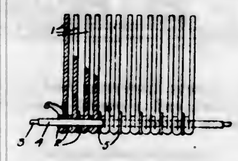
1,387,489. CONDUIT OR CABLE CLAMP AND BRIDLE-RING. WILLIAM J. HESS, New York, N. Y. Filed Oct. 25, 1920. Serial No. 419,478. 4 Claims. (Cl. 248—36.)



1. The combination of a conduit or cable clamp having a hook portion to support a conduit or cable and a base to lie against a wall or other suitable support, the base being provided with means to coöperate with a bridle ring, and a bridle ring coöperating with said means, said bridle ring having one or more hooks adapted to hook into the dead space on the hook portion of the clamp.

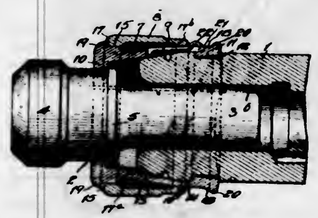
1,387,490. HORN-MUTE. GUY B. HUMES, Chicago, Ill. Filed Aug. 16, 1920. Serial No. 403,636. 6 Claims. (Cl. 84—400.)

1. An article of the class described, comprising a hollow conical shaped member; a closure member mounted in one end of said conical shaped member orifices in said closure member; and means mounted thereon whereby the volume of the tone of the horn is varied, substantially as described.



1,387,491. RIM-CLAMP-ATTACHING DEVICE. HARPER M. HUPMAN, Detroit, Mich., assignor to Michigan Optical Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 21, 1921. Serial No. 454,250. 6 Claims. (Cl. 81—15.)

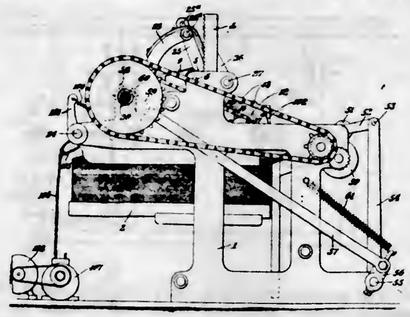
1. In combination, a base, a die mounted thereon having a groove to receive a rim for an eye glass lens, a



vertically movable head, a pair of beveled plates at the lower end of the head adapted to engage the clamps of an attachment for the rim, and bend the clamps toward each other, and a plate mounted on the head and slidable between the plates of said pair to bend the inner edges of the clamps to constitute a groove.

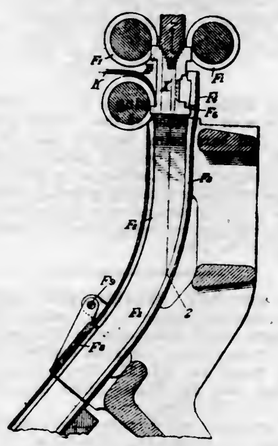
1,387,492. RESISTER. HARVEY H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1919. Serial No. 270,144. 8 Claims. (Cl. 219—69.)

1. An electrical resister comprising a grid having a main body portion and having an end portion thereof bent back upon itself to constitute a spacing member.



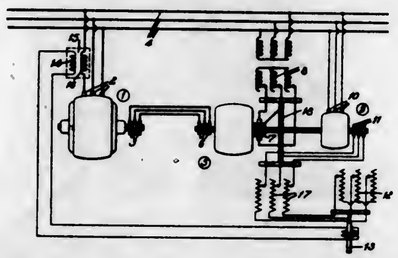
1,387,493. PERCUSSION-TOOL. WILLIAM H. KELLER and ALBERT SCHINKEZ, Grand Haven, Mich., assignors to Keller Pneumatic Tool Company, Grand Haven, Mich., a Corporation of Michigan. Filed June 17, 1918. Serial No. 240,429. 2 Claims. (Cl. 121—32.)

1. In a percussion tool, the combination with a barrel having a forward tapered end and an annular peripheral groove rearwardly of said tapered end, a tool mounted in said barrel and having an annular flange, a plurality of members fulcrumed on the barrel at the forward edge of said groove and each having at one end a portion projecting into the path of said tool flange and at its other end a dog engaging in said annular groove, a ring for retaining said members upon the forward end of the barrel having annular bosses at its opposite ends arranged to engage respectively with the opposite ends of said members, said ring being of a length less than the length of the members so as to be movable longitudinally relative thereto and said members having recesses in their outer faces between their opposite ends adapted to receive the boss on the forward end of the ring when the ring is moved rearwardly thereof whereby to permit the forward ends of the members to be moved radially outward by the boss at the rear end of the ring engaging with the rear ends of said members.



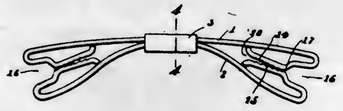
1,387,494. SHEET-FEEDING MACHINE. ROBERT E. KEMPER, Rensselaer, N. Y. Filed Nov. 18, 1920. Serial No. 424,851. 15 Claims. (Cl. 271—38.)

4. In a machine for feeding sheets and like articles, the combination with a support for the sheets, sheet delivery means, and a comber for moving the topmost sheet into position to be engaged by the sheet delivery means, of means for moving the comber into and out of operative relation with the topmost sheet, a controlling mechanism for the comber having a sheet engaging part, for engaging the sheet to be fed adjacent to its rear edge, operative connections between the said part and the comber for insuring the movement of the comber to inoperative po-



sition, when and as the said sheet engaging part passes off of the rear edge of the topmost sheet, and means operated in timed relation with the sheet delivery means, and normally brought into operation, after said sheet engaging part has passed off of the rear edge of the topmost sheet, for depressing said part firmly upon the lower sheets.

1,387,495. TYPOGRAPHICAL DISTRIBUTING-MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed Nov. 30, 1917, Serial No. 204,534. Divided and this application filed Mar. 29, 1919. Serial No. 286,220. 5 Claims. (Cl. 199—33.)

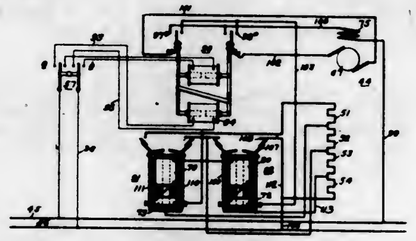


1. In a typographical machine comprising matrices formed with projecting ears at their upper and lower ends, the combination with a channeled magazine to contain the matrices, a distributer, and an intermediate magazine entrance separate and distinct from the magazine and formed with sets of opposing grooves to guide the matrices by their projecting ears from the distributer to the magazine, of supplemental guiding means forming part of said magazine entrance and arranged at the receiving end thereof to insure the engagement of the upper ears of the matrices in the entrance grooves.

1,387,496. SPEED CONTROL FOR INDUCTION-MOTORS. BENJAMIN G. LAMME, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 21, 1916. Serial No. 126,904. 4 Claims. (Cl. 172—274.)

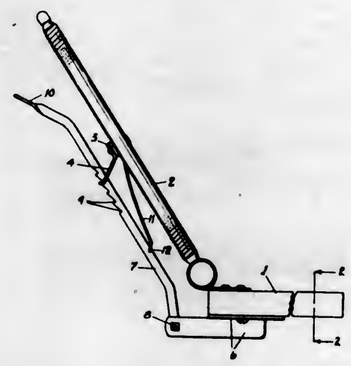
1. The combination with a main induction motor, of a frequency-changer operatively connected thereto for cooperating in the speed regulation thereof, an auxiliary driving motor of the induction type mechanically coupled to said frequency changer, and means for so regulating the speed of said auxiliary motor in accordance with the load of said main motor as to reproduce the speed changes in said main motor that would be provided by resistance slip under like load conditions.

1,387,497. COLLAR-HOLDER. FRANK J. LE CLAIR, Attleboro, Mass., assignor to Freeman-Daughaday Company, Chartley, Mass., a Corporation of Massachusetts. Filed May 17, 1921. Serial No. 470,358. 5 Claims. (Cl. 24—81.)



1. A collar holder comprising a pair of oppositely disposed bars secured together at their central portions, one at least of said bars being resilient, each of said bars having each of its end portions folded inwardly upon itself and constructed and arranged to provide an elongated and substantially straight gripping surface for cooperation with the corresponding surface of the other bar, said coöperating surfaces being normally disposed to diverge one from the other.

1,387,498. CONTROL SYSTEM AND APPARATUS. HARRY A. LEWIS, Norristown, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed May 22, 1911, Serial No. 628,733. Divided and this application filed May 23, 1919. Serial No. 299,251. 24 Claims. (Cl. 172—288.)

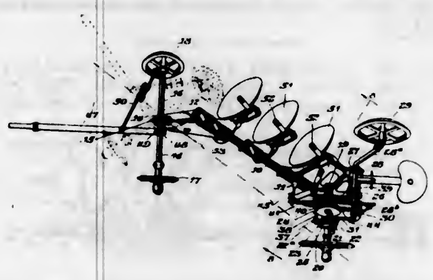


19. In a system of motor control, the combination with a motor and an accelerating resistance, of a magnet switch for governing the resistance having a stationary magnetizable member, stationary switch contact members, movable magnetizable members, contact members secured thereto and a current coil tending to actuate the movable members and close the switches, and a current coil operating in the same direction electrically but opposing the action of the movable members when the motor current exceeds a predetermined amount.

20. In a system of motor control, the combination with a motor having an armature and an accelerating resistor in circuit therewith, and a source of current for said motor, of a magnet switch for governing said resistor having a coil in series with said armature, means whereby the leakage flux of said series coil maintains said switch

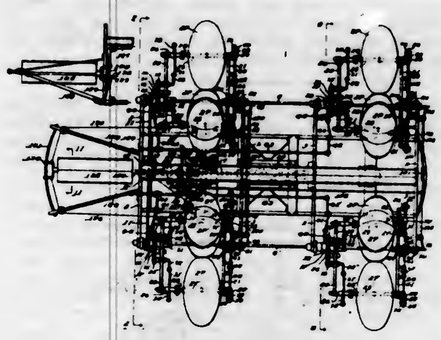
open when the current traversing said motor exceeds a predetermined value, and a second series coil for maintaining said switch closed.

1,387,499. CARRIAGE ADJUSTABLE BACK. CHARLES A. LINDBERG, Sturgis, Mich., assignor to Sturgis Steel Go-Cart Co., Sturgis, Mich. Filed Apr. 16, 1921. Serial No. 461,817. 1 Claim. (Cl. 155—162.)



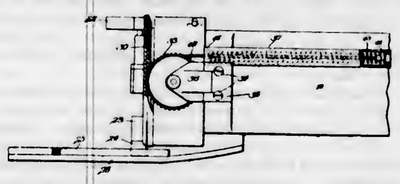
In a structure of the class described, the combination of a seat, a back pivotally mounted on said seat, a rearwardly projecting slotted arm on said back, a bracket mounted on the under side of said seat projecting rearwardly therefrom, a back supporting arm pivotally mounted on said bracket and projecting upwardly at the rear of the said back and through said slotted arm thereon, said supporting arm being provided with a rearwardly directed grip portion at its upper end, and with a series of upwardly facing tooth-like notches on its rear edge engaging said arm on said back, and a blade spring mounted on said back and notched at its lower end to engage said supporting arm whereby said notches thereof are held in engagement with said arm on said back.

1,387,500. POWER-LIFT DISK PLOW. ALEXUS C. LINDGREN, Hamilton, Ontario, Canada, assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Filed Oct. 28, 1918. Serial No. 259,959. 18 Claims. (Cl. 97—54.)



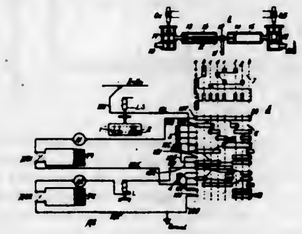
1. In a power-lift plow, a front axle, a beam having a laterally offset portion which is swiveled to the axle, a plow carried on the opposite side of the beam, wheeled axles extending oppositely from the rear of the beam, the one on the plow side being vertically adjustable, and

means for moving the plow to and from working position by adjusting said axle to rock the beam around a longi-



tudinal axis passing through said swivel and the other wheel.

1,387,501. FLYING-MACHINE. GEORGE H. LOCUSON, Philadelphia, Pa. Filed Aug. 30, 1917. Serial No. 188,894. 14 Claims. (Cl. 244—20.)

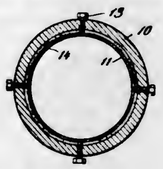


1. In a flying machine, the combination with a main framework, a plurality of sets of rotatable wing supporting units carried by said frame, concave wings located on said supporting units and manually controlled automatically operating means to feather said wings during the non-working portion of their path of revolution without reversing the position of the individual wings with respect to their respective axes of rotation, the concave sides of the wings facing downwardly during the working portion of their path of revolution.

1,387,502. SEMI-AUTOMATIC BREECH MECHANISM FOR GUNS. JOHN LUND, Bethlehem, Pa., assignor to Bethlehem Steel Company, South Bethlehem, Pa., a Corporation of Pennsylvania. Filed May 3, 1916. Serial No. 95,124. 17 Claims. (Cl. 89—4.)

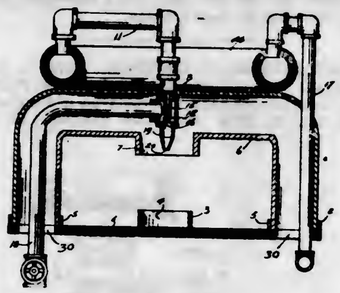
1. A semi-automatic breech mechanism for guns comprising a breech block mounted for rotation about an axis parallel to and offset from the axis of the gun barrel and moving with the barrel at all times, means for rotating said block to open the same operated by and during the recoil of the gun, a spring connected to said breech block and tending to close the same, and a releasable lock for holding the block in open position.

1,387,503. SYSTEM OF CONTROL. PAUL L. MARDIS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,539. 19 Claims. (Cl. 172—179.)



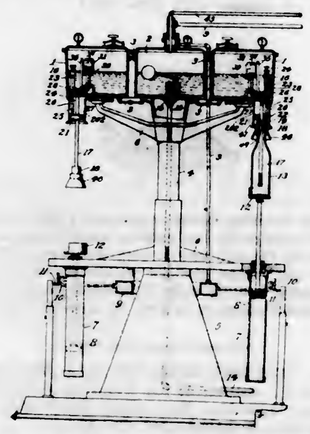
1. In a system of control, the combination with a dynamo-electric machine and a plurality of operating circuits therefor, of single means having one part connected for effecting a manual step-by-step operation of the machine and another part connected for automatically effecting a similar normal operation.

1,387,504. RAIL-JOINT FASTENER. JOHN MÉSZÁROS, Glenalum, W. Va. Filed June 11, 1921. Serial No. 476,684. 4 Claims. (Cl. 238—260.)



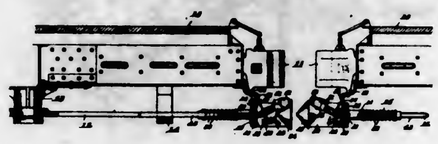
1. A rail fastening device comprising a pair of members adapted to engage the rail ends on opposite sides thereof, bolts passing through one of said members and through the rails, and means confined within the other member for releasably holding said bolts, said means including spring pressed elements located on opposite sides of the bolts.

1,387,505. FURNACE-TUBE. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Feb. 6, 1920. Serial No. 356,734. 8 Claims. (Cl. 23—13.)



1. A furnace tube adapted for use in the fixation of nitrogen by heating mixtures of alkali metal compounds and carbon in the presence of nitrogen, which comprises, an outer shell of oxidation resistant material and a relatively thin inner nonporous shell of material which is not affected by said alkali metal compound.

1,387,506. GAS-GENERATING OIL-BURNER. EDWIN L. MILLER, Kansas City, Mo. Filed Oct. 11, 1919. Serial No. 330,092. 1 Claim. (Cl. 158—53.)

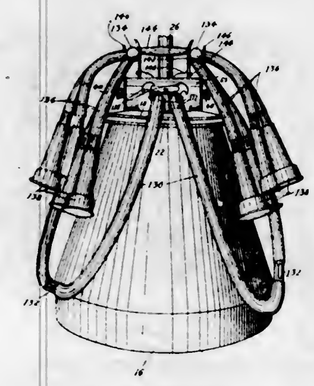


In a gas generating oil burner, the combination of a base plate, an inverted U-shaped air duct mounted vertically on said plate, the arch in said pipe being provided centrally on its lower side with a tubular discharge opening, a mixing chamber arranged in the arch of said duct, a steam generator connected with said mixing chamber and adapted for venting therein a diminutive jet of steam, a pipe arranged in said air duct and adapted for the delivery of oil and gas therefrom to said mixing chamber, and a nozzle connected with said mixing chamber and adapted for venting the contents of the chamber into the discharge opening of said air duct.

1,387,507. BOTTLE-FILLING APPARATUS. FRED W. MÜLLER, Hoboken, N. J. Filed Mar. 3, 1921. Serial No. 449,445. 9 Claims. (Cl. 226—111.)

1. In a bottle filling apparatus comprising a tank adapted to contain bodies of gas and liquid under pressure, a passageway extending from a point in the tank above the normal liquid level therein to the exterior thereof, a passageway extending from a point in the tank below the normal liquid level therein to the exterior thereof, with the outer ends of which passagewnys the mouth of a bottle may be put in communication, and apparatus for raising a bottle to establish such communication or lowering it to destroy such communication, the combination with said elements above recited, of a valve mechanism adapted to control the flow of fluid through the first above mentioned passageway, a valve mechanism adapted to control the flow of fluid through the second above mentioned passageway, and means automatically operated by a rising bottle during the period of establishing such communication to permit the opening of both said valves only when the fluid pressure in the passageways to the bottle equals that in the tank and to permit the automatic closing of both said valves whenever the fluid pressure in said passageways is less than that in said tank.

1,387,508. FLUID-PIPE COUPLING FOR RAILWAY-CARS. AUGUST E. NESCHER, Chicago, Ill. Filed Oct. 23, 1917. Serial No. 198,030. 1 Claim. (Cl. 285—58.)



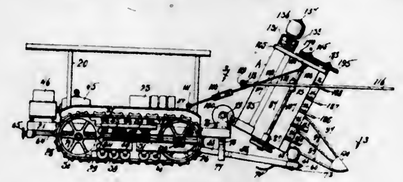
A coupling of the class described for railway cars comprising a pair of coöperating oscillatory coupling members adapted, when the cars are brought together, to engage with each other, said members being mounted for slidable movement rearwardly and forwardly of said car; means mounted on said car for moving said member forwardly thereof; a stop mounted on said member; means mounted on the car to which said member is attached for engaging said stop upon rearward movement thereof for rocking said member downwardly; means mounted on said car for engaging said stop upon the forward movement thereof for rocking said member upwardly, substantially as described.

1,387,509. LIQUID RHEOSTAT. STANLEY G. NOTTAGE, Murraysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,588. 8 Claims. (Cl. 219—57.)

1. A polyphase liquid rheostat comprising a plurality of sets of plates, said sets corresponding to different motors, the various phase-plates of said sets being progressively disposed in alternation.

1,387,510. MILKING APPARATUS. EDWARD J. O'LEARY, Minneapolis, Minn., assignor of one-half to Frank A. Thurston and one-half to Henry Junge, St. Paul, Minn. Filed May 31, 1919. Serial No. 300,917. 4 Claims. (Cl. 31—99.)

1. A milking appaartus comprising a milk receptacle, teat cups, adapted to be connected with said receptacle, a cylinder attached to the cover of said receptacle, a piston having its two ends fitting said cylinder and having a reduced portion between said ends, means for constantly maintaining a vacuum in said receptacle, a passageway connnecting said receptacle and the reduced portion of said piston at all positions of the latter, means for alternately establishing communication between the ends of the cylinder and said reduced portion of the piston whereby said piston is reciprocated, and means operated by said piston for alternately creating and relieving a vacuum within said teat cups.

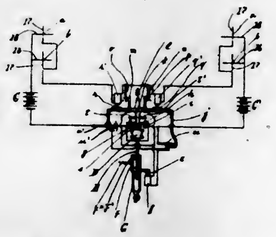


2. A milking apparatus comprising a milk receptacle, teat cups adapted to be connected with said receptacle, a cylinder attached to the cover of said receptacle, a piston having its two ends fitting said cylinder and having a reduced portion between said ends, a tube closed except for three ports and being slidably mounted in said piston, one of said ports being always in communication with said reduced portion of the piston and the other two ports being in communication with one or the other of the ends of said cylinder according to the position of said tube in said piston, means for constantly maintaining a vacuum in said receptacle, a passageway connecting said receptacle and the reduced portion of said piston at all positions of the latter, means for shifting said tube from one position in the piston to the other position when the piston reaches the end of its stroke whereby said piston is reversed, and means operated by said piston for alternately creating and relieving a vacuum within said teat cups.

3. A milking apparatus comprising a milk receptacle, teat cups adapted to be connected with said receptacle, a cylinder attached to the cover of said receptacle, a piston having its two ends fitting said cylinder and having a reduced portion between said ends, a tube closed except for three ports and being slidably mounted in said piston, one of said ports being always in communication with said reduced portion of the piston and the other two ports being in communication with one or the other of the ends of said cylinder according to the position of said tube in said piston, means for constantly maintaining a vacuum in said receptacle, a passageway connecting said receptacle and the reduced portion of said piston at all positions of the latter, a rod slidably mounted in said piston, arms secured to the ends of said rod, said arms being adapted to engage said tube to shift it from one position in the piston to the other position when the piston reaches the end of its stroke whereby said piston is reversed, and means operated by said piston for alternately creating and relieving a vacuum within said teat cups.

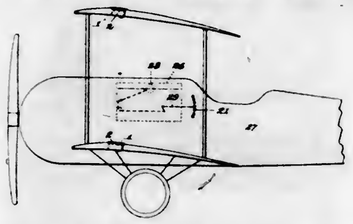
4. A milking apparatus comprising a milk receptacle, teat cups adapted to be connected with said receptacle, a cylinder attached to the cover of said receptacle, a piston in said cylinder, means for reciprocating said piston, a valve casing attached to said cover, a valve member in said casing, an arm connected to said valve member and adapted to be oscillated by said piston to rock said valve member, means whereby a vacuum will be produced in said teat cups when said valve member is in one position, and means whereby the vacuum will be relieved when said valve member is in another position.

1,387,511. CANE-CUTTING MACHINE. GEORGE G. POWELL, New York, N. Y., assignor to Antoinette M. Powell, New York, N. Y. Filed Dec. 15, 1919. Serial No. 344,808. 17 Claims. (Cl. 56—17.)



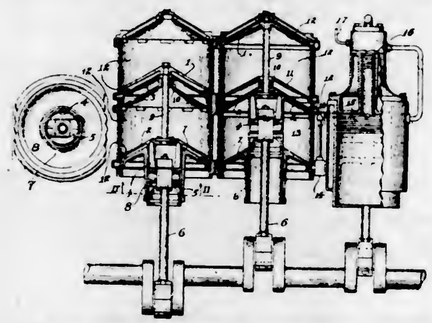
6. In a machine of the character described the combination of a platform, means to move the platform, a cutter housing hinged to the platform, rotating cutters in the housing, rotating feeder arms coacting with the cutters, a ground cutter support adjustably connected to the platform, a pair of sleeves hinged to the support, an arm extending from each sleeve, an electric motor with its armature shaft journaled in each arm and a ground cutter turned by each motor.

1,387,512. SAFETY-PIN. VOJTECH PUC, Prague-Vinohrady, Bohemia. Filed Aug. 6, 1919. Serial No. 315,619. 1 Claim. (Cl. 24—161.)



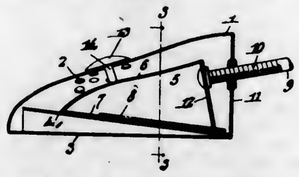
A safety pin having a pointed portion, a fixed portion, an uninterrupted looped outer end, and a guard to which one end of the fixed portion is attached and which is engaged by the pointed portion of the pin, said fixed portion being formed with a coil which lies wholly to one side of the loop.

1,387,513. CONTROL FOR AEROPLANES. WILLIAM S. RABE, St. Paul, Minn. Filed July 29, 1920. Serial No. 399,760. 3 Claims. (Cl. 244—1.)



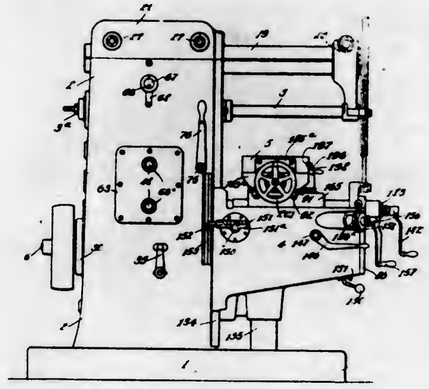
3. A device for controlling steering apparatus of a flying aeroplane, by a wireless telephony system such as the Poulson and the like, the latter having a diaphragm transmitter at the land station and a diaphragm receiver on the aeroplane, a motor on the aeroplane operatively connected with steering mechanism of the latter to change the course thereof when the motor is actuated, a normally open electric circuit connected with said motor to actuate it when said circuit is closed, and a vibratory circuit closing device connected in said circuit and capable of adjustment in syntony with both of said diaphragms to vibrate sympathetically to close said circuit when said diaphragms are active.

1,387,514. LIFT-INDICATOR FOR FLYING-MACHINES. ANITA S. REYNOLDS, Greenwich, Conn. Filed Mar. 14, 1917. Serial No. 154,853. 4 Claims. (Cl. 177—351.)



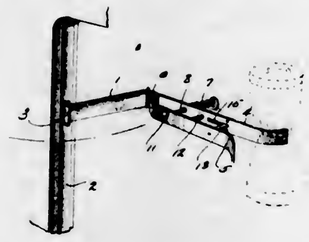
3. A device of the character described comprising an aerofoil, a diaphragm in the top camber an axially alined diaphragm in the bottom camber, said diaphragms being connected together at their centers, a lever engaging the connection, and means actuated by the lever for indicating the air reactions above and below the aerofoil.

1,387,515. ENGINE AIR-COMPRESSOR. MAX ROTTER, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 12, 1917. Serial No. 190,886. 2 Claims. (Cl. 230—32.)



1. In marine air-compressing apparatus, the combination of adjacent scavenger pumps, each having tandem-arranged pistons, the lower piston of each pump having a trunk and the lower cylinder head of each pump having a long, air-cooled bearing for said trunk, of circular section, extending freely in the direction of and around the connecting rod of said piston.

1,387,516. SHOE-STRETCHER. JOHN A. SCHULZ, Baltimore, Md. Filed Oct. 20, 1920. Serial No. 418,232. 4 Claims. (Cl. 12—128.5.)

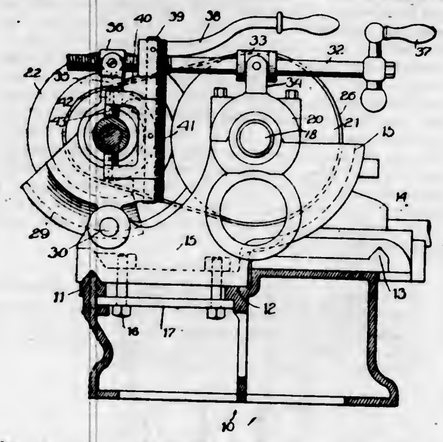


1. A shoe stretcher consisting of a hollow last having holes formed in the body thereof for the reception of a button shank, a wedge member movably mounted within the last and having a tapered convex upper surface conforming to the contour of the outer surface of the last whereby the button shank may be engaged wherever located on the body of the last and means for moving the wedge member lengthwise of the last.

1,387,517. MACHINE-TOOL. FRANK S. SHIELDS and JOHN A. CAMM, Cleveland, Ohio, assignors, by mesne assignments, to The Clark & Mesker Milling Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 14, 1917. Serial No. 168,571. 35 Claims. (Cl. 90—18.)

1. In a milling machine, the combination of a vertically disposed hollow column and a knee vertically adjustable thereon, said knee being formed of a hollow casing and containing therein variable power transmission devices for adjusting said knee.

1,387,518. MAIL-BAG CATCHER. WILLIAM R. SHULTZ, Camp Lee, Va. Filed Feb. 1, 1919. Serial No. 274,535. 1 Claim. (Cl. 258—22.)

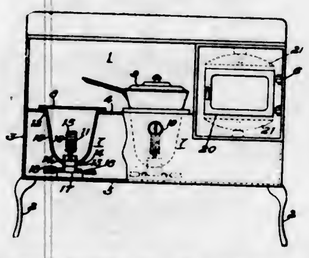


A mail bag catcher, comprising a bar bent to provide an arm and a relatively fixed catcher member in which is formed an opening and a slot, a companion catcher member pivotally connected to the fixed catcher member, a rod projecting laterally from the pivoted catcher member and passing loosely through the opening of the fixed catcher member, a spring on the rod yieldably pressing the catcher members together, a spacing stop carried by the fixed member and limiting the closing of the catcher members and a trigger pivotally mounted upon the fixed member at one end of the slot therein and operable through the said slot and serving to normally hold the members apart a given distance and displaceable by the mail to admit of the members closing and retaining the mail after being delivered to the catcher.

1,387,519. CONE-PULLEY HEAD-STOCK. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 23, 1919. Serial No. 319,308. 23 Claims. (Cl. 74—21.)

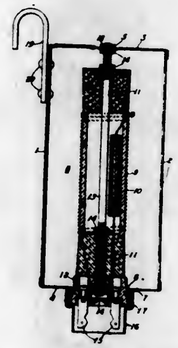
1. A lathe having, in combination, a bed, spaced ways on said bed, a head stock on said ways, a lathe spindle

carried by said headstock and located approximately vertically over one of said ways, a countershaft carried by said headstock and located approximately vertically over



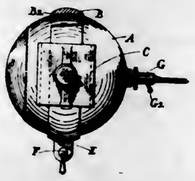
the other way, cone pulleys carried by said spindle and countershaft, means for varying the distance between said spindle and countershaft by moving the shaft, and power-receiving means carried by the shaft.

1,387,520. CONTAINER. WILLIAM B. THOMAS, Jr., Philadelphia, Pa. Filed Oct. 4, 1920. Serial No. 414,417. 2 Claims. (Cl. 220—43.)



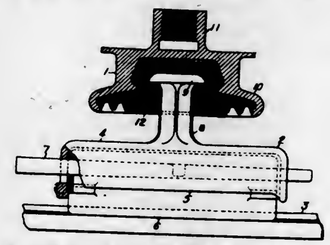
1. A container including a body portion; a lid for the body portion; a pivot member on said lid; and a strip plate mounted on said pivot member and having a portion engaging the inner surface of the lid and an extended portion protruding out of the container between the lid and the body portion; substantially as described.

1,387,521. RADIANT HEATER FOR ELECTRIC RANGES. FRANK THORNTON, Jr., Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Nov. 20, 1919. Serial No. 339,291. 9 Claims. (Cl. 219—37.)



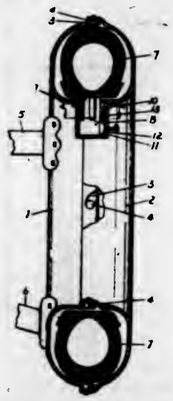
1. In a cooking apparatus, the combination with a food-supporting means, of an electric heating element, and a reflector adapted to reflect substantially all of the heat generated by said heating element against said supporting means.

1,387,522. AUTOMOBILE-ENGINE HEATER. FRANK THORNTON, Jr., Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Dec. 10, 1919. Serial No. 343,896. 7 Claims. (Cl. 219—38.)



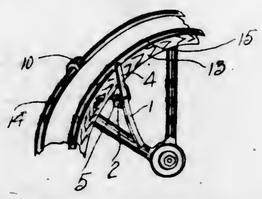
1. In an electrical heater, the combination with a casing, of longitudinally-extending heating means in said casing, and supporting means for said heating means at each end of said casing and integral therewith.

1,387,523. LAMP AND LAMP-HOLDER. CHARLES FREDERIC VAUGHAN, London, England. Filed July 8, 1920. Serial No. 394,731. 2 Claims. (Cl. 240—7.)



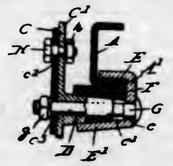
1. In an automobile lamp, the combination with the lamp casing having a spherical surface, of a split clamping ring fitting said surface, and a screw device for positively moving the ends of said clamping ring toward or away from each other causing the ring to tighten around the said casing or loosen therefrom.

1,387,524. INSULATOR TROLLEY-CONDUCTOR CLAMP. NILS J. A. WAHLBERG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1919. Serial No. 323,555. 4 Claims. (Cl. 191—42.)



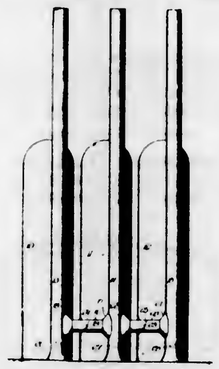
1. In a conductor insulating support, the combination with an insulator comprising a metal supporting hood and an insulating member disposed thereunder to be protected thereby, of a conductor clamp comprising a metal member having an elongated portion extending parallel to the conductor and an integral headed shank on the elongated portion for coöperative holding relation to said insulating member.

1,387,525. TIRE-HOLDER. BRUCE M. WARNER, Jackson, Mich. Filed Jan. 16, 1920. Serial No. 351,866. 4 Claims. (Cl. 224—29.)



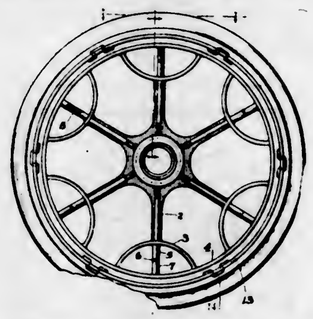
4. In a tire holder, the combination of a pair of annular casing members having coacting joint members adapted to be engaged and disengaged by a relative rotative movement of the members, said holder having a nipple adapted to receive the valve of a tire arranged in the holder, said nipple comprising a member mounted on each casing adapted to coact when the casing members are closed, and a means engaging said nipple constituting a locking means for said joint members.

1,387,526. RIM-TOOL. FRED WEISS, Woodstock, Ill. Filed Oct. 27, 1920. Serial No. 419,791. 1 Claim. (Cl. 157—6.)



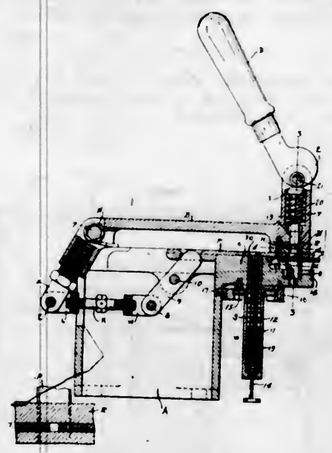
A rim tool for wheels comprising a lever handle; a lug hinged to the lever handle at a point spaced from the end thereof; a threaded bore in the lug perpendicular to the lever handle; a threaded rod to engage the threaded bore of the lug; a short hook rod hinged to the free end of the threaded rod; and an inwardly turned hook on the free end of the hook rod.

1,387,527. AUTOMOBILE-BUMPER. FREDERIK G. WHITTINGTON, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 24, 1920. Serial No. 433,025. 4 Claims. (Cl. 293—55.)



1. In combination with a bumper having a rearwardly extending supporting arm adapted to be applied laterally to a vehicle side bar, two similar clamping devices each comprising (*a*) a bracket consisting of a frusto-conical stem and an arm extending transversely therefrom at one end thereof, (*b*) a U-shaped clasp with diverging limbs for engaging the bracket with a flange of the vehicle side bar, one limb of said clasp being inwardly concave to fit the frusto-conical stem, and the other being adapted to lodge on the inner surface of the side bar flange; (*c*) a coöperating part having one side concaved to fit the bracket stem and the other flat for fitting on the outer surface of the side bar flange, and, (*d*) a clamping bolt extending through the bracket stem for forcing the U-clasp longitudinally of said stem, the bumper supporting arm being engaged by said bolt of one of the clamping devices, and a separate bolt engaging it with the bracket arm of the other of the clamping devices at a distance from said clamping bolt thereof.

1,387,528. CHIMNEY FOR HOT-BLAST STOVES. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1919. Serial No. 311,579. 4 Claims. (Cl. 263—20.)



1. In combination with hot blast stoves, of chimneys and means having passages therethrough connecting the chimneys.

1,387,529. CAST-STEEL-SPOKED WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Sept. 18, 1919. Serial No. 324,497. 6 Claims. (Cl. 301—65.)
